The most important of all the recommendations of the Commission, the one that might in fact be described as the corner stone of their report, is that there should be in each Presidency three classes of jails: in the first place, large central jails for convicts sentenced to more than one year's imprisonment, secondly, district jails at the headquarters of districts, and thirdly, subsidiary jails and "lock ups" for under trial prisoners and convicts sentenced to short terms of imprisonment. The jail department in each province is under the control of an Inspector-General, he is generally an officer of the Indian Medical Service with jail experience, and the Superintendents of certain jails are usually recruited from the same service. The district jail is under the charge of the civil surgeon, and is frequently inspected by the district magistrate. The staff under the Superintendent includes, in large central jails, a Deputy Superintendent to supervise the jail manufactures, and in all central and district jails one or more subordinate medical officers. The executive staff consists of jailors and warders, and convict petty officers are employed in all central and district jails, the prospect of promotion to one of these posts being a strong inducement to good behaviour. A Press Note issued by the Bombay Government in October 1915, says—"The cadre and emoluments of all ranks from Warder to Superintendent have been repeatedly revised and altered in recent years. But the Department is not at all attractive in its lower grades. The two weak spots in the jail administration at the moment are the insufficiency of Central Prisons and the difficulty of obtaining good and sufficient warders."

The Jails Committee—Since the introduction of the reformed constitution the maintenance of the Indian Prisons falls within the sphere of provincial Governments and is subject

to all India legislation. The obvious advisability of proceeding along certain General lines of uniform application led lately to the appointment of a Jails Committee, which conducted the first comprehensive survey of Indian prison administration which had been made for thirty years. Stress was laid by the Committee upon the necessity of improving and increasing existing jail accommodation, of recruiting a better class of warders, of providing education for prisoners, and of developing prison industries so as to meet the needs of the consuming Departments of Government. Other important recommendations included the separation of civil from criminal offenders, the adoption of the English system of release on license in the case of adolescents, and the creation of children's courts. The Committee found that the reformatory side of the Indian system needed particular attention. They recommended the segregation of habituals from ordinary prisoners, the provision of separate accommodation for prisoners under trial, the institution of the star class system, and the abolition of certain practices which are liable to harden or degrade the prison population.

Employment of Prisoners—The work on which convicts are employed is mostly carried on within the jail walls, but extra-mural employment on a large scale is sometimes allowed as for example, when a large number of convicts were employed in excavating the Jhelum Canal in the Punjab. Within the walls prisoners are employed on jail service and repairs, and in workshops. The main principle laid down with regard to jail manufactures is that the work must be penal and industrial. The industries are on a large scale, multifarious employment being condemned, while care is taken that the jail shall not compete with local traders. As far as possible industries are adapted to the requirements of the consuming public departments, and printing, tent-making and the manufacture of clothing are among the commonest employments. Schooling is confined to juveniles, the experiment of teaching adults has been tried, but literary instruction is unsuitable for the class of persons who fill an Indian jail.

The conduct of convicts in jail is generally good, and the number of desperate characters among them is small. Failure to perform the allotted task is by far the most common offence. In a large majority of cases the punishment inflicted is one of those classed as "minor." Among the "major" punishments fetters take the first place. Corporal punishment is inflicted in relatively few cases, and the number is steadily falling. Punishments were revised as the result of the Commission of 1889. Two notable punishments then abolished were shaving the heads of female prisoners and the stocks. The latter, which was apparently much practised in Bombay, was described by the Commission as inflicting "exquisite torture." Punishments are now scheduled and graded into major and minor. The most difficult of all jail problems is the internal maintenance of order among the prisoners, for which purpose paid

warders and convict warders are employed. With this is bound up the question of a special class of well-behaved prisoners which was tried from 1905 on wards in the Thana Jail.

Juvenile Prisoners—As regards 'youthful offenders'—i.e., those below the age of 15—the law provides alternatives to imprisonment, and it is strictly enjoined that boys shall not be sent to jail when they can be dealt with otherwise. The alternatives are detention in a reformatory school for a period of from three to seven years, but not beyond the age of 18, discharge after admonition, delivery to the parent or guardian on the latter executing a bond to be responsible for the good behaviour of the culprit and whipping by way of school discipline.

The question of the treatment of young adult prisoners has in recent years received much attention. Under the Prisons Act, prisoners below the age of 18 must be kept separate from older prisoners, but the recognition of the principle that an ordinary jail is not a fitting place for adolescents (other than youthful habituals) who are over 15, and therefore ineligible for admission to the reformatory school, has led Local Governments to consider schemes for going beyond this by treating young adults on the lines followed at Borstal, and considerable progress has been made in this direction. In 1905 a special class for selected juveniles and young adults was established at the Dharwar jail in Bombay. In 1908 a special juvenile jail was opened at Alipore in Bengal, in 1909 the Muktia jail in Burma and the Tanjore jail in Madras were set aside for adolescents, and a new jail for juvenile and juvenile adult convicts was opened at Bareilly in the United Provinces and in 1910 it was decided to concentrate adolescents in the Punjab at the Lahore District jail, which is now worked on Borstal lines. Other measures had previously been taken in some cases a special reformatory system for juvenile adults had, for example, been in force in two central jails in the Punjab since the early years of the decade and Borstal enclosures had been established in some jails in Bengal. But the public is slow to appreciate that it has a duty towards prisoners, and but little progress has been made in the formation of Prisoners' Aid Societies except in Bombay and Calcutta, though even in those cities much remains to be done.

Reformatory Schools—These schools have been administered since 1899 by the Education department, and the authorities are directed to improve the industrial education of the inmates, to help the boys to obtain employment on leaving school, and as far as possible to keep a watch on their careers.

Transportation—Transportation is an old punishment of the British Indian criminal law, and a number of places were formerly appointed for the reception of Indian transported convicts. The only penal settlement at the present time is Port Blair in the Andaman Islands.

Commission of Enquiry, 1919—A committee was appointed to investigate the whole system of prison administration in India with special reference to recent legislation and experience in Western countries. Its report published in 1921, was summarised in the

Indian Year Book, 1922 (pages 670 671). A number of reforms were advocated but, owing to financial stringency, it has not yet been possible to introduce some of the more important of them.

Fines and Short Sentences—Those sections of the Indian Penal Code, under which imprisonment must be awarded when a conviction occurs, should be amended so as to give discretion to the court. Sentences of imprisonment for less than twenty-eight days should be prohibited.

The Indeterminate Sentences—The sentence of every long term prisoner should be brought under revision, as soon as the prisoner has served half the sentence in the case of the non habitual and two thirds of the sentence in the case of the habitual, remission earned being counted in each case. The revision should be carried out by a Revising Board, composed of the Inspector General of Prisons, the Sessions Judge and a non official. In all cases, the release of a prisoner on parole should be made subject to conditions, breach of which would render him liable to be remanded to undergo the full original sentence. The duty of seeing that a prisoner fulfils the conditions on which he was released should not be imposed upon the police or upon the village headman, but special officers, to be termed parole officers, should be appointed for the purpose. These parole officers should possess a good standard of education, though not necessarily a university degree and should both protect and advise the released prisoner and report breaches of the conditions of release.

Transportation and the Andamans—The future of the penal settlement of Port Blair was continually under the consideration of the Government of India from the time of the publication of the Jails Commission report, but it was not till 1926 that a definite decision was reached. It was then decided that henceforth only those convicts should normally be sent to the Andamans who volunteered to come, that the old restrictions on life in the settlement should be sensibly relaxed that convicts should be encouraged to settle on the land that in certain conditions they should be entitled to release to obtain occupancy rights over the land which they had cultivated and that the importation of wives and families should be encouraged. The object of these changes was to promote the development of a free colony of persons who would alter the terms of their sentences had expired, make the Andamans their permanent home. The effect up to date has been to introduce a completely new outlook on life into the settlement but it is still too soon to appreciate its potentialities. It has recently been found necessary to send to the Andamans certain convicts either sentenced to transportation for life or to long terms of rigorous imprisonment for permanent incarceration in the Cellular Jail. Such prisoners will not be released and allowed to go into the settlement and its development will in no way be affected by their presence.

Criminal Tribes—The first essential of success in dealing with the criminal tribes is the provision of a reasonable degree of economic

comfort for the people. It is therefore of paramount importance to locate settlements where sufficient work at remunerative rates is available. Large numbers of fresh settlers should never be sent to a settlement without first as-

certaining whether there is work for them. Commitment to settlements should, as far as possible, be by gangs not by individuals. It is desirable to utilise both Government and private agency for the control of settlements.

The variations of the jail population in British India during the five years ending 1934 are shown in the following table —

	1934	1933	1932	1931	1930
Jail population of all classes on 1st January	1,56,753	1,65,778	1,54,871	1,63,298	1,37,129
Admissions during the year	741,942	756,344	896,876	739,840	771,187
Aggregate	898,695	922,122	1,051,747	903,138	908,316
Discharged during the year from all causes	740,893	765,369	885,949	748,266	744,946
Jail population on 31st December	1,57,802	1,56,753	1,65,798	1,54,872	1,63,370
Convict population on 1st January	1,81,977	1,39,705	1,26,580	1,36,552	1,16,184
Admissions during the year	2,20,871	2,25,100	2,67,289	2,07,568	2,23,538
Aggregate	3,32,848	3,64,805	3,93,819	3,44,120	3,39,722
Released during the year	2,15,011	2,26,175	2,17,648	2,16,807	1,96,996
Transported beyond seas	1,113	1,342	1,402	1,685	1,509
Casualties, &c	2,632	2,592	2,395	2,503	2,541
Convict population on 31st December	1,32,686	1,31,981	1,39,708	1,26,580	1,38,552

More than one-half of the total number of convicts received in jails during 1934 came from the classes engaged in agriculture and cattle tending, over 1,80,000 out of 2,21,000 were returned as illiterate.

The percentage of previously convicted prisoners was 14, the same as in the preceding year, while the number of youthful offenders fell from 382 to 245. The following table shows the nature and length of sentences of convicts admitted to jails in 1932 to 1934 —

Nature and Length of Sentence	1934	1933	1932
Not exceeding one month	52,890	45,954	43,196
Above one month and not exceeding six months	84,942	93,007	1,20,656
" six months " " one year	42,531	44,020	54,253
" one year " " five years	32,059	33,121	38,673
" five years " " ten "	4,801	5,087	5,598
Exceeding ten years	473	463	705
Transportation beyond seas—			
(a) for life	1,848	1,929	2,348
(b) for a term	63	96	94
Sentenced to death	1,293	1,415	1,648

The total daily average population for 1934 was 1,29,441, the total offences dealt with by criminal courts was 202, and by Superintendents 1,13,954. The corresponding figures for 1933 were 1,33,750, 227 and 1,26,719, respectively.

The total number of corporal punishments decreased from 267 to 180. The total number of cases in which penal diet (with and without cellular confinement) was prescribed was 3,878 as compared with 4,153 in the preceding year.

Total expenditure decreased from Rs. 1,70,37,505 to Rs. 1,60,97,998 while total cash earnings increased from Rs. 20,16,245 to Rs. 20,53,904, there was consequently a decrease of Rs. 9,77,166 in the net cost to Government.

The death rate per mille increased from 10.80 in 1933 to 11.97 in 1934. The admissions to hospital were lower, and the ratio of daily average number of sick per mille of average strength fell from 21.57 to 20.83.

The Laws of 1936

T/1

BY

RATANLAL RANCHHODDAS, *Advocate, High Court, Bombay*

AND

MANHAR R VAKIL *Barrister at-Law*

The Indian Finance Act—This Act continues for a further period of one year certain duties and taxes imposed under the Indian Finance Act 1935, which would otherwise cease to have effect from April 1, 1936. It also abolishes the income tax on incomes of Rs 1,000 or upwards but less than Rs 2,000 and reduces the surcharges on income tax and super tax. S 2 provides for the continuance for a further period of one year of the existing provisions regarding salt duty. The duty of Rs 140 per mound on salt remains liable to the additional duty imposed under s 5 of the Indian Finance (Supplementary and Extending) Act, 1931. S 3 continues for a further period of one year of the present inland postage rates with the following alteration—The weight of a letter to be carried for one anna is raised from half a tola to one tola. The rate for every tola or fraction thereof exceeding one tola is half an anna. S 4 continues for a further period of one year of the existing rates of income tax and super tax with the following alterations—(a) Income tax on income of less than Rs 2,000 falling under heading A in Part I of Schedule II is abolished. (b) The surcharges of income tax and super tax are reduced from one sixth to one twelfth. S 4(4) provides that incomes from salaries and interest on securities should be finally taxed for purposes of income tax and not super tax at the rates applicable to a total income of like amount which was in force at the time when the taxation at source on these incomes took place. A similar provision is made for purposes of dividends under sub s (1) or sub s (3) of s 45 in respect of dividends declared in the year ending 31st March, 1936, or of payments made in the said year of salaries or of interest on securities.

1 The Italian Loans and Credits Prohibition Act—The Italian Loans and Credits Prohibition Ordinance was promulgated by the Governor General in Council on November 18, 1935, in pursuance of the obligations imposed on India as a signatory of the covenant of the League of Nations by Article 16 thereof, to prohibit the making of certain loans and credits. The terms of the Ordinance, under s 72 of the Government of India Act, expire six months after its promulgation and the present Act replaces it by legislation. S 2 prohibits the making or issuing of any loan to or for the benefit of (i) the Government of any Italian territory, or (ii) any person of whatever nationality resident in any such territory, or (iii) any person wherever resident, being a body corporate incorporated under the law of any such territory. S 3 prescribes the penalty for contravening the above provisions, which is imprisonment for a term which may extend to two years or fine or both. S 6 empowers the Governor General in Council to repeal this law by notification in the Gazette of India.

2 The Salt Additional Import Duty (Extending) Act—This Act continues the Salt (Additional Import Duty) Act, 1931, for two more years, subject to a reduction of the rate of duty to one and a half annas.

3 The Parsi Marriage and Divorce Act—Since the passing of the Parsi Marriage and Divorce Act 1865 circumstances have greatly altered and to some extent there has also been a change in the sentiments and views of the Parsi community. A necessity for some change in the law was felt for years and the Parsi Central Association took up the question in 1923 and appointed a Sub Committee to suggest amendments. The Sub Committee submitted a report which the Association got printed and circulated for opinion to most other Parsi Associations as well as prominent members of the community both in Bombay and outside. Many suggestions were made in the press on the platform by associations and individuals and these were fully considered by the Trustees of the Bombay Parsi Punchayet and the Association. The present Act is the result.

The Act extends to the whole of British India and in respect of Parsi subjects of His Majesty to the whole of India. The Governor General in Council is authorised to direct that the provisions of this Act relating to the constitution and powers of Parsi Matrimonial Courts and to appeals from the decisions and orders of such Courts shall apply with such modifications as may be specified in respect of territories in India beyond the limits of British India [s 1(2)]. S 2 defines certain words and phrases used in the Act. To desert means to desert the other party to a marriage without reasonable cause and without the consent or against the will, of such party. Grievous hurt means—(a) emasculation, (b) permanent privation of the sight of either eye, (c) permanent privation of the hearing of either ear, (d) privation of any member or joint, (e) destruction or permanent impairing of the powers of any member or joint, (f) permanent disfigurement of the head or face, or (g) any hurt which endangers life. 'Parsi' means a Parsi Zoroastrian and 'priest' means a Parsi priest and includes Dastur and Mobed. S 3 sets forth the requisites to the validity of Parsi marriages, the contracting parties must not be related to each other in any of the degrees of consanguinity or affinity set forth in Schedule I to the Act, the marriage must be solemnised according to the Parsi form of ceremony called Ashirvad by a priest in the presence of two Parsi witnesses other than such priest and in the case of any Parsi who has not completed the age of twenty-one years, the consent of his or her father or guardian must be previously obtained to such marriage. Under s 4 no Parsi (whether such Parsi has changed his or her religion or

domicile or not) can contract any marriage under this Act or any other law in the lifetime of his or her wife or husband whether a Parsi or not, except after his or her lawful divorce from such wife or husband or after his or her marriage with such wife or husband has lawfully been declared null and void or dissolved and if the marriage was contracted with such wife or husband under the Parsi Marriage and Divorce Act, 1869, or under this Act (except after a divorce declaration or dissolution as aforesaid under either of the said Acts) a marriage contracted contrary to the above provisions will be void. S 6 provides penalties for the offence of bigamy. Under s 6 every marriage contracted under the Act must immediately on the solemnization thereof be certified by the officiating priest in the form contained in Schedule II to the Act. The certificate must be signed by the said priest, the contracting parties, or their fathers or guardians when they have not completed the age of twenty-one years, and two witnesses present at the marriage, and the priest must thereupon send such certificate together with a fee of two rupees to be paid by the husband to the Registrar of the place at which such marriage is solemnised. The Registrar on receipt of the certificate and fee must enter the certificate in a register kept by him for that purpose. S 8 provides for the registrar of marriage to be open for public inspection and for obtaining certified extracts from it. S 11 prescribes the penalty for solemnising marriage contrary to s 4, the punishment being simple imprisonment for a term which may extend to six months or with fine which may extend to two hundred rupees or with both. S 12 prescribes the penalty for the priest's neglect of the requirements of s 6, the punishment being simple imprisonment for a term which may extend to three months or with fine which may extend to one hundred rupees or with both. Under s 13 the penalty for omitting to subscribe and attest the certificate is a fine not exceeding one hundred rupees. Ss 14 to 16 prescribe various penalties for making or signing or attesting a false certificate, for failing to register a certificate and for secreting, destroying or altering the register. Under s 17 a marriage contracted under this Act will not be deemed to be invalid solely by reason of the fact that it was not certified under s 6 or that the certificate was not sent to the Registrar or that the certificate was defective, irregular or incorrect.

Under s 18 for the purpose of hearing suits under this Act a special Court will be constituted in each of the Presidency towns of Calcutta, Madras and Bombay, and in such other places in the territories of the several local Governments as such Governments respectively think fit. The Court so constituted in each of the Presidency towns will be entitled the Parsi Chief Matrimonial Court of Calcutta, Madras or Bombay as the case may be. The local limits of the jurisdiction of a Parsi Chief Matrimonial Court will be continuous with the local limits of the ordinary original civil jurisdiction of the High Court. The Chief Justice of the High Court, or such other Judge of the same Court as the Chief Justice will from time to time appoint, will be the Judge of such Matrimonial Court and in the trial of cases under this Act, he will be guided by seven delegates. S 20

provides for the constitution of Parsi District Matrimonial Courts at places other than Presidency towns. Under s 24 the Local Government will appoint persons to be delegates to aid in the adjudication of cases arising under this Act after giving the local Parsis an opportunity of expressing their opinion. The persons so appointed will be Parsis; their names will be published in the local official Gazette and their number within the local limits of the ordinary original civil jurisdiction of a High Court will not be more than thirty, and in districts beyond such limits not more than twenty. Under s 25 the term of office of a delegate will be ten years but he will be eligible for re-appointment for the like term or terms. The Local Government is empowered to appoint a new delegate in place of one who has died or has completed his term of office or is desirous of relinquishing his office or refuses or becomes incapable or unfit to act or ceases to be a Parsi or is convicted of an offence under the Indian Penal Code or other law for the time being in force or is adjudged insolvent. The delegates selected to aid in adjudication of suits under the Act will be taken under the orders of the presiding Judge of the Court in due rotation from the delegates appointed by the Local Government. Each party to the suit is entitled without cause assigned to challenge any three of the delegates attending the Court before such delegates are selected and no delegate so challenged will be selected (s 27). Under s 28 illegal practitioners entitled to practise in a High Court are entitled to practise in any Court constituted under this act and all legal practitioners entitled to practise in a District Court are entitled to practise in any Parsi District Matrimonial Court constituted under this act. All suits instituted under the Act must be brought in the Court within the limits of whose jurisdiction the defendant resides at the time of the institution of the suit. When the defendant has at such time left British India such suit must be brought in the Court at the place where the plaintiff and defendant last resided together. A suit may also be brought in the Court at the place where the plaintiff resides or at the place where the plaintiff and the defendant last resided together. If such Court, after recording its reasons in writing grants leave to do so (s 29).

Under s 30 in any case in which consummation of the marriage is from natural causes impossible such marriage may, at the instance of either party thereto be declared to be null and void. If a husband or wife has been continually absent from his or her wife or husband for the space of seven years and has not been heard of as being alive within that time by those persons who would have naturally heard of him or her had he or she been alive the marriage of such husband or wife may at the instance of either party thereto, be dissolved (s 31). S 32 deals with the grounds for divorce. Any married person may sue for divorce on any one or more of the following grounds, namely:— (a) that the marriage has not been consummated within one year after its solemnization owing to the wilful refusal of the defendant to consummate; (b) that the defendant at the time of the marriage was of unsound mind and has been habitually so up to the date of the suit; divorce will not be granted on this ground

unless the plaintiff (1) was ignorant of the fact at the time of the marriage, and (2) has filed the suit within three years from the date of the marriage, (c) that the defendant was at the time of marriage pregnant by some person other than the plaintiff, divorce will not be granted on this ground unless (1) the plaintiff was at the time of the marriage ignorant of the fact alleged, (2) the suit has been filed within two years of the date of marriage, and (3) marital intercourse has not taken place after the plaintiff came to know of the fact. (d) that the defendant has since the marriage committed adultery or fornication or bigamy or rape or an unnatural offence, divorce will not be granted on this ground if the suit has been filed more than two years after the plaintiff came to know of the fact, (e) that the defendant has since the marriage voluntarily caused grievous hurt to the plaintiff or has infected the plaintiff with venereal disease, or where the defendant is the husband, has compelled the wife to submit herself to prostitution, divorce will not be granted on this ground if the suit has been filed more than two years (i) after the infliction of the grievous hurt or (ii) after the plaintiff came to know of the infection, or (iii) after the last act of compulsory prostitution. (f) that the defendant is undergoing a sentence of imprisonment for seven years or more for an offence as defined in the Indian Penal Code, divorce will not be granted on this ground unless the defendant has prior to the filing of the suit undergone at least one year's imprisonment out of the said period. (g) that the defendant has deserted the plaintiff for at least three years, (h) that a decree or order for judicial separation has been passed against the defendant or an order has been passed against the defendant by a Magistrate awarding separate maintenance to the plaintiff and the parties have not had marital intercourse for three years or more since such decree or order. (i) that the defendant has failed to comply with a decree for restitution of conjugal rights for a year or more, and (j) that the defendant has ceased to be a Parsi, divorce will not be granted on this ground if the suit has been filed more than two years after the plaintiff came to know of the fact. Under s. 34 any married person may sue for judicial separation on any of the grounds for which such person could have filed a suit for divorce, or on the ground that the defendant has been guilty of such cruelty to him or her or their children or has used such personal violence, or has behaved in such a way as to render it in the judgment of the Court improper to compel him or her to live with the defendant. Under s. 36 where a husband has deserted or without lawful cause ceased to cohabit with his wife, or where a wife has deserted or without lawful cause ceased to cohabit with her husband, the party so deserted or with whom cohabitation has so ceased may sue for restitution of his or her conjugal rights. Under s. 38 no suit can be brought to enforce any marriage or any contract arising out of any marriage, if at the date of the institution of the suit the husband is under sixteen years or the wife under twenty years. S. 39 deals with alimony *pendente lite*. If the wife has not an independent income sufficient for her support and the necessary

expenses of the suit, the Court on the application of the wife, may order the husband to pay her monthly or weekly during the suit a sum not exceeding one fifth of her husband's net income. S. 40 deals with permanent alimony. The Court may, at the time of passing any decree under the Act or subsequently on application made to it (a) order the husband to secure to the wife while she remains chaste and unmarried a gross sum or a monthly or periodical payment of money for a term not exceeding her life and for that purpose may require a proper instrument to be executed by all necessary parties or (b) make such monthly payments to the wife for her maintenance and support as the Court may think reasonable. In case any such order is not obeyed by her husband it may be enforced in the manner provided for the execution of decrees and orders under the Civil Procedure Code, 1908 and the husband may be sued by any person supplying the wife with necessities during the time of such disobedience for the price of the necessities. Under s. 43 a suit preferred under the Act must be tried with closed doors if either of the parties so desires. Notwithstanding the provisions of s. 19 or s. 20 if in a trial in a Parsi Matrimonial Court not less than five delegates have attended throughout the proceedings, the trial is not rendered invalid by reason of the absence during any part thereof of the other delegates. Under s. 46 in suits under the Act all questions of law and procedure must be determined by the presiding Judge, the decision on the facts must be the decision of the majority of the delegates before whom the case is tried, where such delegates are equally divided in opinion the decision on the facts will be the decision of the presiding Judge. S. 47 provides for an appeal to the High Court from the decision of any Court established under the Act on the ground of the decision being contrary to some law or usage having the force of law or of a substantial error or defect in the procedure or investigation of the case which may have produced error or defect in decision of the case upon the merits. Such an appeal must be instituted within three months after the decision appealed from has been pronounced. Under s. 48 when the time limited for appealing against any decree granting a divorce or annulling or dissolving a marriage has expired and no appeal has been presented against such decree or when an appeal has been dismissed or when in the result of any appeal a divorce has been granted or a marriage has been declared to be annulled or dissolved it will be lawful for the respective parties to marry again. Under s. 49 the Court may from time to time pass such interim orders and make such provisions in the final decree as it may deem just and proper with respect to the custody, maintenance and education of the children under the age of sixteen years, the marriage of whose parents is the subject of the suit. In any case in which the Court has pronounced a decree of divorce or judicial separation for adultery of the wife and if it is made to appear to the Court that the wife is entitled to any property (either in possession or reversion) the Court may order such settlement as it thinks reasonable to make of any part of the property not exceeding one half of it, for the benefit of the children of the

marriage or any of them (s 50) Under s 52 (2) a Parsi who has contracted a marriage under the earlier Act or under the present Act, even though such a person has changed his or her religion or domicile so long as the Parsi Marriage subsists he or she cannot contract another marriage under any other law

4 The Payment of Wages Act—In 1926 the Government of India addressed Local Governments with a view to ascertain the position with regard to the delays which occurred in payment of wages to persons employed in industry, and the practice of imposing fines upon them. The investigations revealed the existence of abuses in both directions, and the material collected was placed before the Royal Commission on Labour which was appointed in 1929. The commission collected further evidence on the subject, and the results of their examination, with their recommendations were embodied in a report. The Government of India re-examined the subject in the light of the Commission's Report and the present Act is the result.

The Act applies only to the payment of wages to persons receiving less than Rs 200 per mensem. It applies to the payment of wages to persons employed in any factory and to persons employed (otherwise than in a factory) upon any railway by a railway administration or, either directly or through a subcontractor by a person fulfilling a contract with a railway administration [s 1(4) & (6)]. S 2 defines certain words and phrases used in the Act. Industrial establishment means (a) any tramway or motor omnibus service (b) dock, wharf or jetty, (c) inland steam vessel, (d) mine, quarry or oil field, (e) plantation, (f) workshop or other establishment in which articles are produced, adapted or manufactured, with a view to their use, transport or sale. Plantation means any estate which is maintained for the purpose of growing cinchona, rubber, coffee or tea, and on which twenty-five or more persons are employed for that purpose. Wages does not include (a) the value of any house accommodation supply of light, water, medical attendance or other amenity or of any service excluded by general or special order of the Governor General in Council or Local Government, (b) any contribution paid by the employer to any pension fund or provident fund, (c) any travelling allowance, or the value of any travelling concession, (d) any sum paid to the person employed to defray special expenses entailed on him by the nature of his employment or (e) any gratuity payable on discharge. Under s 3 the employer is responsible for the payment of wages to persons employed by him. In the case of persons employed (otherwise than by a contractor) in factories, in industrial establishments and upon railways, the person named as the manager of the factory, the person responsible to the employer for the supervision and control of the industrial establishment and the person nominated by the railway administration on this behalf are respectively responsible for such payment. Under s 4 every person responsible for the payment of wages must fix wage periods. A wage period must not exceed one month. Under s 5 (1) the wages of every person employed in any

railway, factory or industrial establishment in which less than one thousand persons are employed must be paid before the expiry of the seventh day after the last day of the wage-period in respect of which the wages are payable and the wages of persons employed in any other railway, factory or industrial establishment must be paid before the expiry of the tenth day. Where the employment of any person is terminated by the employer the wages earned by him must be paid before the expiry of the second working day from the day on which his employment was terminated. All payments of wages must be made on a working day. Under s 6 all wages must be paid in current coin or currency notes. S 7(2) enumerates the types of permissible deductions which may be made from the wages, namely (a) fines, (b) deductions for absence from duty, (c) deductions for damage or loss in respect of goods entrusted to an employed person for custody, or money for which he is required to account, (d) deductions for house accommodation supplied by the employer, (e) deductions for amenities and services supplied by the employer—services does not include the supply of tools and raw materials required for the purpose of employment, (f) deductions on account of advances and adjustment of over payment of wages, (g) deductions of income tax payable by the employed person, (h) deductions required to be made by order of a Court or other authority, (i) deductions on account of payments to certain Provident Funds and (j) to certain co-operative credit Societies. Under s 8 fines can be imposed only for acts or omissions specified in a regular notice exhibited on the premises in which the employment is carried on. The total amount of fine which may be imposed in any one wage period must not exceed an amount equal to half an anna in the rupee of the wages payable in respect of that wage period. No fine can be imposed on any employed person who is under the age of fifteen years. Every fine is deemed to be imposed on the day of the act or omission and it cannot be recovered by instalments or after the expiry of sixty days from its imposition. S 14 deals with the appointment of Inspectors for the purposes of the Act. An Inspector so appointed is authorised to enter on any premises and make such examination of any document relating to the payment of wages and take on the spot such evidence of any person as he may deem necessary. S 15 deals with the appointment of a special authority to deal with all claims arising out of deductions from the wages, or delay in payment of wages. Application for such a claim must be presented within six months from the date on which the deduction was made or from the date on which the payment was to be made. The authority constituted under this section is empowered to order the payment to the claimant of the sum wrongfully withheld plus compensation up to ten times that sum in the case of deductions, and rupees ten per head in the case of delay. No direction for the payment of compensation can be made in the case of delayed wages if the delay was due to (a) bona fide error or bona fide dispute as to the amount payable to the employed person, or (b) the occurrence of an emergency or the existence of exceptional circumstances or (c) the

failure of the employed person to apply for or accept payment. A penalty not exceeding fifty rupees payable to the employer is prescribed for an application which is either malicious or vexatious. S 17 provides for an appeal against a direction made under s 15 within thirty days of the date of the direction (a) by the employer if the total sum directed to be paid exceeds three hundred rupees, or (b) by an employed person if the total amount of wages claimed exceeds fifty rupees. S 20 prescribes penalties for offences under the Act which may extend to fine up to five hundred rupees. S 21 provides for prosecutions on account of infringements of the law, such prosecutions cannot be instituted unless the application presented under s 15 has been granted wholly or in part and the authority appointed under the latter section or the appellate Court considers such prosecutions warranted. Under s 28 no Court can entertain any suit for the recovery of wages or of any deduction from wages in so far as the sum claimed (a) forms the subject of an application under s 15 or (b) has formed the subject of a direction under s 15 in favour of the plaintiff, or (c) has been adjudged in any proceeding under s 15, not to be owed to the plaintiff or (d) could have been recovered by an application under s 15. Under s 23 any contract or agreement, whether made before or after the commencement of the Act, whereby an employed person relinquishes any right conferred by the Act is rendered null and void in so far as it purports to deprive him of such right.

5 The Decrees and Orders Validating Act—Clause 12 of the Letters Patent of the Bombay High Court which is identical in terms with clause 12 of the Letters Patent of the Madras and Calcutta High Courts and corresponds to clause 10 of the Letters Patent of the Rangoon High Court has been variously interpreted by the several High Courts, and the question of amending the clause is under consideration. The present Act obviates in the meantime the inconvenience which would result if the decrees or orders of a High Court acting in the exercise of its ordinary original civil jurisdiction, as the Court itself interprets that jurisdiction, prove infructuous in another Court which favours a different interpretation. Under s 2 such decrees or orders cannot be called in question in any proceedings before any Court on the ground that the High Court had no jurisdiction to pass or make the decrees or orders. Under s 3 where in any proceedings, concluded on or after August 26 1935 any such decree or order has been found invalid on such ground such finding will be void and on application made within six months from the commencement of the Act by any person prejudicially affected by such finding the Court will restore the proceedings.

6 The Cochin Port Act.—The port of Cochin will be declared, under Item 9 of Part I of Schedule I to the Devolution Rules, a major port on or about April 1, 1936, and the Governor General in Council will then replace the Government of Madras in the administration of the port. The present Act provides for the transfer of the statutory powers in respect of the port under the Indian Ports Act, 1908, and the

Madras Out Ports Landing and Shipping Fees Act, 1885, from the Local Government to the Governor General in Council.

7 The Indian Aircraft (Amendment) Act—Under s 6 (1) (p) of the Indian Port Act, 1908, Local Governments are empowered to make rules for the prevention of danger arising to public health by the introduction and the spread of any infectious or contagious disease from vessels arriving at, or being in any sea port, and for the prevention of the conveyance of infection or contagion by means of any vessel sailing from any such port. The development of air traffic has made it necessary to establish similar control over incoming and outgoing aircraft especially in conditions in India are favourable to the spread of yellow fever and there is a risk of this disease being introduced into India from Africa by the entry of an infected person or infected insect, if adequate measures are not taken to prevent it. The present Act amends the original Act so as to enable the Governor General in Council to make the necessary rules for protecting the public health.

8 The Factories (Amendment) Act—Sub-section (1) of s 5 of the Factories Act 1934 gives Local Governments power to notify as factories premises which have ten or more persons working in them or in their precincts. But a notification so issued extends only to the premises and not to the precincts and may thus apply only to part of the work. The present Act ensures that manufacture carried on elsewhere than inside buildings can be regulated when necessary.

9 Indian Lac Cess (Amendment) Act—Under the Indian Lac Cess Act 1930 a cess is levied on lac and refuse lac exported to countries outside India at the rate of four annas and two annas per maund respectively with the object of providing funds for the improvement and development of the cultivation, manufacture and marketing of Indian lac. The present Act increases the cess to seven and five annas per maund respectively in order to provide the Indian Lac Cess Committee with more adequate funds for these purposes.

Section 3 reorganises the Lac Cess Committee and provides for a logical division of functions into general and technical and appropriate machinery for the most efficient handling of both. The Committee consists of two parts—the Governing Body entrusted with questions of policy and the administration and control of the Lac Cess funds and the Advisory Board dealing with the scientific and technical aspects of the Committee's work. S 5 authorises the Committee, subject to the control of the Governor General in Council to spend lac cess funds in securing patents for the protection of inventions by employees of the Committee. S 6 provides for the periodical inspection by persons appointed in this behalf by the Governor General in Council of the Indian Lac Research Institute and other institutions maintained by the Committee.

10 The Indian Tariff (Amendment) Act—This Act continues for a further period of one year the existing duty of twelve annas per maund on broken rice. It also continues for another year the import duty on wheat and wheat flour at a reduced rate of rupee one per cwt.

11 The Indian Mines (Amendment) Act— This Act enacts further measures to ensure safety in coal mines, more particularly in respect of danger from fires. S 2 empowers in Inspector to prohibit the extraction or reduction of pillars in any part of a mine if such operation is likely to endanger the mine and to provide for the sealing off and isolation of a part of the mine to minimise the risk of fire. It also empowers him to limit to such dimensions as he considers reasonable the galleries that may be driven in the mine. The operation of this section is limited to two years only from the commencement of the Act. S 3 enlarges in certain respects the power vested in the Governor General in Council, to make regulations for safety purposes. S 5 empowers the Governor General in Council to require the setting up of central rescue stations and s 4 transfers the regulation of rescue brigades to the Governor General in Council. S 6 enables emergency regulations to be made without previous publication and without previous reference to Mining Boards. A regulation so made cannot remain in force for more than two years from making the rule.

12 The Indian Tariff (Second Amendment) Act— S 2 makes spun silk yarn subject to the same rate of duty as pure silk yarn i.e. 25 per cent *ad valorem*, plus 14 annas per lb. The duty on fents is altered and the protective duty applicable to cotton knitted hosiery is extended to all cotton knitted apparel.

13 Indian Tea Cess (Amendment) Act— Under s 3 the maximum rate of cess leviable is raised from annas twelve to one rupee and eight annas per hundred pounds of tea exported.

S 4 changes the designation of the Committee administering the cess funds to the Indian Tea Market Expansion Board. The strength of the Committee is increased from 20 to 27. Under s 5 the Executive Committee of the Board must consist of nine members of whom not less than three must be Indians. S 6 empowers the Board to borrow on the security of the tea cess—the total amount not to exceed five lacs of rupees and no loan to be taken which is repayable later than six months from the date of the loan.

14 The Geneva Convention Implementing Act— The International Convention for the Amelioration of the Conditions of the Wounded and Sick in Armies in the Field was drawn up in Geneva on July 27, 1929. India was a signatory to this Convention, which came into force so far as His Majesty's possessions were concerned, on December 23, 1931. Article 28 of the Convention requires the Governments of the high contracting parties to prohibit within five years (a) the use of the emblem or designation Red Cross or Geneva Cross by private individuals or associations, firms or companies, other than those entitled thereto under the 1911 Convention. (b) the use, for commercial or any other purposes whatsoever of any sign or designation constituting an imitation of the heraldic emblem of the red cross on a white ground formed by reversing the federal colours of Switzerland, (c) the use by any person for commercial or any other purposes whatsoever, of the heraldic emblem of the white

cross on a red ground being the federal colours of Switzerland. (d) the use by any person for commercial or any other purposes whatsoever, of the use of an imitation of the white cross on a red ground. The Geneva Convention Act, 1911, as applied to India by the Order of His Majesty in Council, dated October 24, 1916, regulates (a) above and, in view of the provisions of s 65(2) of the Government of India Act, 1919, the Indian Legislature is not competent to pass any law affecting that Act. The Convention of 1929 may however be implemented as far as (a) is concerned, by administrative instructions from Government of India to their Defence Secretary to the effect that he should not exercise the power to authorise the use of the emblem which was given him by the Order in Council of 1916. Ss 2 and 3 of the present Act secure the prohibitions referred to at (b), (c) and (d) above. S 4 prescribes the penalty for contravening the above provisions—fine up to fifty rupees. Under s 5 a criminal court cannot take cognizance of any offence punishable under the Act without the previous sanction of the Governor General in Council or the local Government.

15 The Indian Rubber Control (Amendment) Act— The Indian Rubber Control Act which implements the obligations contracted by the Government of India under the Inter Governmental Agreement relating to the restriction of the export production and stocks of rubber was passed in 1934 but its enforcement was held up pending the preparation of the rules and bye-laws to be issued under it. The Act provides for the declaration by the Governor General in Council of export allotments for India and Burma respectively for a whole year whereas the practice of the International Rubber Regulation Committee which administers the rubber restriction scheme has been to fix the export allotments for the various contracting parties for six months or even three months. The present Act amends the original Act so as to bring its provisions in this respect into conformity with the practice of the International Rubber Regulation Committee. S 2 amends certain definitions contained in the original Act so as to bring them into accord with the provisions of the Inter Governmental Agreement.

16 The Bangalore Marriages Validating Act— A Missionary of the Plymouth Brethren was in the year 1929 granted by the resident in Mysore a licence under the Indian Christian Marriage Act, 1872 as applied to the Civil and Military Station of Bangalore to solemnise marriages within the territories included in the Civil and Military Station of Bangalore between persons one of whom was a Native Christian subject of Mysore, and neither of whom was a Christian subject of His Majesty. The missionary in the belief that he was authorised so to do solemnised certain marriages in the Civil and Military Station of Bangalore between certain Christian subjects of His Majesty. The present Act validates these marriages which though irregular were solemnised in good faith by the Missionary.

17 The Indian Tea Control (Amendment) Act— The Indian Tea Control Act 1933 which gave effect to the International Agreement relating to the tea control scheme, set up an

Indian Tea Licensing Committee for the whole of British India, including Burma, and restricts the total annual exports of tea from British India, including Burma, to the amount of the Indian Overseas Export Allotment for the year. But with effect from the date of separation of Burma from India it will be necessary to have separate Licensing Authorities and separate Overseas export allotments for British India and Burma. The present Act gives effect to that object. S. 4 provides for the constitution of the Burma Tea Licensing Authority. Under s. 6 the Indian Overseas Export Allotment for any financial year after the financial year ending on March 31, 1937, will not include the Overseas export allotment for the Province of Burma, but the Governor General in Council is empowered to declare a separate Burma Overseas Export Allotment.

18 The Red Cross Society (Allocation of Property) Act—In view of the impending separation of Burma from India it was proposed to set up a separate Red Cross Society in Burma with a share of the capital at present vested in the Indian Red Cross Society by the Indian Red Cross Society Act 1920. The present Act gives effect to this proposal. Under s. 2 an amount equal to seven per cent of the corpus of the property vested in the Indian Red Cross Society will be set apart to be administered in the province of Burma as a trust by a body of trustees, the High Court of Judicature at Rangoon may appoint. S. 3 provides for the dissolution of the Indian Red Cross Society Burma Branch as soon as the apportioned property is transferred to the trustees.

19 The General Clauses (Amendment) Act—This Act makes it clear that the repeal of an amending Act which has made textual alterations in the parent Act does not affect the continuance of the amendments made by it. Under s. 2 where any act of the Governor General in Council or regulation made after the commencement of this Act repeals any enactment by which the text of any Act of the Governor General in Council or regulation was amended the repeal will not affect the continuance of any amendment made by the enactment so repealed.

20 The Chittagong Port (Amendment) Act—The Chittagong Port (Amendment) Act 1928 provided *inter alia* for the transfer to the Governor General in Council of certain powers conferred by the principal Act on the Local Government. The exercise of these powers by the Governor General in Council showed the desirability of carrying out certain further amendments in the principal Act. The present Act makes these amendments, most of which are of a formal nature and are based on the practice and legislation in force at the other Major Ports in India. The two most important ones are those which empower the Port Commissioners to frame bye laws subject to the approval of the Governor General in Council, for the grant of gratuities and compassionate allowances to the surviving relatives of their employees who die while in service and to authorise the starting or welfare funds for their staff.

21 The Code of Civil Procedure (Amendment) Act—This Act is the outcome of the recommendations of the Royal Commission on Labour in India to the effect that in the case of

industrial workers in receipt of wages less than rupees one hundred a month arrest and imprisonment for debt should be abolished except where the debtor has been proved to be both able and unwilling to pay. The Act amends the Civil Procedure Code 1908, so as to protect honest debtors of all classes, and not of the industrial worker class only from detention in a civil prison and confines such detention to debtors proved to be recalcitrant or fraudulent. S. 2 provides that where the decree is for the payment of money execution by detention in prison will not be ordered unless the debtor has been given opportunity of showing cause why he should not be committed to prison and the Court is satisfied for reasons recorded in writing (a) that the debtor is likely to abscond or leave the local limits of the jurisdiction of the Court or has after the institution of the suit dishonestly transferred, concealed or removed any part of his property or (b) that the debtor has the means to pay the amount of the decree or some substantial part thereof otherwise than from protected assets and refuses or neglects to pay the same or (c) that the decree is for a sum for which the debtor is bound in a fiduciary capacity to account.

22 The Indian Companies (Amendment)

Act—For some considerable time Government had under consideration the overhaul of the law relating to companies. Substantial material had accumulated in the form of communications and suggestions from Local Governments, public bodies and individuals supplemented by publications in the press indicating unanimity of opinion that the Indian Companies Act required fairly extensive changes. The opinions received disclosed a demand for power to deal with mushroom and fraudulent companies for changes in the provisions relating to the issue and contents of prospectuses for increased disclosure to shareholders of the financial position of companies and for increased rights to shareholders in connection with the management of companies, for modification of the present law applicable to managing agents, for changes in the provisions applicable to winding up for special provisions to govern banking companies and for numerous other improvements.

In September 1934 the Government of India placed a paper with experience in the administration of company law on special duty to examine the material collected and to make proposals for the amendment of the Indian law. These proposals were further discussed by a small committee of business experts specially convened for the purpose. The amendments made by the present Act are the result of the proposals and discussions. The following are some of the salient features of the Act, which came into force on January 15, 1937.

Section 2 defines certain terms. Manager means a person who, subject to the control and direction of the directors has the management of the whole affairs of a company. Managing agent means a person firm or company entitled to the management of the whole affairs of a company by virtue of an agreement with the company and under the control and direction of the directors except to the extent otherwise provided for in the agreement. Private company means a company which by its articles (a) res-

tricts the right to transfer the shares and (b) limits the number of its members to fifty, not including persons who are in the employment of the company and (c) prohibits any invitation to the public to subscribe for the shares or debentures of the company. Where the assets of a company consist in whole or in part of shares in another company and the amount of the shares so held is more than fifty per cent of the issued share capital of that company or such as to entitle the company to more than fifty per cent of the voting power in that other company, or the company has power to appoint the majority of the directors of that other company—that other company is deemed a subsidiary company under the Act. The original Act prohibits partnerships exceeding a certain number. Under s. 3 of the present Act any person who is a member of a company, association or partnership formed in contravention of the above provision is punishable with fine up to one thousand rupees. This provision does not apply to a joint family carrying on joint family trade or business. Under s. 7 in the absence of express provision in the memorandum a company is competent to alter its objects so as to enable it to sell or dispose of the whole or any part of the undertaking of the company or to amalgamate with any other company or body of persons. Under s. 10 a member of a company is not bound by an alteration made in the memorandum or articles after the date on which he became a member if the alteration requires him to subscribe for more shares than the number held by him at the date on which the alteration is made, or in any way increases his liability. Under s. 12 every copy of the memorandum or articles issued after the date of the alteration must be in accordance with the alteration made, otherwise the company will be liable to a fine up to ten rupees for each unaltered copy so issued. S. 14 requires every company having more than fifty members to keep an index of the names of the members of the company. Failure to do so is made punishable with a fine up to fifty rupees. Under s. 15 the first list of members in the case of a newly formed company must be prepared within eighteen months from its incorporation. Under s. 16 an application for the registration of the transfer of shares in a company may be made either by the transferor or the transferee. In the case of such an application by the transferor where the shares are not fully paid up no registration can be effected unless the company has given notice of the application to the transferee and the company must, unless objection is made by the transferee within two weeks from the date of receipt of the notice, enter in its register of members the name of the transferee. If a company refuses to register the transfer of any shares or debentures, the company must within two months from the date on which the instrument of transfer was lodged send to the transferee and the transferor notice of the refusal. If default is made in complying with the above provision the company will be liable to a fine not exceeding fifty rupees for every day during which the default continues. This section does not affect the right of a company to refuse to register a transfer of shares where that right exists by virtue of the articles. S. 21 does not require a special resolution but only the authority of the company in general meeting for a change in the memorandum. S. 24 places restrictions

on the purchase by a company or loans by a company for the purchase of its own shares. The penalty prescribed for contravening this provision is fine up to one thousand rupees. Under s. 25 if in the case of a company provision is made by the memorandum or articles for authorising the variation of the rights attached to any class of shares in the company, and in pursuance of the provision the rights attached to such class of shares are varied the holders of not less in the aggregate than ten per cent of the issued shares of that class, being persons who did not consent to the variation, may apply to the Court to have the variation cancelled. S. 30 requires a company to have a registered office from the date on which it begins to carry on business or from the twenty-eighth day after the date of its incorporation, whichever is earlier. Notice of the situation of the registered office and of any change therein must be given to the Registrar within twenty-eight days after the date of the incorporation of the company or of the change. Penalty for non-observance of these provisions is fine up to fifty rupees for every day during which a company so carries on business. Under s. 31 a general meeting of every company must be held within eighteen months from the date of its incorporation. The statutory meeting of every company having a share capital must be held within a period of not less than one month nor more than six months from the date at which the company is entitled to commence business. S. 34 deals with the provisions as to meetings and votes. Notwithstanding any provision made in the articles of a company a meeting of the company may be called by not less than fourteen days' notice in writing, notice of the meeting with a statement of the business to be transacted at the meeting must be served on every member, the accidental omission to give notice to or the non receipt of the notice by, any member will not invalidate the proceedings at the meeting, five members present in person or by proxy, or the Chairman of the meeting or any member or members holding not less than one-tenth of the issued capital which carries voting rights are entitled to demand a poll, an instrument appointing a proxy if in the form set out in regulation 67 of Table A cannot be questioned on the ground that it fails to comply with any special requirements specified for such instruments by the articles. S. 37 requires the books containing the minutes of proceedings of any general meeting of a company to be kept at the registered office of the company and during business hours must be open to the inspection of any member without charge, a member is entitled, at any time after seven days from the meeting, to be furnished, within seven days after he has made a request, with a copy of the minutes at a charge not exceeding six annas for every hundred words. If inspection is refused or a copy is not furnished within the time specified, the company is liable in respect of each offence to a fine up to twenty-five rupees. S. 38 increases the minimum number of directors of the company to three. Under s. 39 not less than two thirds of the whole number of directors must be persons whose period of office is liable to determination by retirement of directors in rotation. S. 42 provides for the control of directors. An undischarged insolvent cannot act as director or managing agent or manager of any company. If he does so he will

be liable to imprisonment for a term not exceeding two years or to a fine up to one thousand rupees. A director or manager of a company cannot assign his office to another person unless the assignment is approved by special resolution of the company. Temporary appointments of alternate or substitute directors do not constitute an assignment of office, if made with the approval of the Board of Directors. A company is prohibited from making any loan to a director of the company. Punishment for a breach of this provision is fine up to five hundred rupees. This provision is however inapplicable to certain classes of private companies and to banking companies. A director cannot without the consent of the company in general meeting hold any office of profit under the company except that of the managing director or manager or a legal or technical adviser or a banker. The office of managing agents is not deemed to be an office of profit under the company. A director cannot without the consent of the other directors enter into contracts for the sale, purchase or supply of goods and materials with the company. The company may by extraordinary resolution remove any director before the expiration of his period of office and may by ordinary resolution appoint another person in his stead. A director so appointed cannot be re-appointed a director by the Board of Directors. The directors of a public company or of a subsidiary company of a public company cannot except with the consent of the company concerned in general meeting—
(a) sell or dispose of the undertaking of the company
(b) remit any debt due by a director
Provision is made for vacation of office by a director if (a) he fails to obtain within the time specified or at any time thereafter ceases to hold the share qualification necessary for his appointment or (b) he is found to be of unsound mind by a court or (c) he is adjudged an insolvent or (d) he fails to pay calls of shares held by him within six months or (e) he accepts without the sanction of the company any office of profit under the company or (f) he absents himself from three consecutive meetings of directors or from all meetings of the directors for a continuous period of three months without leave of absence or (g) he accepts a loan from the company or (h) he enters into contracts with the company without the consent of the other directors.

Section 44 deals with managing agents. A managing agent cannot be appointed to hold office for a term of more than twenty years at a time. A managing agent of a company appointed before the commencement of this Act cannot continue to hold office after the expiry of twenty years from the commencement of the Act. A managing agent whose office is so terminated will be entitled to a charge upon the assets of the company by way of indemnity for liabilities undertaken by him on behalf of the company. Provision is also made to secure to the managing agent loans made by him to the company and remuneration due to him at the time of the termination of the managing agency. A company may remove a managing agent if he is convicted of a non-bailable offence committed in relation to the company. The office of a managing agent will be vacated if he is adjudged insolvent. A transfer of his office by a managing agent will be void unless approved by the company in general meeting. A charge or assignment of

his remuneration effected by a managing agent will be void against the company. If a company is wound up any contract of management made with a managing agent will thereupon be determined without prejudice to the right of the managing agent, to recover any moneys from the company. If the negligence or misconduct of the managing agent itself conduces to the winding up the managing agent will be debarred from recovering compensation for the consequent termination of his contract. The appointment of a managing agent, the removal of a managing agent and any variation of a managing agent's contract of management made after the commencement of the Act will not be valid unless approved by the company. The remuneration of a managing agent will be a sum based on a fixed percentage of the net annual profits of the company, with provision for a minimum payment in the case of absence of or inadequacy of profits together with an office allowance to be defined in the agreement of management. This provision is not applicable to private companies and insurance companies. A company is prohibited from making any loan to a managing agent. Except with the consent of three-fourths of the directors present and entitled to vote on the resolution a managing agent of the company cannot enter into any contract for the sale, purchase or supply of goods and materials with the company. The making of loans between companies under the same management is prohibited. Purchase by a company of the shares of another company under the same managing agent is prohibited unless the purchase is approved by a unanimous decision of the board of directors of the purchasing company. A managing agent cannot exercise a power to issue debentures and except with the authority of the directors he cannot invest the funds of the company. A managing agent cannot on his own account engage in any business which is of the same nature and directly competes with the business carried on by the company under his management. The directors appointed by the managing agent must not exceed in number one-third of the whole number of directors. S 45 empowers a person to execute deeds on behalf of a company in any place situated either in or outside British India. Under s 46 a register must be kept by the company to ensure that shareholders may obtain information about contracts in which directors of the company are interested. S 50 provides for the disclosure of certain details in the prospectus of a company, e.g., information about the underwriting of shares, the names of the underwriters and the opinion of the directors that the resources of the underwriters are sufficient to discharge the underwriting obligations, a balance sheet, to be appended to the prospectus, for a period of twelve months in respect of a business purchased or proposed to be purchased by the company, the disclosure of discount paid in respect of shares issued, to the managing agents, full information in respect of property purchased or to be purchased, e.g., as to the charges on such property, disclosure of full information as to subsidiary companies and the sources from which the purchased company has found the money for its recent dividends, etc. Under s 54 a document offering shares or debentures for sale is deemed to be a prospectus issued by the company. S 55 is aimed at discouraging

floatation of companies with insufficient capital. No allotment can be made of any share capital of a company unless the amount stated in the prospectus as the minimum amount has been subscribed, and the sum of at least five per cent thereof has been paid to the company. The matters for which provision for the raising of a minimum amount of share capital must be made by the directors are the following, namely: (a) the purchase price of any property purchased or to be purchased, (b) any preliminary expenses and commission payable by the company, (c) the repayment of any moneys borrowed in respect of the foregoing matters, and (d) working capital. S. 59 is concerned with a company's power to issue shares at a discount, the issue of redeemable preference shares and the issue of further shares to increase the capital of the company. Under s. 63 where a receiver of the property of a company has been appointed, every invoice, order for goods, or business letter issued by the company must contain a statement that a receiver has been appointed. S. 70 provides that the directors must attach to every balance sheet a report with respect to the state of the company's affairs, the amount which they recommend by way of dividend and the amount which they propose to carry to the Reserve Fund, General Reserve or Reserve Account. Under s. 72 the balance sheet of the holding company must include particulars as to the subsidiary company e.g. the balance sheet, profit and loss account and auditors' report of the subsidiary company. The holding company is empowered to inspect the books of account of subsidiary companies and has rights in respect of them to demand investigation. S. 81 empowers the auditors of a company to attend any general meeting of the company to explain the accounts. S. 82 gives the trustees for debenture holders the right to receive and inspect the balance sheets, profit and loss accounts and auditors' report. Under s. 86 the liability of a contributory will create a debt payable at the time specified in the calls made on him by the liquidator and under s. 87 the surviving coparceners of a contributory who is a member of a Hindu joint family governed by the Mitakshara school of Hindu law are deemed to be his legal representatives and heirs. S. 89 empowers the Registrar to apply for the winding up of a company and defines the circumstances in which the power may be exercised. S. 92 provides that after a winding up order is made by the Court a public official will automatically become the liquidator unless some other person is appointed by the Court. Under s. 96 where the Court has made a winding up order a statement as to the affairs of the company must be submitted to the official liquidator containing certain specified particulars. The official liquidator is also required to submit a preliminary report to the Court as to certain specified matters. S. 98 deals with the constitution of a committee of inspection in compulsory winding up. The committee must not consist of more than twelve members being creditors and contributories of the company. The Committee has the right to inspect the accounts of the official liquidator. Under s. 105 where it is proposed to wind up a company voluntarily, the directors of the company are required to make a declaration, which must be supported by a report of the company's auditors, to the effect that after having made a full inquiry into the affairs of the company, they

have formed the opinion that the company will be able to pay its debts in full within a period of three years from the commencement of the winding up. This is referred to in the Act as a members' voluntary winding up. A winding up in the case of which a declaration has not been made is referred to as a creditors' voluntary winding up. There are certain provisions which are applicable to a members' voluntary winding up e.g., the company is empowered to appoint and fix the remuneration of the liquidator, the liquidator is empowered to receive shares, policies, etc., as consideration for sale of the property of the company for distribution among the members of the company, when the affairs of the company are fully wound up the liquidator must call a general meeting of the company for the purpose of laying before it the accounts, within one week after the meeting the liquidator must send to the Registrar a copy of the account and on the expiration of three months from the registration of the account the company will be deemed to be dissolved. The following are some of the provisions applicable to a creditors' voluntary winding up. The company must cause a meeting of the creditors of the company to be summoned and the directors must put before the meeting a full statement of the position of the company's affairs together with a list of the creditors of the company and the estimated amount of their claims, the directors must appoint one of their number to preside at the aforesaid meeting, the creditors and the company may nominate a person to be liquidator, the creditors are empowered to appoint a committee of inspection consisting of not more than five persons, the committee of inspection or the creditors are empowered to fix the remuneration of the liquidator, when the affairs of the company are fully wound up the liquidator must call a general meeting of the company and a meeting of the creditors for laying the account before the meetings, within one week after the date of the meetings the liquidator must send to the Registrar a copy of the account and on the expiration of three months from the registration of the account the company will be deemed to be dissolved. The following are some of the general provisions applicable to every voluntary winding up. The property of a company subject to preferential payments on its winding up must be applied in satisfaction of its liabilities *pari passu*, and subject to such application must be distributed among the members according to their rights and interests in the company. The liquidator has *inter alia* the power of settling a list of contributories, of making calls and of summoning general meetings of the company. A liquidator must pay the debts of the company and must adjust the rights of the contributories among themselves. The court is authorized, on cause shown, to remove a liquidator and appoint another. Costs of a voluntary winding up, subject to the rights of secured creditors, must be payable out of the assets of the company in priority to all other claims. S. 106 adds the following items receiving priority in a winding up—(a) compensation payable under the Workmen's Compensation Act, 1923, (b) sums due to an employee from a provident fund, a pension fund, a gratuity fund or any other fund and (c) the expenses of any investigation of the affairs of a company by inspectors on a report made by the registrar. S. 107 empowers the liquidator

where any part of the property of a company which is being wound up consists of land of any tenure burdened with onerous covenants, of shares or stock in companies, of unprofitable contracts or of any other property that is unsaleable or not readily salable to disclaim the property with leave of the Court at any time within twelve months after the commencement of the winding up. The disclaimer will operate to determine from its date, the rights, interest and liabilities of the company. Any person injured by the operation of a disclaimer will be deemed to be a creditor of the company to the amount of the injury and may prove the amount as a debt in the winding up. Under s 113 the liquidator of a company which is being wound up by the Court must pay the money received by him into a scheduled bank. S 116 provides for the winding up of companies incorporated outside British India which have been carrying on business in British India, notwithstanding that these have been dissolved under laws of the country under which they were incorporated. Under s 117 if the balance sheet of a company incorporated outside British India does not contain all the information required under the Act it must file supplementary statements giving the essential information. Every such company must if the liability of its members is limited give full information of the fact. S 118 prohibits the sale and offer for sale of shares of a company incorporated or to be incorporated outside British India unless certain specified conditions as to the prospectus and the form of application for shares or debentures are fulfilled. Penalty for the issue of a prospectus or a form of application in contravention of the provisions of the section is fine up to five thousand rupees.

Section 119 contains special provisions applicable to banking companies. A banking company is defined as a company which carries on as its principal business the accepting of deposits of money on current account or otherwise subject to withdrawal by cheque, draft or order. It may in addition engage in any one or more specified forms of business enumerated in the section e.g. act as agents for Government or local authorities, contract for public or private loans and negotiate and issue the same, carry on and transact every kind of guarantee and indemnity business, underwrite and execute trusts and undertake the administration of estates, executor or trustee. A banking company whether incorporated in or outside British India cannot after expiry of two years from the commencement of the Act carry on any form of business not specified in the section. After the expiry of the same period a banking company cannot employ or be managed by a managing agent. A banking company cannot commence business unless shares have been allotted to an amount sufficient to yield a sum of at least fifty thousand rupees in working capital and unless a declaration that the sum has been received by way of paid up capital has been filed with the Registrar. Every banking company must out of the declared profits of each year and before any dividend is declared transfer a sum equivalent to not less than twenty per cent of such profits to a reserve fund until the amount of the fund is equal to the paid up capital. It must also maintain by way of cash reserve in cash

a sum equivalent to at least one and a half per cent of the time liabilities and five per cent of the demand liabilities of such company. If a banking company has subsidiary companies these must not be anything but banking companies. On the application of a banking company which is temporarily unable to meet its obligations the Court is empowered to make an order staying the commencement or continuance of all actions and proceedings against the company for a fixed period of time. S 121 penalises misapplication of the property of a company by an officer or employee of the company and prevents misuse of securities lodged with a company by its employees under their contracts of service and safeguards provident funds.

23 The Durgah Khawaja Sahab Act.—This Act changes the constitution of the Committee of the Durgah Khawaja Sahab Ajmer, by reducing the term of office of the members from life to five years and increases the number of independent Muslim members in the Committee so as to provide for popular and effective control over the Durgah Hazrat Khawaja Moinuddin Chisti and the Endowments attached thereto and ensures the proper collection of income, disbursement of expenditure, maintenance and publication of the accounts and observance of discipline in the Durgah.

24 The Cantonments (Amendment) Act.—Section 2 defines certain terms and phrases used in the Act. Building includes a wall other than a boundary wall. Fitted consumer means a person in a cantonment who is paid from the Defence Services Estimates and is authorised by order of the Governor General in Council to receive a supply of water for domestic purposes from the Military Engineer Services or Public Works Department. Military Estates Officer means the officer appointed by the Governor General in Council to perform the duties of the Military Estates Officer. Under s 3 the special power of modifying the Act in its application is confined to cases where a Board is superseded under s 54 of the original Act and to cantonments in Presidency towns. S 5 provides for the incorporation of a Cantonment Board and the appointment of an Executive Officer for every cantonment. The Executive Officer must be appointed by the Governor General in Council from a Service of Executive Officers constituted and controlled by Government. The Executive Officer will be the Secretary of the Board and of every Committee of the Board but he cannot be a member of the Board or of any such Committee. Cantonments are divided into three classes namely:—(i) Class I Cantonments in which the civil population exceeds ten thousand; (ii) Class II Cantonments in which the civil population exceeds two thousand five hundred but does not exceed ten thousand; and (iii) Class III Cantonments in which the civil population does not exceed two thousand five hundred. In Class I Cantonments the Board must consist of the following members, namely:—(a) the Officer Commanding the Station; (b) a Magistrate of the First Class nominated by the District Magistrate; (c) the Health Officer; (d) the Executive Engineer; (e) four Military Officers nominated by name by the Officer Commanding the Station.

(f) seven members elected under this Act. The personnel of the Boards of Class II and Class III Cantonments is also specified. The Governor General in Council is empowered in the case of (a) Military operations or (b) serious administrative troubles, to replace the Board in any cantonment by a Board consisting of the following members, namely—(a) the Officer Commanding the Station (b) one military officer nominated by the Officer Commanding the Station (c) one member not being a person in the service of the Government nominated by the Officer Commanding the Station. The term of office of such a Board is limited to one year, subject to extension by periods of not more than one year at a time and also subject to the condition that the Governor General in Council must restore the former Board if the extraordinary reasons necessitating its abrogation have ceased to exist. Under s 6 the Governor General in Council is authorised to extend the term of office of all the elected members of a Board by one year in order to avoid administrative difficulty. Under s 7 in every Board in which there is more than one elected member there must be a Vice President elected by the elected members only and from among their number. The term of office of a Vice President will be three years or the residue of his term of office as a member whichever is less. Under s 17 every Board constituted in Class I Cantonment or Class II Cantonment must appoint a Committee consisting of the elected members of the Board, the Health Officer and the Executive Engineer for the administration of areas in the cantonment declared by the Governor General in Council to be bazar areas and may delegate its powers and duties to such Committee. The Vice President of the Board must be the Chairman of the Committee. Under s 19 every Board must submit to the Governor General in Council a report on the administration of the cantonment. S 23 empowers the Board, with the previous sanction of the Local Government to impose taxes in a cantonment. S 45 prohibits the erection or re erection of a building on any land in a cantonment without the previous sanction of the Board. Under s 46 the Board may refuse to sanction the erection or re erection of any building, either on grounds sufficient in the opinion of the Board affecting the particular building, or in pursuance of a general scheme sanctioned by the Officer Commanding in Chief the Command, restricting the erection or re erection of buildings within specified limits for the prevention of over crowding or in the interests of persons residing within

such limits or for any other public purpose. The Board, before sanctioning the erection or re erection of a building on land which is under the management of the Military Estates Officer must refer the application to the Military Estates Officer for ascertaining whether there is any objection on the part of Government to such erection or re erection. The Board may refuse to sanction the erection or re erection of any building (a) when the land on which it is proposed to erect or re erect the building is held on a lease from Government, if the erection or re erection constitutes a breach of the terms of the lease, or (b) when the land is not held on a lease from Government, if the right to build on it is in dispute between the person applying for sanction and the Government. Under s 49 a Board when sanctioning the erection or re erection of a building must specify a reasonable period after the work has commenced within which it is to be completed and if the work is not completed within the period so fixed it cannot be continued without obtaining fresh sanction unless the Court has allowed an extension of that period. The Board cannot allow more than two such extensions. Under s 51 a Board must direct the owner, lessee or occupier of any land in the cantonment to stop the erection or re erection of a building, in any case in which the order sanctioning the erection or re erection has been suspended by the Officer Commanding in Chief the Command and pursuant to the latter's order must direct the demolition or alteration of the building or any part thereof. The Board must pay to the owner of the building compensation for any loss actually incurred by him in consequence of the demolition or alteration of any building which has been erected or re erected prior to the date on which the order of the Officer Commanding in Chief the Command has been communicated to him. Under s 59 the Board may receive from the Military Engineer Services or the Public Works Department, a supply of water, which must be a bulk supply adequate to the requirements for domestic use of all persons in the cantonment other than entitled consumers. The Board must not charge to the consumers of the water so supplied a rate calculated to produce more than the sum of the payments made by the Board for water received and the actual cost of the supply thereof by the Board to the consumers. Under s 63 no offence made punishable under the Act can be tried by any Magistrate or by any Bench of such Magistrate or any of the Magistrates comprising the Bench is a member of the Board.

India and the League of Nations.

India is a Founder-Member of the League of Nations and enjoys in it equal rights with other Member States, a position which she mainly owes to the goodwill shown towards her advancement and aspirations by Great Britain and the Self Governing Dominions of the British Empire. The League of Nations was established under the terms of the Peace Treaty which was signed in Paris in 1919 after the conclusion of the Great War. Great Britain and the Self Governing Dominions in 1917 passed a resolution which set India upon the road that led to the high international platform on which she stepped.

India was represented at the Imperial War Conference of 1918, at the Imperial Conferences held in London in 1921, 1923, and 1926, and at the Imperial Economic Conference held in London in 1930. The report of the Inter-Imperial Relations Committee of the Imperial Conference, which was adopted by the Conference of 1926, stated the position of Great Britain and the Dominions to be autonomous communities, equal in status, in no way subordinate to one another in any respect of their domestic or external affairs, though united by a common allegiance to the Crown and freely associated as members of the British Commonwealth of Nations. India is not yet a Self-Governing Dominion to the extent indicated in this formula. The first stage in the direction of establishing Responsible Government in India was prescribed by the Government of India Act, 1919, but the Governor-General of India does not yet (to quote again from the Inter-Imperial Relations Committee) hold in all essential respects the same position in relation to the administration of public affairs in India as is held by His Majesty the King Emperor in Great Britain. And there are certain other respects in which India's Constitutional position in the Empire is not the same as that of the Self Governing Dominions. India, for example is not entitled to accredit a Minister Plenipotentiary to the Heads of Foreign States.

The position enjoyed by India in the Empire governed the position which she entered when, as one of the States of the Empire she joined in the Paris Peace Negotiations in 1918. India's membership of the League of Nations places her in a unique position among all non self governing States, Dominions, or Colonies throughout the world. She is an original member of the League by virtue of para 1 of article I of the Covenant by which the League was established and which states that any fully self governing State, Dominion or Colony not named in the Annexes may become a member of the League. She is the only original member which is not self governing and in virtue of the restriction under para 11 of article I, on the admission of members other than original members she will so long as the present constitution of the League endures, remain the only member which is not self governing. As a member of the League, India was for the first time brought into direct and formal contact with the outside world as a separate entity.

She was treated as if she had attained to the same kind of separate nationhood as that enjoyed by the Dominions.

India's Attitude

On questions coming before the League, India has exactly the same rights as any other Member State. The Secretary of State for India in His Majesty's Government is ultimately responsible for the appointment of Indian delegates and for their instruction, but in practice, he and the Government of India act jointly in consultation and agreement with one another. Partly as a result of her membership of the League and partly owing to resolution No IX adopted by the Imperial War Conference in 1917, recommending *inter alia* recognition of the right of the Dominions and of India to an adequate voice in British foreign policy and foreign relations, India has been given the same representation as the Dominions at all international conferences at which the British Empire is represented by a combined Empire Delegation. On many occasions in fact she has taken the lead in forming world opinion towards the achievement of the League's aims. In particular in the international Labour organisation she has been successful in bringing Empire policy into line with her own on more than one occasion. In many of those conferences, particularly those of the League, Indian delegations have taken an independent line of action sometimes directly opposed to the attitude of other parts of the British Commonwealth. One interesting case occurred in 1920 at the Geneva Maritime Conference when Indian delegates in the face of opposition from the Empire managed to secure a mandate for special treatment for Indian sailors in British shipping although there was a concerted move from the Empire delegation to get Indian lascars driven off British ships.

India's New Status

It will be observed that the situation created by India's stepping from the Imperial Conference into the Paris Peace Conference and League of Nations in the manner in which she did was in certain respects highly anomalous and one impossible to harmonize with her constitutional position as defined in the Government of India Act. Nevertheless as the Secretary of State in a Memorandum presented to the Indian Statutory Commission by the India Office in 1929 showed, it has been the deliberate object of the Secretary of State to make India's new status a reality for practical purposes within widest possible limits. It was not legally possible for the Secretary of State to relinquish his constitutional power of control, nor, consistently with responsibility to Parliament, could he delegate it. But it has been his constant endeavour to restrict its exercise to a minimum to keep even its existence as far as possible in the background, and to allow to the Indian Government the greatest possible freedom of action under the influence of their Legislature and of public opinion."

There are available many illustrations of these principles being followed in practice. India is given scope to pursue in the League of Nations an independent line of action within very wide limits, even though, as has occurred in some instances it brings her into conflict with His Majesty's Government. In 1925, for example, at the conference on Opium and Drugs India so acted that the British delegation had to obtain fresh instructions from H. M. S. Government which resulted in India settling the question of Indian hemp to her own liking. In the event of such conflict within those limits, the Secretary of State acts, if he acts at all, as head of the Government of India rather than as a member of His Majesty's Government. He does not use his power to impose on the Indian Delegation an artificial solidarity with British Delegates but, rather, with the consent of his colleagues of His Majesty's Government, he stands aside and allows representatives of India the same freedom as Dominion Delegates would enjoy in controversy with the Delegates of Great Britain. India has participated in all the Assemblies of the League, in the annual session of the International Labour Conference where because of her individual importance she plays a very predominant part, and in numerous Conferences on special subjects held under the auspices of the League as well as in some important non-

League, International Conferences, including the Washington Conference on Naval Armament in 1921, in Genoa Economic Conference in 1922, and the International Naval Conference held in London in 1930. India is also represented on several permanent League bodies, e.g., the governing body of the International Labour Office, the Advisory Committee on Opium and Drugs, the Economic Committee, the Health Committee and the Committee of Intellectual Co-operation. Sir Atul Chatterjee from 1921 onwards acted as Deputy Commissioner of the Governing Body of the International Labour Office and this position was preliminary to his being elected Chairman in 1932.

The year 1932 saw the opening of a League of Nations **Bureau in Bombay** in response to the demands of successive delegations to Geneva. Its purpose is to keep in touch with representative Indian opinion so that Geneva and India may be brought closer together. The Bureau is maintained by the League of Nations without any contribution by the Government of India.

In the Report of the Indian Delegation in 1933, a recommendation was made for the appointment of a permanent Indian Delegate at Geneva, but Government have not yet seen their way to adopt the suggestion.

Labour in India.

GROWTH OF THE LABOUR PROBLEM.

India is and always has been a predominantly agricultural country and over sixty five per cent of her working population are dependent on the soil for their principal means of livelihood. Agriculture by itself, however does not always afford either to the agriculturist or to the agricultural labourer, the wherewithal for keeping body and soul together. Much the greater part of the land is divided up into small holdings which are in the hands of cultivating owners or of cultivating tenants who work on the fields themselves with as many members of their families as are able to do so. Little outside labour is employed and then only during busy spells such as at transplanting and harvesting. For the purely agricultural labourer employment on the land is casual and spasmodic and normally the cash wages earned by him are remarkably low for the contract of hiring often includes a mid day meal. Even for the members of the families of the cultivating owners and tenants employment on the land is seldom perennial and is mostly seasonal. It is necessary, therefore for both the smaller cultivators and the agricultural labourers to migrate frequently to the towns and cities in search of additional work in order to keep the wolf from the door but the migration is generally always of a temporary character and the agriculturists' contact with his land is seldom, if ever permanently broken. It is this pool—cultivating owners and tenants members of their families and the landless agricultural labourers—from which the manufacturing, transport mining and other industries of India draw the bulk of the labour which they require. Unlike the West where large congregations of workpeople have been completely divorced from the land and are permanently settled in industrial towns and cities the proportion of permanent town dwellers in India, as compared with the total population, is exceedingly small, and, as has already been pointed out above, the majority of Indian industrial workers return to and maintain their contact with the land. This point cannot be overemphasized because it is the most important factor for the proper appreciation and understanding of the several problems connected with Indian industrial labour.

It is no doubt true that in many instances it is the spirit of adventure or the lure of city life which draws the agriculturist from his land to the towns. In most cases, however the migration is due to the efforts of the jobber or a recruiting agent to secure the labour which his employer requires. Many must be the stories that are told to the illiterate and ignorant peasant of the attractions of employment in city industries—stories the telling of which in almost

all cases is followed by severe disillusionment—but still where needs must the devil drives and so the stream continues to flow. The duration of the stay in a town or city would depend on the extent of the need for cash. It may last only for a few weeks or it may extend to a few months. In many cases a member of an agriculturist's family may be required to work in a town or city for years in order to send home such remittances as he can from his meagre wages but even then there are always frequent returns home either for some festive occasion such as a marriage or for partaking in the obsequies and religious rites associated with a death in the family or for short spells of work on the soil during the busy season. Such workers become semi permanent town dwellers, and, as a result of the experience which they have gained, are able to secure employment in skilled jobs and to command higher wages and better conditions of work.

THE EARLIER FACTORY ACTS.

Up to almost the end of the nineteenth century there was no State control over conditions of employment in any industry in India. Employers were free to do what they liked with the result that Indian labour was exploited to the fullest extent possible. Hours of labour were inordinately excessive, rates of wages unduly low and other conditions of employment as bad as they possibly could be. There was no regulation of the age at which children could be employed, there were no periodical or weekly holidays, and there was no legislation to safeguard factory workers from injury through accidents caused by entanglement with unfenced machinery in motion. Employers thought only in terms of profit and forgetting the human factor in the labour which they employed considered their workpeople as a speechless and silent part of their factory plants to be worked to the limit of the endurance not of the workers but of the machinery. With the growth of factory organisation in India and the rapid development of her industries the minds of certain men, notably the late Mr Sorabjee Shapurjee Bengali, C.I.F., however began to be awakened to the existence of evils which by the standards of to day would be considered intolerable, and unceasing efforts at securing some improvement in conditions of work in factories resulted, notwithstanding strenuous and universal opposition at the time from all employers, in the passing of the first Indian Factories Act of 1881. This Act gave a limited measure of protection to children firstly, by prohibiting their employment in factories if they were under seven years

of age and also in two separate factories on the same day, secondly, by restricting their hours of employment to nine per day, and thirdly, by requiring that they should be granted four holidays in a month and also rest intervals in accordance with rules to be framed by local governments. The lower and upper age limits of children were fixed at seven and twelve respectively but the scope of the measure was greatly restricted by fixing the number of operatives necessary to constitute a factory at 100, by excluding from the operation of the Act those factories which did not work for more than four months in a year, and also by excluding all establishments which did not use mechanical power this last exclusion remaining absolute until 1922. The burden of proving that an employed person was over seven or twelve years of age as the case might be was placed on the person accused of employing any one contrary to the law. The Act contained no restrictions in connection with the employment of adult labour but provision was made for the fencing of such parts of machinery as would be dangerous if left unfenced and for the reporting of accidents. The appointment of inspectors and certifying surgeons was left to the discretion of local governments, and the work of inspection, like most other duties at that time, was thrown at once on the district officers in all provinces. District officers had neither the time nor the necessary technical knowledge for the adequate inspection of factories and it was not long before the 1881 Act became almost a dead letter in most provinces.

Early in 1882, the Coroner of Bombay reported an incident where a boy of 15 after working 14 hours in a mill including the whole night, was killed by being entangled in a cog wheel. Of all the provincial governments in India, the Government of Bombay has always taken a progressive lead in matters connected with labour, and following the Coroner of Bombay's report, the Bombay Government obtained the services of an English Inspector of Factories, Mr. Meade King, for a period of six months to study and make a report on the working of the 1881 Act. His recommendations included the alteration in the age limits of children from seven to 12 to eight to 13, the limitation of their hours of work to six per day, the restriction of the hours of work for females to day light, the creation of a "young persons" class to include all up to 16 and the limitation of their hours of labour and the abolition of the clause limiting the definition of 'factories' to works employing at least 100 persons. Mr. Meade King's report was followed up by a Factories Commission appointed by the Government of Bombay in 1884 to consider whether any further legislative measures were necessary. The evidence taken by the Commission confirmed the view that conditions were worst in the smaller factories, and particularly in upcountry ginning factories. Many of these factories employed less than 100 persons, and the clause excluding factories which did not work for more than four months had been expressly introduced with the object of exempting them all from the operation of the Act. The work was carried on mainly by women and evidence given by all the witnesses

familiar with the conditions—nearly all men engaged in the management of factories—was described by the Commission as "a sad tale of great want on the one side and cruel cupidity on the other." Women were employed for long periods for 23 hours a day, two or three hours being the longest time for which they could be absent. They were kept at work continuously till they were exhausted (and they were said to die frequently as a result of overwork) and were then replaced by fresh women, if they could be found. In the busiest season the hands worked for several days and nights without stopping. There was no other work available, and the wage was 3 to 4 annas for a day of 16 hours with, at times, half an anna as bonus for longer hours. The factories were nearly all ill ventilated and they were covered by corrugated iron roofs in many cases, while the machinery was generally unfenced. The mentality of the time may be judged from the fact that the Commission with their professed desire to be moderate in their findings urged that in factories working for less than six months in a year, women and children should be employed daily for *only* 16 hours with two hours rest!

The stout opposition put up by employers all over India at the time against further advance in legislation for the control of working conditions in factories made it very difficult for Government to proceed as expeditiously as they could have wished in the matter, but, at the same time, Government were not unmindful of the need for securing as much evidence as possible of prevailing conditions in order to complete their case for greater regulation. Large meetings of textile mill workers were organised in Bombay City by persons interested in labour welfare and memorials praying for better conditions of work in factories were submitted to Government. One such memorial submitted in 1884 demanded (1) a complete day of rest every Sunday, (2) a recess of half an hour, (3) the limitation of hours of work from 6.30 a.m. to sunset, (4) compensation for injuries and disablement and (5) the payment of wages not later than the 15th of the month following that in which they were earned. It is significant that periods of forty and more than fifty years had to elapse before the fourth and the fifth of these very elementary demands of factory workers in India were granted by the State.

A landmark in the history of factory legislation in India was a memorandum on conditions of work in factories in the Bombay Presidency which was submitted to Her Majesty's Chief Inspector of Factories in England in 1886 by Mr. James Jones, an English Factory Inspector who was appointed by the Government of Bombay in 1883 as the first permanent special Inspector of Factories in India. Mr. Jones' memorandum was incorporated by the British Chief Inspector of Factories in his report for 1886-87 and it makes harrowing reading. Most factories worked from daybreak to sunset, Sundays were usually working days and, if they were holidays, they had to be used for cleaning the frames. There were no proper intervals for rest or meals. Both women and children were worked for excessively long hours. Ventilation

lation in most factories was extremely bad and sanitation left much to be desired. Mr Jones urged that pressure on the Government of India from the Home Government was necessary. In March 1889, the Government of India after consulting local Governments, forwarded to the Secretary of State for India, definite proposals for the modification of the 1881 Act. The main amendments suggested were (1) the reduction of the number of workers necessary to constitute a factory to 20, (2) the raising of the lower age of children to nine, and (3) the restriction in the hours of work for women to 11. At the suggestion of the Bengal Chamber of Commerce and the Indian Jute Manufacturers Association, another Factories Commission was appointed in 1890 to enquire into factory conditions in Bengal, Bombay, the North West Provinces and Oudh. On this occasion, female operatives were strongly opposed to any limitation of their hours of work if a similar limitation were not made for the hours of male operatives and the Commission therefore recommended that the Government should have power to exempt any or all women from the clause limiting their hours to 11 daily.

THE FACTORIES ACT OF 1891

It is not necessary for the purposes of this note to trace the various stages leading up to the passing of the 1891 Amending Act and it will be sufficient to state that, as finally passed, it represented a big advance on the Act of ten years before. The main features of the new Act were (1) the reduction in the number of persons necessary to constitute a factory from 100 to 50 and the grant of the power to local Governments to notify concerns employing 20 or more persons as factories, (2) a compulsory stoppage of work for half an hour between noon and 2 p.m. for all operatives except those employed in factories working on the basis of approved shifts, (3) provision for weekly holidays, (4) the fixation of the lower and upper limits of the age of 'children' at nine and 14, the limitation of their daily hours of work to seven and to day light, and the prohibition of their employment in dangerous work, and (5) the limitation of the daily hours of work of women to 11, the restriction of their employment during 8 p.m. and 5 a.m., and the provision that if women were worked for the full eleven hours permitted by the Act they should be given rest intervals amounting in the aggregate to at least an hour and a half per day. Government accepted the recommendation of the Commission of 1890 for the exemption of any or all women from the operation of the regulation of their daily hours of work and a wide exempting clause was added in the 1891 Amending Act. The Act was regarded generally as the final word on the question of factories and His Excellency Lord Lansdowne speaking in the Legislative Council at the time said, 'We believe that the effect of our measure will be to place factory labour in India on a proper footing and our Bill will be accepted here and at home not as a mere prelude to still further restrictions but a settlement as final as any settlement of such a question can be.'

Apart from the mass meetings of workmen which were organised in the eighties by humanitarian social reformers for the purpose of memo-

rialising Government for improvement of conditions of work in factories, Indian factory labour was almost up to the beginning of the twentieth century, a silent and unorganised factor in the huge industrial organisation that was rapidly coming into being in India. Trade unionism was non-existent and there was no channel through which the Indian workman could ventilate his grievances and ask for their redress. The strike as a weapon of defence against oppressive conditions was almost unknown and such industrial disputes as did occur soon terminated in favour of the employer owing to the unfettered power which he enjoyed of replacing all men who downed tools with black leg labour.

INTRODUCTION OF ELECTRICITY AND THE GREAT PLAGUE

The last decade of the nineteenth century saw the advent of two new factors in the field of industrial labour in India which were destined, for the time being at any rate, to worsen conditions in Indian factories. The first was the introduction of electricity for purposes of factory lighting and the second was the widespread epidemic of plague. By 1900, the majority of the cotton textile mills in Bombay City and almost all the jute mills in Bengal were lit by electricity, and by the end of that year the ravages of the great epidemic of plague, which first broke out in Bombay City in 1896 and soon spread to other centres in India, resulted in the reduction of the labour force in most centres to a third to a half of its normal strength. The immediate effect of these two events was a considerable increase in working hours. Many of the larger textile mills resorted to day and night working and evidence is not wanting that some mills worked their operatives continuously for stretches of fifteen to twenty hours per day. In Bombay City there were actually auctions for labourers at street corners. The weaker of both the cotton and the jute mills, however, began to be alarmed at the competition from the mills which worked day and night and many of the millowners were not unwilling that Government should step in and prohibit night working altogether. Factory industries were, however, saved from further restrictive measures owing to serious slumps which occurred in both the cotton and the jute trades at the beginning of the twentieth century. The problem of limiting hours of work of adult workers appeared to have solved itself and Government decided that no immediate action was necessary. The result was that an urgently needed reform was postponed by a decade.

The ravages caused by the plague were, however, not entirely devoid of some good effects. The heavy mortality caused by it had thinned the ranks of agricultural workers and the inequality between the demand for and the supply of labour naturally led to a considerable improvement in agricultural wages. Both cultivators and agricultural labourers felt that there was little need to search for additional work by migrating to the towns from where reports were continually forthcoming of excessive hours of work in factories which were lit by electricity. Such industrial workers as

remained in the towns therefore began to feel more independent than they did before and the beginning of the twentieth century saw the first awakenings of a sense of class consciousness among industrial workmen. They were less ready to submit to the old conditions, and wherever employers tried to force those conditions upon their workmen they were met by opposition. Black leg labour was not available to the same extent as before and a few stray strikes met with instantaneous success. These early successes led to disputes of a more widespread and concerted character—disputes which resulted in a general all round improvement in wages. Employers began to find that a spirit of bargaining was slowly but surely replacing the old tacit acceptance by the workers of such rates and conditions as they chose to offer during the earlier decades of the growth of Indian industrialism.

There was no further advance in factory legislation in India for twenty years after 1891. The period 1891-1911 was one of changing conditions and of investigation. It was also marked by intense industrial activity in the country. There was a rapid expansion in road and railway construction with a collateral activity in building engineering and mining. The number of factories rose from 656 in 1892 to 2,403 in 1911 and the average daily number of persons employed in these factories increased from 316,816 to 791,944 over the same period. The cotton and the jute industries showed top figures in this expansion and the demand for labour began to get more and more acute as years rolled on. A greater number of factories began to be lit by electricity and night working was quite a common feature in all branches of the textile industry. Most of the cotton and the jute mills however did not work on the basis of shifts as they do to day and the same batch of workpeople who entered a mill in the early hours of the morning were expected to continue working through the day and the evening into the late hours of the night. Hours of work in cotton mills in Bombay averaged fourteen and a half and in the jute mills in Bengal fifteen per day, and when one thinks in terms of averages one must not forget that in averaging there must be several units in frequencies higher than the average. The result of the scarcity of labour was to increase the interest of the employers in making conditions more attractive. The raising of wages was one step, the provision of houses was another. Inside the factory less was done to make industrial labour attractive. It was an axiom with a number of employers that labour did not object to long hours in the factory, and that the actual hours of work were not considered excessive by those who worked. The Inspector of Factories in Bengal however considered that the large number of strikes which were occurring in that province in the first decade of the present century were directly attributable to long hours. Criticising the belief that the Indian labourer 'preferred to do a little work over a long period than to work hard for a short period' he remarked that the latter system never appears to have been tried so that this opinion may be taken as mere supposition' and in his reports he pointed out on more than one occasion that in workshops, where hours had always been shorter

than in textile factories there was not the same difficulty in obtaining the labour required. In a few individual cases, the managements of some mills admitted that they had increased both their output and their profits substantially as a result of reductions in hours but it was to be at a much later date that these solitary instances were to receive more general confirmation.

As far as the hours of work of women factory workers were concerned, the 1891 Act had restricted them to eleven per day, but, owing to a fairly general demand from women for hours coincident with those for men, local Governments had granted several exemptions to individual factories and groups of factories permitting the employment of women during hours parallel with those for men. The restrictive provisions of that Act as far as the employment of women was concerned were therefore partially ineffective. It was hoped, however, that the reduction which the Act had made in the hours of work of children to seven per day would result in a diminution in the demand for child labour—hope that was not fulfilled, both on account of the acute shortage of adult male labour and the higher wages that were demanded by able-bodied men. The annual statistics of the average daily numbers of persons employed in factories show that whereas the numbers of men employed rose by a little over 147 per cent in 1911 as compared with 1892, similar increases in the numbers of women and children employed amounted to 164 and more than 175 per cent respectively. But over and above the employment of a comparatively larger proportion of children, there were flagrant evasions of the provisions of the Act both by the employment of under aged children and by compelling them to work for considerably longer than the permissible hours. Both the 1881 and the 1891 Acts had provided for certification but this was not compulsory and the burden of proving that a child whose illegal employment was complained of was not under the prescribed age rested with the accused. Convictions were difficult to obtain because both then as now there is much room for honest differences of opinion regarding the ages of Indian children. No certificates of fitness were necessary before children could be employed and employers were consequently left in a position to do much as they liked.

It is noteworthy that the lead in the matter of a statutory reduction in the hours of work of adult workers was given by the Bombay mill owners.

The agitation against "Sweated labour" conditions started by two of the leading newspapers and periodicals in India was soon taken up by the operatives and at a large meeting of mill workers held in Bombay City on the 24th September 1905 a demand was made for a twelve hour day. Frightened at the prospect of being faced with a general strike in the cotton mills in the city, the majority of the Bombay mills agreed to work a twelve hour day up to the 1st December and a thirteen hour day thereafter. The Government of India drew up a draft Bill and sent it to local Governments for opinion and this was soon followed by the appointment of a Committee (the Freer Smith Committee) to make a preliminary survey of hours

and conditions of work of persons of all ages and sexes employed in factories. The Committee recommended the restriction of the hours of adult workers to twelve per day and, following the Berne Convention of 1906, also recommended that night work for women should be prohibited.

APPOINTMENT OF FACTORY LABOUR COMMISSION OF 1907

The findings of the Freer Smith Committee made the appointment of a Commission inevitable and the Home Government in October 1907 announced the appointment of a Factory Labour Commission with seven members under the chairmanship of the Hon ble Mr (afterwards Sir) W. F. Morrison, I.C.S. The terms of reference were to investigate, in respect of all factories in India, the questions referred to Sir Hamilton Freer Smith's Committee, and the various suggestions and recommendations which that Committee has made. The Commission made a complete survey of factory conditions in India, and their report, which was published in 1908 gives a comprehensive account of conditions at the time and of the defects of the existing legislation.

The Commission endorsed the abuses and the variations of the 1881 and 1891 Acts in connection with the employment of children. They found that in Calcutta the headquarters of a factory inspector from 30 to 40 per cent of the children employed half time in jute factories were under the legal age of nine years and that 25 per cent of the young full timers were under the legal age of fourteen years. In 17 out of 29 cotton mills visited outside the Bombay Presidency all the children under 14 years of age were regularly worked the same hours as adults. In many factories the provisions of the Act with regard to the weekly holiday and the daily rest interval were more or less ignored. Factory inspectors admitted that they knew of the existence of these evils and also that they took no steps to stop them. The Commission stated that inspections of large factories by District Magistrates or Civil Surgeons was a useless formality so far as the administration of the factory law was concerned and they recommended that it should be abandoned.

As far as the findings of the Commission with regard to the question of the hours of work of adult males is concerned, it must be admitted, that looked at from the point of view of opinions held on the subject to day, they must appear to have been of a rather halting character. The Commission were unanimously of opinion that some limitation was essential but the majority were opposed to any direct limitation. Their arguments were —(1) that no case had been made out in favour of applying a principle which had not been accepted elsewhere, (2) that direct limitation involved a restriction of the working hours in all factories whereas such restriction was only necessary in textile factories, (3) that it would not be possible to enforce such a restriction owing to the necessarily small cadre of the inspecting staff, (4) that most capitalists were opposed to it, and (5) that if the working hours of adult males were limited to 12 or 13 per day, attempts would be made in the future

to restrict these hours still further. As far as women's hours were concerned, they actually proposed that the statutory maximum should be increased from 11 to 12. It is noteworthy that only one member (Dr Nair) dissented from the Commission's findings in the matter of adult hours. Dr Nair recommended a limitation in the hours of adult male workers to twelve per day and a continuation of the 11 hour day for women with less power to local Governments to grant exemptions. The findings of the Commission were circulated to all provincial Governments for opinions and, in the light of criticisms received, the Government of India drew up a fresh Bill to consolidate and amend the law regulating labour in factories. This Bill was introduced in the Governor General's Legislative Council in July 1909. In drafting the Bill the Government of India followed the proposals made by Dr Nair rather than by the majority of the Commission.

THE FACTORIES ACT OF 1911

Want of space prevents us from recounting the various stages through which the Bill had to go before it was finally passed on the 21st March 1911. It naturally evoked considerable opposition from all quarters but this was not so strong as that which met the proposals of Government in the eighties and the nineties. It is interesting however to observe that one association which submitted a last minute memorial to the Select Committee of the Legislative Council to whom the Bill had been referred, after alluding to the protest which in point of unanimity and emphasis has seldom if ever been equalled in the case of Indian legislative projects, prayed that even at this eleventh hour it is earnestly hoped that the revolutionary, dangerous and unnecessary legislation contemplated should not be persisted in.

The 1881 Act endeavoured to place a limitation on the hours of work of children employed in factories. The 1891 Act introduced a further limitation in children's hours and, for the first time, placed a limitation on the hours of work of women. The 1911 Act sought to make a beginning in the restriction of the hours of work of adult males by prescribing that men's hours in textile factories should not exceed twelve per day. It was not considered necessary to limit men's hours in other types of factories because it was believed that excessive hours were only to be found in the textile industry. Endeavours were made to prevent circumventions of the Act firstly by providing that mechanical power should not be used in textile factories for more than twelve hours per day, and secondly, by prescribing that no persons should be employed in any factory except between the hours of five thirty in the morning and seven in the evening. In both cases local Governments were vested with powers to grant relaxations in cases where factories worked on approved systems of shifts. The provisions of the 1891 Act in connection with women's hours were maintained but with the difference that the rest interval of an hour and a half prescribed for women who were made to work for the full permissible hours was reduced. This was done in order to limit the spreadover. Children's hours in textile factories were reduced to six per day and more

stringent measures were provided for inspection and certification. A compulsory rest interval of half an hour in the middle of the day was provided for all operatives except for those employed in continuous process factories. A number of provisions were made for the health and safety of the operatives and several changes designed to make inspection more effective and to both prevent and punish breaches of the Act were incorporated, but, at the same time, wide powers were given to local Governments to grant exemptions.

The 1911 Act was brought into force with effect from the 1st of July 1912. The administration of the new legislation did not prove to be as difficult as was anticipated partly because textile employers in particular were beginning to realise that longer hours with the same sets of operatives did not necessarily mean greater production and that reductions in hours of work wherever they had been brought into effect had not reduced efficiency. Substantial increases in the provincial factory inspection staffs did much to prevent evasions of the Act but the abuse of the employment of children in two separate factories on the same day began to assume more serious proportions after the passing of the 1911 Act. The reduction in children's hours in textile factories, coupled with the exclusion of many children owing to stricter certification, led to a serious restriction in the supply of child labour, and in some centres many a child worked a full day under two names and with two certificates.

THE ADVENT OF THE GREAT WAR.

Matters in connection with the administration of the Factories Act of 1911 had hardly begun to be regularised when the whole world was convulsed by the outbreak of the Great War of 1914-1918. Metaphorically, the whole world was in the melting pot and Indian labour went into it too. The large contingents of Indian troops which were sent overseas had to be supplied with clothing, rations and the munitions of war. Imports of manufactured articles into India were restricted owing to the bulk of the available British tonnage in ships having been commandeered for transport of men and material to the various seats of war. Heavy demands were also being made by both belligerent and other countries for raw products. Here was the opportunity for which India had been waiting for generations and she was not slow in seizing it with both hands. Much of her available arable land was put under cultivation, and there was an immediate and rapid expansion in every sphere of her industrial activity. Factories sprang up everywhere like mushrooms, and all available means of transport were requisitioned for the carriage of men, beasts and goods to the ports and to the seats of manufacture. Indian labour was consequently faced with a more than capacity demand for its services. Local Governments were beset by employers with requests for relaxations of existing restrictions in hours and conditions in factories. The ranks of the factory inspectorate were thinned as a result of some inspectors having joined the fighting forces and the duties of factory inspection were entrusted to officers already overburdened with other work. All the good preparatory work which had been done during the two years

following the coming into effect of the 1911 Act appeared to be going by the board—but only temporarily, because Indian labour was no longer that dumb and inarticulate part of factory plants which it used to be during the years preceding the outbreak of the war. If workers were asked to work for longer hours they demanded and secured higher rates of wages. They were also not blind to the fact that employers were making better profits than before. Prices of all commodities were, moreover, rising and Indian operatives, like others, began to feel that they were not able to make both ends meet on prevalent rates. There were, therefore, frequent demands for increases in wage rates—demands which were not always granted without strikes, but the few strikes which occurred were mostly of an unorganised character and were short lived because employers rather than allow production to suffer by prolonged stoppages of work reached compromises with their workmen by doling out small increases in wage rates at frequent intervals. Apprehensive however, of their workpeople demanding a continuation of the higher rates after the war had ended many employers all over India and particularly in the textile industry in the Bombay Presidency resorted to the device of granting wage increases in the form of war or dearness allowances over the basic rates of 1914—a practice which cotton millowners in the cities of Bombay, Ahmedabad and Sholapur and in several other centres are adhering to even to day. In extension of their action in this matter employers referred to the sliding scale allowances dependent on cost of living indexes which were introduced in munition and other factories and establishments in Great Britain and many Western countries towards the end of the war.

One of the most vexed questions in Indian industry is that of wages and Indian employers will not grant increases in rates unless they are forced to do so. Wages in 1916-17 were undoubtedly higher than what they were in 1914, but at the same time, real wages (earnings expressed in terms of sufficiency in relation to the cost of living) were in many centres and cases lower than in the pre-war year, and consequently, industrial workers were very little better off than they were before the war. At the same time, however, the foundations for a better standard of life were being laid. Excessive hours of work, however still continued to be the feature in all branches of industry and conditions inside the factories had worsened. Owing to the influx of large bodies of persons into the towns, housing became hopelessly inadequate and rents soared to heights which forced several local Governments to pass legislation to control them. Temporary *bastees* (collections of improvised huts and shelters) sprang up everywhere and these were a standing menace to the maintenance of the good health of town and city populations. Many of the new factories which had been erected during the war to meet the demand for munitions and army clothing were just mere shelters with roofs and sides built of corrugated metal. Conditions in such factories during the summer and the wet seasons were extremely oppressive. Little attempt had been made to study the questions of proper ventilation in the older factories or of the manner in which the ill

effects of excessive humidification in weaving sheds could be mitigated. Employers still continued to think in terms of dividends and it would not be incorrect to say that greater care was taken of the machinery than of the human element in front of it. Gaps in muster rolls caused by the serious illness or death of numbers of operatives could always be filled without expense, or at the worst, at the cost of a few rupees paid to a jobber or a recruiting agent, but, replacements of uncared for and neglected machinery would considerably reduce available profits and agency commissions. This should not however, be taken as indicating that there were no humanitarian employers in India. Most of the larger engineering workshops were controlled by Englishmen and foreigners many of whom had had actual experience of work in foreign factories before they became industrial entrepreneurs in India, and in many of these concerns, hours of work were reasonable and the welfare of the labour employed was given a fair measure of studious consideration. Indian employers were also not lacking in pioneer work in the field of industrial welfare and the late Sir Currimbhoy Ebrahim, the late Mr Nowrojee Wadia, the late Mr Morarjee Gooldas and the late Mr Bomonjee Petit did much to provide decent housing and proper medical facilities for the workers employed in the many large cotton mills which they controlled in the cities of Bombay and Sholapur. But taking all industries as a whole, very little was done for the welfare of labour and humanitarian employers were like the proverbial needles in a haystack.

THE AFTERMATH OF THE WAR.

The victorious and successful emergence of Great Britain, her dominions and her allies from the World War of 1914-1918 led the people of the British Empire, and particularly of India, to believe that the dawn of an utopia had at last arrived. Everybody expected that prices would fall, that there would be an ample scope of employment for all and that the end of the war would see the beginning of a long stretch of continuous prosperity for industry, trade and commerce. All these hopes were however, destined to be blasted sooner than the worst pessimists could have foreseen. The end of the war saw an unprecedented epidemic in the form of influenza sweep over the face of practically the whole world. The ravages wrought by this new plague were probably the worst in India and it was responsible for a total death roll of over eight million persons. Contrary to the expectations of the masses and also of many who should have known better prices instead of falling rose more sharply than ever before—due, in a large measure, to the unprecedented depreciation in the currencies of most European countries. Merchants and manufacturers all over the world had made phenomenal profits during the period of the war—thirteen large jute mills in Bengal alone paid dividends of 200 per cent and over for the year 1918—and with the gradual closing down of munitions works and factories engaged in the manufacture of war materials, these merchants and manufacturers were looking for new fields for investment. Property valua-

tions increased fivefold and more. The huge reconstruction loans raised by the victorious nations were subscribed several times over within a few hours of the lists being opened. Prices of industrial securities rocketed and there were still large amounts of liquid funds available for further investment. Industrialists therefore got together and floated big companies for transport services by rail, road, sea and air, for the construction of new mills and factories and for the exploitation of mineral resources. The most tempting prospectuses were issued and both the gullibles and the wiseacres hastened in a mad rush to get allotments in the portions of the share capital which were available for subscription by the public. The prices of the shares of several of these new companies doubled or trebled even before the share certificates had been issued. Hectic building activity was evident everywhere and this was naturally followed by heavy demands for all types and kinds of labour.

Similar to the chance which Indian industrialists had secured at the outbreak of the war was the one which Indian labour secured at the end of it. The great influenza epidemic had left large gaps in the ranks of available labour especially as the age groups between 20 and 40 had suffered most heavily and a situation very similar to that which followed the great plague of the nineties was created but on this occasion there were no auctions of mill workers at street corners because as the result of a country wide expansion in transport services labour had become much more mobile. Notwithstanding this, fancy rates of wages were demanded and were in many cases paid. Wages in the more organised industries, however, lagged far behind the rapid rise in prices and real wages began to become appallingly low. The beginning of the year 1919 therefore saw the outbreak of industrial strife on a scale previously unknown. Although sporadic strikes had occurred prior to and during the war, the power of the strike as an economic weapon for securing redress of grievances had not been generally recognised by Indian labour. The workers, who were for the most part villagers endeavouring to improve their position by a temporary allegiance to industry, were submissive and unorganised, and if conditions became too distasteful, the natural remedy was not the strike but the abandonment of the mill or of industry generally. As has already been pointed out above a number of industries were making phenomenal profits and the employers could, by concerted action on the part of labour have been forced to pay phenomenal wages, but strikes on any organised scale up to then were rare and the employers as has already been pointed out, were not giving anything away unless they were absolutely forced to do so. Prices, however, were still rising and it was literally becoming almost impossible for the workers to meet even their most necessary expenditure on the existing rates of wages. Had employers then exercised greater vision and been a little more farsighted than what they were in the matter of granting adequate increases in wages themselves without being forced to do so the history of the labour movement in India during the last eighteen years, so far at least as industrial disputes are concerned,

might have been entirely different. Employers, however, were deaf to the approaching roars of thunder and they had to pay the eventual penalty for their short sightedness in this matter.

The war had done much to educate Indian labour in the conditions of work prevalent and the methods of agitation adopted in other countries. Conditions, particularly as regards working hours, which had formerly been accepted as inevitable, were no longer regarded as tolerable and while trade unions as they are understood in the West were still almost unknown, the value of concerted action was being rapidly realised. A number of strike committees were formed and many large strikes of a fairly concerted character met with almost instantaneous success in several industrial centres in India. The idea of organisation for the purpose of securing concessions received a substantial measure of recognition everywhere and it was not long before some of the earlier strike committees formed themselves into trade unions similar to those which had been formed in the previous century in most European countries. These earlier unions were formed with two main objects in view (1) increases in wages and (2) reductions in hours of work. The first was in imperative economic necessity. The second had received considerable support from the Indian Industrial Commission which had been set up by the Government of India in 1916, to examine and report upon the possibilities of further industrial development in India and to make recommendations with particular reference to new openings and to assistance by Government. In their report which was published in 1918 the Commission noted a growing opinion in India in favour of a ten hours day and they recommended that the possibility of reducing the existing statutory maximum hours should receive further examination. There was a recurrence of the influenza epidemic of 1918-19 in the winter of 1919-1920 and although it was not of such severity as the earlier one it was nevertheless severe enough to be responsible for a total mortality in India of considerably over a million. The acute shortage which had been created in the supply of available labour by the earlier epidemic was accentuated by the later one. This gave added strength to the labour organisations that were coming into being as the result of the successes which had been gained by the earlier strike committees in the matter of wage increases and reductions in hours.

The allied problems of excessive hours and the shortage of labour were however to be temporarily solved by factors the operation of which nobody had foreseen. The gradual demobilisation of the armies of the war and the closing up of the various munitions works had disbanded tens of thousands of both men and women who in anticipation of re-employment in the great industrial enterprises which were being floated everywhere had spent the savings which they had secured during the war. Pre-war industries in the belligerent countries could not moreover, be reorganised at once. It was suddenly realised that resources would have to be husbanded and there was a perceptible decline in the purchase of commodities and the demand for manufactured goods. Production had neces-

sarily to be eased off for stocks were accumulating. The spectre of unemployment loomed large. But, employers had learnt their lesson from the difficulty of securing workmen during periods of acute shortage of labour and they were not prepared to disband large bodies of their work people. They were therefore not unwilling to consider reductions in hours of work. Some employers who had already reduced hours found that production far from having fallen off had actually improved. A new angle of vision came into being and the trail was laid for reforms of a world wide and far reaching character which were to be introduced in all countries as the result of the formation of the International Labour Organisation.

THE INFLUENCE OF THE INTERNATIONAL LABOUR ORGANISATION

The Preamble to Part XIII of the Treaty of Versailles refers to the fact that the failure of any nation to adopt humane conditions is an obstacle in the way of other nations which desire to improve conditions in their own countries. In order to establish universal peace based on social justice, the Peace Treaty not only laid down general principles in regard to questions affecting labour which were recognised by the High Contracting Parties to be of special and urgent importance, but also brought into being the International Labour Organisation which was entrusted with the task of securing as far as practicable the observance of these principles. The duties of this organisation which was to be controlled by a Governing Body consisting of members representing Governments, employers and labour from all countries of chief industrial importance, and from other countries by rotation, were to collect all possible information regarding conditions of employment in all countries and to present reports of such enquiries to the International Labour Conference which was to meet periodically on each subject as to be discussed at first at one and later at two sessions. After a first preliminary discussion, the views of various Member States were to be invited on tentative proposals. The International Labour Office would then re-examine these proposals in the light of the criticisms and opinions received and submit a final Report with a Draft Convention or Recommendation to the next Conference for a final discussion and decision. It was laid down that it would be obligatory on all Member States to introduce legislation in their respective countries to deal with matters covered by a Draft Convention but that it would be optional for a Member State to adopt a Recommendation.

THE WASHINGTON CONFERENCE

In accordance with a provision in the Treaty of Versailles, the first International Labour Conference met at Washington on the 29th October 1919 and sat for a month. India, as an original member of the League of Nations, was among the 39 countries represented. The Indian delegates were Sir Louis Kershaw and Sir Atul Chatterjee representing the Government of India, Sir Alexander Murray represent-

ing Indian employers and Mr N M Joshi representing Indian labour. The Conference was asked to consider proposals relating to a number of subjects including the eight hours day, unemployment, the night work of women and young persons, the employment of children, maternity benefits and industrial diseases.

The conference met in an atmosphere of optimism which later experience has shown to be unjustified and thus and the inadequate time allowed for the examination of the immense agenda made it difficult for it to examine critically the various proposals in detail. It is not surprising therefore that while the deliberations of the Conference had a wide influence and none of their decisions failed to produce its effect in legislation, difficulties which became apparent later have so far prevented many countries from translating into law the conclusions embodied in the more important Conventions adopted. The Washington Conference adopted the Hours Convention but as far as India was concerned, her delegates were able to impress the Conference that the adoption of an 8 hour day would be too revolutionary a change for the country and would never be accepted by Indian employers. The Conference therefore agreed to grant a special relaxation in the case of India and it was decided that a beginning should be made by the introduction of a 60 hour week in factories subject to the Indian Factories Act.

The ground for a reduction in factory hours had however, already been partially prepared by the Government of India who, acting on the recommendations made in the matters by the Industrial Commission had circularised all local Governments in June 1919 on the subject. After referring to the possibility that shorter hours might mean greater production, the Government of India in their circular letter, said that they believed that there was a considerable body of opinion among the more enlightened factory owners that the hours of labour might well be reduced without injurious effects on the output of the Indian mills. The replies showed a general consensus of opinion in favour of a ten hour day or a sixty hour week. The subsequent endorsement of a sixty hour week for India by the Washington Conference received further support from the workmen themselves in the winter of 1919-20 which saw the recrudescence of industrial strife of a greater intensity than that of the year before. The principal cause again was the fact that cash wages were lagging far behind the continued rise in prices and that real wages were again falling. On this occasion, however, the workmen did not limit their demands to increases in wage rates alone and their leaders everywhere demanded both increases in wages and reductions in hours of work. Concerted strikes in the cotton mills of Bombay, Ahmedabad and Cawnpore resulted in the employers conceding a ten hour day in addition to the granting of higher wages. In March 1920, the Millowners Association of Bombay presented a memorial to the Viceroy asking for a statutory reduction of hours of work in all textile factories in India from twelve to ten. The rapid sequence of events in favour of a ten hour day broke the back of all opposition to reduced hours of work in Indian factories and an easy passage for the necessary legislation was assured.

CREATION OF GOVERNMENT LABOUR DEPARTMENTS

In this short historical sketch of the growth of the labour problem in India references have frequently been made to the circularisation to local Governments by the Government of India of the proposals in connection with factory legislation and also to the independent action taken by the Government of Bombay in appointing Committees of Enquiry to examine certain phases connected with the conditions of work in factories in the Bombay Presidency. But apart from these and the examination of certain questions connected with labour by the Factories Commission of 1907 and the Industries Commission of 1916 there was little co-ordination between the Centre and the Provinces in matters connected with labour and there were no provincial or all India enquiries of a general character into industrial wages or conditions of employment in industrial establishments. It is true that certain provinces had conducted quinquennial enquiries into agricultural wages but the results of these enquiries were of a very meagre and limited character. The participation of India in International conferences and the increasing interest taken by the Indian public in questions connected with labour made it necessary both for the Government of India and the Governments of the more industrialised provinces not only to consider the question of the representation of labour in the central and provincial legislatures but also to allocate special departments or offices the administration of labour questions.

Under the Devolution Rules (Schedule I, Part 2 Rule 2b) framed under the Government of India Act, 1919 industrial matters included under the heads factories and welfare of labour fell within the scope of the provincial legislatures and the heads regulation of mines and interprovincial migration were central subjects. The Government of India established a Labour Bureau in the year 1920 and the Governments of Bengal and Madras created special appointments of labour officers in the same year. The Labour Bureau of the Government of India published a series of bulletins on certain phases of factory work but before its utility could be established the office was abolished in March 1923 on the recommendation of the Indian Retrenchment Committee. The lead in the matter of the creation of a proper and stable department of Government with investigators and an adequate statistical staff to deal with all questions connected with labour was taken by the Government of Bombay who created a Labour Office in 1921. Further details in connection with this office and other matters dealing with Government administration of labour subjects will be found in a special section towards the end of this note.

THE FACTORIES ACT OF 1922

A Bill to amend the Factories Act of 1911 was introduced by the Government of India in the Legislative Assembly in March 1921 and was passed into law in January 1922. The Amended Act was brought into effect from

1st July 1922 The main provisions of the new law as it now stood were as follows —

1 The definition of the term factory was improved so as to bring within its scope all concerns using power and employing not less than 20 persons. At the same time, local Governments were invested with powers to declare as factories any concerns which were engaged in a manufacturing process and which employed not less than 10 persons whether power was used or not. The exemption hitherto enjoyed by indigo, coffee and tea factories was removed, and the clause contained in the 1911 Act permitting an abrogation of the restrictions relating to hours of work, holidays, etc. in respect of persons working in a place within the precincts of a factory where no power was used or where power was used for the purpose of moving or working any appliance in connection with the bringing or taking of any goods into or out of the factory was omitted.

2 Effect was given to the Washington Convention re minimum age of children employed in factories by raising the lower limit of the age of a child from 9 to 12 and by raising the upper limit from 14 to 15. The restriction of children's hours in textile factories to six per day which was imposed by the 1911 Act was made universally applicable to all factories. The provisions relating to the certificates of age of children were improved by prescribing that only those children who were within the specified age limits and who were fit for employment should receive certificates and that the certificates granted to children who were subsequently found to be unfit could be revoked. No child was to be worked for more than four hours without a rest interval of at least half an hour and no child could be employed in two factories on the same day. For employing a child in two factories on the same day a parent or a guardian could be fined to the extent of Rs 20.

3 Both the 1891 and the 1911 Acts restricted women's hours to eleven per day but both Acts permitted relaxations in respect of prohibition of night work and the limitation of daily hours of women employed in cotton gins and presses. The 1922 Act restricted women's hours to eleven per day and to sixty per week and totally prohibited their employment at night between the hours of 7 p.m. and 5.30 a.m. except in seasonal factories in the fish curing and canning industries.

4 The 1911 Act had restricted men's hours to twelve per day in textile factories alone. The 1922 Act restricted men's hours in all factories to eleven per day and to sixty per week. The further restrictions imposed by the earlier Act on the working of textile factories were removed.

5 All operatives were to be given a compulsory weekly holiday subject to the limitation that no worker would be made to work for more than ten consecutive days without a holiday. Provision was also made for the grant of a compulsory rest interval of one hour to all adult workers after every period of six hours' work, at the request of the employees concerned, of two half hour periods after five hours' work

in factories working for 8½ or less hours a grant of an interval of half an hour was permissible subject to the consent of the operatives and the sanction of Government.

6 Exemptions on defined principles were to be permitted in respect of the restrictions re the weekly holiday, rest intervals and daily and weekly limitation of hours of work of adult males employed in continuous process factories or in occupations connected with power and maintenance plants or in the case of *force majeure*.

7 Provision was made for controlling excessive artificial humidification when injurious to the health of the operatives. (In this connection the Government of India appointed Mr T. Maloney, a textile expert from Lancashire, to make an enquiry into and to make recommendations on the use of artificial humidification in cotton mills in India. Mr Maloney's report was published early in 1922 and most of his recommendations were adopted by all textile mills without further legislation on the subject at the time.) Various other provisions dealing with the health and safety of the operatives were also incorporated in the new Act.

8 The rule-making powers of local Governments were extended to meet the additional requirements of the new legislation, and the Governor-General was, in addition, empowered to make rules for the adequate disinfection of wool used in factories in order to prevent infection from anthrax.

9 The limit of maximum fine for single offences against the Act was raised from Rs 200 to Rs 500 and a new principle was introduced by providing that a court imposing a fine in respect of an offence causing bodily injury or death could pay the whole or part of the fine recovered as compensation to the injured or in the case of a workman's death to his legal representatives.

Subsequent amending Acts were passed in 1923, 1926 and 1931 but the changes affected by these were designed rather to meet administrative difficulties which had been experienced in the working of the main Act or for making improvements of a minor character and not for altering any of the main principles laid down in 1922. Factory staffs were adequately expanded in all provinces by recruiting inspectors men who had the necessary technical experience and district and other officers who had hitherto been entrusted with considerable factory inspectorial duties were completely divested of them although all district collectors were appointed *ex officio* Inspectors of Factories. This was done in order to provide for an early inspection of a factory in the absence of a proper Inspector if a report was received of an alleged breach of the Act.

PROPOSALS FOR FURTHER LABOUR LAWS.

Indian labour was jubilant at the successes which it had gained as a result of the passing of the Factories Amendment Act of 1922. Further legislative proposals in connection with the grant of workmen's compensation in

the case of accidents, for the regulation of working conditions in mines and for the registration of trade unions were under the consideration of the Government of India who were consulting local Governments on the proposals which they had formulated. Proposals to safeguard employers against strikes which were, as has been seen, becoming most disturbing to industry were also under consideration and the Government of Bombay, acting on the recommendations of the Provincial Legislative Council, appointed an Industrial Disputes Committee in 1922 under the chairmanship of Sir Stanley Reed, editor in chief of *The Times of India* "to consider and report on the practicability or otherwise of creating machinery for the prevention and early settlement of industrial disputes." In their report the Committee, after setting down their views on various schemes of welfare which employers might adopt to improve the conditions of employment and of the life of their workpeople so as to make them more contented and less amenable to the influence of outside agitators, recommended that a statutory tribunal on the lines of the Industrial Court created by the United Kingdom Act of 1919 should be set up in the Bombay Presidency and that all strikes which could not be settled without Government intervention should be referred to this Court. The Government of Bombay, acting on the recommendations of this Committee, drew up a Bill on the subject which was introduced in the local Legislative Council in 1923-24. In the meanwhile however, the Government of India informed the Government of Bombay that they themselves were proceeding with similar legislation of an all India character and they requested the local Government to abandon their own measure. The Workmen's Compensation and the Mines Acts were passed in 1923 and the Trade Unions Act was passed in 1926 but the all India Trade Disputes Act was not passed till 1929. The main features of these several pieces of labour legislation will be described in the special sections dealing with these subjects.

THE TURNING OF THE TIDE

Unfortunately for Indian labour, a period of acute depression set in in all industries towards the end of the year 1922. Some of the first tasks to which the Labour Office created by the Government of Bombay in 1921 had set itself were to compile a cost of living index for working classes in Bombay City, to make an enquiry into their standard of life by the collection of family budgets for representative working class families and to make an enquiry into wages and hours of work in the cotton mill industry in the Bombay Presidency. The cost of living index compiled by that office—the first of its kind in India—showed that except for a slight fall during the earlier months of the year 1920 prices had been steadily rising after the end of the war for the next two years. The peak was reached in October 1920. The annual average of the monthly index numbers (1914=100) for that year was 183. A gradual decline, however, set in from the beginning of the following year and the annual average for the year 1921 registered a fall of ten points on the figure for 1920. A further fall of nine points was registered in the

annual average for the year 1922. The year 1923 opened with a sharp decline to 156, but for the next five years—that is, up to the end of the year 1927, the optimum monthly variation was within eleven points between 150 and 161. The Report of the Family Budget Enquiry conducted by the Bombay Labour Office showed the standards of earnings and expenditure of some two thousand representative working class families and single men during the years 1921 and 1922 but no comparable figures were available for any other year. The report of the cotton mills wages enquiry which was published early in 1923 showed that the real wages of cotton mill workers in Ahmedabad were thirty three per cent. higher in 1921 than in 1914. Later investigations conducted by the Bombay Labour Office have shown that the figures, especially those for 1914 on which this deduction of real wages had been based were very defective but this was not known at the time the report was published, and the Ahmedabad Millowners Association made the first organised post war move in India for wholesale reductions in wages by announcing that the wages of all workmen in the Ahmedabad cotton mills would be reduced by 20 per cent. with effect from the 1st April 1923. The strike of the Ahmedabad cotton mill workers which followed this announcement was by far the largest and the most disastrous that has ever occurred in that city. It affected 56 out of 61 working mills, involved nearly 45,000 workpeople and resulted in a total time loss of nearly two and a half million man days. It began on the 1st April and lasted till the 4th June. On that date a compromise was arrived at by the terms of which wages were to be reduced by 15½ per cent. instead of by 20 per cent. Labour received a rude shock and it was felt that the turning of the tide had set in.

There can be no doubt that as compared with the standards of wage rates and prices which were prevalent during the peak period of 1920, real wages continuously improved with the steady decline in the level of prices which first set in in the month of November of that year. The point, however, is whether the wage rates of 1914 and 1920 were sufficient to maintain a decent standard of life. Studying the question from such fragments of statistical information as are available the answer must be definitely in the negative. Contemporary observers of those periods give harrowing descriptions of insufficiently clad half starved and unkempt men, women and children rising from street pavements in the cities in the early hours of the morning and dragging their bodies to their factories and places of employment to earn pittance of an average of six to eight annas (six to eight pence) a day for work lasting for anything between twelve to fifteen or more hours per day and although this description could not apply to all industrial workers in India, it did apply to fairly large proportions of them, and the remainder were not very much better off. Judging the standards of life of Indian workers in 1914 from the standards which labour in all the industrialised countries of the world are endeavouring to maintain to day, they must be considered as appallingly low and one can well sympathise with Indian

workers for attempting to clothe and feed themselves and to live as human beings ought to be able to do

In an earlier paragraph it was stated that in granting increases in wages during the period of high prices between 1917 and 1920 cotton mill owners had resorted to the device of giving the men wages in the form of percentage additions to war or dearness allowances over the basic rates of 1914 or of some other year between 1914 and 1917. In the case of the cotton mills in Bombay City these allowances had amounted to 80 per cent. over basic rates for weavers and to 70 per cent. for spinners and women. In 1918-1919 when cotton mills were making phenomenal profits, the Bombay Millowners' Association met demands for a participation in these profits by sanctioning an annual bonus of one month's pay for all cotton mill workers in Bombay City provided a full year's service had been put in during the year for which the bonus was paid. Proportionate bonuses were to be paid to those who had served for lesser periods. This bonus was paid annually for five years between 1919 and 1923, but at the beginning of the year 1924 the Association decided that the profits made during the previous year would not justify the payment of the annual bonus. This bonus had come to be regarded by the workers as a definite part of their wage contract and when it was not paid in the middle of January with the wages for December as it usually was, the workers of all textile mills in Bombay City went out on strike. The Government of Bombay appointed a Committee under the chairmanship of Sir Norman Macleod, Chief Justice of the High Court of Judicature of Bombay, as a fact-finding body to consider the nature and basis of the bonus which had been granted to the employees in the cotton mills of Bombay since 1919 and to declare whether the employees had established any enforceable claim, customary, legal or equitable to the payment of such a bonus. The Committee were also requested to enquire into the profits made by the Bombay mills between 1919 and 1923 and to report on the contention of the millowners that the profits of 1923 did not justify the payment of the annual bonus. The report of the Committee was entirely in favour of the employees and the strike was broken immediately after its publication but not before the industry had lost nearly eight million working days. This strike was greater in proportion than any previous strike which had occurred in the country. It would be interesting to observe that as far as the question of the equity of the bonus was concerned, the Committee held that the millworkers had not established any enforceable claim, customary, legal or equitable to the payment annually of a bonus by which we mean that in our opinion such a claim would not be upheld in a court of law.

ABOLITION OF THE EXCISE DUTY ON COTTON MANUFACTURES

The next big concerted attack by employers on wage rates in India was made in 1925 by the millowners in Bombay City. The cost of living index remained more or less stationary but the cotton mill industry was passing through a period of severe and unprecedented depression

and the Millowners' Association, Bombay, decided to reduce the dearness allowances by 20 per cent. with effect from the 1st September 1925. This decision, if it had been accepted by the workers would have meant an all round average cut of about 12 per cent. in their earnings. They were not likely to take it lying down, but as is usual with strikes in India, no warning was given of the threatened strike. On the 15th September 1925, 33,249 workers from 15 mills suddenly downed tools and by the 6th of October there was a complete stoppage of work in all the textile mills in the city and island of Bombay. The Government of Bombay held several conferences with the representatives of both sides and several proposals and counter-proposals were considered but neither of the parties appeared likely to give in. On this occasion, however, the Government of India came to the rescue of both the cotton mill industry and the labour employed in it by suspending for the remainder of the financial year, the collection of the excise duty of 3½ per cent. which had been levied on cotton manufacturers in India for several years past. The Millowners' Association had given repeated assurances to both the Government of India and the local Government that the old rates of wages would be restored if the excise duty were abolished and the strike therefore virtually ended as soon as the Viceroy's Special Ordinance announcing the suspension of the excise duty was published at the end of November. Each of the successive general strikes which occurred in the cotton mill industry in Western India between 1923 and 1928 was more severe in intensity than its predecessor and the strike of 1925 was no exception. It resulted in a loss of nearly eleven million working man days to the industry and the workpeople lost considerably more than a crore and a quarter of rupees in wages. But the strike was a great victory for the workers and showed that, in spite of their illiteracy and inadequate organisation they were able to take concerted action and to offer a stubborn resistance against any attack on their wages. At the same time, however, it is significant that the employers did not give way until they had secured from Government a concession for which they had pressed before arriving at the decision to effect a cut in wages.

It will have been noticed that so far prominence has been given only to the big industrial disputes that occurred in the textile industry in Western India. This should not be taken to mean that other industries and the other provinces in India were not troubled with industrial strife. As soon as Indian labour had realised the potential value of the strike as a weapon for securing redress of grievances, strikes began to get extremely frequent and the quinquennium 1921-1926 saw the outbreak of no less than 1,154 strikes in India involving nearly two million workpeople and causing a total loss of thirty-seven and a quarter million working days. Of these, 146 disputes involving 57,570 workpeople and resulting in a loss of nearly three and a half million working days occurred in the jute mills in Bengal. Strikes in the jute mills are not of such frequent occurrence or as severe in intensity as they are in the cotton mill industry, and the main reason

for this appears to be that the jute industry is almost entirely under British management and under the control of men who take greater pains in understanding the problems connected with the labour which they employ. The number of disputes in the cotton mill industry in the whole of India during the same quinquennium was only three and a half times as great as that in the jute industry but the total loss in working days was nearly seven times as much and amounted to nearly twenty five million man days. Summary statistics for the main industries are incorporated in the following table —

Consolidated Statement of Industrial Disputes for the Quinquennium 1921-25

Industries	Number of disputes	Number of workmen involved	Man days lost
Cotton spinning and weaving	505	815,341	21,967,386
Jute	146	575,570	3,454,356
Engineering (excluding railway workshops)	65	71,590	1,031,779
Railways (including railway workshops)	59	1,35,254	3,687,504
Mines	29	30,632	261,198
Others	350	291,327	3,915,681
Total	1,154	1,919,714	37,317,904

It is significant that although only 59 of the total number of 1,154 strikes in the period under review occurred on Indian railways (including railway workshops) and that the total number of workpeople involved was less than a quarter of those involved in disputes in jute mills, the loss in man days was a quarter of a million days more. The group "others" in the above table includes ports, road transport services, municipalities, etc. This group also came in for its fair share of industrial strife with 350 strikes and a total loss of nearly four million man days. It is not possible in this short note to analyse the causes and the results of these 1,154 disputes by industries. It may be interesting, however, to state that as far as causes are concerned, 641 strikes or 55 per cent of the total number of disputes during the quinquennium arose over questions of pay and bonuses, 239 or 21 per cent over matters connected with personnel and 274 or 24 per cent over other matters. If the results are similarly analysed, 200 strikes or 17 per cent of the total ended entirely in favour of the workers and 762 or 67 per cent in favour of the employers. In 179 or in 16 per cent of the disputes, the workers were only partially successful. No statistics are available to show the extent to which trade unions in India played a direct or indirect part in conducting these disputes or in bringing about settlements but from the personal experience of the compiler of this note, he can say that this was, except in the case of some of the bigger strikes, very small indeed. Quite an appreciable number of the disputes under consideration arose over matters connected with personnel. This head includes demands for the dismissal or reinstatement of particular individuals, generally jobbers in textile mills, and chagemen, mukadams and maistries

in other industries. It is the personnel strike which is the most injurious to industry as it occurs with extreme suddenness and without previous notice.

A PERIOD OF QUIESCENCE

The two years 1926 and 1927 were as compared with the quinquennium which has just been reviewed a period of quiet consolidation of their respective positions for both the employers and the employed and also for Government who had completed a heavy programme of labour legislation. There was a slight revival in trade and employers after the bitter experience which they had had of disastrous strikes most dislocating to industry were content to allow sleeping dogs to lie as far as wages were concerned Governments and employers had completed extensive industrial housing schemes many employers had expanded their activities for the welfare of their work people and the cost of living index was steadily on the decline. The administration of the Factory Law had been improved by the 1922 Act and the avenues for evasions were so barricaded as to make breaches of the law most difficult if not impossible. Hours of work, as compared to those obtaining five years previously, were congenial and permitted of sufficient rest and also of some relaxation and recreation. Absences from work began to get more frequent. All these and other factors were conducing to a decided improvement in the standard of life and the conditions of employment of industrial labour. The chief Indian industries were however, still showing adverse balances in their profit and loss accounts and the shareholders were getting little or no return on the capital

which they had invested in industry. The share holders were consequently becoming somewhat restive, and harangues at the annual general company meetings by the more disgruntled of them were becoming frequent enough to be noticed. The Indian Tariff Board (Cotton Textile Industry Enquiry) appointed in 1926 had also made a number of recommendations aiming at a more efficient conduct and management of cotton mills in India. The more progressive firms, thereupon began to devise ways and means for improving efficiency and for securing greater production at less cost. The methods of rationalisation which had been successfully attempted in the West received a measure of studious consideration and three go ahead firms of cotton mill agents in Bombay City—Messrs E. D. Sassoon and Company, Messrs James Finlay and Company, and Messrs Killick Nixon and Company—decided to try out schemes whereby cotton mill workers would be asked to look after a greater number of spindles and more looms. A beginning was made at the Manchester Mill of which Messrs E. D. Sassoon and Company were the agents. The attempt was at once met by a prolonged strike in that mill.

The annual averages for numbers of industrial disputes, workers involved and total time lost in the cotton mill industry in India for the five years 1921 to 1925 were 101 strikes, 163,068 workers involved and 4,993,477 man days lost. The corresponding averages for the two years 1926 and 1927 were 58 strikes, 29,400 workers involved and 214,504 man days lost—figures which speak for themselves. The advent of rationalisation in Indian industries synchronised with the entry of the principles of communism into the country and the formation of the Workers and Peasants Party on models similar to those obtaining in Bolshevik Russia. Many communists secured appointments on the executives of several trade unions in India and they were not long before they made their presence on these bodies felt by inciting workers to go on strike on the most flimsiest of pretexts. The immediate object of these communists was not so much to improve the condition of industrial workers as to cause prolonged stoppages of work in industry thereby sending batches of dissatisfied workmen back to their native villages to preach revolutionary doctrines of class hatred, the uprooting of capitalism and the smashing of stable Governments.

THE CLIMAX OF INDUSTRIAL STRIFE IN INDIA.

The year 1928 was one in which a handful of communist agitators in India secured a large measure of control over her industries through their almost complete domination over labour. They engineered large scale strikes in most industries and brought several to the verge of an almost complete standstill. It is significant, however, that the workers in the mining industry and in the cotton mills in Ahmedabad were free of their evil machinations. The Indian Mines Act of 1923 had not given miners the same hours as factory workers and had permitted a twelve hour day, and most miners live close to the mines in which they are employed. This together with the fact that few mines are situated close to easily accessible towns left the miners

free of communist control. Cotton mill workers in Ahmedabad are in a peculiarly happy position owing to the excellent conciliation and arbitration machinery which exists in that centre for the settlement of industrial disputes. One of the earliest trade unions in India was that of the cotton mill workers of Ahmedabad. Very fortunately both for the industry and for the labour employed in it this union has been under the control and influence of Mr M. K. Gandhi and Mr S. G. Banker, and under the management of two extremely able, far sighted and level headed men in the persons of Messrs Gulzarilal Nanda and Kandubhai K. Desai. With commendable farsightedness the Ahmedabad mill owners had agreed to the formation of a permanent arbitration board consisting of Mr M. K. Gandhi as the representative of labour and the Chairman of the Millowners Association as the representative of the employers. All disputes which could not be settled by conciliation between the union and the management of the Mill or mills concerned or by negotiation between the union and the Ahmedabad Millowners Association were to be referred to the permanent arbitration board for settlement. In the event of the arbitration board failing to reach an agreed solution, the constitution laid down that the matter should be referred by the board to an agreed *sarpanch* or umpire whose decision would be final and which both parties to a dispute would be bound to accept. Although there have been many strikes in the Ahmedabad cotton mills during the last fifteen years—mainly over questions of personnel and rates—the Ahmedabad cotton mill industry, except for the big dispute which occurred in 1923 over the question of a reduction of 20 per cent in wages, has been entirely free from the type of general strikes that have occurred at frequent intervals in the Bombay mills and this has been entirely due to the steady influence exercised over the workers as the result of the impassionate and thorough examination of their grievances and demands by the permanent arbitration board.

The most disastrous of the strikes which occurred in the year 1928 was that in the cotton mills in Bombay City and which alone was responsible for the loss of over twenty two and a half million working days out of a total of over thirty one and a half million lost to all Indian industries in that year. The direct cause of this disastrous strike which lasted from the middle of April to the beginning of October was the fear of unemployment created by the decision of certain millowners to introduce 'rational' methods of work in their mills. And although it must be admitted that the communists had no hand in the starting of this strike by the downing of tools by the workers in the Currimbhoy Ibrahim group of mills, they rapidly assumed control over affairs once it had begun and they saw to it that the conflagration soon spread to every mill in the city and island of Bombay. There were four small unions of cotton mill workers in Bombay City at the beginning of the year 1928. The most important of these was the Bombay Textile Labour Union formed by Messrs N. M. Joshi and R. R. Bakhale, members of the Servants of India Society in 1925. These unions formed a strike committee for the conduct of this strike. The communist leaders formed a new

association of workmen in the industry and called it the Bombay Girni Kamgar Union which they registered under the 1926 Act. This union also formed a strike committee of their own. The two committees were acting in opposite directions for some time but wiser counsels prevailed and they agreed to drown their differences and to form a Joint Strike Committee of thirty members—15 from each side. This committee carried on several negotiations with the Millowners' Association, Bombay, and the Hon'ble the General Member of the Government of Bombay Sir Ghulam Hussein Hidayatullah, presided at several conferences to which the representatives of both sides were invited. When the strike first broke out neither side had made demands. The Joint Strike Committee however, soon formulated demands which are now historically known as the Seventeen Demands. These demands were met by the owners by a scheme of standard wages for all mills in Bombay City framed on the basis of a reduction of 7½ per cent in weavers' wages. Separate schemes of standard rates were put up for mills which intended working on the basis of rationalisation. The Joint Strike Committee drew up their own lists of standard rates. At a later stage, the Association proposed a body of uniform standing orders or rules of conduct for the operatives of all mills in the city. It was obvious that these various demands and counter demands, schemes and counter schemes could not possibly receive the adequate and careful consideration which they deserved, in an atmosphere of turmoil and hatred. The communist leaders of the Joint Strike Committee harangued huge mass meetings of the strikers daily on the principles and advantages of communism. Relief measures were organised but funds amounting to less than two lakhs of rupees could not support nearly a lakh and a half workpeople for a period of nearly six months and large batches of cotton mill workers consequently left the city for their homes and villages.

APPOINTMENT OF BOMBAY STRIKE ENQUIRY COMMITTEE

The strike dragged on until the 4th of October when the Government of Bombay again convened another conference of the representatives of both sides under the chairmanship of the Hon'ble Sir Ghulam Hussein Hidayatullah. At this conference the representatives of the strikers consented to call off the strike if Government would agree to appoint an impartial committee of enquiry to examine the various questions under dispute. The Hon'ble the General Member gave the necessary undertaking on behalf of Government, and the terms of reference were agreed upon at the conference. The strike was accordingly called off as soon as Government announced the appointment of the committee under the chairmanship of the Hon'ble the Acting Chief Justice of the High Court of Bombay, Sir Charles Fawcett.

The deliberations of the Fawcett Committee lasted for over five months and their report which was published on the 26th March 1929

still continues to be one of the standard works of reference on conditions of employment in the cotton textile mills in Bombay City. The Committee held that the proposals of the Millowners' Association for the standardization of wage rates and for the fixation of the numbers to be employed on different types of machines were in the main fair and reasonable and that while there was justification for the Association's proposal to effect a cut of 7½ per cent in weavers' wages there were reasonable objections to be urged against its adoption. The Committee recommended that the Association should drop the proposal if the labour leaders agreed to give their co-operation in working the scheme for the standardisation of wages. The Committee also held that that part of the standardisation scheme which was called the 'Rational or Efficiency' system and which aimed at reducing the number of operatives employed in mills while raising their wages and providing conditions favourable for the extra efficiency expected from the operatives was fair and reasonable. The Committee further held that the Association's proposals with regard to standard standing orders for the operatives about the conditions of their employment were, in the main, fair and reasonable. With regard to the seventeen demands formulated by the Joint Strike Committee some of the demands which were con-

sidered to be fair and reasonable were—

- (a) That the millowners should not vary any of the prevalent conditions to the disadvantage of the workers before securing the approval of the workers through their organisations, and that the Association should not permit its individual members to vary the conditions of service to the disadvantage of the workers without the sanction of the Association,
- (b) Rates of new varieties should be fixed by the Association in consultation with the representatives of the workers' organisations, and that all piece rates should be posted departmentally in detail, and
- (c) That there should be no victimisation of men who had taken part in the strike or any union activities.

Among the more important demands which were held to be unfair and unreasonable were those relating to the granting of substantial increases in wages to those workers whose average monthly wages were less than Rs 30 and the abrogation of the new orders which had been issued requiring certain workers to clean their own machinery and to carry tickets of attendance. On balance, the findings and recommendations of the Fawcett Committee were more favourable to the workers than to the employers. The other important strikes during the year 1928 occurred in the Tata Iron and Steel Company's Works at Jamshedpur, the East Indian and South Indian Railways, in the Fort Gloster Jute Mills and in the textile mills at Sholapur and Cawnpore. Want of space prevents a detailed description of these disputes, but it may be stated that a significant feature of

the disputes during the year 1928 was the growth of picketing and intimidation which in some cases resulted in violence and bloodshed. In the Bombay Cotton, the Bengal jute and the two railway strikes the police were compelled to

resort to firing in order to prevent the strikers from causing injury to person or damage to property. The following table gives, by industries the main statistics in connection with the disputes of 1928 —

Classification of Industrial Disputes in 1928

Industries	Number of disputes	Number of workers involved	Days lost
Cotton and woollen mills	110	323,484	24,851,274
Jute mills	19	64,524	1,556,808
Engineering workshops	11	37,688	3,148,706
Railways (including railway workshops)	9	49,400	1,874,313
Mines	1	638	5,104
Others—miscellaneous	53	31,117	211,199
Total	203	506,851	31,647,404

THE BOMBAY RIOTS OF 1929

The result of the general strike in the Bombay cotton mills in 1928 was a great moral victory for the communists and the membership of the Bombay Ginni Kamgar Union which they had formed during the earlier days of the strike was reported as having reached the enormous figure of 55,000 within a few months after the conclusion of the armistice of the 4th October. Government were, however, not allowing the communists to ride rough shod over industry and labour as they did in that year and thirty of the more prominent and avowed communists were arrested in March 1929 under section 121 A of the Indian Penal Code for organised conspiracy under the direction of the Communist International and other associated bodies to deprive the King of the sovereignty of British India, but not before their doctrines had resulted in a considerable loss of life and property in Bombay City. Towards the end of the previous year they had organised another large scale strike of the workers of the oil companies in Bombay. This industry is manned by a considerable proportion of Pathans and the highly inflammatory speeches which the communists had delivered to the strikers in both the cotton and the oil strikes were responsible for the outbreak, in Bombay City, on the 3rd February 1929, of riots and disturbances on a scale which the city had seldom experienced before. Rioting lasted for several days and martial law had to be declared before it could be quelled. The net result of the riots was a death roll of 149 persons and destruction and damage of property valued at

several lakhs of rupees. The Riots Enquiry Committee appointed by the Government of Bombay to enquire into the causes and the handling of these riots found that their origin was in the speeches which had been delivered by communist agitators during the cotton and the oil strikes.

AN ACCUMULATION OF UNREDRESSED GRIEVANCES

The widespread industrial strife of the year 1928 brought out several facts in connection with Indian labour prominently to the surface. The most important of these was that the workers employed in Indian industries had a large accumulation of grievances which required early examination and redress, if possible. A very large majority of the settlements of the disputes that had occurred in the decade following the end of the Great War were hardly settlements at all if the word is considered in the sense of solutions acceptable to both sides. In most cases the workers had been beaten into surrender owing to the fear of unemployment consequent on their places being filled up by black leg labour or were forced into submission as the result of the complete exhaustion of their resources. Although the trade union movement had penetrated into most industries it has not even yet, except perhaps on the spinning side of the cotton textile industry in Ahmedabad, covered the majority of the workers in any particular units or groups of units, and in no case had any union collected at sufficiency of

funds to finance a strike. Very few of the existing unions had secured complete recognition by the employers concerned and in most cases the illiterate workmen had no level headed persons to argue their cause with their employers. In those cases where strikers had met with complete or partial success the settlements were mostly of an exceedingly patchwork character and it was obvious to any observer that few of the existing sores had been permanently healed. Employers were still thinking of wages in terms of comparison with the levels of the pre war year and not from the point of view of their sufficiency for the maintenance of a decent standard of life. No attempt was made to enquire as to how far any particular wage could be considered as a minimum wage and all discussions centred round the determination of the percentage increase over the levels of 1914.

LACK OF COMPREHENSIVENESS IN EXISTING LABOUR LAWS

In an earlier section reference has been made to the three great pieces of Indian labour legislation passed in the years 1922 and 1923. (1) The Factories Act of 1922 (2) The Indian Mines Act 1923, and (3) The Workmen's Compensation Act 1923. These Acts had conferred several benefits, privileges and advantages on Indian workmen, but as compared with similar pieces of legislation in the other industrialised countries of the world they were of an exceedingly limited scope and character. This was due to the fact that in tracing new ground, the Government of India had necessarily to proceed with circumspection and a measure of caution. The original proposals formulated by the Government of India had in all cases, been considerably modified and whittled down as a result of the opinions given by the provincial Governments and the opposition of employers' organisations when the proposals or the Bills based on these proposals were circulated for opinion. Still further modifications had to be accepted by Government in the central legislature in order to ensure a safe passage to each measure. Great credit must however be given to that great stalwart of Indian labour Mr. N. M. Joshi who has fought many a hard battle on the floor of the Legislative Assembly during the last fifteen years on behalf of Indian labour.

MR. N. M. JOSHI

Under the Government of India Act 1919, one seat (nominations by Government) is reserved for Indian labour. Mr. N. M. Joshi has been nominated to represent Indian labour at each successive Assembly since the introduction of the reforms. He has attended several sessions of the International Labour Conference and is a member of the Governing Body of the International Labour Organisation. Of all the labour leaders in India, Mr. Joshi has had unique opportunities of studying almost all questions connected with labour and there is to-day nobody in India who is better qualified to speak on behalf of Indian labour as a whole. Mr. Joshi has successfully moved various resolutions both in the Indian Legislative Assembly and at the International Labour Conference for enquiries into several phases of conditions of employment in Indian industries and for the introduction

of new labour laws for India. If India, to-day, has a code of labour laws which compares very favourably with the similar codes of other countries it is due largely to the influence and the pressure which Mr. Joshi has brought to bear on the Government of India and the Indian Legislative Assembly in the matter.

APPOINTMENT OF A ROYAL COMMISSION ON INDIAN LABOUR

Reverting to the labour laws of 1922-1923, seven years' administration of these laws had brought several defects to light. Certain administrative defects had been rectified by Amending Acts but it was gradually felt that much of the legislation was of a very halting character and that it did not go far enough. Several trade union leaders who had attended ten successive sessions of the International Labour Conference as Labour Delegates or Advisers had availed themselves of the opportunity offered by their being sent to Geneva of making enquiries and studies of labour questions in European countries before returning to India. After their return to India these leaders started newspaper and platform agitation for both reform and expansion of the existing laws. These demands coupled with the great industrial unrest prevalent in India at the time made a complete survey and investigation by an impartial body inevitable and in the middle of the year 1929 the Government of India announced the appointment by His Majesty the King Emperor, of a Royal Commission on Indian Labour to enquire into and report on existing conditions of labour in industrial undertakings and plantations in British India, on the health, efficiency and standard of living of the workers, and on the relations between the employers and the employed, and to make recommendations. The late Rt. Hon. J. H. Whitley was appointed Chairman. The other members of the Commission were the Rt. Hon. Shrinivasa Sastri, P. C. Sir Alexander Murray, Kt., C.B.E., Sir Ibrahim Rahimtoola, K.C.S.I., K.B.I., C.I.E., Sir Victor Simon, Pionier, Dewan Chaman Lal, M.A., Miss Beryl M. Le Port, P.O.W., Deputy Chief Inspector, Trade Boards, England, and Messrs. A. G. Clow, C.S.I., C.I.E., I.C.S., N. M. Joshi, M.A., Kabeeruddin Ahmed, M.A., G. D. Birla, M.A., and John Cliff, Assistant General Secretary, Transport and Railway Workers' Union, England. Mr. S. Lal, I.C.S., and Mr. A. Dibdin from the India Office, London were appointed Joint Secretaries, and Mr. A. H. Green, Assistant Secretary, Mr. S. R. Deshpande, Assistant Commissioner of Labour, Government of Bombay, was appointed Statistician and Lt. Col. A. J. H. Russell, C.B.E., Medical Assessor to the Commission. The Commission arrived in India on the 11th October 1929 and after visiting several places in India and examining several representatives of the Central and Provincial Governments, the railways and associations of the employers and the employed left for England on the 22nd March 1930 to collect further evidence in that country. The Commission returned to India in the month of October of the same year and after completing that part of their tour which had been left unfinished in the previous winter, went to Delhi in November to draft their Report.

1929—A YEAR OF CROWDED EVENTS

The year 1929 was a very momentous one in the history of the labour movement in India crowded as it was with events of prime importance. References have already been made to the Bombay riots, the arrest of communist leaders, the publication of the Report of the Bombay Strike Enquiry Committee and to the announcement of the appointment of a Royal Commission on Indian Labour. Mention has also been made of the passing of the Trade Disputes Act in that year. An Act amending the Workmen's Compensation Act was also passed by the central legislature and the Government of Bombay took the initiative in provincial labour legislation by passing a Maternity Benefits Act providing for monetary compensation by factory employers to their women workers for loss of wages during periods immediately prior to and following confinement.

The chief communist leaders had been arrested but their henchmen were not. Inbued with communist principles, these endeavoured to carry on the industrial strife of the year before. The Bombay Girm Kamgar Union continued to claim a membership of over 50,000 but when the Millowners' Association Bombay set themselves to the task of implementing such of the Fawcett Committee's recommendations as required joint consideration by the representatives of both parties, they found that there was nobody who was in a position to deliver the goods on behalf of labour. Such joint meetings as were held were not fruitful of any results and when a dispute arose in the Spring Mill in the month of April over the question of the dismissal of one worker, the Bombay Girm Kamgar Union made this a *casus belli* for the declaration of another general strike in the cotton mill industry. This strike however, did not extend to all the mills in the city and island of Bombay as that of the previous year had done but still it was of a fairly general character involving 109,232 workers in 62 mills. It lasted from the 26th April to the 18th September and was responsible for a total time loss of nearly seven million working days. The Government of Bombay took advantage of the new Trade Disputes Act and appointed a Court of Enquiry under the chairmanship of the Hon. Mr Justice Pearson of the Calcutta High Court to make a full investigation into the causes of the strike. The Court sat continuously for over a month and in their report which was published on the 18th September they came to the unanimous conclusion that the whole of the blame for the calling and the continuation of this strike rested with the Bombay Girm Kamgar Union. The moral effect of this report was so great that the Union called off the strike unconditionally on the day following its publication.

Another important strike which occurred in India during the year 1929 was one of the employees of the B & C I Railway's Loco and Carriage Workshop at Dohad. The railway administration had transferred a number of operatives from their big workshops in Bombay to the new workshop which they had built at Dohad and had given them certain allowances on reduced rates of pay. The men demanded a continuation of the old rates plus Dohad

allowances and failing a restoration of the cut they struck work. After the strike had proceeded for some weeks, the Government of India appointed a Board of Conciliation under the Trade Disputes Act and this Board upheld the workmen's claims.

SPLIT IN THE ALL-INDIA TRADE UNION CONGRESS

The last important event in this year of crowded events was the split which occurred in the Trade Union Congress at its tenth session which was held in Nagpur in the month of November of that year under the presidency of Pandit Jawaharlal Nehru. The Trade Union Congress was inaugurated in 1920 for two main purposes: (1) to co-ordinate the activities of the individual labour unions in India which till then remained inchoate and were unable to take concerted action and (2) to recommend workers' delegates to the various sessions of the International Labour Conference. It remained the central organisation of the trade union movement in India for nearly a decade and most of the important unions in India were affiliated to it. The Congress met in a full dress session once every year and discussed various leading questions connected with Indian labour. Early in 1929 the Bombay Girm Kamgar Union and the G.I.P. Railwaymen's Union—two organisations controlled almost entirely by communists—secured affiliation to the Congress. As the elections to the executive body of the Congress are conducted on the basis of the membership strength of the individual affiliated unions, the communists were able to capture a majority of the seats on the executive through the membership of these two unions and the tenth session was therefore entirely dominated by the communist section of the movement. Resolutions were passed for the boycott of the Royal Commission on Indian Labour and the International Labour Conference, for the affiliation of the Congress to the League Against Imperialism and for the appointment of the Workers' Welfare League, a communist organisation in England as agents of the Congress in Great Britain. The passing of these resolutions marked the culmination of a long period of mischievous activity inspired by Moscow and fomented by communist agents in India and brought to a head the question whether the trade union movement in India should be under the leadership of genuine trade unionists or of the votaries of communism. The moderate sections under the leadership of Messrs N. M. Joshi, V. V. Giri, B. Shiva Rao, R. K. Bakhale and Dewan Chaman Lal seceded from the Congress and set up a separate federation under the name of *The Indian Trades Union Federation* in order to co-ordinate the activities of non-communist trade unions in India. Further details in connection with these two all India federations, their quarrels, the further split in the Congress and the attempts made for unity will be dealt with in the chapter on *Trade Unionism and Trade Union Law*.

THE CALM AFTER THE STORM

The third decade of the twentieth century had been a most momentous period in the history of labour in India crowded as it was

with almost continuous industrial strife, the appointment of committees and commissions to enquire into and make recommendations in connection with the causes of this strife and the laying of the foundation stones for a first class code of labour laws for the country. The prolonged and disastrous strikes of the years 1928 and 1929—especially of the latter year in the storm centre of India's principal industry—had completely exhausted the resources of the workers. In the opening paragraph of this note it was stated that the agricultural character of the industrial worker in India and the permanent contact which he maintained with his land was the prime factor for the proper understanding of the several problems connected with labour in India. General strikes of three to six months duration without financial assistance and strike benefits from workmen's organisations would be impossible to understand if industrial town dwellers did not have agricultural and their village homes to fall back upon during periods of prolonged stoppages of work. Statistics collected during each of these big disputes showed that after the first few weeks of their start they were exodus of large groups of workers to their village homes. Such of them as remained in the towns sold their trinkets and possessions, fell into arrears with their rents and explored their credit to the fullest with *bamias* (native money lenders) and retail shopkeepers for food supplies. The history of each of these disputes shows that it takes several weeks after the termination of each dispute for a unit to get back to full strength working because the workmen have to return from distant places to which the news of a resumption of work takes a very long time to filter through, and even then it is only the pressure on the land which forces the agriculturist to make a further temporary return to industry.

After the end of the general strike in the cotton textile mills of Bombay of the year 1929, trade unionism (except perhaps in Ahmedabad) was thoroughly discredited. Both the workmen and such of their organisations as existed had been defeated most ignominiously and the workers began to lose faith in their leaders. *Bonuses* and landlords were clamouring for the repayment of debts and it was becoming very necessary to put in as much steady work as possible. The schemes of standardisation of wage rates which had been approved of by the Lawlett Committee had been temporarily shelved. This standardisation, even without a general cut in wage rates, would have reduced the earnings of several thousands of workers in the process of levelling down to standard rates. On the other hand those of several other thousands of workmen would have been improved in the process of levelling up. But the poorer mills which were paying low rates of wages were naturally most disinclined to increase their wages bills and the Millowners' Association (Bombay), decided to allow sleeping dogs to lie. The annual averages of the monthly cost of living index numbers (1914=100) were 147 for 1928 and 149 for 1929. This annual average fell to 137 in 1930 and there was a further drop of more than 20 points in the average for the year 1931. Apart from a few alterations in piece rates of wages for new sorts and other minor adjustments, there had been

no wholesale reductions in wage rates in any of the larger centres of the textile industry in India since the cut of 15 per cent in the wages of the cotton mill workers in Ahmedabad in 1923 and with each successive fall in prices, real wages naturally improved. Apart from the question of the sufficiency of the existing rates for the maintenance of a decent standard of life, the wage rates prevalent in 1930 and 1931 did permit margins for wiping out old debts and as the employers made no general move in these two years to reduce rates, this period was one of comparative industrial calm for the whole country. Stray strikes over matters connected with personnel or with minor grievances continued to occur at frequent intervals but these were mostly settled by the replacement of the dissatisfied elements from the ranks of the unemployed owing to the weakening of the bonds on solidarity among workmen and to the absence of trusted leaders. The Royal Commission on Indian Labour were moreover engaged in making a full and comprehensive enquiry into conditions of employment and as the workmen were aware that the members of the Commission were visiting several units all over India to personally see things for themselves, Indian industrial labour was content to wait till such time as the Commission's report was published instead of taking the initiative into its own hands as it had frequently done during the last ten years.

The Government of the Central Provinces and Berar followed the Government of Bombay by passing a Maternity Benefits Act in 1930. In 1931 the Government of India appointed a Court of Enquiry under the Trade Disputes Act to enquire into certain questions affecting labour arising out of the large reductions which Indian railways were making in their staffs. This Court made certain recommendations regarding the absorption of the retrenched men in other industries and for their re-employment when suitable opportunities arose in the future and also for the payment of a more generous scale of retirement gratuities. The work on this occasion, however, had to accept the inevitable and they were not slow in recognising the elementary and cardinal principle that no organisation could possibly maintain staffs which were surplus to requirements. The extreme left wing in the leftist Trade Union Congress came to the conclusion in 1931 that the Congress was not as revolutionary as what it should be and this element broke away to form the All-India Red Trade Union Congress. It thus happened that instead of there being one co-ordinating body at the apex of the trade union organisation in the country to guide and control the movement there were four separate federations the majority of which were useless and effete bodies with little influence and trifling membership.

PUBLICATION OF THE ROYAL LABOUR COMMISSION'S REPORT

The most notable event in the world of Indian labour during the year 1931 was the publication, in the month of June, of the report of the Royal Commission on Indian Labour. The report is a document of first rate importance dealing with almost every aspect of the labour problem

in India and it contains many hundreds of recommendations covering a very wide field of subjects. The value of the Commission's recommendations are considerably enhanced by two facts—firstly, by the considered opinions which were brought to bear on the various matters discussed by a thoroughly representative body of persons representing as they did both the employers and the employed and legislators and Government officials, and secondly, by the almost complete unanimity with which the various groups composing this body reached their conclusions and decisions on matters which must necessarily have been discussed with expressions of widely divergent views. The Report has been the lodestar of all the various pieces of labour legislation which have been placed on the Indian Statute Book since its publication, and it will continue to be the text book for social legislation and labour welfare in India for many years to come.

A summary containing the principal recommendations of the Commission classified according to the subjects with which they deal, was given at pages 474 to 484 of the 1932 edition of this publication. The Government of India classified these recommendations under six different groups according as they involved or required Central or Provincial legislation, administrative action by the Central or Provincial Governments or action by public and local bodies or by employers or workers or organisations, and forwarded them to various local Governments and bodies requesting them to give such of the recommendations as concerned them due and adequate consideration and to initiate provincial legislation wherever necessary. The Government of India have published annually since 1932 reports on the action taken by the Central and provincial Governments on the Commission's recommendations and these reports are on sale at the Government of India Book Depots at Delhi and Calcutta. Most of the Royal Commission's recommendations with regard to the expansion of the scope and the improvement of the existing Acts relating to conditions and hours of work in factories and mines, workmen's compensation and to the control and supervision of the labour which migrates from India to the tea and other plantations in Assam have already been implemented by amending or consolidating Acts. Acts amending the Trade Disputes Act in a minor particular and placing it permanently (the original Act had been passed for a period of five years) on the Statute Book were passed in 1932 and 1934. The Employers and Workmen (Disputes) Act which had been passed as early as 1860 for the speedy determination of disputes relating to wages of certain classes of workers employed on the construction of railways, canals and other public works and which had been almost a dead letter was, in accordance with a recommendation made in the matter by the Royal Commission, repealed in 1932. Acts to prevent the pledging of children and to facilitate the acquisition of land for industrial housing were passed in 1933. Legislation on the lines of the British Truck Act to control the deductions which employers may make from wages in respect of fines and to provide for the early payment of due wages was passed early in 1936. Various other proposals for

new labour legislation in connection with employers liability (re common employment and assumed risk), extension of workmen's compensation to agriculture and forestry, fixation of hours of work of dock labourers, allotment of seamen's wages, exemption of salaries and wages from attachment, the shortening of wage periods, arrest and imprisonment of industrial workers for debt and for the prevention of the besetting of industrial establishments by money lenders for the recovery of debts have been circulated by the Government of India to the various provincial Governments for opinion and some of these have resulted in the introduction of Bills in the legislature. It is very unlikely, however, that all these proposals will result in legislation because very weighty objections have been raised during circulation on the various practical difficulties which would have to be contended with in the administration of any laws that may be framed to govern these matters. The Department of Industries and Labour of the Government of India are at present engaged in formulating proposals and/or a Bill for the control of those factories which do not use power and which are not regulated in any way at present. Other matters will be taken up in due course.

It will have been noticed that nothing has been stated so far in this section regarding the actual recommendations which the Royal Commission have made. But as they have stated these under several headings and the more important of them were reproduced in the 1932 edition of this publication. Nor has anything been stated yet with regard to the action taken by provincial Governments, public bodies and employers and workers' organisations on such of the recommendations as they were concerned with. In this connection there is very little indeed to report because financial stringency in most provinces and with most bodies has prevented any substantial measure of action. It is obviously impossible for us to attempt even a brief summarisation of the Royal Commission's report and recommendations and the action taken thereon in a compact book of reference such as *The Indian Year Book*, but as it might be of considerable interest to the users of this reference book to have information readily available on such of the Commission's recommendations as have already been implemented or which are proposed to be implemented in the near future, references will be made to these recommendations in each of the various sections into which this note has been divided. For example, the Commission's recommendations relating to workmen's compensation will be dealt with in the chapter on that subject.

BEGINNING OF A PERIOD OF LARGE WAGE-CUTS

The sharp downward trend of prices which set in about the middle of the year 1930 continued till May 1933 when the cost of living index for working classes in Bombay (City) touched par or 100 (1914=100). Wages in most industries, on the other hand, had continued almost at the same high levels of 1929-30—in many

cases rates early in 1933 were double or more than double those prevalent in 1914. Following the cut of 15.625 per cent in wages which had been effected in the Ahmedabad cotton mills in 1923, the cotton mill workers in that centre had submitted a demand for a restoration of the cut in 1929. The matter was, as usual, referred to the permanent arbitration board. On the board failing to reach an agreement in the matter, the question was referred to an umpire (Dewan Bahadur Krishanlal M. Thaver) who awarded an increase of 8 per cent in the rates for the workpeople on the spinning side and of five per cent for those on the weaving side of the industry. The conciliation board appointed in connection with the Dohad dispute had decided in favour of the workers and against the administration of the B. B. & C. I. Railway. Employers, therefore, were beginning to feel that the public generally and impartial arbitrators and conciliators in particular were determined that the standard of life which Indian industrial workers had attained as a result of the hard battles which they had fought must be maintained. They were, therefore, very chary of initiating proposals for reductions in rates. The commencement of the year 1933, however, saw the beginning of a new wave of depression in industry. Jute mills had already resorted to short time working and several cotton mills and other factories were being compelled to close down. One firm of managing agents who controlled ten large cotton textile mills in Bombay City crashed and as a result of this crash all the mills under their control were compelled to stop work. Several of the mills under the control of another large firm of managing agents had to suspend work temporarily. The remaining mills were faced with two alternatives—(a) to reduce wages and so to lower costs of production, or (b) to close down. The technical wages sub-committee of the Millowners Association, Bombay to whom the question of the necessity for a reduction in wages had been referred earlier in the year reported against the advisability of collective action in the matter and advised that each individual affiliated unit should take independent action. Hitherto, the Association had adhered to the principle of collective action and the dearth of food or war allowances in all the cotton mills in Bombay had remained at 80 per cent over basic rates for weavers and 70 per cent for spinners and women. Reference has often been made in this note to "basic rates of wages. This should not be taken to mean that there existed in any industry in India a standard scale of wage rates at any particular period. The term basic simply applies to the rates prevalent at some remote date on which percentage allowances were given instead of direct consolidated increases. Rates of wages in Indian industries vary widely not only between industry and industry and centre and centre but also between unit and unit in the same industry in the same centre and also between the different individuals in the same occupation in one individual unit. If the same or similar rates of wages are found in any two or more units in any centre this is due merely to coincidence and not to any deliberate action in the matter. Therefore, although the consolidated allowances remained at 80 and 70 per cent in the cases of all mills,

the basic rates on which these allowances were granted varied widely between mill and mill and rates are not unknown where the cumulative rates (basic rates *plus* allowances) in one mill are almost double those for the same type of work in another.

Acting on the recommendations made in the matter by the Bombay Millowners Association, the affiliated mills started adopting individual measures in effecting reductions in rates by announcing varying cuts in the dearth allowances. Certain mills resorted to the device of closing down completely for a few months and reopening on reduced rates. At one stage during the year 1933 more than 50,000 cotton mill operatives in Bombay City had been thrown out of employment as a result of permanent or temporary closures of some mills and partial working in others. Many of these had gone back to their village homes but many remained in the city in the hope of securing employment either in their own or in any other mill which would start work. The unemployed workers were literally on the verge of starvation and they were consequently ready to accept work on any wages that were offering. It would have been futile for the operatives in the working mills to attempt a general strike because in a few cases where certain groups of workers preferred to leave their jobs rather than to accept reduced rates, their places were at once filled from the ranks of the hundreds of the unemployed who were clamouring for jobs. The success achieved by some mills in effecting reductions without strikes emboldened the rest to follow suit. Some of the earlier mills which had effected small cuts as a preliminary try out administered second larger doses when they saw other mills getting away with larger cuts and by the beginning of the year 1934 almost every mill in Bombay had effected substantial reductions in their rates of wages.

Towards the end of the year 1933, the Ahmedabad Millowners Association, attempting to profit as a result of the successful experience of the Bombay Mills in the matter, decided to reduce wages in the cotton mills in Ahmedabad by 25 per cent. The industrial constitution in this centre, however, demanded that the matter should be referred to the permanent arbitration board. Mr. M. K. Gandhi, a labour member of this board, was at the time very busy with his several other political and social preoccupations and his health was also far from satisfactory. He therefore requested the Millowners Association and the Textile Labour Association to prepare their respective cases for and against the reduction and also to discuss the main questions between themselves in order to arrive at as great a measure of agreement as possible. These negotiations and the subsequent discussions between the members of the board were carried on for over a year and it was not till the beginning of the year 1935 that an agreement was concluded on the basis of a uniform cut of $6\frac{1}{2}$ per cent subject to the proviso that the earnings of a two loom weaver should not be reduced below Rs. 41-4-0 for 26 working days. In recounting the course of events in Ahmedabad those in Bombay have been anticipated by about a year.

INSTITUTION OF A DEPARTMENTAL ENQUIRY INTO WAGE CUTS

The year 1934 in the world of labour in Bombay opened with an insistent demand by the more moderate labour leaders, particularly Mr R. R. Bakhale M.L.C. for an impartial enquiry into the wage cuts and unemployment in the cotton mill industry in the Bombay Presidency. The agitation for such an enquiry was taken up by the press and His Excellency the Governor of Bombay granted several interviews to the representatives of the Millowners Association and to Mr R. R. Bakhale in order to discover a *via media* which would be satisfactory to both sides. As a result of these and other discussions, the Government of Bombay decided that a departmental enquiry into the nature and the extent of wage cuts and the extent of unemployment in the cotton textile industry in the whole of the Bombay Presidency, should be conducted by Mr J. L. Ginnings, C.B.E., Commissioner of Labour Mr Ginnings appointed Mr S. R. Deshpande, Assistant Commissioner of Labour, to take charge of all the field work and collection of evidence. Mr Deshpande, together with the Labour Officer at Ahmedabad and a statistical assistant of the Labour Office (Mr S. S. Rajagopalan B.A.) visited every cotton mill in the Presidency and procured full information on wages and on the other matters under enquiry. It was unfortunate that whilst the Departmental Enquiry was in progress the cotton mills in Bombay City were again affected by a prolonged strike of a semi-general character. There was also a general strike in all the cotton mills in Sholapur which lasted for over three months. In order to trace the causes of this strike we must leave the work of the Departmental Committee *pro tem* and go back to the arrest of the thirty communist leaders early in 1929 on charges of sedition and organised conspiracy to deprive the King of his sovereignty of British India.

THE FAMOUS MEERUT TRIAL

The trial of the thirty communist leaders in what is now historically known as the famous Meerut conspiracy case lasted from 1929 to 1932 when some of the prisoners were released on bail pending final judgment. Judgment in the case was delivered at Meerut by Mr Yorke the Sessions Judge, on the 16th January 1933. One of the thirty accused died in prison three were acquitted and the remaining 26 were sentenced to terms of imprisonment varying from transportation for life to three years. All the convicted persons appealed and substantial reductions were made by the Allahabad High Court in the sentences passed by the Sessions Judge of Meerut. The convictions of three persons were maintained to the extent that their sentences were reduced to the terms of imprisonment already undergone by them and they were ordered to be released from jail. The convictions of nine persons were set aside and they were ordered to be released forthwith. Such of the communists as were acquitted and were subsequently released from jail made frantic efforts to regain their hold on trade unions, and actually succeeded in getting into some of the

more important of them—notably the railway unions and the Bombay Girm Kamgar Union. Assisted by such of the extreme leftists as had not been jailed they formed a labour committee on an all India basis early in 1934 to call a general strike in all cotton mills in India. The partial strike in the Bombay cotton mills in April and May and the general strike in the Sholapur mills were almost entirely due to the efforts launched by this committee but with the exception of Bombay and Sholapur they did not meet with any appreciable measure of success in any other centre of the industry in the rest of India.

THE PUBLICATION OF THE REPORT OF THE DEPARTMENTAL ENQUIRY.

The report of the Departmental Enquiry conducted by the Bombay Labour Office was published on the 21st June 1934 and the strike in the Bombay mills was called off almost simultaneously. This enquiry was perhaps the most comprehensive of its kind that had yet been undertaken in India into wages and conditions of work in the textile industry and the information and revelations which it contained were the subject of an India wide discussion on public platforms and in the press. The Departmental findings on the various questions referred to the Labour Office for enquiry were as follows—

1 *Extent of Wage Reductions*—Wages in Bombay City were lower by 21 per cent in April 1934 as compared with July 1926 and in Sholapur by 17 per cent. Wages in Ahmedabad had risen between five to six per cent during the same period.

2 *Question of Uniformity in the Reductions*—The reduction in Sholapur was uniform in all mills but as the Bombay Millowners Association permitted its members to take independent action as they pleased, the extent of the cuts varied widely between mill and mill.

3 *Extent of Fall in Cost of Living*—The cost of living had fallen in all centres. Taking July 1926 as 100 it fell by 29 points in Bombay City in April 1934. In Ahmedabad City, the fall in December 1933 as compared with August 1926 was 31 per cent and in Sholapur there was a fall of 28 per cent between February 1927 and December 1933.

4 *Position re Real Wages*—Bombay, April 1934 eleven per cent higher than in 1926. Ahmedabad, 54 per cent higher, and in Sholapur 15 per cent higher.

5 *Reasons for Wage Cuts*—The reason most generally given was trade depression. Other reasons varied with the centres. In Bombay it was stated that it was necessary to reduce the cost of production, and labour costs were those most capable of reduction as the fall in the cost of living would enable the workers to maintain the standard of life they had in 1926 even after wages were reduced. As regards

Ahmedabad, there was no general reduction of wages at the time but such a reduction was contemplated owing to diminished profits and the wage reductions in other centres. In one centre wages were reduced owing to the probable coming into operation of the 54 hours week.

6 *Rationalisation* and its Effects on Work and Conditions*—That method of rationalisation which takes the form of asking operatives to mind more machines than formerly had made the greatest progress in mills in Bombay City. In Ahmedabad, rationalisation had been particularly directed towards improving the efficiency and types of machines used. The effect of rationalisation on earnings varied from mill to mill. In the few cases where rationalisation had not been accompanied by wage cuts the workers were getting about 50 per cent more than they did before rationalisation was introduced, where it was accompanied by wage cuts the workers were not getting any more—the extra rates for minding more machines being neutralised by reductions in wages. The effects of rationalisation on the conditions of work had been beneficial because the workers were either working a shorter, day or their work had been rendered easier. In Bombay, one form of rationalisation was to ask a weaver to mind four looms instead of two. In Ahmedabad, the system had not been adopted but double side working in the frame department was developing and better mixings and the production of finer cloth had increased rapidly. Where operatives were attending more machines than formerly, the workers had usually been given 35 to 60 per cent more wages in ring spinning, and 50 to 75 per cent more on the speed frame. But some benefit from the increased efficiency of the plant had been passed on to some workers in the form of higher earnings on those machines. In other centres there had been very few changes in machinery or methods. The general effects of rationalisation, in so far as one is able to generalise, had been beneficial to the workers.

7 *Extent of Unemployment and its Causes*—For lack of any agency official or non official for collecting statistics of unemployment, it was very difficult to formulate an answer to this question. 28,000 workers had lost their employment in cotton mills in Bombay. (The reopening of closed mills and the employment of workers on night shift had, however, more than absorbed this number by the end of the year 1934). In Ahmedabad, 28,551 more operatives were employed in cotton mills than in 1926 and in Sholapur the number employed was more or less stationary.

The publication of the report of the Departmental Enquiry was followed by several conversations between His Excellency the Governor of Bombay and the Hon ble the General and Home Member on the one hand and the representatives of the Millowners Association, Bombay, and representative labour leaders on the other. The Association submitted to Government

a simple scheme of standard rates for unrationed occupations on time rates of wages for affiliated mills in Bombay City and they also agreed, in cases where the doorness allowance for weavers had fallen to less than 40 per cent to raise this allowance to 40 per cent after the coming into effect of the 54 hour week on the 1st January 1935.

BOMBAY PASSES A TRADE DISPUTES CONCILIATION ACT

By far the most important result of the report of the Bombay Departmental Enquiry was the passing by the Government of Bombay of a Trade Disputes Conciliation Act in August 1934. This Act makes provision (1) for the appointment of a Labour Officer to look after the interests of cotton mill workers in Bombay City, to represent their individual grievances to their employers and to secure redress of such grievances whenever and wherever possible, and (2) for the appointment of the Commissioner of Labour as an ex officio Chief Conciliator to whom the Labour Officer could bring all cases in which he could not succeed. The Chief Conciliator is given powers to summon parties and witnesses and to call for such documents as may be necessary. Although the functions of the Chief Conciliator were to bring about an agreement between two opposing parties, he has come to be regarded almost as an industrial judge whose decision has so far been mostly accepted by both the parties to a dispute. When the Bill for this piece of legislation was submitted to the Bombay Legislative Council, the Millowners' Association, Bombay, gave an undertaking to Government that if the Bill was passed they would also appoint a Labour Officer of their own whose main duties would be to use his influence with mill managements on behalf of the workers and who would endeavour to secure a certain measure of co ordination in conditions of work as between the different mills in Bombay. Mr W B Gilligan, I.C.S., was the first Government Labour Officer to be appointed under the Act. When Mr Gilligan went on leave in November 1935, he was succeeded by Mr W Pryde, I.P. Mr J P Gennings, C.B.E., Commissioner of Labour, is the ex officio Chief Conciliator and Mr C A Dalal, B.Sc. (London) is the Labour Officer of the Millowners Association. During the period of nearly three years for which the Act has been in force, remarkable results have been achieved and there has been little industrial strife in the cotton mill industry in Bombay City since the Act came into force in September 1934.

During the year 1936, the total number of complaints enquired into by the Labour officer amounted to 1,370 of which 1,062 or 77.5 per cent ended successfully. The total number of workpeople involved in these complaints was about 20,000. The total number of disputes in connection with wages numbered 38 and of these 28 resulted in the workpeople benefitting to some extent. The Bombay Trade Disputes Conciliation Act and the jurisdiction of the Labour Officer was extended to include glass and soap factories in Bombay City and the Bombay Suburban Area and also to textile factories in the Thana District with effect from the 1st March 1937.

INSTITUTION BY THE GOVERNMENT OF BOMBAY OF A GENERAL WAGE CENSUS

By far the most notable event in the field of Government administration of matters connected with labour in India was the institution by the Government of Bombay, in 1934, of a General Wage Census to cover as many industries as possible in the Bombay Presidency. The Royal Commission on Indian Labour had recommended that before any machinery was set up for fixing minimum wages complete surveys of wages and conditions should be undertaken for such industries in which there was a strong presumption that conditions warranted detailed investigation and that the results of these surveys should be the basis on which it should be decided whether the fixing of a minimum wage would be desirable and practicable. Until 1934 the Labour Office of the Government of Bombay had conducted three enquiries into the wages and hours of work of cotton mill workers in the Bombay Presidency for selected months in the years 1921, 1923 and 1926. Other wages enquiries of a limited character covered municipal workers, peons in Bombay City and workers in a few selected printing presses in Bombay City. None of the other industries, especially the engineering, had been touched. No other province in India had attempted an enquiry into industrial wages and such information as was available on the subject consisted of a few figures of wage rates in some important occupations in selected units which are contained in some of the annual provincial administration reports on the working of the Indian Factories Act. The Government of Bombay felt that before any question in connection with the creation of wage boards for fixing minimum wages could be considered, it would be necessary to have accurate and reliable information on wages and conditions of work in as many industries as possible—both organised and unorganised. They accordingly instructed the Labour Office to first make a survey of wages and conditions in factory industries the first part of which should cover all perennial factories and the second seasonal factories.

In 1923, the Government of Bombay had introduced, in the local Legislative Council, a Bill to provide for the collection of statistics in connection with wages, prices and rents by making it compulsory for occupiers, shop-keepers and tenants to supply correct information. Owing to strong opposition from the non-official benches, particularly from the representatives of employers and vested interests, the Bill was withdrawn, and, to day, neither the Central nor any of the Provincial Statute Books in India contain any Act which compels employers to furnish statistics relating to wages, or shop-keepers to make returns of prices.

Preliminary enquiries which had been conducted in representative factories during the year 1933 had revealed the existence of a bewildering variety of methods and periods of wage payment as between unit and unit and also the use of a variety of English, vernacular and local names for designating occupations. It was moreover felt that if results of any value

were to be secured from a general wage census, it should cover all or as many units as possible, and that, in the absence of a Statistics Act, it would be necessary to secure the willing co-operation of as many factory managements as possible. It was also necessary to draw up uniform forms which would be equally applicable to all industries. With this object in view, an Assistant Commissioner of Labour (Mr. N. A. Mehrban, B.A., F.S.S.) assisted by a statistical assistant from the Labour Office (Mr. R. G. Gokhale, B.Com.) visited every one of nearly 750 perennial factories in over 80 towns and villages in the Bombay Presidency between January and May 1934. All manufacturing processes at each of these factories were examined and with the assistance of technical experts in each industry, lists of standard occupational terms were drawn up for all industries. The whole of the administrative, clerical and labour staffs at each factory were properly classified according to their correct occupational designations and full instructions were left at each factory with regard to the manner in which the census forms were to be filled up. This first part of the census was for the month of May 1934 with variations to suit local conditions. The forms together with a general questionnaire containing over 60 questions covering all phases of wage payments, conditions of work and welfare, and standard lists of occupational terms were issued to all perennial factories early in the month of June and second and third visits were paid to almost every factory for the purpose of securing both uniformity and accuracy in the returns. It reflects great credit on the staff of the Labour Office that not one of the perennial working factories in the Bombay Presidency failed to submit full information.

The Government of Bombay propose to publish the results of the first part of the General Wage Census in a series of six reports, the first four covering wages, hours of work and conditions of employment in the engineering, printing, textile and other miscellaneous industries, the fifth covering salaries and conditions of employment of supervisory staffs in perennial factories and the last being a general report covering all industries. The first report of the series covering the engineering trade was published in December 1935, the second covering the printing industry was published early in March 1936, and the third covering all the textile industries (cotton, silk, wool and hosiery) in the Bombay Presidency was published early in May 1937. These reports contain a fund of most valuable information regarding wage rates, earnings and conditions of employment and they should be of the greatest possible value to both employers and the employed, to Government administrations, to economists and to the public generally. Copies of these reports can be had from the Government Book Depot, Bombay or from the High Commissioner for India in London.

FIRST ASIATIC LABOUR CONFERENCE.

The year 1934 was a year of notable events for Indian labour. The first Asiatic Labour Conference attended by delegates from Japan, India and Ceylon was held at Colombo on the 10th and 11th May. Messrs N. M. Joshi, Jannadas M. Mehta, S. C. Joshi and W. Francis

represented India. Dr P. P. Pillu, Director of the Indian Branch of the International Labour Office and Dr F. I. Aiyasawa, a member of the International Labour Office staff at Geneva also attended the Congress. A constitution for the Congress was drawn up and several resolutions dealing with various aspects of the labour problem were adopted.

In the month of August, the Government of Bombay launched a prosecution against eight leaders of the textile strike of April June on the grounds (1) that some of the demands made or formulated by the strikers were not in furtherance of a trade dispute, and (2) that the strike was designed to inflict severe, general and prolonged hardship on the community and thereby to compel the Government to take or abstain from taking some particular course of action. The accused were charged under sections 16 and 17 of the Trade Disputes Act, 1929 as being persons who incited others to take part in an illegal strike. The Chief Presidency Magistrate Bombay who tried the case, held that the strike was not illegal within the meaning of sub-section (1) of section 16 of the Act and acquitted all the accused on the 23rd October 1934. The Government of Bombay preferred an appeal against the decision of the Chief Presidency Magistrate and the appeal was dismissed by the Bombay High Court. The Honourable the Chief Justice and Mr Justice N. J. Wadia who heard the case, agreed with the findings of the Chief Presidency Magistrate and dismissed the appeal.

THE INDIAN FACTORIES ACT, 1934

The Royal Commission on Indian Labour made several very important recommendations for substantial amendments to the Indian Factories Act 1911 as amended by the Amending Acts of 1922 1923 1926 and 1931 firstly for the reduction of the maximum limits of daily and weekly hours of work in perennial factories and for the better regulation of such hours secondly for the improvement of working conditions in factories and thirdly for a more effective observance on the part of factory owners of the requirements of the Act. The Government of India accepted most of the Royal Commission's recommendations and drew up a draft Bill for an entirely new Act. This was circulated to all provincial Governments in June 1932 for opinion. On the receipt of the replies from local Governments, the Honourable Member in charge of the Department of Industries and Labour of the Government of India made a tour of the more important industrial centres in India to discuss various questions arising out of the draft Bill with the representatives of local Governments and associations of employers and workmen. On the conclusion of this tour, the Government of India convened a conference of provincial chief inspectors of factories and a final Bill was then drawn up and this was introduced in the Legislative Assembly on the 8th September 1933. It was passed into law at the summer session of the Assembly at Simla in 1934 and received the assent of the Governor General on the 20th August of that year. The new Act was brought into effect from the 1st January 1935.

Full details have been given in this note of the first Factories Act of 1881 and of the subsequent amending Act of 1891, of the 1911 consolidating Act and of the Amending Act of 1922. The Amending Acts of 1923 1926 and 1931 did not introduce any new principle of major importance and were merely intended to remove administrative difficulties. All the new features introduced by the 1934 Act were incorporated as a result of the recommendations of the Royal Commission. The main provisions of the Indian factory law as it stands to-day are given below with notes regarding the new principles which were introduced by the 1934 Act.

(a) *Classification of Factories*—A distinction is drawn between seasonal and perennial factories. A factory which is exclusively engaged in cotton-ginning cotton or jute pressing, the decortication of ground-nuts or the manufacture of ground-nut oil or the manufacture of coffee, indigo, the rubber sugar (including gur) or tea is to be a seasonal factory, provided that a local Government may, by notification in the local official gazette, declare any such factory in which manufacturing processes are ordinarily carried on for more than 180 working days in the year, not to be a seasonal factory for the purposes of the Act. The local Government may also by notification, declare any seasonal factory in which manufacturing processes are ordinarily carried on for not more than 180 working days in the year and which cannot be carried on except during particular seasons or at times dependent on the irregular action of natural forces to be a seasonal factory for the purposes of this Act.

(b) *Age and Sex Groups*—Prior to the 1934 Act, factory operatives were divided into three age and sex groups: (1) adult males, (2) adult females, and (3) children of both sexes, i.e., persons over 12 and under 15 years of age. A fourth group of adolescents has now been introduced. These are defined as persons of both sexes who are over the age of 15 years and under the age of 17 years but who have not been certified as fit for employment as adults. Such adolescents as have not been so certified are to be deemed to be children.

(c) *Hours of Work*—The maximum limits of eleven hours per day and sixty hours per week laid down by the 1922 Act for both adult males and females are permitted only in the case of seasonal factories. The maximum hours permitted for perennial factories have been reduced to nine per day and 54 per week subject to the proviso that persons employed on work necessitating continuous production for technical reasons and persons whose work is required for the manufacture or supply of articles of prime necessity which must be made or supplied every day may be employed for not more than 36 hours in any one week. The maximum hours of work permitted for both uncertified adolescents and children have been limited to five per day both in seasonal and in perennial factories.

(d) *Spreadover*—The principle of spreadover, i.e., the limitation of the period of consecutive hours during which the daily limits of hours of work may be availed of by the owner or occupier of a factory was introduced in factory legislation in 1934 for the first time. The spreadover in the case of adults is limited to

thirteen consecutive hours and in the case of children to seven and a half continuous hours, but the continuous period of eleven free hours in every twenty four hours in the case of adults and of sixteen and a half free hours in the case of children must include the hours between 7 p.m. and 6 a.m. for both women and children. The power to grant exemptions in the case of women where technical reasons require that work should be done at night, e.g. in the fish curing industry, continues to be allowed.

(e) *Artificial Cooling and Humidification*—The provisions incorporated in the 1922 Act with regard to the control of artificial humidification were expanded. A new principle was introduced whereby power was given to local Governments to authorise Factory Inspectors to call upon managers of factories to carry out specific measures for increasing the cooling power of the air if they are of opinion that it is at times insufficient to secure operatives against danger to health or serious discomfort provided, however, that the cooling power can be appreciably increased without involving an amount of expense which would be unreasonable under the circumstances.

(f) *Welfare*—The Government of India did not accept the recommendation of the Royal Commission with regard to the giving of the power to local Governments to issue welfare orders such as a issued by the Secretary of State in England under section 7 of the Police Factories, etc. Miscellaneous Provisions) Act of 1914. They were of opinion that the matters to be covered by such welfare orders should have the approval of the legislature and should not be imposed on owners by the executive Government. The new Act has, however, made provision for four matters in connection with workers' welfare: (1) for the maintenance of a suitable and sufficient supply of water for washing for the use of persons employed in processes involving contact with obnoxious or poisonous substances, (2) for adequate shelter for rest in factories employing more than 150 persons, (3) for the reservation of suitable rooms for the use of children of women employed in factories employing more than fifty women and (4) for the maintenance of adequate first aid appliances.

(g) *Rest Intervals and Holidays*—The provisions of the 1911 and the 1922 Acts with regard to rest intervals and the weekly holiday were maintained subject only to verbal modifications of a minor character.

(h) *Overtime*—The old Acts contained no limitations with regard to the overtime hours which could be worked by 'exempted' workers. The new Act places a limitation of hours on the amount of overtime that can be worked by virtue of any exemptions granted under the Act. With regard to overtime rates of pay, the Act lays down that a time and a half should be paid in all cases where a worker in a seasonal factory is required to work for more than 60 hours in any one week or where a worker in a factory other than a seasonal factory is required to work for more than ten hours in any one day. But where a worker in a factory other than a seasonal factory is

required to work for more than fifty four hours in any one week, he is to be entitled, in respect of the overtime worked less any overtime in respect of which he is entitled to extra pay under the preceding sentence, to pay at the rate of one and a quarter times his ordinary rate of pay. When a worker in any factory works on the weekly rest day, he is to be entitled in respect of the overtime worked to pay at the rate of one and a half times the ordinary rate of pay.

(i) *Certificates of Fitness for Children*—All the earlier Factory Acts contained provisions for the certification, by certifying surgeons of the age of children seeking employment in factories. The 1934 Act went a step further and gave powers to local Governments to make rules prescribing the degree of fitness to be attained by such children and laid down that whenever such a standard has been laid down no child failing to obtain it can be certified for employment in a factory.

(j) *Security of Factory Structures*—Another new feature of the 1934 Act is the power which has been given to factory inspectors to call upon managers to carry out such tests as may be necessary to determine the strength or quality of any specified parts of the structure of factories if they are of opinion that, on account of any defect or inadequacy in the construction of any factory the factory or any part thereof is dangerous to human life or safety. Local Governments are further empowered to make rules for the furnishing, by factories, of certificates of stability.

(k) *Exemptions*—A frequent cause of complaint against the older factory Acts was that they gave local Governments very wide powers to exempt certain classes of workmen from all or any of the restrictive provisions of the Act. The new Act limited these powers and prescribed further that no exemptions were to be granted in respect of the provisions for spreadover prohibition of night work and the limitations of weekly hours for women and persons under the age of sixteen years, but, as already stated, night work for women was permitted in fish curing factories.

(l) *Notices, Records and Registers*—The 1934 Act provides more effective methods for the maintenance of records and registers of employment, the posting of notices for the benefit of the workers, of their hours of employment, the prescribed abstracts of the Factories Act, weekly holidays, etc., and for the notification of these notices and any changes proposed to be made in them to inspectors of factories.

(m) *Fines and Penalties*—Higher penalties and fines are prescribed for occupiers or owners of factories who have been previously convicted for having committed the same offences.

JANUARY 1935 TO MARCH 1937.

The year 1935 opened with the Government of Bombay adopting a new angle of vision with regard to industrial disputes. The attitude of both the Central and the Provincial Governments towards industrial disputes in India during the previous fifteen years was one either

of *laissez faire* as long as law and order were maintained or of interference only in such cases where particular disputes resulted in breaches of the peace. Compared to the total number of strikes which had occurred in the country the number of cases in which committees of enquiry had been appointed to carry out investigations and to submit reports or in which official conciliators had taken the trouble to bring about settlements which would be acceptable to both parties was very small indeed. But the success which met the efforts of the Labour Officer appointed under the Bombay Trade Disputes Conciliation Act for the textile industry in Bombay City was at once apparent and the Government of Bombay, emboldened by this success, were most anxious to try out the principle of conciliation in industries other than the textile and to bring about settlements which would make for industrial peace of a more enduring character. With this object in view, the Bombay Government instructed their Commissioner of Labour (who is also ex-officio Chief Conciliator under the Bombay Trade Disputes Conciliation Act) to attempt conciliation in cases where he thought that Government intervention would be of value. In accordance with these instructions, the Commissioner of Labour offered his services as conciliator to the Western India Match Company during a dispute which occurred during January 1935 between the company and its workmen at their Ambernath factory over questions connected mainly with reductions in wages. Mr. J. L. Gannings (Commissioner of Labour and Mr. S. R. Deshpande, Assistant Commissioner), were able to secure an agreement between the two parties on the basis of which work was resumed after a strike lasting for a month. Subsequent to restarting work there was a further disagreement between the employers and workers on the figures of production on which the new piece work prices were to be based and these were referred by both parties to the Commissioner of Labour for his arbitration. On this occasion, Mr. N. A. Mehrbin, Assistant Commissioner of Labour, in the absence of Mr. Deshpande who was on leave, paid several visits to Ambernath in order to examine the various processes of work, to ascertain figures of average production and efficiency for different groups of piece rate workers and to discuss the various questions involved with the management on the spot. Mr. Gannings held frequent meetings with the management in Bombay and after nearly two months' work, he gave a comprehensive award which was accepted by both parties. Although many of the more important disputes in the cotton textile industry in Ahmedabad have been settled on the basis of awards given by umpires, the Ambernath settlement was the first occasion in India on which a Government official was appointed an arbitrator in an industrial dispute and whose award was accepted by both the parties to a dispute. This has been dealt with at some length because the Ambernath settlement marks a development of the greatest possible importance in the field of industrial conciliation and arbitration in India. After this first success, the officials of the Labour Office have successfully intervened in several other disputes and have been able to secure agreements acceptable to both sides.

A recent case in which two parties to an industrial dispute sought the arbitration of the Commissioner of Labour was connected with the dismissal of 84 persons in the Gokak Mills. The Commissioner of Labour deputed Mr. S. R. Deshpande, Assistant Commissioner of Labour, to make an enquiry into each of these cases of dismissal at Gokak and on the results of that enquiry issued an award recommending the reinstatement of 31 workers.

MR R R BAKHALE'S SHOPS BILL

At the summer session of the Bombay Legislative Council held at Poona in July 1935 Mr. R. R. Bakhale introduced a Bill to prohibit the employment of children and to limit the hours of work of young persons in shops and to provide for their early closing. A motion for the circulation of the Bill for opinion was adopted, but, the Government of Bombay while not opposing the first reading were of opinion that it was essential to be in possession of definite information relating to the conditions of work and wages of shop employees before they could formulate any views on the subject. Government therefore instructed the Commissioner of Labour to conduct an enquiry and submit a report for the information of Government and the Legislative Council. The report of this enquiry which covers the hours of work, wages and conditions of employment in the retail trade of some towns of the Bombay Presidency was published in February 1936 and it is the first of its kind in India. Mr. Bakhale's Bill came up again in the Bombay Legislative Council on the 20th March on a motion for the reference of the Bill to a Select Committee, but this motion was lost by 34 votes to 30 owing mainly to the opposition of Government who felt that the difficulties in connection with the administration of such a measure were for the present insurmountable. Government were also of the opinion that the legislature which would shortly be elected under the new reforms should have an opportunity of deciding whether such a measure as was proposed by Mr. Bakhale should be adopted or not.

THE PAYMENT OF WAGES ACT

Perhaps the most advanced and difficult piece of social legislation attempted in India is the Payment of Wages Act which was passed by the central legislature early in 1936. This Act owes its origin to Mr. N. M. Joshi who more than ten years ago, moved a resolution in the Legislative Assembly for legislation in India on the lines of the British Truck Acts. The Government of India at the time promised to undertake an investigation into the subject and they accordingly asked all local Governments for their opinions in the matter. The Government of Bombay felt that they were not in a position to offer any views without complete information on the extent of the deductions which are made from wages in respect of fines and other matters and they therefore instituted a Presidency wide enquiry into the matter. All factories, industrial establishments, hotels, shops, offices, etc., were covered and the report of the enquiry was published in April 1926. The results showed that abuses of a sufficiently wide

character as to justify legislation for their control were prevalent. Of all the provincial Governments in India the Government of Bombay alone were in favour of legislation on the subject and the Government of India were considering whether that province alone should be asked to undertake such legislation. In the meanwhile, the Royal Commission on Indian Labour was appointed and the Government of India decided to await their recommendations in the matter. The Royal Commission recommended all India legislation and the Government of India drew up a draft Bill in 1932 and this was introduced in the Legislative Assembly on the 1st February 1933. A motion for the circulation of the Bill was passed on the 14th February and the Bill was then referred to all local Governments for opinion after consultation with the interests concerned. A motion for the reference of the Bill to a Select Committee was tabled for the Delhi session of 1934 but was not reached and the Bill lapsed. The Government of India took this opportunity of revising the original Bill throughout in the light of the criticisms which had been received and a new Bill was introduced in the Legislative Assembly on the 13th February 1935. A motion for the reference of the Bill to a Select Committee was adopted on the 18th February. The Select Committee met at Simla from the 27th May to the 1st June and Mr N. A. Mehiban, Assistant Commissioner of Labour of the Government of Bombay, was invited by the Government of India to attend its meetings as an Expert Adviser. The Select Committee's report together with the Bill as amended by them was published in the *Gazette of India* dated the 16th February 1935.

It is not necessary for the purposes of this note to describe the contents of the Government of India's original and revised Bills and the amplifications made in the revised Bill by the Select Committee. All the different drafts dealt with two main principles: (1) prompter payments of wages, and (2) control of the deductions which an employer may make from the wages of his workmen in respect of fines and services. The main differences between the three drafts related to (a) the scope of the proposed measure, (b) the types and extent of the permissible deductions, (c) definition of the term 'wages', and (d) the periods during which wages should be paid after they fall due. The original Bill permitted employers to make deductions from wages in respect of the value of material damaged in the process of manufacture and which was handed over to the worker concerned. The practice of handing over damaged material to the worker and of deducting its cost from his wages was widely prevalent in certain centres of the textile industry in India and particularly in Ahmedabad where it was estimated that a total sum of nearly fifteen lakhs of rupees was deducted annually from the wages of about 2,000 weavers in respect of weaving fines and the value of damaged cloth handed over to them. The Labour Office of the Government of Bombay made an elaborate enquiry into this matter in 1933 and the Government of India acting on a report on the subject submitted to them by the Bombay Government decided to disallow this type of deductions in the revised Bill. Another practice which was widely prevalent in several industries was to grant good attendance and efficiency

bonuses in addition to rates. Bonuses offer a wide loophole to employers to evade limitations in respect of fines because if the granting of bonuses were permitted there would be nothing to prevent an employer from setting apart substantial portions of wages as bonuses to be paid conditionally on certain standards of conduct, attendance and efficiency being attained. If a workman failed to attain the specified standards, he would lose the bonus or in other words he would be fined to that extent. It was necessary, therefore, for the Government of India to so simplify the definition of the term 'wages' as to cover all bonuses. At the moment of writing however it is open to considerable doubt whether the Government of India have achieved their object of preventing substantial portions of wages from being converted into bonuses and eminent lawyers are of opinion that bonuses can still be paid. Textile mills in Sholapur had a practice of granting a certain quantity of grain every month to such of their workers as did not remain absent for more than four days in a month and of deducting Rs. 2 (or more depending on varying quantities of grain supplied) from their wages. The system was introduced during a period of high prices which were prevalent in 1919-20 and was intended to meet a demand for increases in wages. The value of the grain allowance varied with fluctuations in prices and put a part of the wage on the basis of a sliding scale. As such it was not objectionable but workers who failed to put in the required period of attendance were deprived of this allowance and the loss which accrued to them acted as a fine. In principle the whole system was bad and savoured very much of the old Tommy shops in England which the earlier Truck Acts were intended to kill. The Select Committee accepted this argument and inserted a new provision in the Bill requiring that all wages should be paid in currency notes and/or coin of the realm.

When the Bill came up for second reading in the Legislative Assembly in February 1936, Sir Homi P. Mody, K.B.E., the representative of the Millowners' Association, Bombay, moved an amendment by virtue of which an employer would be permitted to deduct thirteen days' wages from the due wages of such persons as acting in concert of ten or more remained absent from work without giving due notice. This amendment was intended to prevent lightning strikes and it introduced an entirely new principle into the Bill. As such it was strongly opposed by Mr N. M. Joshi, the representative of Indian labour and other labour members in the House. The Legislative Assembly however passed Sir Homi Mody's amendment but when the Bill as passed by the Legislative Assembly went to the Council of State that body amended this clause by permitting a deduction of only eight days' wages on this account. The Act was finally passed on the 18th April 1936. Early in 1937, the Act was amended in such a way as to extend the provisions relating to ten or more persons remaining absent from work in concert so as to cover 'stay in' strikes as well. The Payment of Wages Act was brought into operation with effect from the 26th March 1937. The more important provisions of the Act are as follows —

(d) *Scope of Application*—The Act will in the first instance, apply to factories and railways but local Governments are empowered to extend it to tramway or motor omnibus services, docks, wharves or jetties, inland steamer vessels, mines, quarries or oil fields, plantations, and any other class of workshops or establishments in which articles are produced, adapted or manufactured with a view to their use, transport or sale.

(b) *Wages*—Wages for purposes of the Act means all remuneration, capable of being expressed in terms of money, which would, if the terms of the contract of employment, express or implied, were fulfilled, be payable, whether conditionally upon the regular attendance, good work or conduct or other behaviour of the person employed or otherwise to a person employed in respect of his employment or of work done in such employment, and includes any bonus or other additional remuneration of the nature aforesaid which would be so payable and any sum payable to such person by reason of the termination of his employment but does not include travelling allowances, employees' contributions to provident funds, gratuities payable on discharge, or the value of any housing accommodation or services rendered to the worker by his employer.

(c) *Wage Periods*—No wage period shall exceed one month. (Amendments moved by Labour members to reduce this to a week and a fortnight were defeated), and all wages are required to be paid in coin and/or currency notes.

(d) *Time of Payment*—The wages of all persons employed in concerns employing less than one thousand persons are to be paid before the expiry of the seventh day after the last day of the wage period in respect of which the wages are payable and in establishments employing more than one thousand persons before the expiry of the tenth day. Where employment is terminated by the employer, all due wages are required to be paid before the expiry of the second working day following that on which the employment is terminated.

(e) *Permissible Deductions*—Deductions from wages are permitted only in respect of fines, absence from duty, damage to or loss of goods expressly entrusted to an employed person for custody, housing accommodation supplied by an employer, for recovery of advances or for adjustment of over payments of wages, for income tax, or contributions to or repayment of advances from provident funds, for schemes of postal insurance, for dues to co-operative societies and in orders made by courts of law. Deductions are also permitted in respect of such identities and services supplied by the employer as the Governor General in Council or a local Government may, by general or special order, authorise.

(f) *Fines*—No fines are to be imposed on children, i.e., persons below the age of fifteen years. No fines may be imposed save in respect of such acts or omissions as have been exhibited in notices which have received the approval of the local Government or of an authority which the local Government may prescribe in the matter and unless the person who is fined has been given an opportunity of showing cause against the fine. The total amount of fines which may be imposed on any person during any wage period

shall not exceed half in value in the respect of wages for that wage period and no fine can be recovered in instalments or after the expiry of 60 days from the day on which it was imposed. All fines are to be recorded in prescribed registers and all deductions from fines are to be expended on objects beneficial to the workers. Local Governments have been empowered to make rules in connection with most of these matters.

(g) *Deductions for Absence from Duty*—Deductions from wages for period of absence from duty should be *pro rata* and should not bear a larger proportion than the period of absence bears to the period of duty (i.e. if the wage is Rs. 27 for 27 working days the deductions for 7 days absence must not be more than Rs. 7), provided that subject to any rules made in this behalf by the local Government if ten or more employed persons acting in concert absent themselves without due notice (that is to say without giving the notice which they are required to give either expressly by their contracts of employment or impliedly by the terms of their service) and without reasonable cause, such deduction from any such person may include such amount not exceeding his wages for eight days as may be any such contract or terms be due to the employer in lieu of due notice. By an amending Act passed early in 1937 an explanation has been added to the Section dealing with this matter which provides that an employed person shall be deemed to be absent from the place where he is required to work if although present in such place, he refuses to carry out his work.

(h) *Deductions for Recovery of Advances*—Recovery of an advance of money given before employment began shall be made from the first payment of wages in respect of a complete wage period, but no recovery shall be made on such advances given for travelling expenses and recovery of advances of wages not already earned shall be subject to rules to be made by local Governments.

(i) *Contracting Out*—No contracting out is permitted.

(j) *Procedure*—Local Governments are empowered to appoint Commissioners for Workmen's Compensation or any other persons with judicial experience as the authority to hear and decide all claims arising out of deductions from or non payment of wages. Penalties have been laid down for malicious or vexatious claims. Appeals to courts of small causes are permitted and an elaborate procedure has been laid down with regard to trials for offences against the Act.

(k) *Administration*—Inspectors of factories are to be responsible for the administration of the Act as far as factories are concerned and powers are reserved to the Governor General in Council and to local Governments to appoint such other persons as they think fit to be inspectors for the purposes of this Act for railways.

This concludes our historical survey of the growth of the Labour Problem in India. In this survey factory legislation and legislation in connection with payment of wages has been dealt with as exhaustively as space permitted. We now proceed to deal more briefly with other important phases connected with labour in India.

C P UNREGULATED FACTORIES ACT, 1937

The Legislative Council of the Central Provinces and Berar passed an Unregulated Factories Act early in 1937. This Act seeks to regulate the labour of women and children and to make provision for the welfare of labour in factories to which the Factories Act 1934 does not apply.

Unregulated Factory has been defined as any place wherein fifty or more workers are employed or were employed on any one day of the preceding twelve months and to which the Factories Act, 1934 does not apply and wherein the following industries are carried on—(i) bidi making, (ii) shellac manufacture, and (iii) leather tanning. A child has been defined

as a person who has not completed his fourteenth year. The provisions with regard to health and safety, notices and registers, penalties and procedure closely follow the similar provision in the Factories Act. Children's hours are restricted to seven in any one day and no child can be employed in any unregulated factory except between 8 a.m. and noon, and 1 p.m. and 5 p.m. The double employment of children is prohibited and a child who has worked in any unregulated factory on any one day is prevented from working overtime or taking work home. The hours of work of adult males are limited to ten per day and provision has been made for the grant of a holiday after every period of six consecutive days. Women's hours are restricted to nine per day and they are prohibited from working in any unregulated factory before sunrise or after sunset.

INDUSTRIAL WORKERS IN INDIA.

In 1922 India obtained recognition by the League of Nations as one of the eight chief industrial countries of the world. As such she is entitled to a permanent seat on the Governing Body of the International Labour Organisation. In the memorandum prepared by the India Office of the British Government for the substantiation of India's claims as such the following figures were given to illustrate the industrial importance of the country—

Twenty eight million agricultural workers excluding peasant proprietors, 141,000 maritime workers, lascars, etc., a figure second only to that of the United Kingdom, over twenty million workers in industry, including cottage industries, mines and transport, railway mileage in excess of that in every country in the world except the United States of America.

The figures for the 1931 population census show that the number of agricultural workers has increased to nearly thirty-one and a half millions. This figure excludes cultivating owners (27 millions), cultivating tenants (34 millions), landlords (over three millions) and others (six and a half millions). The number of earners plus working dependants in industry, trade, transport and mines amounts to twenty-

six millions. Domestic servants number eleven millions. These figures, at the best, must be considered as estimates, because even to day no reliable statistics are available in India to show approximately correct figures of the numbers employed in each branch of industry in India. The statistics contained in the annual administration reports for factories and mines show the numbers of persons employed in factories and mines which are subject to the control of the Factories and the Mines Acts. As far as factories are concerned, it is known that there are thousands of small factories in India which are not subject to any control and no statistics are therefore available to show the numbers employed in such concerns. All that the annual factory statistics show are the numbers of factories which are controlled by the Indian Factories Act in any particular year and the numbers employed in such factories.

With each expansion in the definition of the term 'factory' more existing factories come under control and are therefore included in the statistics but such expansions only occurred in the years immediately following the passing of the 1891, 1911 and 1922 Acts. Subject to these provisos, the following figures show the growth of the factory population in India during the last forty years.

Factory Statistics, 1894-1935

Year	Number of factories	Average daily number employed			
		Men	Women	Children	Total
1894	815	275,806	53,127	20,877	349,810
1898	1,098	334,594	60,603	27,532	422,729
1902	1,533	424,375	85,882	31,377	541,634
1906	1,855	546,693	102,796	41,223	690,712
1910	2,359	624,945	115,540	52,026	792,511
1914	2,936	746,773	144,157	60,043	950,973
1918	3,436	897,469	161,343	64,110	1,122,922
1922	5,144	1,086,457	206,887	67,628	1,361,002
1926	7,251	1,208,628	249,669	60,094	1,518,391
1930	8,148	1,235,425	254,905	37,972	1,528,302
1934	8,658	1,248,009	220,860	18,362	1,487,231
1935	8,881	1,360,131(a)	235,344(b)	15,457	1,610,932

(a) Of these, 27,384 were classed as adolescent males

(b) Of these, 5,634 were classed as adolescent females

Adolescents' are a new class created by the Indian Factories Act, 1934, to cover persons between the ages of 15 and 17 who have not secured certificates of fitness for employment as adults and who must continue to be employed as children

Several interesting deductions can be drawn from the figures given in the above table. The most striking feature of these figures is that although the total number of factories rose by more than 500 between 1930 and 1935, the total of the average daily number employed in all

factories during the same period fell by over forty thousand. This is due partly to the introduction of rational or more efficient methods of work. The average daily number of children employed in factories shows a steady fall since 1922. This is due to stricter administration and better inspection and certification after the passing of the Amending Act of 1922. As against 67,628 children employed in 5,144 factories, in that year the number employed in 8,831 factories in 1935 fell to 15,457. It is noteworthy that the Millowners' Association, Bombay reached a decision in 1922 that no children should be employed in any textile mill in Bombay City after that year. The following table gives the detailed factory statistics for the year 1935 by provinces and age and sex groups

Detailed Factory Statistics for 1935

Province	Number of Factories	Average daily number of Workers employed				
		Adult Males	Adult Women	Adolescents	Children	Total
Madras	1,491	106,744	39,655	9,851	6,495	162,745
Bombay	1,746	343,194	70,235	5,346	1,941	420,716
Bengal	1,591	442,259	57,733	10,879	2,328	513,199
United Provinces	496	132,042	5,534	1,220	464	139,260
Punjab	669	48,819	7,597	1,042	733	58,191
Burma	965	77,672	11,924	638	93	90,327
Bihar and Orissa	309	79,350	6,517	253	207	86,327
Central Provinces and Bihar	696	40,501	18,799	241	355	59,896
Assam	706	32,030	9,635	3,456	2,436	47,557
North West Frontier Province	28	1,098	16	17		1,131
Pakistan	16	2,195			83	2,278
United Marwar	38	12,235	1,011	2	233	23,481
Delhi	55	12,816	295	57	61	13,229
Bangalore and Coorg	21	1,792	759		33	2,584
Total	8,831	1,332,747	229,710	33,002	15,462	1,610,921

The annual all India reports give detailed figures of numbers employed, by age and sex groups, only for cotton spinning and weaving mills and for jute mills and not for the other industries. It is not possible, therefore, to give a table similar to the one above by industries. It is interesting, however, to observe that of the total numbers employed as given in the above table 357,883 men, 62,412 women, 11,789 adolescents and 6,736 children were employed in cotton mills and 235,745 men, 39,002 women, 2,659 adolescents and 380 children were employed in jute mills. Out of the total number of 438,820 persons employed in all cotton mills in India, 279,685 or nearly 65 per cent were employed in cotton mills in the Bombay Presidency and out of a total number of 277,986 persons employed in all jute mills in India,

263,399 or nearly 95 per cent were employed in jute mills in Bengal. The next most important factory industry is that of engineering. This group covers engineering concerns proper railway workshops, dockyards, metal ware factories, fine woodwork factories and saw mills etc., and it covers between 25 to 30 per cent of the total number employed in all factories.

MINING STATISTICS

The collection of full statistics with regard to the number of persons employed in mines in India dates from 1924, that is to say, after the passing of the Indian Mines Act, 1923. The following table contains the statistics for the period 1924-1935 —

Mining Statistics, 1924-1935

Year	Total number of mines which came under the Act	Number of persons employed		
		Underground and open workings	Above ground	Total
1924	1,804	167,779	90,498	258,277
1925	2,011	168,554	84,303	253,857
1926	1,897	189,371	70,742	260,113
1927	1,992	196,341	72,949	269,290
1928	1,948	197,398	70,273	267,671
1929	1,732	199,908	69,783	269,691
1930	1,669	191,915	69,752	261,667
1931	1,471	170,638	60,144	230,782
1932	1,281	151,924	52,734	204,658
1933	1,424	153,942	52,565	206,507
1934	1,675	170,820	58,561	229,381
1935	1,813	189,263	64,707	253,970

MIGRATION

The principal industry of India being agriculture there are naturally no large movements of population from one part to another. Where the migration figures are high it is generally in the small units. Thus, Delhi has 41 per cent of immigrants and Ajmer-Merwara 19 per cent while Ajmer City itself has as many immigrants as natives. Immigration influences the population of India very little. The 1931 Census shows only 730,562 persons as born outside the country as against 603,526 in 1921. The total emigration from the country is estimated at a million during the decade 1921-1931. The most important inter-provincial streams of migration are those between Assam and the other provinces in India, parti-

cularly Madras and Bihar and Orissa. At the last Census, Assam showed a net gain of nearly a million and a quarter due largely to the influx of immigrant labour on plantations. The greatest loss was shown by Bihar and Orissa which suffered to the extent of 1,291,567 persons. As between British India and the Native States the tendency prior to 1921 was for migration into British India but the position during the decade 1921-1931 was reversed. The most striking example of this in 1931 was Bikaner State which showed a net gain of 161,303.

Internal migration is of six kinds: (1) *casual* involving minor movements between neighbouring villages; (2) *temporary* due to demands for labour on canals, railway construction, public works, etc. and to pilgrimages and fairs; (3) *periodic* caused by recurring seasonal

demands (4) *semi permanent* where persons who, although maintaining constant contact with their homes seek employment in industry, (5) *permanent* where migrants leave one place for another for good, and (6) *daily necessitated* by business and employment at a walking distance from home. The Punjab and Delhi furnish the best examples of casual migration. Periodic migration is particularly heavy at harvest time and also at the changes of the seasons when traders, herdsmen, graziers and labourers from Khyber Pakhtunkhwa, Kashmir and the hills move down to the plains during winter.

As far as labour is concerned, the greatest fluidity is to be found in Assam and the greatest immobility in Bihar and Orissa where 959 out of every 1,000 persons in the province in 1931 were born therein. The emigration of labour from Madras is mainly overseas particularly to Malaya but recruiting of Indian labour for Malaya was stopped in 1930. None the less, considerably over half a million Indians were found in that country in 1931. As far as the main industrial cities are concerned Bombay draws the bulk of its labour from Kathiawar and the Konkan, Calcutta draws an appreciable part from Bihar and Orissa and the greater part of the *pardeshi* labour in the Ahmedabad cotton mills comes from the United Provinces.

METHODS OF RECRUITMENT

One of the most difficult problems connected with industrial labour in India is the method followed for its recruitment. Minor variations in the method may be found as between industry and industry but the cardinal principle is the same in all industries and that is recruitment through the medium of a recruiting agent, a *sardar*, a *mukhladam* or a jobber. In the first introductory paragraphs of this note several reasons were made to the agricultural character and outlook of the workpeople employed in Indian industries to their ignorance and illiteracy and to their inherent attachment to their village homes and life. Reference was also made to the want of a stable labour force in industrial towns in India. Over and above all this, the Indian industrial labourer is, inherently, extremely conservative. Poverty and indebtedness may force him from his village to look for work but they will not force him to accept any work that may be offering among alien strangers. It will therefore be found that almost all industrial units in India are manned by groups of workpeople from the same or surrounding villages—by groups who know all the others in the group and who they feel will look after them in the event of any trouble or serious illness. A first exodus from a village is seldom a solitary one. It is almost invariably in bands collected by recruiting agents or jobbers—old hands who have a degree of intelligence above that of their fellows and who know all the tricks of the game. In most cases the agent or jobber is aimed by his employer with sufficient funds to give advances to a recruit in order to help him to clear a pressing debt or to buy a recruit from his family by helping it with small funds for ceremonial expenditure. In some cases the recruiting agent launches on this expenditure himself in

the hope that the recurring payments which he will receive from the recruit whom he succeeds in placing in employment will double or treble his original outlay.

The methods by which the jobber or recruiting agent is remunerated by the employer vary. It is reported that in the Central Provinces labourers are purchased from private contractors at so much per head. In Bengal the recruiting agent receives a lump sum payment from which he pays his men and retains the balance himself. In the textile mills in the Bombay Presidency the jobbers receive fixed salaries. Recruitment through contractors is most prevalent in Burma owing to the scarcity of labour in that province.

The method of recruitment which has just been described is not bad in itself. In many cases it appears to be the only way which an employer can adopt. The trouble with it, however, is the abuses with which it is wrapped up. One can understand a jobber holding a considerable controlling influence over the men whom he recruits, and one can also forgive him for accepting occasional gifts in cash as tokens of gratitude from the men whom he has placed in employment, but the matter does not rest here. The jobber is known to be an exceedingly corrupt creature who not only bleeds the persons whom he recruits by demanding from them recurring cash payments for every wage, but who also wields a considerable influence over his employer by threatening to withhold his labour in the event of his not receiving satisfaction. In Ahmedabad, a system is common whereby a jobber takes over a number of looms in a mill runs them with men whom he feeds and houses, and himself collects all their piece rate earnings. It is estimated that in several such cases his income amounts to many hundreds of rupees per month.

The system of recruitment followed in the case of the better paid and the more skilled jobs—especially in the engineering industry and on railways—is different. Here also a recommendation by a foreman or headman is an important factor but in most cases the recruitment is direct because the type of man required is generally available on the spot. On railways, a contract for a period of apprenticeship is almost always entered into the terms of these contracts vary according to the types of apprenticeship. The periods of apprenticeship vary from two to five years according to the jobs for which the apprentices are trained.

As far as recruitment of the ordinary unskilled worker is concerned, the rapid industrialisation of many towns is creating a nucleus of permanent town dwellers and such of these as are out of employment have got into the habit of invading mill and factory gates in the mornings in the hope of securing substitute employment or of getting into a permanent vacancy. This labour is somewhat independent of the jobber but not entirely because they must keep in his good graces in order to continue in the employment which they are able to secure.

Existing methods of recruitment in Indian industries have received general condemnation on all sides and the Royal Commission on Indian Labour have devoted much space in their

report to this question. For the guidance of employers, the Commission made the following recommendations —

(a) Jobbers should be excluded from the engagement and dismissal of labour,

(b) Whenever the scale of a factory permits it a labour officer should be appointed directly under the general manager. His main functions should be in regard to engagements, dismissal and discharge,

(c) Where it is not possible to appoint a whole time labour officer, the manager or some responsible officer should retain complete control over engagements and dismissals,

(d) Employers associations in co-operation with trade unions should adopt a common policy to stamp out bribery,

(e) Where women are engaged in substantial numbers, at least one educated woman should be appointed in charge of their welfare and supervision,

(f) Workers should be encouraged to apply for definite periods of leave and should go with a promise that on their return at the proper time they will be able to resume their old work. Whenever possible an allowance should be given to the worker who goes on leave after approved service.

In pursuance of the Royal Commission's recommendations in the matter, several large organisations in India have appointed special labour officers to recruit and to look after the welfare of the labour force and from such reports as are available it is gathered that the system wherever introduced has been an unqualified success. It may therefore be anticipated that appointments of labour officers will be more widely resorted to in the near future. The Bombay Millowners' Association in anticipation of the Commission's recommendations in the matter instructed their affiliated mills in January 1930 to introduce wherever possible a policy of direct recruitment of labour instead of the existing practice of recruitment through jobbers. They also recommended the introduction of a system of granting discharge certificates to contain a complete record of a worker's service and to demand the production of such certificates before engaging new men. Messrs E. D. Sassoon and Company, Limited, in 1933 introduced a system of decentralisation in connection with their substitute labour for the eleven mills which they control in Bombay City. Each mill makes a monthly estimate of the number of temporary men which it is likely to engage during the month and issues employment cards to the required number. These men present themselves at the gates of their respective mills every morning and substitutes are engaged only from such men as have had these employment cards issued to them. There has been a rapid development of this system in most of the other cotton textile mills in Bombay City.

RECRUITMENT OF PLANTATION LABOUR FOR ASSAM

One of the earliest pieces of labour legislation in India was the Assam Labour and Emigration Act of 1901 which was designed mainly to regulate the recruitment and engagement of

indentured labour for the tea plantations in that province. Owing to altering conditions, it had not been possible for many years to subject plantation workers to penal contracts and although several attempts had been made to improve the law by amendments of the main Act in 1909, 1915 and 1927 and by the issue of rules and regulations, these proved to be abortive and ineffective and the law on the subject became extremely confused. The whole question was subjected to a thorough examination by the Government of India and the provincial Governments in 1925-28 and by the Royal Commission on Indian Labour in 1929-30. The Commission recommended that the existing legislation should be replaced by a new enactment which should provide (a) that no assisted emigrants from controlled areas should be forwarded to the Assam tea gardens except through a depot maintained either by the tea industry or by suitable groups of employers and approved by the local Government, (b) that the Government of India should have power to frame rules regarding transit arrangements, in particular for the laying down of certain prescribed routes to Assam and for the maintenance of depots at necessary intervals, (c) that the power conferred by section 3 of the 1901 Act to prohibit recruitment for Assam in particular localities should be withdrawn immediately, (d) that the existing Assam Labour Board should be abolished and that in its place a Controller of Immigrants in Assam should be appointed to look after the interests of emigrants from other provinces, (e) that every future assisted emigrant to an Assam tea garden should have the right after the first three years to be repatriated at his employer's expense, and that the Controller should be empowered to repatriate a garden worker at the expense of the employer within one year of his arrival if it is found necessary on the ground of health unsuitability of the work to his personal capacity or for other sufficient reason, and (f) that in the event of the recurrence of abuses, Government should have power to reintroduce in any area the prohibition of recruitment otherwise than by means of licensed garden sardars and licensed recruiters. The Government of India implemented these recommendations in the Tea Districts Emigrant Labour Act which was passed in September 1932 and brought into effect from the 1st April 1933.

THE TEA DISTRICTS EMIGRANT LABOUR ACT, 1932

The first object of this Act is to make it possible, on the one hand, to exercise all the control over the recruitment and forwarding of assisted emigrants to the Assam tea gardens as may be justified and required by the interests of actual and potential emigrants, and, on the other hand, to ensure that no restrictions are imposed which are not justified. Local Governments are empowered, subject to the control of the Government of India, to impose control over the forwarding of assisted emigrants (chapter III) or over both their recruitment and their forwarding as occasion may dictate (chapters III and IV). Employers are prevented from recruiting otherwise than by means of certificated

garden sirdars or licensed recruiters. It is made unlawful to assist persons under 16 to migrate unless they are accompanied by their parents or guardians. Full effect was given to the Royal Commission's recommendations regarding repatriation (sections 7 to 11) and it is further provided that where an employer fails to make all the necessary arrangements for the repatriation of a worker within fifteen days from the date on which a right of repatriation arises to an emigrant labourer the Controller may direct the employer to despatch such labourer and his family or to pay him such compensation as may be prescribed within such period as the Controller may fix (sections 13 and 15). Section 1 of the Act makes provision for the appointment of a Controller of Emigrants with some staff and possibly one or more Deputy Controllers for supervising the general administration of the system which the Act seeks to establish. The charges for this establishment are to be met from an annual cess called the Emigrant Labour Cess which is to be levied at such rate not exceeding Rs. 9 per emigrant as the Governor General may determine for each year of levy. The provisions of this Act were intended, in the first instance, to apply only to emigration for work on tea plantations in eight specified districts in Assam, but power is retained to extend its application to other industries and to other districts in Assam if necessary.

Statistics and information with regard to the number of emigrants, conditions of life, health and work and wages of labourers working on tea plantations in Assam are contained in the Annual Administration Reports on the working of the Assam Labour Board until 1933 and of the Controller of Emigrants after 1934.

A good state of affairs is shown to exist in Indian plantations by the 1936 Annual Report on the working of the Tea Districts Emigrant Labour Act.

As there was a surplus of labour, the tea gardens were able to stipulate that only married couples would be accepted and in many cases that the number of children per couple should be limited to two. The licensing system under which labour was recruited from different parts of India worked satisfactorily. From various centres there are reports of improved accommodation for labourers on the long journey from their homes to the tea gardens.

The death and birth rates among the labourers showed a reduction, while the number of crimes was creditably small for a migrant population with a mean annual strength of 1,132,857.

Special facilities were given for the observance of different rites and religious festivals. Games such as football and hockey, were encouraged.

LABOUR IN INDIAN MINES AND THE MINES ACTS

The conditions of employment of labour in Indian mines are governed by the Indian Mines Act, 1923, as amended by the Amending Act of 1935. The Act of 1923 which came into force from the 1st July 1924 replaced the earlier enactment of 1901. The Act of 1901 contained provisions designed to secure safety in mines and it

provided for the maintenance of an inspecting staff but it contained no provisions regulating the employment of labour. This defect was first remedied by the 1923 Act section 23 of which prescribed maximum limits of 54 hours per week for underground and 60 hours per week for aboveground workers. No limits were prescribed for daily hours. As some mining managers preferred to have longer week ends off and others to work their mines by shifts, the maximum weekly hours were crowded into a few days as possible and excessive daily hours continued to be worked. There were consequently insistent demands from the representatives of the miners for the fixation of a daily limit and the Government of India therefore introduced a Bill in the Legislative Assembly in March 1927 to fix a maximum limit of daily hours at twelve. There was a considerable body of opinion in favour of enforcing an eight hour day and this was also the opinion of a minority of the Select Committee appointed to examine the Bill. The majority of the Committee however adhered to the principle of a twelve hour shift as proposed in the Bill but agreed that an eight hour shift should be gradually worked up to and they recommended a re-examination of the whole question after the new provisions had been in operation for a period of three years. A daily limit of 12 hours was thus imposed by the Amending Act of 1924 which was brought into effect from 1st April 1930.

The Royal Commission on Indian Labour which reviewed the whole position came to conclusions similar to those reached by the Select Committee. A minority of the Commission advocated an 8 hour day while the majority favoured a 12 hour day but they suggested that weekly hours above ground should be reduced to 54. In the meanwhile the Fifteenth Session of the International Labour Conference adopted a Draft Convention concerning hours of work in coal mines framed solely with reference to conditions in European countries and this Convention prescribed that the hours of work should be limited to 7½ per day in underground coal mines and to 8 hours a day and 48 hours a week in open coal mines. The Convention was placed before the Legislative Assembly on the 24th February and before the Council of State on the 22nd March 1932 and resolutions were adopted by both chambers to the effect that Government should re-examine the whole position. The Government of India accordingly referred the matter to all local Governments and on receipt of their replies introduced a Bill in the Legislative Assembly on the 22nd January 1935 for a further limitation in mining hours. It was passed in the same session and was brought into effect from the 1st October 1935. The main provisions of the 1935 Amending Act are as follows —

(a) No person is to be employed in a mine for more than six days in any one week.

(b) No person employed aboveground in a mine is to be permitted to work for more than 54 hours in any one week or for more than ten hours in any one day, and the periods of work of any such person are to be so arranged that along with any intervals of rest they shall not on any one day spread over more than eleven hours.

(c) The periods of work of a person employed below ground in a mine are to be reckoned from the time he leaves the surface to the time he returns to the surface and are not in any one day to spread over more than nine hours. No person is to be allowed to remain below ground except during his periods of work and while work below ground is carried on by a system of relays the periods of work of all persons employed in the same relay are to be the same and are to be reckoned from the time the first person of the relay leaves the surface to the time the last person of the relay returns to the surface.

(d) The employment in any mine of children under fifteen years of age is prohibited.

(e) Accidents which cause bodily injury resulting in the enforced absence from work for more than seven days are to be recorded in the prescribed manner.

PROHIBITION OF THE EMPLOYMENT OF WOMEN IN MINES.

The Government of India promulgated regulations under section 29(j) of the Indian Mines Act, 1923, on the 7th March 1929 prohibiting the employment of any woman underground in the coal mines in Bengal, Bihar and Orissa and the Central Provinces and the alt mines in the Punjab with effect from the 1st July 1930 and in all other mines with effect from the 1st July 1929. As the summary exclusion of women in the main coal fields would have resulted in a very serious dislocation in the industry a principle of gradualness was laid down and it was prescribed that in mines in certain provinces women may still be employed underground up to 1939 provided that the total number of women so employed at any time in any mine does not exceed a gradually decreasing percentage of the total number of both men and women employed underground. The annual decrease was to be 3 per cent in coal and 4 per cent in all mines. The number of females employed underground in mines since 1929 have been as follows:

1929 24,059	1930 18,684	1931 16,841
1932 14,711	1933 12,709	1934 11,103
and 1935 9,551		

HOURS OF WORK AND CONDITIONS OF EMPLOYMENT.

If one is asked what is the most remarkable feature in Indian industry the unhesitating answer would be, the existence of a bewildering variety of conditions of work and employment. These vary widely not only between industry and industry and centre and centre but also between unit and unit in the same industry and in the same centre. One would imagine that it should be possible to find some standardisation of conditions in units which are under the same administration such as in Government railways which are under the control of the Railway Board, or, in concerns of a type which are affiliated to a large and industrial association such as in textile mills which are members of the Millowners' Association, Bombay. If a similarity of conditions is to be found in two or more units this would be due more to coincidence than to intention. The assertion of individuality and a strong dislike of change are the keystones to the proper understanding of the lack of standardisation in industrial conditions in India, and old customs die hard. To attempt an adequate description of conditions of work and employment under the thirty odd heads into which this chapter is divided for each of the scores of industries which exist in India would require space greater than that given to all the subjects which have been dealt with in this volume. The situation is further complicated by the fact that conditions vary widely between organised and unorganised concerns and also as between concerns conducted on the one hand by Government, local and public bodies and on the other by private individuals and companies. At the best, therefore, it can only be possible to give broad generalisations for the more important industries and indications as to where further information

can be found. As far as the latter is concerned we may at once state that the report of the Royal Commission on Indian Labour and the various appendices to that report containing the oral and written evidence of the Government of India, the Railway Board, the various provincial Governments and other bodies and persons contain a great deal of information on a host of subjects. The descriptions of the conditions existent in 1928-29 which are contained in this report are however, somewhat out of date. As far as conditions in factories are concerned, the various provincial annual factory administration reports and the summaries annually compiled by the Government of India on the basis of these reports give valuable information on hours of work, etc. Information on conditions in Indian mines is contained in the annual all India mines administration reports. The last word on almost all phases of conditions of work and employment is, however, contained in the series of admirable reports published by the Government of Bombay in connection with the General Wage Census conducted by the Bombay Labour Office in all the perennial factories of the Bombay Presidency in 1934. It is true that these reports are of a somewhat limited character in so far as territory is concerned but owing to the existence of innumerable variations the reports are fully indicative of conditions in the whole of India. At the moment of writing three reports covering the engineering, printing and textile (cotton, silk, woollen and hosiery) industries have been published but it is expected that the remaining reports for all other industries will be available before the next edition of the *Indian Year Book* is ready for publication.

HOURS OF WORK

The existing restrictions in hours of work in factories and mines subject to the Indian Factories and Mines Acts have been described in the sections dealing with those Acts. Speaking broadly, hours in perennial factories are limited to 10 per day and 54 per week and in seasonal factories to 11 per day and 60 per week. The cotton textile industry in almost all centres works a uniform 9 hour day except in a few concerns which work a 9½ or 10 hour day from Mondays to Fridays and 1½ hours or 4 hour day on Saturdays. In the jute industry, an agreement which had been reached between the Jute Mills Association and outside mills to work a uniform 40 hour week in order to restrict production came to an end on the 31st March 1936. All jute mills were to be free to work a 54 hour week as from the 1st April 1936. All the dockyards, many of the light engineering and almost all the railway workshops work a 48 hour week but the daily hours vary according to the number of hours worked on a short Saturday. The hours in many of the mechanic shops of textile mills and in the larger non engineering factories are usually half an hour to an hour less than those for process workers and approximate more closely to those in large engineering plants. Factories engaged in the production of metalware, however, work the full number of hours permissible under the Factories Act. It also do oil and sugar mills. Almost all seasonal factories work a uniform 10 hour day for all the days in the week except on the compulsory rest day which is not always on a Sunday especially in the districts where factory owners endeavour, as far as possible to close on the local bazaar day. The Statistics of Factories compiled by the Government of India for the year ending 31st December 1935 for all factories subject to the Factories Act 1934 gives the following summary table regarding hours of work in all factories in India:—

Types of Factories and Sex Groups	Percentage of Factories in which normal weekly hours are		
	Not above 42	Between 42 & 48	Above 48
<i>Perennial</i>			
For Men	7	23	70
For Women	15	18	67
<i>Seasonal</i>			
For Men	27	13	60
For Women	35	11	54

No child can be employed for more than 30 hours in any one week. The decrease in working hours under the 1934 Act was at first resented by piece rated workers in textile mills in the Punjab, but before the close of the year 1936 so much improvement in their efficiency had occurred that ultimately no reduction in their wages resulted.

The daily hours of work underground in mines average nine per day for six days in the week. In all cases where continuous production is necessary such as in electricity generating plants and certain water pumping stations, work is arranged on a system of three shifts—the different shifts changing over every week or fortnight. The change over is so arranged that every workman gets a rest period of at least twenty four continuous hours once in one week.

As far as railways are concerned, hours of work in railway workshops are controlled by the Indian Factories Act. Most of the larger running sheds have also recently been classified as factories and work in these large sheds is arranged on the basis of three shifts of eight hours each. In the smaller sheds where work is of a fairly intermittent character systems of two shifts of twelve hours each obtain. As far as the hours of work of other classes of Railway servants are concerned the Indian Railways Act, 1890, was so amended in 1920 as to empower the Governor General in Council to make rules for the limitation of hours of work of and of grants of periodical rests to certain classes of railway servants. Under the new powers the Railway Servants Hours of Employment Rules, 1931, were promulgated and put into effect. These provide a 60 hour week for persons engaged in continuous work and an 84 hour week for employees whose work is of an essentially intermittent character. Persons in positions of supervision and management or who are already subject to the limitations imposed by other Acts such as in railway workshops, running staffs and watchmen, watermen, sweepers and gatekeepers whose work is both intermittent and of a specially light character are excluded from the operation of the rules.

There is at present no legal restriction on the hours of work of dock labourers in India and the Royal Commission who examined the question recommended that the normal daily hours prescribed by law should be fixed at nine and that overtime should be allowed up to a maximum of three additional hours on any one day overtime being paid for at 33½ per cent over ordinary rates. On circulation of these proposals by the Government of India, most provincial Governments were of opinion that under the existing organisation of dock labour in India, legislation for the control of hours was not practicable owing to the insurmountable difficulties which would be experienced in enforcement. The authority of the Karachi Port were thereupon advised to try out an improvised method of declassification which would involve registration of all dock workers. The present hours of work of stevedore labour vary between nine and twelve per day.

As far as the industries not specifically dealt with here are concerned the hours of work in the case of certain individual units may, by the standards of to day, be considered excessive but the existing regulation of the hours of a large percentage of industrial labour in India has had a very salutary effect in bringing about a general reduction to more normal standards in the case of the non regulated industries and concerns.

HOLIDAYS WITH PAY

The question of allowing industrial workers the right of having annual holidays with pay has recently become of international interest owing to the twentieth session of the International Labour Conference held in June 1936 having adopted a draft Convention on the subject of annual holidays with pay. The application of this Convention is of an exceedingly wide character and it is intended to cover almost every class and type of industrial and commercial worker. By virtue of Article 2 of the Convention, "every person to whom this Convention applies shall be entitled after one year of continuous service to an annual holiday with pay of at least six working days." The Indian Legislative Assembly by a resolution adopted on the 26th January 1937 decided that India should not ratify this Convention.

In India, holidays with pay are enjoyed only by a very small percentage of the population, but owing to the preponderance, in numbers employed, of the workmen in Government and railway factories and in the factories owned by public and local bodies and public utility companies, the engineering industry in India easily outstrips all other industries in the leave with pay privileges which are enjoyed by its workers. The leave rules of different administrations vary widely, and different sets of rules are adopted not only for different classes of employees of the same administration but also for the same or similar types of employees, according to the dates when they first joined service.

All permanent monthly rated employees in Government factories in all industries are entitled to leave with pay.—In the case of the concerns under the Government of India, according to the Fundamental Rules and the factories owned and controlled by the local Governments according to the Civil Service Regulations in force at the time in the different provinces. Daily rated employees and certain categories of menials and piece rated workers are governed by special orders suited to each case. The leave rules which were in operation up to a few years ago have, in many provinces, been regarded as too liberal and for new entrants substantial changes have been made with the result that different systems are in operation for different classes of Government employees according to the dates when they first joined service. Leave with pay to permanent monthly rated industrial employees of Government is granted in terms of ordinary earned leave on average pay or double the period on half average pay, not due leave on half average pay and casual leave. All leave other than on medical certificate must be earned, and the maximum period of continuous leave that may be enjoyed at any one time is limited, in the case of ordinary leave on average pay up to four months according to the date on which a Government employee first joined service, and, in the case of leave on medical certificate, up to eight months. Casual leave is intended to meet cases of short absences from duty. According to the rules which are in operation at present, the minimum period of leave with pay which can be earned by all permanent Government servants is more than one month for every eleven months of duty plus

ten to twenty days casual leave in every calendar year. To cite an example of special leave rules for certain categories, reference may be made to daily rated workmen and piece workers in all ordinance and clothing factories of the Army Department of the Government of India who since 1931 get 10, 15 or 20 days leave with pay every year according to whether they have put in three to ten, ten to twenty or over twenty years service.

The leave rules for railway workshopmen who joined before the 1st September 1928 vary not only between railway and railway but also according to the dates when the men were first engaged. As far as the workmen who joined after 1st September 1928 are concerned, all railway systems appear to have accepted the principle of a standardisation of conditions on the basis of those laid down by the Army Department. Leave rules for those employees who joined before the date mentioned are more liberal. One big company owned railway grants fifteen days casual leave in a calendar year plus Empire Day and King's Birthday or any 17 paid holidays in addition to the above privileges to all workshop employees irrespective of a qualifying minimum period of service.

The information collected on the question of leave with pay by the Government of Bombay for the purposes of its General Wage Census in perennial factories in the Bombay Presidency showed that out of 221 engineering concerns in the Presidency, 72 employing 28,502 workers or nearly 60 per cent of the total number employed grant leave with pay to most of their workers and that another 16 employing 6,800 workers or 14.09 per cent employed in the industry grant leave with pay to certain categories only.

In cotton textile and jute mills certain categories of workmen on the mechanical and subordinate supervisory establishments are granted varying periods of leave in most units. Leave with pay to workmen is granted by a few large corporations such as the Burma Shell Corporation, General Motors (India), Ltd., and the Tata Hydro Electric and Power Companies, etc. Taking all Indian industrial workers as a whole, it would perhaps not be incorrect to say that barely five per cent enjoy leave with pay privileges.

PRINCIPLES OF WAGE FIXATION

Wage rates in the industrial countries of the West are mostly based upon union rates—accepted both by employers and employees—trade agreements, awards by arbitration or conciliation boards or, in countries which have Trade Boards Acts for the fixation of wages in unorganised industries where association of workmen is weak, upon the decisions of Trade Boards. In India none of these methods of wage fixation obtain and the employer is more or less free to fix any wages which he likes or, at the most, to bargain with his prospective workman. The labour costs in all Government and railway concerns and in the establishments run by local or public bodies, however, have to be accurately budgeted for and in such concerns wage rates are fixed. Each occupation is divided into a number of grades or classes and the number of posts in each grade is fixed, but the basis of grading varies

widely between the different administrations. Promotion from a lower grade to a higher usually depends both upon merit and the passing of trade tests and is not automatic. The rates for the different grades are determined by professional officers, as in the case of His Majesty's Indian Naval Dockyard or on information published by Government departments of industries and labour. In privately owned concerns the governing factors in wage fixation are the demand for and the supply of the type of labour required, personal efficiency and current rates in the locality where a concern is situated but once a worker's rate has been determined, it is not varied unless a general increase or cut is applied to a whole establishment or a department of the establishment.

TYPES OF RATES AND ALLOWANCES

Wage rates in the West are generally either consolidated hourly time rates or piece rates and the calculation of earnings from such rates is both simple and easy. Some progress has been made in India during recent years in the direction of payment of wages on the basis of hourly rates in a few large engineering concerns but this form of payment is very rare. The most common types of payment of time rates are daily rates or monthly rates, and, in some cases, where wages are paid weekly or fortnightly, of weekly or fortnightly rates. The calculation of earnings from hourly or daily rates does not offer any difficulty except in the case of daily rates in concerns which work a short Saturday. Here, some concerns pay half the daily rate or *pro rata* the daily rate for number of hours worked or the full daily rate provided that all the days from Mondays to Fridays or the Thursday and the Friday have been put in. Calculation of earnings from monthly rates are on the other hand, so devised as, generally, to deprive the monthly paid worker of a part of his dues. Some concerns calculate earnings from monthly rates on the basis of all the days in the month and deduct pay for the weekly holiday. Others make payment for the weekly holiday conditional on the Saturday or Monday or both having been put in. Still others pay wages for one, two or three Sundays (but not for all) on the condition that certain specified numbers of working days in the month concerned have been put in. A few calculate earnings *pro rata* the number of working days in the month. Thus a worker on Rs 27 per month will receive Rs 24 for 24 days work in a 27 day month. The Payment of Wages Act makes the last method obligatory on all concerns which pay on monthly rates of wages. In certain cases monthly rates are for the Hindu calendar month or a month of so many hours, as in the case of the G I P Railway where monthly rates are for a month of 208 hours, or for a book month of so many complete weeks.

Calculations of earnings from piece rates offer no difficulty in cases where they are based on number of articles produced but they are exceedingly complicated in cotton weaving. Some mills pay on the basis of weight, others on length. The rates vary according to reed

space and picks to an inch and are further complicated by allowances for different types of borders and dobby designs. Certain units, especially in the printing industry have task rates which are a combination of time and piece rates. Certain engineering concerns in India have introduced the Halsey Weir or the Bedaux point systems of payment.

Allowances—The textile industry in the Bombay Presidency still adheres to the principle of granting war or dearness allowances over basic rates prevalent in some year between 1914 and 1918. Up to 1933, all mills in Bombay City paid a *moghware* or dearness allowance of 80 per cent for piece rated men and of 70 per cent for time rated men and all time and piece-rated women. In that year the Mill owners' Association Bombay permitted its affiliated members to take independent action in the matter of wage reductions. Certain mills reduced basic rates, others reduced the allowances and still others effected reductions in both basic rates and allowances. Although up to 1933 the rates of allowances were universal basic rates varied widely between mill and mill. To day both basic rates and allowances vary although the Association has successfully attempted to standardise basic time rates in certain of the more numerically important unionalised occupations on the basis of consolidation. The allowances in textile mills in the Bombay Presidency outside Bombay City vary both between centre and centre and occupation and occupation. The tendency in industries outside the textile has been towards consolidation but certain railway systems grant grain allowances in addition to rates of pay for certain categories of employees with low rates of wages.

Bonuses—The system of paying good attendance bonuses was widely prevalent in several industries in India up to a few years ago but they were tending to disappear during the last few years. The question as to whether employers can still pay such bonuses under the Payment of Wages Act is, at the moment of writing, not quite clear.

In addition to the good attendance bonus paid in cash the textile mills in Sholapur gave a grain allowance of a quantity of grain at a fixed price to all workers who did not lose more than four days in the month. This allowance has already been dealt with under *The Payment of Wages Act*.

Textile mills in Ahmedabad gave an efficiency bonus of eight annas per loom per fortnight on the attainment of certain standards of efficiency. This however, benefitted the weaver very little, if at all, because in order to attain increased production he allowed slips to go past unattended and for these he was either fined very heavily or was made to take over whole pieces of damaged material the value of which, at the selling price of the finished article, was deducted from his wages. Efficiency bonuses were also paid in certain other sections of industry such as in engineering and coal mining.

In addition to good attendance and efficiency bonuses the workers in several concerns owned by large public companies are permitted to

participate in the annual bonuses which are sometimes given as ex gratia payments dependent on profits to all the employees of a company. The payment of such a bonus amounting to one month's pay to cotton mill workers in Bombay City during the years 1919 to 1923 and the disastrous general strike which followed the stoppage of this bonus in 1924 has been referred to in the first chapter of this note. Evidence is not wanting of the payment, by several concerns of a small ex gratia bonus at Diwali or the Hindu business New Year.

Overtime—The term 'overtime' in general parlance, is applied to all extra time put in by a worker outside his normal specified daily hours of work and in England and many other industrial countries is remunerated at higher rates which vary according to whether the overtime was worked immediately prior to normal starting or after normal closing, during the luncheon hour, at night, on a Saturday afternoon or on a Sunday or a holiday, and often go up to more than double ordinary rates. In India the Factories Act, 1934, requires that the overtime rate for hours in excess of the statutory weekly hours shall be a time and a quarter for hours in excess of 54 and a time and a half for hours in excess of 60. These provisions are however, applicable only to those workers in respect of whom exemptions from the restrictive regulations have been allowed. Legally, as long as the daily or weekly statutory hours are not exceeded an employer need pay nothing extra for overtime work outside normal hours, and in practice very few employers do so. On certain railways where monthly rates are for a month of 208 hours, all time—both ordinary and overtime—is credited to the normal hours account and payment at overtime rates does not come into consideration until such time as the monthly hours are exceeded. Where overtime rates outside the requirements of the Act obtain these are generally a time and a quarter the ordinary rates, but very few concerns indeed pay enhanced overtime rates for extra time beyond normal daily hours. In many cases workers are called upon to put in compensatory time after normal hours for time lost owing to late attendance or absence and in others workers who put in overtime are asked to take compensatory time off during specified working hours on the day following that on which overtime was worked. These methods mean that the same rate is given for both normal and overtime work. In many other cases no additional remuneration whatever is paid for overtime outside normal hours.

PAY PERIODS AND WAITING PERIODS

There is a complete absence of uniformity as regards the periods for which payments of wages are made in the various branches of industry in India. In scarcely any industry is there a single period of payment. Different systems are found in establishments belonging to the same industry and in the same district, and within the same establishment different classes of workers are paid for different periods. If

generalisations may be attempted, the jute industry in Bengal coal mines, tea plantations, seasonal factories oil mills rice and flour mills and certain classes and groups of workers in Government establishments such as the Security Printing Press at Nasik pay wages for periods of a week. Payments on a fortnightly basis range between payments for *hapta* or wage periods of fourteen and sixteen days for weavers and spinners respectively in the cotton mills in Ahmedabad to bimonthly payments for periods from the 1st to the 15th and from the 16th to the end of the month in textile mills in Broach and various other centres in India. The month is the accepted wage period for the railways (including railway work-shops) cotton textile mills in Bombay, Sholapur and several other centres engineering work-shops, dockyards, printing presses and for the prisons employed in the mechanical and maintenance departments of almost all concerns which pay wages to process operatives weekly or fortnightly. Wages are calculated on both the monthly and the fortnightly basis in the iron and steel industry and in sugar mills and tanneries. The most general system of payment in the case of casual labour is that of daily payment. Supervisory and clerical staffs in all industrial establishments are paid on a monthly basis.

The question of shortening the wage period universally in India by law to a week or a fortnight has been considered by the Government of India in consultation with the provincial Governments and interested persons and bodies, on three different occasions within the last ten years. Attempts were also made to amend the Payment of Wages Bill in such a way as to achieve this object. The proposals, however, fell through owing mainly to the opposition of the monthly paid workmen who appeared to prefer the system of monthly to fortnightly or weekly payments. Their argument was that if rents and bills were to be settled monthly they would be in difficulties if they had frittered away their weekly earnings.

Periods elapsing before Payment—The waiting period or the time which elapses between the end of the period for which wages are earned and the date of payment varied considerably as between industry and industry and between establishments in the same industry. The longest delays were associated with concerns which paid wages monthly and in some cases extended to as many as 30 to 40 days following the date on which wages fell due. Some delay must be occasioned in cases where intricate calculations are necessary for ascertaining earnings from piece rates but textile mills in England pay wages for the week ending Thursday evening on the following Saturday morning and it seems unreasonable that textile mills in India should have required fifteen to twenty five days for the purpose. The chief reason for delaying payments of wages in India was, however, not due so much to difficulties of wage calculations as to ensuring employers against their workmen leaving them without giving due notice. The Payment of Wages Act prescribes that wages in all concerns employing 1,000 or more persons must be paid within ten days and in concerns employing less than 1,000 persons within seven days of the end of the period for which wages fall due.

SUPERANNUATION BENEFITS AND FINANCIAL AID

The subjects which fall under this section are pensions, gratuities, provident funds, co-operative societies, grain and cloth shops, advances and loans.

Pensions—All monthly and time rated workmen in the industrial establishments of Government are entitled to pensions on retirement provided that a minimum of nine years' service has been put in. The amount of the pension due is arrived at by multiplying the average monthly pay for the three years preceding retirement by the actual period of active service less one year and dividing the product by 48. When permanent monthly paid workers on piece rates are admitted the average monthly pay is arrived at on the basis of the earnings for 72 months and the divisor in the above formula is 72. Commutation up to 50 per cent of the amount of the monthly pension is permitted in certain cases. Outside Government concerns pensions on retirement are almost non-existent although many concerns give small pensions to old employees who have put in long periods of trusted and faithful service but these are mostly *ex gratia* and cannot be claimed as of right.

Gratuities—All railway employees and the employees of local and public bodies and a few of the larger public companies receive gratuities on retirement. Gratuities are also paid to non-pensionable workers who have put in not less than thirty years' service in Government concerns. In all cases specified periods of qualifying service have to be put in before gratuities can be earned. The rules of individual administrations vary widely but the most generally accepted principle is half a month's pay for each year of service limited to fifteen months' pay in all. Permanent Government servants who have put in less than nine years' active service are entitled to gratuity if they are compelled to retire on medical certificate.

Provident Funds—These are of two kinds: (1) contributory, where both the employer and the employee subscribe to them; and (2) non-contributory where the employee alone subscribes to them. Certain Government servants who by the terms of their contracts are not eligible for Pensions are compulsorily required to subscribe to the contributory section of the General Government Provident Fund. In such cases both Government and the Government servant concerned subscribe one month's pay each per year to the fund. All pensionable Government servants except certain classes of industrial workers and menials have the option of subscribing to the non-contributory section of the fund, subscriptions to which vary from 12 to 30 paise to the rupee of income, at the option of the subscriber. Very few industrial workers of Government, however, take advantage of this section of the fund mainly because, apart from the compound interest which his subscriptions earn, the worker does not stand to gain anything on his outlay.

In cases where large bodies of non-pensionable Government servants are brought under the operation of contributory provident fund schemes, special funds such as the State Railways

Provident Fund and the Indian Ordnance Factories Workmen's Provident Fund, which are governed by special rules are formed. Company owned railways have schemes similar to that for State railways. Whereas it is obligatory for some categories of permanent non-workshop railway staffs with monthly pay over specified limits to join the provident fund, workshop employees with monthly and daily rates over specified limits are permitted to exercise an option. Once the option to join has been exercised no withdrawal is permitted.

Compulsory contributory schemes are provided for all permanent workmen in the factories owned by certain public bodies such as the Bombay Port Trust, whilst both compulsory and optional non-contributory and contributory schemes obtain for permanent workmen in the factories owned by most municipalities. Most of the larger public utility companies and corporations such as the Tata Electricity Generating and Distributing plants, the Bombay Electric Supply and Tramways Company Ltd. and the Purma Shell Corporation to mention only a few of many provide contributory schemes for the benefit of the majority of their workmen. Several others have schemes for their supervisory and clerical establishments but not for their workmen. The most usual amount of deduction from pay is one twelfth of the monthly pay but the amount contributed by employers varies from 50 per cent to 100 per cent of the amount put in by the employee. The rate of interest may be fixed or it may fluctuate with the rate at which Government or the employer borrows money. All provident fund rules make provision for loans to subscribers from the balance standing at the credit of their accounts in respect of their own subscriptions and for the compulsory repayment of these loans. Subscribers are entitled to withdraw their own subscriptions at any time on retirement or on relinquishing their posts but the payment of that share of a contributory provident fund account which represents the employer's subscriptions depends on the putting in of specified periods of qualifying service—periods which show considerable variation.

Co-operative Societies—The co-operative movement has made very rapid progress in industrial establishments all over India during recent years and a very fair percentage of concerns employing 500 or more workers have co-operative credit societies for their employees. Almost all railway systems in India have co-operative banks and savings banks in addition to credit societies and full information on the whole subject is available in the different annual administration reports of Registrars of Co-operative Societies in the various provinces. It is impossible to attempt even a brief summary of the movement here but a few details regarding one of the best of such societies would be of interest.

The Jackson Co-operative Bank on the B. B. & C. I. Railway is perhaps the biggest and the best managed co-operative credit society of industrial workers in India. During the year ending 30th June 1936 it had a membership of 34,924 with a share capital of Rs. 4,34 lakhs and a reserve fund amounting to Rs. 3,12 lakhs. It receives both fixed deposits and ordinary deposits in its savings bank branch, and it also issues cash certificates to all railway employees earning

Rs 125 or less per month. Fixed deposits for the year ending June 1936 amounted to Rs 27 lakhs and savings bank deposits to Rs 24 lakhs which, together with capital, gave the society a working fund of Rs 58 lakhs for the year. The number of new loans issued during the year amounted to 16,514 and involved a sum of Rs 55.51 lakhs. The bank has been declaring a 10 per cent dividend (which is the maximum payable under the Co-operative Societies Act) for the last ten years. A special feature of the activities of the Bank is a new scheme which it has recently introduced for redemption of debts. Members of the society who are in debt are encouraged to bring a complete list of their debts to the Bank which with the assistance of the Staff Officer of the Railway, interviews all creditors and arranges with them to compound the debts for much lesser sums in return for ready payment. The total amounts so paid to members creditors are treated as loans and recovered in easy instalments spread over 72 months. The Bank also contributes an amount of Rs 10,000 annually to a special Staff Welfare Fund started by the railway administration at the instance of the Bank 'to look after the welfare of the staff in general and of low paid staffs and their families in particular. Welfare centres which have been opened at various stations on the line render help by way of supplying milk to the children of the needy, by nursing the sick and by opening hygiene clinics.

Grain and Cloth Shops—During the period of high prices in India in 1919-22, several large industrial establishments all over the country, and particularly the cotton textile mills in Bombay City, conducted cheap grain shops for the benefit of their work people. In addition to supplying grain at cost price (the units concerned bore the cost of management) these shops had the advantage of offering loans on credit to be liquidated by deductions from due wages. With the fall in prices the majority of these shops disappeared and last year a very few establishments indeed had them. Many textile mills all over the country however, had cheap cloth shops for their workers. It was thought that all types of these shops would have to cease functioning because the Payment of Wages Act prohibits employers from making deductions from pay due or receiving payments from their employees for purchases from employers' shops. This is in accordance with one of the main cardinal principles of Iruck legislation. At the moment of writing however, it is understood that certain provinces are permitting such shops as "amenities for sales for which deductions from wages may be made.

Loans and Advances—Speaking generally most industrial concerns in India do not grant loans to their workers except during periods of an acute shortage of labour when recruiting agents are empowered to liquidate debts in order to attract the required workers to join industry. But, all workers who subscribe to provident fund schemes in such concerns as have them or who are members of co-operative credit societies can secure loans on easy terms both as to interest and to repayment. A few concerns, however, have set apart special funds for the purpose. **Advances**—applying the term to the small sums of money advanced against earned wages—

on the other hand, are more widely prevalent and give rise, in certain centres, to widespread abuses. For example, the cotton textile mills in Ahmedabad used to charge interest at rates varying from 30 to 150 per cent per annum on all such advances given. The Payment of Wages Act empowers local Governments to frame rules for the regulation of these advances but no interest on such advances will be permitted.

MEASURES FOR ENFORCING DISCIPLINE

The measures adopted by industrial employers in India for enforcing discipline have engaged the earnest attention of both the Central and the Provincial Governments in this country for the last ten years. Early in 1926, the Government of India asked all local Governments to make enquiries, in their respective administrations, into the extent of the deductions made by employers from the wages of their workpeople in respect of fines and other matters. The Government of Bombay conducted an extensive enquiry into the subject in the Bombay Presidency and as a result of their investigations came to the conclusion that abuses sufficient to justify legislative action for their control were prevalent. The subject was partly examined by the Bombay Strike Enquiry Committee (Fawcett Committee) in 1928-29 and again more fully by the Royal Commission on Indian Labour in 1929-30 and both these bodies made a series of recommendations in the matter. The Payment of Wages Act which has already been dealt with in an earlier section, was passed in 1936, in order to implement these recommendations.

The two matters with regard to the discipline of their workmen which Indian industrial employers complain of most are the large extent of labour turnover and the high degree of absenteeism. Indian employers state that it is inherent in the Indian workman to make frequent changes in his employments and also to resort to frequent abstentions from work. Delayed payments of due wages, forfeitures of wages for failure to give due notice and the withholding of due wages where workers proceed on unauthorised leave are some of the devices which have been resorted to by employers to counteract the former. Various methods had been devised in order to control the latter—good attendance bonuses, fines and *double khadda* by virtue of which a workman lost two days wages for each day of absence. The withholding of due wages till next pay day had given rise to a system of *havalas* or pay order tickets which were cashed by *pedhiwallas* (small bankers) at discounts of $3\frac{1}{2}$ to 12½ per cent. That both high labour turnover and high absenteeism are to be found in several Indian industries cannot be denied, but, few, if any, employers have taken the trouble to examine the root causes for them. The investigations conducted by the Labour Office of the Government of Bombay go to show that both labour turnover and absenteeism are highest in concerns and industries in which wages are lowest and where conditions of employment are least attractive and that they are lowest in concerns and industries in which wages are comparatively high and where other conditions of

employment are attractive. For example, the Bombay Labour Office compiles monthly figures of percentage absenteeism in cotton textile mills in Bombay, Ahmedabad and Sholapur. Textile wages are highest in Ahmedabad and lowest in Sholapur. The annual averages of percentage absenteeism in these three centres for the year 1936 were: Ahmedabad 3.13, Bombay 7.19, and Sholapur 11.80—figures which tell their own story. Low wages and adverse conditions must necessarily tend to weak health, incapacity for sustained effort and to the growth of a desire for change in order to improve one's lot. These are problems which the new autonomous provinces in India and Indian industrial employers will have to try and remedy instead of devising methods of enforcing good attendance and continuity of employment by the infliction of monetary penalties and other forms of punishment.

Both the main provisions of the Payment of Wages Act and the Rules framed thereunder require that employers should draw up conduct rules or standing orders clearly specifying the acts of commission or omission for which fines will be inflicted. These standing orders have to be approved by the local Government and exhibited in the work place in the prescribed manner. The total amount of the fines which it will be permissible for an employer to inflict on any one workman during any wage period is not to exceed half an anna in the rupee of his or her wages for that wage period and no fine may be imposed unless the order inflicting the fine is in writing and the worker concerned has been given an opportunity of showing cause why the fine should not be inflicted. All fines are to be properly recorded in the prescribed registers and all receipts from fines are to be deposited on such objects beneficial to the workers employed in the establishment concerned as a whole as are approved by the prescribed authority in each Province. Children under 15 years of age cannot be fined. In view of these regulations it is obviously futile to enter upon a discussion here of the extent to which these regulations have been practised in Indian industries up to now but for the information of persons interested in these questions we might state that full information on all these matters is contained in the series of reports which have been published from time to time by the Bombay Labour Office.

INDUSTRIAL HOUSING

Residential buildings in all countries are constructed from the point of view of investments from which their owners hope to receive a fair interest on their capital outlay. No country in the world expects its landlords to be philanthropists in the matter of providing rent free or cheap rented housing to such of her people as cannot afford to pay the economic rents which are asked for, and although every Government must be expected to provide decent housing for its own low paid servants, the world has not yet reached that socialistic stage where Governments are expected to provide adequate housing for whole populations. At the same time, low paid wage earners in crowded

and congested industrial areas can hardly be expected to be able to afford the economic rents demanded by the landlords. In such cases there can be only two alternatives: wage levels such as will permit workmen to pay such rents as are asked for or the provision of adequate housing by the employer. The first does not appear to have received much consideration at the hands of industrial employers in India. The second is a lament which has been repeated by almost every Commission and Committee that has been appointed in India during the last 20 years to the point of saturation and although several benevolent and far sighted employers have endeavoured to provide housing for their workpeople a very small percentage indeed of the total industrial population of India is housed by the employer and the question of industrial housing continues to be one of the most vexed questions of the country.

The pioneer work in the field of industrial housing has been done by the railways which have spent over thirty crores of rupees to date in providing adequate residential quarters for different classes of their employees, and by the Government of Bombay who have built 207 chawls with nearly 17,000 tenements for industrial labour in Bombay City. The latter is a part of a gigantic scheme launched in 1920 by Lord Lloyd then Governor of Bombay, for the construction of 625 chawls having 50,000 tenements in all. The rents of the tenements in these chawls vary from Rs. 5 to Rs. 8 per month. The chawls situated at Naugam and Sewli and at DeLase Road are in fair demand but the majority of the tenements at the Worli chawls continue unoccupied owing to a complaint by the workers that they are situated at considerable distances from their places of work and that the locality offers few of the amenities of city life. The Municipalities of Calcutta, Bombay, Madras and Karachi, the Calcutta and Bombay Port Trusts and the Improvement Trust in Bombay have done much to house their own labour and also to supply low rented tenements for other classes of industrial workers. Perhaps the most magnificent scheme of industrial housing conceived in India is that launched by the Lamps Mills under the agency of Messrs. Tata Sons Limited at Nagpur. These mills have leased a plot of 200 acres at Indora, a suburb of Nagpur, two miles from the mills. The idea is to establish a model village and to build houses of the bungalow type on plots measuring 36 x 3 with the limitation that building is not to be allowed on more than one third of the space provided. The houses are let to the workers on the hire purchase system and it is expected that many of the workers will ultimately own them. The Tatass are in the forefront of industrial employers in India in providing decent housing for as many of their workmen as possible and they have built 5,000 residential buildings in Jamshedpur for the staff and the employees of their Iron and Steel Works at that centre. All the workmen in their several electricity generating and distributing stations are also provided with adequate housing. Many of the jute mills in Bengal and cotton mills in Bombay City and other centres have provided

housing for fair percentages of their total staffs but the majority of textile workers in India are not housed by their employers.

The general policy adopted by Government in providing quarters for the labour employed in their industrial establishments is to do so when funds permit but usually only where conditions are such that private enterprise does not adequately meet the demand for housing or where it is necessary for special reasons to provide quarters for certain classes of staff near to their work. These principles appear to be generally followed by private companies and concerns as well especially by coal mine owners in Bihar and Orissa and by tea planters in Assam. All the collieries in the Jharia coal field are amply and efficiently equipped with approved types of houses whose design, construction, ventilation and general amenities are controlled by the Jharia Mines Board of Health. Every house in the coal fields has to be licensed and licences are not granted unless the standards are complied with. If labourers are found in occupation of unlicensed houses the management is liable to prosecution. In Assam all residential employees on tea estates are provided with rent free quarters in barracks or lines as they are called. These are regularly inspected by district and sub-divisional officers and every endeavour is made to maintain as high a degree of sanitation as is possible.

Conditions of industrial housing in India are the worst in Ahmedabad. A recent enquiry conducted by the Ahmedabad Textile Labour Union into industrial housing in that centre showed that out of a total of 23,706 tenements observed and studied, 5,669 had no provision of any kind for water and that 3,117 had only a supply of some sort from wells. Those which have the advantage of a supply from municipal sources had one or two taps in an area occupied by 200 or more families. 5,000 tenements had no latrine accommodation and sanitation and drainage were conspicuously absent. The Ahmedabad Municipality has, however, awakened to a realisation of the seriousness of the situation and it has been decided to construct model dwellings on co-operative lines for industrial workers in the city. Owing to financial considerations progress must necessarily be slow but a beginning has already been made.

Royal Commission's Recommendations — The Royal Commission on Indian Labour have made several recommendations in connection with industrial housing. These recommendations fall under various categories. (1) Legislative action by the Central Government, (2) Administrative action by the Central Government, (3) Legislative action by Provincial Governments, (4) Administrative action by Provincial Governments, (5) Administrative action by public bodies such as municipalities, improvement trusts etc., and (6) action by employers and workers organisations. The recommendations under the first head included a suggestion to amend the Land Acquisition Act in such a way as to enable owners of industrial concerns to acquire land for the erection of workers dwellings. The Government of India introduced a Bill in the Legislative Assembly to amend the Land Acquisition Act in the manner suggested

and this Bill was passed into law in 1933. The Commission's recommendations under the second head mostly concern railways, and although the Railway Board agrees on the vital urgency of providing greater facilities for adequate housing it has come to the conclusion that no material advance can be made in this direction at present owing to financial stringency.

The Commission's recommendations with regard to legislative action by Provinces are of a very ambitious character. They include Town Planning Acts for the Bombay and the Bengal Provinces providing for the acquisition and layout of suitable areas for working class housing, the opening up and reconstruction of congested and insanitary areas, the zoning of industrial and urban areas and Government grants and loans to approved schemes. For administrative action by local Governments, the Commission recommend that they should make surveys of urban and industrial areas to ascertain their needs in regard to housing, and that they should then arrange for conferences with all interested parties in order that decisions may be taken as to practicable schemes and the methods whereby their cost should be shared. Where suitable Government land is available, Government should be prepared to sell or lease to those who agree to build houses within a specified period and Government should announce their willingness to subsidise in this or other ways employers' housing schemes approved by them. The Commission further recommended that Government should insist that all local authorities should frame bye laws laying down minimum standards in regard to floor and cubic space, ventilation and lighting and that the Governments themselves should draw up regulations for water supply, drainage schemes and standards for latrines. For action by public bodies, the Commission recommend that the provision of working class housing should be a statutory obligation on every Improvement Trust and that it should be possible for Improvement Trusts to provide land, roads, sewers and sanitary conveniences for new areas but that street lighting and water mains should be a charge on municipalities. Improvement Trusts should be placed in a position to recoup themselves from the enhancement of land values resulting from their activities. It has also been suggested that co-operative building societies and similar activities should be encouraged. In view, however, of the present acute financial stringency prevailing in all provinces, it is very doubtful whether most of the provincial Governments will be in a position to do much in the matter of the Commission's recommendations on industrial housing.

Rest Shelters, Dining Rooms and Canteens — Section 33 (1) of the Indian Factories Act, 1934, makes it obligatory for all factories employing more than 150 workers to provide adequate shelters for the use of workers during periods of rest. Apart from this almost all large industrial establishments in India do provide tiffin rooms and rest shelters for their workmen. Most concerns have also permitted the establishment of tea stalls on the premises but apart from this little effort has been made to run co-operative canteens on the lines of those which are associated with most of the large factories.

in the West. Pioneer work in this direction has been done by Messrs E. D. Sassoon & Co in Bombay. This Company which manages eleven large cotton mills in the City has established large canteens in all their mills. The management in each case bears the salaries of staff and the on cost for equipment and hot meals are supplied to the workmen at actual cost. The Company has also established a hostel for boarding and lodging its poor women workers. The charges are exceedingly moderate and vary from Re 1.80 per month for a child to Rs 6 for an adult. Communal factors such as the religious prohibition of Hindus to eat their food in the company or members of other communities want of space and the constructional layout of the majority of the smaller industrial establishments are among the reasons given by the managements who do not provide rest shelters and/or bath rooms for their workmen.

HEALTH

Such statistics of health and mortality as are collected and published in India relate to the whole community and no statistics are compiled separately for industrial workers alone. In the absence of such data it is not possible to generalise about these matters. The problems associated with health are always difficult, they are much more so in a country where climate, highly insanitary housing conditions, poverty and the ignorance of the people contribute to recurring outbreaks of such deadly tropical diseases as cholera and small pox in epidemic form. The widespread prevalence of malaria in certain congested areas of the Bengal, the Bombay and the Madras Presidencies is responsible for a considerable undermining of the health and the vitality of the poorer classes who cannot afford to sleep under mosquito nets and although the more advanced municipalities are doing all they can to combat the disease by filling up wells and surface treating small ponds and pools of stagnant water malaria still continues to take a big toll of human life. *Beri beri* and tuberculosis in Bihar and Oris a, *kala-azar* among the jute workers in Bengal and tuberculosis in the Punjab are some of the many diseases which are widely prevalent in certain tracts.

The maintenance of the good health of town and city populations is in the hands of the municipalities and although all provincial Governments appoint health officers for groups of districts to supervise and co-ordinate the work of the municipalities, the interference and control of Governments in these matters is of a somewhat nonnal character. But wherever control is possible, Government have done much to make for an improvement in sanitary and hygienic conditions. For example, following the recommendations of the Royal Commission on Indian Labour in the matter, several provisions for the maintenance of the good health of factory workers have been incorporated in the Indian Factories Act, 1934. These include the maintenance of cleanliness in accordance with rules to be framed by local Governments with regard to lime or colour washing, painting, deodorising and disinfecting, the provision of proper standards of ventilation and the adoption of adequate measures to prevent the inhalation

of gas, dust and other impurities generated in the course of work, the installation of apparatus for cooling the air in factories in which the humidity of the air is artificially increased, the prohibition of overcrowding by laying down the standards of cubic feet of space to be provided for each worker, the provision of suitable and sufficient lighting, the provision of adequate supplies and sources of water both for drinking and for washing and for the maintenance of sufficient latrine accommodation separately for male and female workers.

As in most things connected with the welfare of labour, Indian railways are in the forefront in the matter of the provision made for medical aid and relief. All railways maintain fully equipped hospitals with qualified surgeons, physicians and nursing staffs at suitable centres in addition to fully equipped dispensaries in charge of qualified medical officers at all places where there are sufficient numbers of workers to justify them. As all the industrial workers of Government have free access to Government hospitals and dispensaries the provision of separate medical establishments attached to large Government establishments has not been considered necessary in the case of concerns under the control of local Governments but the Government of India have provided adequate medical facilities in most of their own establishments such as His Majesty's Indian Naval Dockyard and their various Ordnance and Ammunition Factories. Several of the larger municipalities and public bodies such as the Port Trust also maintain their own hospitals and dispensaries for the benefit of their workers. Following the lead of Government and public and local bodies in the matter, almost all the large labour employing establishments in India—cotton and jute mills, mines, engineering workshops, tea plantations, etc.—maintain fully equipped dispensaries in charge of whole or part time qualified medical officers.

Maternity Benefits—A Bill introduced by Mr N. M. Joshi in the Legislative Assembly of the Central Government in 1924 to provide for the payment of maternity benefits in certain industries was thrown out by the Assembly in August 1925 but the Governments of Bombay, Bengal, Madras and the Central Provinces passed their own Maternity Benefit Acts. The Bombay Act was amended in 1934 in such a way as to be of greater benefit to the persons concerned. Under these Acts all women workers employed in factories are to be compulsorily rested for three to four weeks before child birth and for four weeks after child birth and employers are required to pay them a benefit amounting to about half their usual pay during this period. The Bombay Municipality started a maternity benefit scheme for its *halal khore* and scavenging women in 1928. By this scheme, the classes benefited receive a benefit of leave on full pay for a period not exceeding 42 consecutive days. In Assam, voluntary maternity benefit schemes have been adopted by almost every tea estate of repute. While pregnant women remain at work, they are put on light work on full rates of pay. During periods of advanced pregnancy and after child birth leave on half pay is usually granted and in some cases full pay is allowed and a bonus at child birth.

is often granted in addition. This bonus is in some cases conditional on the child being healthy. The Assam Railways and Trading Company and the Assam Oil Company grant six and three months leave respectively on half pay. Several estates in the Coimbatore District of the Madras Presidency either pay lump sum bonuses in lieu of pay or feed the women concerned for a few weeks before and after confinement. Provincial Factory Administration Reports for the Bombay Presidency for the years 1935 and 1936 record that the Bombay Maternity Benefit Act is having a restrictive influence on the employment of women in factories, particularly in Ahmedabad.

Provisions of crèches—One of the many additional principles introduced in factory legislation in India by the Indian Factories Act of 1914 was one for the compulsory provision in all factories wherein more than fifty women workers are ordinarily employed of a suitable room for the use of children under the age of six years belonging to such women and for the supervision of the children in such rooms (or crèches) in accordance with rules to be framed by local Governments in the matter. Crèches are however not a new feature in Indian industry. Several textile mills in Bombay, Ahmedabad and Sholapur had provided them for over ten years and in many of these the children were looked after by qualified *daies* (Indian midwifery nurses) and were clothed and fed at the expense of the millowners. The Government of Bombay had also made provision for the adequate supervision of these crèches by the appointment of a Lady Inspector of Factories as early as 1924. Crèches were also provided by several textile mills in other centres and in the factories attached to many of the larger tea plantations in Assam.

Labour Commission's Recommendations—Among the more important recommendations made by the Royal Commission on India in Labour in connection with the health of the industrial workers are the following:—

(a) India should have an Institute of Nutrition. (The Government of India have postponed action on this recommendation indefinitely for want of funds.)

(b) Local authorities should construct sanitary markets in all urban and industrial areas.

(c) Adulteration of Foods Acts should be in force in all provinces.

(d) In industrial provinces Public Health Departments should be strengthened to deal with industrial hygiene and industrial disease.

(e) Women should be appointed to public health staffs particularly in the more industrialised provinces.

(f) Comprehensive Public Health Acts should be passed in all provinces.

(g) Where piped water supplies are not available special precautions as to purity should be taken.

(h) Every provincial health Department, every railway administration and all Boards of Health and welfare in mining areas should employ full time malariologists.

(i) A Government diploma for health visitors should be instituted as the recognised qualification required of all women aspiring to such posts.

(j) In the larger industrial areas Governments, local authorities and industrial managements should co-operate in the development of child welfare centres and women's clinics and Government should give percentage grants for approved schemes.

(k) Maternity benefit legislation on the lines of the Bombay and Central Provinces Acts should be enacted in all provinces, and

(l) All methods should be explored that may lead to the alleviation of existing hardships arising from the need of provision for sickness.

Much progressive work along the lines of the above recommendations has been done in various Provinces in India but want of available funds is holding up further progress. For actual details as to the extent to which these recommendations have been given effect no reference may be made to the 1936 Report published by the Government of India on the action taken by the Central and Provincial Governments on the recommendations made by the Royal Commission on Labour in India.

INDUSTRIAL SAFETY

As in other countries, the industrial progress of India has been accompanied by an alarming increase in the number of industrial accidents. The explanation generally offered for the increase is that the Workmen's Compensation Act is operating as an inducement both for workpeople and for employers to report accidents more frequently than in the past. But the increase in the number of serious accidents suggests that the problem is a more serious one and, that in spite of the statutory requirements which factory and mine owners and firms engaged in the loading and unloading of ships have to comply with in the matter of the fencing of dangerous machinery, an organised safety first campaign for the better education of the workers in the matter of accident prevention is both necessary and desirable. Under the direction of the Railway Board of the Government of India all railways in India have undertaken extensive schemes of safety first propaganda. These include the putting up of safety posters and safeguards both in English and in the vernacular of the district at all prominent points and places, the free issue of illustrated booklets on accident prevention, publication of special articles with photographs in railway magazines, addresses and magic lantern lectures, and the organisation of special safety first committees in the larger workshops. The Factory Department of the Government of Bombay with the assistance of the Bombay Millowners Association and the Bombay Millowners Mutual Insurance Association has made good progress in the posting of safety first posters in cotton mills in Bombay City, and the Millowners Association in conjunction with the St John's Ambulance Association started classes for first aid training with effect from 1931. Several other large labour employing organisations

tions such as His Majesty's Indian Naval Dockyard, the Calcutta and the Bombay Port Trusts and the Tata Iron and Steel Works at Jamshedpur to mention only a few, are, with railways, pioneers in the field of organisation of safety first measures. It is of interest to note that most cotton mills in Ahmedabad had also established safety first committees by the end of the year 1936 and that many more had given an undertaking to the Factory Department to do so as soon as possible.

The provisions contained in the Indian Factories and Mines Acts and in the Indian Dock Labourers Act 1934 and the rules made under the Acts in connection with the guarding and fencing of machinery are of a too technical character to be dealt with here. It may however be of interest if a brief summary were given in connection with the reporting of accidents. The Indian Factories Act requires the manager to report all accidents which cause death or bodily injury whereby the person injured is prevented from returning to his work in the factory during the 48 hours next after the occurrence of the accident. All classes of accidents, namely, fatal, serious (i.e. accidents which prevent a person from returning to work for 21 days or more) and minor are to be reported to the Inspector of Factories and to the District Magistrate and in cases of any accident resulting in death to the officer in charge of the police station in addition. It is the duty of the Inspector of Factories to make an investigation as soon as possible into the causes of and the responsibility for a fatal or serious accident, and to take steps for the prosecution of the person concerned if it is found that the death or serious injury resulted from any infringement of the provisions of the Act or of the rules framed under the Act. The Act also requires notice to be given of an accident which is due to any cause that has been notified in this behalf by a local Government even though no injury may have resulted therefrom to any person. The provisions contained in the Indian Mines Act with regard to the reporting of accidents are somewhat similar to those contained in the Factories Act but with the difference that every accident which occurs in a mine has to be recorded in a special register to be kept for the purpose.

Prior to the passing of the 1934 Factories Act, some of the local Governments had framed rules requiring the provision, under the charge of responsible persons and in readily accessible positions of first aid appliances containing an adequate number of sterilised dressings and some sterilised cotton in all factories employing over 500 operatives. Section 32 (b) of the 1934 Act however, makes it obligatory on all factory owners to maintain stores of first aid appliances and to provide for their custody in accordance with rules to be framed by local Governments in the matter.

UTILISATION OF THE WORKERS' LEISURE

The Industrial Disputes Committee (the Stanley Reed Committee) appointed by the Government of Bombay in 1922 to enquire into the causes of the wide industrial unrest prevalent about that time and to make recom-

mendations, were *inter alia* of opinion that employers should organise extensive schemes of welfare particularly with regard to the proper use of workers' leisure in order to keep the workmen both contented and happy and out of mischief in pursuance of the Committee's recommendations in the matter several cotton mills and groups of mills in the Bombay Presidency—notably the Currumbli Brahmin group of mills, the Sholapur Spinning and Weaving Mills and the Tata Mill—inaugurated wide schemes embracing facilities for education and recreation. All these groups formed special welfare institutes and placed them under the charge of special welfare officers. Much good work was done but with the depression in trade which followed coupled with the financial difficulties in which many of these mills were involved most of the excellent schemes that had been established were either severely curtailed or abandoned. In only a few mills are doing anything for the proper utilisation of their workpeople of their leisure hours. The pioneering work in this field is being done by the railways. All railway systems have established sports clubs and institutes at suitable distances and places for the recreation of their employees. The railways provide land, buildings and equipment and the Institutes are run by the members themselves from their own subscriptions. In certain cases separate club houses and institutes are provided for officers, for non-gazetted Europeans and Anglo-Indians and for Indians and in a few cases for the lower types of workmen as well. All forms of sports and recreation are played at these institutes and railway hockey and football teams are among the finest in India.

Almost all the larger labour employing organisations such as the Bombay Port Trust, the Burma Shell Corporation, the bigger municipalities, the Tata Iron and Steel Works at Jamshedpur, the British India Corporation in the United Provinces, the Impress Mills at Nagpur, etc. have devised wide welfare schemes and in many cases these are under the charge of special welfare or labour officers. In some cases grants in aid are given to such outside organisations such as the Young Men's Christian Association, the Kierke Education Society, the Social Service League, etc. to take charge of certain sections of welfare activities particularly with regard to recreation and the education of both workers and workers' children.

As far as education is concerned the railways are again pioneers in the facilities provided both for the education of their illiterate staffs and for the children of different classes of railway employees. The N.W. Railway recently started three experimental schools for adult workers in the locomotive sheds at Lahore, Sibsar and Kotri. The experiment is confined to locomotive staff as the majority of the staff in this branch are illiterate and education provides a great inducement in that wages can practically be doubled by qualifying for promotion to the higher grades of running staff. The East Indian Railway has provided nearly 40 schools for the employees of the operative department. The B.B. & C.I. Railway have six schools for imparting instruc-

tion in the three Rs and as an inducement to study a bonus of Rs 5 is paid to each man passing a simple test. With regard to the children of railway employees, in addition to about 100 schools for European and Anglo Indian children, all the railway systems in India maintain a total of nearly 150 schools for Indian children at a cost of nearly two lakhs of rupees per annum. These schools are attended by nearly 20,000 children. The Railway Board also gives grants amounting to about Rs 50,000 per annum to aided schools for Indian children. These are attended by 10,000 children of Indian railway employees.

In Bombay the Municipality has introduced compulsory education in the F and G Wards of the City which are chiefly peopled by mill hands. The Social Service League maintains several night schools and a Textile Technical Institute at Parel for imparting practical and theoretical training to actual mill workers.

The Bombay Y M C A also conducts several night schools.

The Royal Commission on Indian Labour have recommended that there should be a more general extension on the part of the employer of welfare work in its broader sense, and that in the larger jute and cotton industrial areas, mills and factories should organise in groups, each establishment having its own welfare centre and health visitor under the supervision of a doctor employed by the group. Owing partly to reasons of financial stringency but mainly to indifference on the part of the majority of employers, no action has as yet been taken on this recommendation and although several of the larger industrial units in India have done a great deal of pioneering work in the field of industrial welfare much still remains to be done because more than sixty per cent of India's industrial workers are still not covered by any schemes of welfare whatever.

COST OF LIVING AND STANDARD OF LIFE.

COST OF LIVING

Bombay was the first province in India to compile and publish monthly cost of living index numbers for working classes. The scope and method of compilation of the index for Bombay City are described in the issues of the *Labour Gazette* for September 1921, September 1923 and April 1929. The index has been published by the Labour Office of the Government of Bombay since January 1918 and in the absence of any family budget enquiry until a few years after the first publication of the index, the

aggregate expenditure method has been followed in compiling the index. In all, 24 items representing food, fuel and lighting, clothing and rent have been included in the index and account is taken only of the effect of the changes in the prices without any reference to changes in the standard of living since July 1914 which is the base period. The Bombay working class cost of living index numbers for certain selected months as well as the annual averages for each of the years 1918 to 1936 are given in the table below—

Bombay Working Class Cost of Living Index Numbers

(July 1914=100)

Year	January	April	July	October	Annual average
1918	134	144	149	175	154
1919	142	167	186	174	175
1920	183	172	190	193	183
1921	169	160	177	183	173
1922	173	162	165	162	164
1923	166	156	153	152	154
1924	159	150	157	161	157
1925	157	158	157	153	155
1926	155	153	157	155	155
1927	156	153	156	151	154
1928	154	144	147	146	147
1929	149	148	148	149	149
1930	147	140	139	131	137
1931	117	111	108	108	110
1932	110	108	109	109	109
1933	109	101	103	100	103
1934	96	93	97	100	97
1935	98	98	101	103	101
1936	103	100	101	103	102

A revised cost of living index for Bombay City based on the results of the enquiry into working class family budgets in Bombay City, 1932-33 published in 1935 is under consideration and the new series will be published shortly

Working class cost of living indexes for Ahmedabad and Sholapur have been compiled on a post war basis and published in the *Labour Gazette* month to month since the beginning of the year 1928. The bases of these indexes are

the results of the family budget enquiries conducted at these two centres in the years 1926 and 1925 respectively. Details regarding the scope and method of compilation of the index for Ahmedabad have been given in the January 1930 issue of the *Labour Gazette* and for Sholapur in the February 1931 issue of the same publication. The following tables give for these two centres the working class cost of living index numbers—for certain selected months as well as annual averages—for the years 1928-1936

Ahmedabad Working Class Cost of Living Index Numbers

(August 1926 to July 1927=100)

Year	January	April	July	October	Annual average
1928	93	91	97	97	95
1929	99	96	98	98	97
1930	93	89	88	82	87
1931	75	75	75	74	75
1932	76	74	75	79	76
1933	73	70	73	73	72
1934	70	69	72	71	71
1935	72	69	71	70	71
1936	70	69	71	72	71

Sholapur Working Class Cost of Living Index Numbers

(February 1927 to January 1928=100)

Year	January	April	July	October	Annual average
1928		92	95	95	
1929	100	98	100	102	101
1930	104	94	92	85	92
1931	76	72	71	72	73
1932	72	72	74	74	73
1933	73	67	68	68	69
1934	68	67	73	76	72
1935	75	72	71	72	72
1936	69	68	70	74	71

A beginning has been made in recent years by the Central Provinces and Burma to publish similar index numbers. In the Central Provinces cost of living index numbers have been compiled for Nagpur and Jubbulpore with January 1927 as base, and in Burma similar index num-

bers are compiled for four classes of industrial workers in Rangoon on base 1931=100. The following table sets out the index numbers for Nagpur and Jubbulpore and for the four classes of industrial workers in Rangoon for each month in 1936 —

Cost of Living Index Numbers for Nagpur, Jubbulpore and Rangoon for each month of 1936

Month	Base period January 1927		Rangoon			
	Nagpur	Jubbulpore	Burmans	Tamils, Malays and Oriyas	Hindu stams	Chitta gonins
January	89	90	87	62	91	87
February	89	89	88	92	91	86
March	89	87	90	94	91	88
April	89	85	93	96	92	90
May	89	87	91	94	90	90
June	89	89	83	93	90	88
July	91	92	89	93	89	89
August	91	97	90	92	90	89
September	91	97	87	92	90	87
October	92	94	85	91	90	85
November	89	94	82	89	88	83
December	92	95	84	90	90	85

STANDARD OF LIFE

The results of family budget enquiries conducted by what is known as the extensive method form the most satisfactory basis of determining the standard of life of any particular class or community. A higher standard of life means better opportunities to satisfy wants and desires other than the primary human needs. A larger percentage expenditure on clothing, housing and miscellaneous items such as education, recreation etc. is therefore a sure indication of an improved standard of living. The Bombay Labour Office has carried out two family budget enquiries for working classes in Bombay City, one in 1921-22 and the other in 1932-33, and the results were published in the years 1923 and 1933 respectively. As has already been mentioned similar enquiries have also been conducted in Ahmedabad and Sholapur etc. and the results

of both these enquiries were published in the year 1928. In Burma the Labour Statistics Bureau, Rangoon, published in the same year the results of an extensive enquiry conducted by the Bureau into the standard and cost of living of four different classes of industrial workers in Rangoon. A number of family budgets have also been collected at Cawnpore in the United Provinces and at Nagpur and Jubbulpore in the Central Provinces with the object of compiling cost of living indexes. The effort in the case of the former Province proved futile and that Province is not therefore at present compiling any such index.

The following comparative data regarding the distribution of expenditure would serve to indicate the standard of life of working classes at different centres in India —

Percentage Distribution of Expenditure

Groups	Bombay (1932-33)	Ahmedabad (1928)	Sholapur (1929)	Nagpur (1927)	Jubbulpore (1927)	Rangoon (1928)
Food	46.60	57.90	49.25	64.10	66.00	52.7
Fuel and light	7.11	7.04	9.60	9.62	7.95	5.2
Clothing	7.75	9.45	11.86	10.70	10.86	10.6
House rent	12.81	11.74	6.27	1.92	1.44	13.9
Miscellaneous	25.73	13.87	23.02	13.66	13.75	17.6
Total	100.00	100.00	100.00	100.00	100.00	100.0

NOTE.—The figures are not *strictly comparable* due to differences in the items included in the different groups. But they nevertheless serve to show the variations in the distribution of expenditure in a general way.

The standard of life is more often than not conditioned by the size of the family and its income. The following figures are of interest in this connection —

	Bombay	Ahmedabad	Sholapur	Nagpur	Jubbulpore	Rangoon (Burmese)
Average size of the family (in persons)	3 70	3 87	4 57	4 33	3 76	3 01
	Rs a p	Rs a p	Rs a p	Rs a p	Rs a p	Rs a p
Average monthly income	50 1 7	44 7 2	39 14 10			59 8 3

It will be seen that the miscellaneous group of expenditure accounts for a comparatively large percentage of the expenditure of the average working class family. In this group is included such items as interests on loans and instalments of debts repaid. Delays in the receipt of earned wages lead to indebtedness of the worker in many cases. The Royal Commission on Labour have made certain important recommendations with a view to lessening the burden of indebtedness of the worker and also to prevent its accumulation. The Payment of Wages Act 1936 to which reference has been made in an earlier section is a measure intended to secure to the workmen prompt payment of earned wages so that they may not be put to the necessity of incurring or accumulating debts. The Government of India have under consideration certain other pieces of legislation which are also designed to improve the lot of the industrial worker. Following the recommendations of the Labour Commission the Government of India have amended the Civil Procedure Code with a view to exempting salaries below a defined limit from attachment. Another recommendation of the Labour Commission is that at least so far as industrial workers in receipt of wages or salary

amounting to less than Rs 100 per month are concerned arrest and imprisonment for debt should be abolished except when the debtor has been proved to be both able and unwilling to pay. The Government of India after consulting the provincial Governments have decided to undertake legislation on the recommendation on an experimental scale restricted to the province of Dhu in the first instance. A third recommendation of the Whitley Commission was made with a view to protect workers from harassment for debts. After consulting public opinion and the views of the various local Governments on this question the Government of India came to the conclusion that central legislation on the subject was not called for. The Government of Bengal, at the suggestion of the Government of India, passed a Workmen's Protection Act in 1934 which makes the titling of industrial establishments for the purpose of collecting debts a criminal and cognizable offence. Some other provinces are also contemplating similar legislation. The Bombay Moneylenders Bill introduced by a non-official member in the Bombay Legislative Council in March 1934 was in effort in this direction. But, unfortunately the motion for the reference of the Bill to a Select Committee was lost.

WAGE RATES AND EARNINGS

The only reliable and satisfactory data in connection with wage rates and earnings of industrial workers in India are those contained in the reports of enquiries conducted by the Labour Office of the Government of Bombay for the Bombay Presidency. The Government of India made an attempt to institute a general wage census in India in 1921 but the necessity for retrenchment at the time led to the abandonment of the project and to day little or no definite information regarding rates of wages is available for any province outside the Bombay Presidency. Such information as there is relates to agricultural labour and is contained in a series of reports of quinquennial censuses conducted in certain provinces into agricultural wages. Some of the annual factory administration reports published by the Provincial Governments in India contain remarks about prevalent wage rates but these relate only to certain units and they can by no

means be considered as being the dominant rates at any one time for any particular industry or area. The annual mines administration reports do contain figures for daily earnings for certain main occupations in representative mines in the provinces in which mines are situated but these are also open to the same objection. The lack of accurate and reliable statistics of wages in India has been adversely commented upon and regretted by almost every commission and committee appointed in the country since the beginning of the century and notably by the Royal Commission on Indian Labour whose work was considerably hampered as a result of the paucity of satisfactory information on the subject.

The blame for the lack of information about wages in India cannot be entirely at the doors of the Central and Provincial Governments. The collection of satisfactory wage statistics is always an exceedingly difficult matter and more

particularly so in India where conditions vary so markedly and widely not only between industry and industry and centre and centre but also between unit and unit in the same industry in the same centre. In the section on hours of work and conditions of employment some indications have been given of the wide variations in the periods and methods of wage payment. To quote an example one textile mill in Ahmedabad has five different wage periods for different groups of workers with variations in methods of wage calculation for the workers in each group—(1) persons employed in the mechanical subordinate supervisory and maintenance departments on both daily and monthly rates of wages are paid for periods of one calendar month (2) weavers on piece rates are paid bi-weekly or for periods of 14 days not always for the period beginning with the Monday of one week and ending on the Sunday of the following week but for 14 consecutive days beginning with any day in the week and (even then not all the weavers in the mill are paid for the same period they are divided into batches and it often happens that whereas the number of working days for one batch may be 12 the working days for another may be eleven or less, (3) daily, monthly or hapta rated workers on the spinning side are paid for haptas or periods of 16 days and these haptas vary for different batches of workers, (4) women reelers and winders on piece rates are paid bi-monthly, i.e., for two periods in a calendar month one from the 1st to the 15th and the second from the 16th to the end of the month and (5) coal and basket carrying cooly labour on daily or weekly rates is paid weekly. The variations shown are only in one unit—those that could and do exist between different units can be better imagined than described for their number is legion. The situation is further complicated by the fact that the nomenclature adopted for designating occupations also varies widely between district and district and concern and concern in the same district owing to the use of a host of vernacular and arbitrary terms and of nick-names. Thirty-six mills which submitted information to the Bombay Labour Office in 1926 for its enquiry into textile wages in three centres of the Bombay Presidency for that year used over a thousand different terms for designating 150 odd cotton textile occupations! Even in concerns which use standard English occupational terms the position is rendered more difficult owing to the existence of arbitrary gradings of different occupations into several sub-grades and classes. The necessary preliminaries to the conduct of any satisfactory enquiry into wages in India therefore must be (1) the establishment of a uniformity of method, (2) the standardisation of occupational terms, and (3) the thorough education and instruction of the clerical staffs of the units to be covered in the proper use of the standardised designations and in the accurate filling up of the required returns. The existence of wide variations in rates and conditions, moreover, makes it advisable to cover as many as possible if not all the units in the industry under survey in order that results which are not biased one way or the other may be secured. In view of what has been stated it is obvious

that no Government in India can undertake a comprehensive enquiry into industrial wage unless it has at its disposal an adequate and thoroughly trained and experienced staff for the purpose. The only Provincial Government in India which has such a staff is the Government of Bombay.

Since its establishment in 1921, the Labour Office of the Government of Bombay has conducted the following enquiries into wages in the Bombay Presidency—

1. An Enquiry into Wages and Hours of Work in the Cotton Mill Industry in the Bombay Presidency for May 1921. Results published in a special report in 1923.

2. Agricultural wages 1900-1922 based on the information collected monthly from all talukas (revenue areas) in the Bombay Presidency since 1890 in a prices return form known as Taluka Form No. XVIII. In this form returns were made to the Director of Agriculture of the predominant daily rates of wages on the 1st and the 15th of each month for able bodied adult male field ordinary and skilled labourers employed in the vicinity of the headquarters town of each taluka. The data relating to prices were tabulated by the Director of Agriculture and published in the *Bombay Government Gazette* but no use was made of the figures for wages. The Labour Office collected the figures recorded in the Department of Agriculture for the 23 years from 1900 to 1922 and the report of the survey was published in 1924. In 1925 the wages portion of the Taluka Form No. XVIII was amplified so as to secure information for women workers as well and also for both cash wages and wages in kind and separated from the prices form. Whilst the prices return was to be submitted to the Director of Agriculture as usual, the wages return was to be submitted to the Labour Office. Continuation figures since 1922 are contained in the reviews on Mofussil Labour and Wages which are compiled by the Labour Office for publication in the annual General Administration Reports of the Bombay Presidency and these are also reproduced in the *Labour Gazette*.

3. An Enquiry into the Wages of Peons in Government and Commercial Offices in Bombay City. Conducted in 1922 and results published in the March 1923 issue of the *Labour Gazette*.

4. An Enquiry into Wages and Hours of Work in the Cotton Mill Industry in the Bombay Presidency. Conducted in 1923 and results published in a special report in 1924.

5. An Enquiry into the Wages of Municipal Employees in the Bombay Presidency. Conducted in 1924 and results published in the July 1925 issue of the *Labour Gazette*.

6. Clerical Wages in Railway and Commercial Offices in Bombay City. Conducted in 1924 and results published in four issues of the *Labour Gazette* for February to May 1925.

7 An Enquiry into Wages and Hours of Work in selected Cotton Textile Mills in Bombay, Ahmedabad and Sholapur conducted in 1928. Results published in a special report in 1930. The 1921 and 1923 enquiries into textile wages were conducted on the basis of aggregate figures for all the workers in each occupation in a unit, thus—two loom weavers 340, aggregate man days in the (selected) month 7,429, aggregate earnings during the month Rs 12,897. No information was collected about rates and in the absence of figures for individuals it was not possible to work out frequencies of attendance, rates and earnings. The aggregate method was therefore discarded in 1926 and information was called for for every individual worker on the basis of the muster and the pay rolls.

8 Selected Printing Presses in Bombay City. Conducted in 1929. Results published in the June 1931 issue of the *Labour Gazette*.

9 Departmental Enquiry into Wage Cuts in Cotton Textile Mills in the Bombay Presidency. Conducted early in 1934 and results published in a special report in the month of June of the same year.

10 The first part of the General Wage Census covering all *Perennial Factories* in the Bombay Presidency for May 1934. (A descriptive note on the origin and scope of this enquiry and the methods adopted for conducting it has already been given in the first part of this note.) The first three volumes of the series of reports in connection with this part of the census covering Wages, Hours of Work and Conditions of Employment in the Engineering, Printing and Textile (Cotton, Silk, Wool and Hosiery) Industries have been published. Three other reports—(4) All Industries except the Engineering, Textile and Printing, (5) Supervisory and Clerical Staffs in Perennial Factories, and (6) General Report—are expected to be published by the end of the year 1937.

11 Enquiry into the conditions of Work and Wages of Workers employed in the Building Trade in Bombay City. Conducted in 1935. Results published in the August 1935 issue of the *Labour Gazette*.

12 Enquiry into the Conditions of Work and Wages in some Unregulated Factories in Bombay City. Conducted in 1935. Results published in the October 1935 issue of the *Labour Gazette*.

13 Enquiry into Wages, Hours of Work and Conditions of Employment in the Retail Trade of some towns of the Bombay Presidency. Conducted in 1935. Results published in a special report early in 1936.

14 The second part of the General Wage Census covering seasonal factories in the Bombay Presidency. Conducted in the winter of 1935-36 and the summer of 1936. Results expected to be published about the middle of the year 1937.

WAGE RATES

Certain important facts govern all discussions on wage rates in India. Firstly, there is no Government machinery for the fixation of

minimum wages, and, in the absence of strong trade unions covering entire or sections of whole industries there are no trade agreements or union rates which have been accepted both by employers and employees. There are also no awards by conciliation boards. The bargaining power of the workers is moreover weak, and the cumulative result of all these various factors is that employers are almost entirely at liberty to fix any rates they like. Secondly, except for a limited measure of standardisation of time rates of wages for unrationalised occupations in the cotton textile industry in Bombay City and for siders and doffers in cotton mills in Ahmedabad, there is little or no standardisation of rates in any industry in the country, and consequently wage rates not only vary widely between centre and centre and unit and unit in the same centre but also between different individuals in the same occupation in one unit. This variation in rates is further complicated by the fact that the rates are often subject to various additions in the form of dearness allowances and/or good attendance and efficiency bonuses and to deductions for percentage cuts. Thirdly, frequent changes are made in the basic units of time for which rates are fixed, e.g., rates which are monthly or daily may be changed into daily or hourly rates. Fourthly, almost all the principal occupations in Government and railway concerns and in the industrial establishments of public and local bodies are divided into several grades and sub-grades. The basis of the grading in all cases is arbitrary and varies widely between the different administrations. Fifthly, vacancies are seldom if ever filled on the same rates as those paid to the workers who have left. In such cases advantage is usually taken to lower rates and the wages offered to new entrants depend more on their personal ability and degree of competence and also on the rates prevalent in other similar concerns and the supply of the type of labour required. The factors of personal competence and the capacity of bargaining power are the most important considerations in wage fixation. The first varies widely between individual and individual among Indian workers and whereas a minority in all occupations may be thoroughly efficient, the same can not be said of the majority. The second depends upon densities of industrial populations in particular locations. Lastly, rates vary widely between town and town and in the case of the semi-skilled and unskilled operations. But, this variation operates within a narrower limits for the more skilled occupations in which the really competent men are able to command their due anywhere. In view of these several diversely varying factors it is impossible to give any rates of wages which will be found to be generally applicable to any particular industry in any particular centre. The compiler of this note, however, has had a wide experience of wages in India and the following figures quoted by him give an approximate idea of the predominant rates for fairly efficient workers in certain of the more important occupations in all sections of Indian industry—

Occupations	Most usual period of payment	Rates in		
		Cities	Towns	Mofussil
Foremen (European)	Monthly	Rs 500 to 700	Rs 400 to 600	Rs 350 to 550
„ (Indian)	,	300 to 500	250 to 350	250 to 300
Chargemen		200 to 250	175 to 225	200 to 250
Maistries		90 to 125	80 to 110	75 to 100
Steam Engine Drivers	,	60 to 75	50 to 70	35 to 50
1st Class Boiler Attendants		70 to 90	65 to 80	40 to 70
2nd „ „ „	,	45 to 70	40 to 60	35 to 50
Firemen	,	30 0 0	27 0 0	24 0 0

Unskilled workers (all occupations)—Women	„	0 10 0	0 6 0	0 4 0

MOVEMENTS OF WAGE RATES

The only satisfactory criterion on which to base any broad conclusions regarding movements of wage rates in any industry in any industrial area or centre in India would be to take the total wages bills for equal numbers of workpeople in the same or similar occupation groups at any two dates and to ascertain the percentage increase or decrease between the two sets of figures. Attempts made by the Bombay Labour Office to do this during its enquiries in connection with the General Wage Census were largely frustrated owing to the existence of irreconcilable variations of principle and considerable diversity in practice not only as between unit and unit but also in the same unit as for example in the cotton textile mill in Ahmedabad which had been dealt with above. The comparisons which employers most need to draw are those with 1914 on, in other words, with the pre-war year. All the pay and muster rolls for that year were however destroyed long ago but most units in the textile industry in Bombay have their 'basic' time and piece rates from which they calculate the earnings on which the percentage dearness of food allowances are computed.

References have often been made in this note to the dearness allowances of 80 per cent. for weavers and of 70 per cent. for all other operatives granted in the textile mills in Bombay City until the middle of 1933 when the Bombay Millowners' Association permitted its individual affiliated members to take independent action in the matter of reducing these allowances. The stages by which these allowances came to be granted were as follows: January 1918—1 per cent.; January 1919—raised to 55 per cent.; February 1920—used to 75 per cent. for weavers and to 55 per cent. for all other operatives; November 1920—used to 80 and 70 per cent. respectively. These allowances were on the 'basic' rates of 1914 or of some other year between 1914 and 1917—rates which were not only not standard for all mills in Bombay City but which actually varied widely as between mill and mill. For example the results of the 1926 enquiry conducted by the Bombay Labour Office showed that in the 19 mills selected for the enquiry in Bombay City the average earnings (from basic rates plus allowances) of two loom weavers varied between Rs. 1.91 and Rs. 2.16 per day or sides between Rs. 0.143 and Rs. 1.211 per day of workers between Rs. 1.103 and Rs. 2.140 per day and for women gey winders between Rs. 5.5 and minus Rs. 5 per day. Notwithstanding these wide variations it is however possible to state that wage levels in any particular textile mill in Bombay City were on the whole about 70 per cent. higher than the pre-war year at the beginning of the year 1933. During the latter half of 1933 and in the beginning of 1934 all mills in Bombay effected considerable cuts in the dearness allowances and in some cases also in the basic rates. If a later year be taken for purposes of comparison say 1926 when the Bombay Labour Office made a thorough survey of prevalent rates the results of the General Wage Census which was conducted for cotton mills in Bombay

City for October 1934 showed that wages in the Bombay mills as compared with July 1926 were lower by 16 per cent. in October 1934.

In Ahmedabad the war or dearness allowances paid in textile mills in that centre varied widely for different occupations and a general comparison with the pre-war year is therefore not possible, but as compared with 1926, wages in May 1934 were 44 per cent. higher. This, however, was nullified by the cut of 64 per cent. which was brought into effect from 1st January 1935.

In Sholapur the increases in wages granted by individual mills between 1916 and 1919 were consolidated with the rates prevailing in 1914. At the beginning of 1920 the Sholapur mill owners gave their first separate dearness allowance in the form of wages in kind—certain quantities of grain—to all those workers who did not remain absent for more than four days in a month. Workers who failed to put in the required attendance were deprived of this benefit and the agitation of both these and the other workers for higher rates led to the Sholapur millowners conceding dearness allowances in cash of 3 per cent. over the rates of 1919 to weavers and of 50 per cent. to all other operatives. The value of the grain allowance varied with fluctuation in prices. The existence of several conflicting factors in the wages position in Sholapur prevents the estimate of an accurate comparison with 1914, but, as compared with 1926, wages in July 1934 were 20.5 per cent. lower. Owing to the lack of the necessary data for the purpose, similar comparisons for other industries and for other provinces are not possible.

EARNINGS

Whilst full and accurate information with regard to wage rates may be of great value for purposes of wage fixation, statistics of earnings alone are of value for the proper assessment and appreciation of the well-being of the masses provided however that the term 'earnings' has one uniform meaning in its computation and application. In practice the connotation of the term varies widely for it is commonly applied to one of three different values: (1) gross earnings, (2) net earnings, or (3) the amount which a workman receives in his pay envelope. In correct statistical parlance it is none of these three. It is explain. Gross earnings for any particular pay period are the total dues of a wage earner from his basic rates—time or piece—plus all the allowances, bonuses and perquisites—or the value of such where they are not in cash—to which he may be entitled by virtue of his contract of employment and includes wages given for any periods of leave with pay which may be granted during such pay period. The allowances may either be in the form of dearness allowances in cash or in allowances or allowances for overtime work. Bonuses may be for good attendance and/or for efficiency. Perquisites may be in the form of free housing, travelling allowances, free medical attendance, free railway passes, etc. Net earnings are gross earnings less deductions for taxes.

The amount in the pay envelope is not earnings less any further deductions which may be made by an employer for house rent, medical attendance, subscriptions to provident funds, income tax, refunds of advances, payments for purchases from co-operative stores or cheap grain or cloth shops, repayments of loans from provident fund account or from co-operative credit societies, subscriptions to sports clubs or institutes, etc. The amount in the pay envelope can never be reckoned as earnings because every worker is expected to pay for his income tax, house rent and purchases and to liquidate his other liabilities and debts from his income. In all cases where fines are widely prevalent gross earnings can also not be reckoned as income because these may be habitually liable to deductions for fines.

Net earnings would most correctly approximate to earnings for statistical purposes. Sufficient has been stated to show how difficult the computation of 'earnings' can be. Different statisticians and different bodies hold different views as to its correct computation and that is the reason why the term 'earnings' is so widely interpreted. The most frequent and general usage of the term for statistical purposes is to take gross earnings in cash less fines and without valuating such perquisites as free housing, free medical attendance and free railway passes in the case of railway workers, and to include travelling allowances where these are paid for convenience between place of work and home but not when they are paid for transport to some other temporary sphere of work. This is the basis on which figures for earnings were collected by the Bombay Labour Office for the purposes of the General Wage Census, and subject to minor modifications, for its other enquiries into wages. It is of the utmost importance that in the conduct of every enquiry into wages, all the persons who are entrusted with the work of filling up the required returns should have a clear and thorough conception as to what should or should not be included in earnings.

Two sets of figures may be compiled for earnings. (1) *average daily earnings* ascertained by dividing the total earnings for a group of workers in any occupation by the total of the number of days actually worked by all the individuals in the group, and (2) *average monthly*

earnings ascertained by dividing the total earnings of the group for a period of one month by the number of persons in the group. In cases where statistics have been collected for wage periods of less than a month, monthly averages can be reckoned by ascertaining the weighted average of the number of days worked by all the units concerned in the month in which the shorter period is contained and by multiplying the figure for average daily earnings by the weighted average less the figure for average absence as shown by the figures for average percentage attendance for the group. *Average percentage attendance* is the percentage ratio of the total number of days actually worked by all the individuals in a group to the possible working days in the pay period for the group.

Part I of the General Wage Census covering all perennial factories in the Bombay Presidency covered nearly a thousand occupations in nearly twenty industries. Of these, the reports covering the engineering, printing and textile (cotton, wool, silk and hosiery) industries alone were published before this issue of *The Indian Year Book* went to press. For the purposes of the census the Bombay Presidency was divided into ten territorial areas and the reports contain the averages of daily and monthly earnings for all monthly paid workers in all the occupations concerned in each of these ten areas. It is obviously not possible for us to reproduce the figures here but for purposes of general interest we give below (1) the averages of monthly earnings for six of the most important occupations which are to be found in all factories, but particularly in engineering works, shops, (2) the general averages for men in all engineering and 'common' occupation in all factories, (3) the average monthly earnings in six of the most important printing occupations, (4) the general averages for process operatives in all printing presses which are factories for the purposes of the Indian Factories Act in the Bombay Presidency, (5) the average daily earnings in the more numerically important occupations in the cotton textile industry and (6) the general averages of daily earnings for all process operatives in the cotton textile industry. The figures in brackets in the first, the third, the fifth, and the sixth tables show the numbers of workers covered by the averages to which they relate.

* The Labour Office report gives figures for average daily earnings separately for men and women and for time rated and piece priced workers. The figures contained in the above table are the weighted averages for both male and female workers whether paid on time or piece. Children are excluded.

† Frame Tenters' include Drawing, Slubbing, Inter and Roving Tenters.

** Since the General Wage Census was held there have been cuts in wages in Cotton textile mills in Ahmedabad City and in the Ahmedabad, Kaira and Panch Mahals in the Broach and Surat, and in the East and West Khandesh areas. These range from one to two annas in the rupee according as to whether the workers concerned were time or piece rated. In order to ascertain the earnings position in May 1937, the figures for siders and doffers for these areas are reducible by an anna in the rupee and for the other occupations in the same areas by two annas in the rupee. The figures for Bombay City and the other areas may be considered to hold good as at May 1937.

VI Average Daily Earnings of All Adult Operatives in all Occupations in the Cotton Textile Industry in the Bombay Presidency in 1934

Areas	Operatives in Process Occupations	Operatives in Engineering and Common Occupations	Operatives in All Occupations
Bombay City	Rs 1 1 9 (116,189)	Rs 1 2 9 (11,429)	Rs 1 1 11 (128,418)
Bombay Suburban Thana, Kolaba and Ratnagiri	1 0 0 (3,774)	1 2 11 (360)	1 0 3 (6,334)
Ahmedabad City	1 5 11 (74,185)	1 3 11 (7,901)	1 5 7 (82,086)
Ahmedabad, Kaira and Panch Mahals	1 0 3 (3,065)	0 1 11 (433)	1 0 3 (3,498)
Broach and Surat	0 14 0 (2,989)	0 15 8 (344)	0 14 3 (3,333)
Last and West Khandesh	0 12 5 (6,986)	0 13 1 (810)	0 12 6 (7,796)
Poona, Nasik and Ahmednagar	0 1 7 (787)	0 15 6 (100)	0 15 7 (887)
Sholapur City	0 11 6 (14,433)	0 12 6 (1,889)	0 11 8 (16,324)
Sholapur and Satara	0 7 5 (1,698)	0 9 9 (262)	0 7 9 (1,960)
Belgaum, Bijapur, Dharwar and Kanara	0 8 1 (4,777)	0 11 3 (893)	0 8 7 (5,672)
Presidency Proper	1 1 7 (231,685)	1 2 0 (24,623)	1 1 8 (256,308)

Provincial factory administration reports show that the monthly earnings of cotton weavers and spinners in some other provinces are as follows: Central Provinces and Berar Rs. 30 and Rs. 15; Bengal Rs. 25 and Rs. 14; Punjab Rs. 28 and Rs. 20; and Madras Rs. 27 and Rs. 20. In the Jute mill industry, single shift hessian weavers earn Rs. 31 per month and the average for both warp and weft spinners is Rs. 17-4-0 per month. The earnings of women workers in jute mills vary between Rs. 11 per month for most occupations and Rs. 15 per month for twistors.

RECOMMENDATIONS OF THE ROYAL COMMISSION

The Royal Commission on Indian Labour have made several important recommendations in connection with the income of industrial workers and the question of their indebtedness. In discussing the possible application to India of the minimum wage convention adopted at the 1928 session of the International Labour Conference the Commission were of opinion that the Convention, in referring to trades in which wages are exceptionally low, must be regarded as having in view trades in which wages are low, not by comparison with western or other foreign standards but by comparison with the general trend of wages and wage levels. In kindred occupations in the country concern-

ed. If the principle of the minimum wage were to be applied to India they considered that it would first be necessary to create machinery for fixing minimum rates of wages in those trades in which wages are lowest and where there is no question of collective bargaining. The industries indicated for a careful study of conditions are mica, wool, deining, shellac, bidi (the indigenous cigarette) manufacturing, carpet weaving and tanneries and those in which there is a strong presumption that the conditions warrant detailed investigation. Full information re wages and conditions should be collected and if the surveys indicate sweetening the trades should be demarcated and the number and the composition of wage boards should be decided. In the setting up of wage boards important criteria for consideration should be the cost of enforcement and the policy of gradualness should not be lost sight of. If the investigations appear to warrant minimum wage fixing machinery the necessary legislation for setting up such machinery should be undertaken. These recommendations are under the consideration of the various Provincial Governments and reference has already been made to the action taken by the Government of Bombay in instituting a General Wage Census to be completed in about five years in order to collect all possible information on the subject of wages in all types of industrial concerns in the Bombay Presidency.

WORKMEN'S COMPENSATION

Under the ordinary common law an injured workman is entitled to recover damages or compensation for an injury sustained by him in the course of his employment if the injury is proved to have been caused by the personal negligence of his employer. In addition the Indian Fatal Accidents Act of 1855 permitted the award of damages to the dependants of a deceased workman if the accident resulting in his death was due to the wrongful act, neglect or fault of the person responsible for the accident. The procedure in connection with the recovery of damages under both the common law and the Fatal Accidents Act was, however, extremely cumbersome. This together with the ignorance and the illiteracy of Indian workers and their financial disability in undertaking extensive litigation had placed them in a very disadvantageous position in suits for compensation. Moreover, with the growing industrialisation of the country, accidents were annually becoming more numerous than before and in their results were responsible for considerable hardship on the workers and their families. Disabilities similar to these had been removed in most of the industrialised countries of the world by the passing of workmen's compensation laws providing for easy and speedy relief to workmen injured as a result of industrial accidents and to their dependants in cases where the accidents resulted in death. The necessity for such legislation in India was obvious and the Government of India drew up proposals for a Workmen's Compensation Act which circulated to all local Governments in 1921. The proposals met with a fair measure of approval and the Government of India drew up a Bill which they introduced in the Legislative Assembly in September 1922. After its reference to a Select Committee, the Bill was passed in March 1923 and the Indian Workmen's Compensation Act was brought into operation with effect from the 1st July 1924. This was the first piece of legislation in the field of social insurance in India.

WORKMEN'S COMPENSATION ACT, 1923

In its main principles, the Indian Act follows the British model but its precision and rigidity and the special machinery set up for its administration are some of the features which distinguish it from the British Act. In its scope—type and classes of workers covered—the original Act of 1923 fell far short of the British Act but it was necessary for the Government of India to adopt a policy of gradualness in the matter so as to secure the support of vested interests to the original measure. The original limitations of scope were to a large extent removed by amending Acts passed in 1926, 1929, 1931 and 1933 and the Act as it stands today covers over seven million industrial workers in the country. Under the Act, payment of compensation has been made obligatory on all employers whose employees come within its scope, even in cases where there has been no negli-

gence and injured workmen or the dependants of those killed can obtain compensation in all cases where personal injury has been caused by accident arising out of and in the course of employment and where the accident is not directly attributable to misconduct, breaches of rules or orders or disregard of safety devices. Besides bodily injuries the contracting of certain occupational diseases such as anthrax and lead and phosphorus poisoning were deemed and treated for the purposes of compensation, as injuries caused by accident provided however, that the worker concerned was in the service of the same employer for more than six months. Mercury poisoning was added to the list of original occupational diseases in 1926 in order to bring the Indian law into conformity with a Draft Convention adopted by the International Labour Conference in 1925. This list was further expanded in 1933 by the addition of (1) poisoning by benzene and its homologues or the sequelae of such poisoning, (2) chrome ulceration or its sequelae, and (3) compressed air illness (Caisson Disease) or its sequelae.

The Royal Commission on Indian Labour made a long series of recommendations for the improvement of the Act, firstly to extend its scope so as to cover all types and classes of workers who were likely to be most affected by the increased risks of modern industry, secondly to enhance the scales of compensation payable and to facilitate the methods for their payment, and thirdly to effect various changes designed to improve the administration of the measure. It is not necessary for the purposes of this note to trace the evolution of the legislation in connection with workmen's compensation in India since the passing of the first Act in 1923 and it will be more useful if we gave the main provisions of the Act as it stands today because that is what is most needed in a compact work of reference such as the *Indian Year Book*.

Classes of Workmen Covered by the Act—These have been specified in the definition of the term 'workman' contained in section 2(1) (n) and in schedule II. In all cases persons employed in an administrative or clerical capacity and those whose monthly earnings exceed Rs. 300 are excluded. Speaking broadly the Act covers railways, factories, mines, seamen, docks, persons employed in the construction, repair or demolition of buildings designed to be or which are of more than one story or of twenty feet in height, or of dams and embankments, roads, bridges or tunnels, or wharves, quays, sea walls or other marine work, the setting up, repairing, maintaining or taking down any telegraph or telephone line or overhead electric lines or cables, aerial ropeways, canal pipe lines or sewers, the fire brigade, railway mail service, operations for winning natural petroleum or natural gas, blasting operations and excavations, ferry boat services, cinchona, coffee, rubber or tea plantations, electricity or gas generating

stations, lighthouses, cinematograph picture producing and exhibiting, divers, elephant and wild animal trainers and keepers and salaried motor drivers and chauffeurs. Persons employed through sub contractors by a person fulfilling a contract with a railway are also covered. As far as seamen are concerned both seamen on ships registered in India and those on ships registered in foreign countries are included. Not only workmen employed within the precincts of a factory or a mine but also men engaged in any kind of work incidental to or connected with a factory or any mining operation are entitled to the benefits of the Act. As far as factories are concerned those using mechanical power and employing more than ten persons or those not using mechanical power and employing more than fifty persons are covered. The Governor General in Council is empowered to bring within the scope of the Act other classes of workmen whose occupations are of a hazardous nature.

Amounts of Compensation Payable—The amount of compensation payable depends on the average monthly wages of an injured or deceased workman. The term wages includes overtime pay and the value of any concession or benefits in the form of food, clothing, free quarters, etc. After the monthly wages of a worker are calculated the amount of compensation due is decided by a reference to schedule IV which gives in a tabular form the amounts of compensation for death, permanent total and temporary disablement in respect of each of seventeen wage classes. The amounts of compensation payable in the case of an injured workman whose monthly wages are not more than Rs. 10 are Rs. 500 for death, Rs. 700 for permanent total and half the monthly wages for temporary disablement. For a workman whose monthly wages are between Rs. 10 and Rs. 60 the corresponding figures are Rs. 1,800, Rs. 2,520 and Rs. 15 respectively. The maxima for persons earning over Rs. 200 per month are Rs. 4,000, Rs. 5,600 and Rs. 30 per month respectively. In the case of minors the amounts of compensation for death and for permanent total disablement are at a uniform rate of Rs. 200 and Rs. 1,200 respectively, and half the monthly wage for temporary disablement. No compensation is payable in respect of a waiting period of seven days following that on which the injury was caused.

(NOTE: *Permanent total disablement* means—such disablement which permanently incapacitates a workman for all work which he was capable of performing at the time of his accident. Any combination of injuries totalling 100 per cent loss in earning capacity is regarded as permanent total disablement even if the combination of injuries does not arise in one accident.)

Who are Dependents—These are defined in two categories: firstly, those who are in practice all cases actually dependents, and secondly those who may or may not be in that position. The first includes a wife, a minor legitimate son, an unmarried legitimate daughter and a widowed mother. The second includes a husband or a parent other than a widowed mother, a minor illegitimate son, an unmarried illegitimate

daughter, a minor legitimate or illegitimate daughter if married or widowed, a minor brother, an unmarried or widowed sister, a widowed daughter in law, a minor child of a deceased son and a paternal grandparent.

General—The interests of dependants in cases of fatal accidents have been safeguarded by ensuring that (1) in all cases of fatal accidents should be brought to the notice of the Commissioner, (2) in all cases where an employer admits liability the amount of compensation payable is to be promptly deposited with the Commissioner, and (3) in cases where the employer disclaims liability and there are good grounds for believing compensation to be payable, the dependants get the information necessary to enable them to judge if they should make a claim or not.

A contractor has been given the right to be indemnified by his sub-contractor if he has had to pay compensation either to a principal or to a workman.

An employer is permitted to make to any dependant advances on account of compensation not exceeding an aggregate of one hundred rupees and so much of such aggregate as does not exceed the compensation payable to that dependant is to be deducted by the Commissioner from such compensation and repaid to the employer. Further the Commissioner may deduct a sum up to Rs. 25 from the amount of compensation for the funeral expenses of a deceased workman and pay the same to the person by whom such expenses were incurred.

Administration—The Act is administered entirely on a provincial basis by Commissioners to be appointed by Local Governments. The Bengal and Madras Presidencies have one Commissioner each for the whole province. The Bombay Presidency has one Commissioner for the more important industrial areas and for the other areas sub-judges have been appointed as ex-officio Commissioners for Workmen's Compensation. In the other provinces the District Magistrate or the District and Sessions Judge or the Senior or Sub Judge is the Commissioner within his jurisdiction.

STATISTICS OF WORKMEN'S COMPENSATION

The statistics regarding cases disposed of under the Act have been collected and published since 1st July 1924 on which date the original Act came into force. These statistics relate to the more important classes of workers, i.e., workers in factories, mines and docks and on railways and tramways. The total amount of compensation paid to these classes of workers was about 6½ lakhs of rupees in 1925, 8½ lakhs in 1926, 11 lakhs each in 1927 and 1928, 12½ lakhs in 1929 and 1930, 10½ lakhs in 1931, 8½ lakhs in 1932, 8 lakhs in 1933, 8½ lakhs in 1934 and 11½ lakhs in 1935. The following table shows the number of cases classified by nature of injuries and the amounts of compensation paid in each year since 1924—

Workmen's Compensation Statistics—All India 1921-35

Year	Number of cases			Amount of compensation paid for		
	Fatal	Non fatal	Total	Fatal cases	Non fatal cases	All cases
1924*—				Rs	Rs	Rs

* The figures for 1924 relate only to the six months from 1st July to 31st December

EFFECT ON INDUSTRY

A compulsory system of workmen's compensation enhances the cost of production but not to any appreciable extent. In the case of coal mines, the increase in cost has been estimated to be not more than annas four per ton of coal (*vide* para 39 of the Report of the Indian Coal Committee 1925). However the owners of many of the smaller coal mines were compelled to close down their mines but this was due mainly to the severe depression with which the industry was faced. In the Punjab the proprietors of the coal mines in the Jhilm District were reported to be not satisfied with the privileges enjoyed by the miners under the Act as some of them had to pay as compensation on a single accident more than they could earn during a month. An unexpected increase in the number of serious and fatal accidents may undoubtedly make a big hole in the profits of a concern but the remedy for this lies in accident insurance facilities for accident insurance are now being

provided by a number of leading insurance companies in the country and the most important of these are the Claims Bureaux in Calcutta and Madras. The Calcutta Claims Bureau which represents many of the leading insurance companies operating in India deals with a large number of claims and offers valuable co-operation to the authorities in settling compensation claims. In Bombay insurance companies were concerned with half the number of cases that came up before the Commissioner. Insurance companies is a rule contest only cases involving questions of law or principle and are of benefit to all concerned. In these provinces insurance is widely resorted to by the employers especially in the textile industry. The Millowners Mutual Insurance Association Ltd Bombay, is an organisation of employers one of whose objects is the mutual insurance of members against liability to pay compensation or damages to workmen employed by them or their dependants for injuries or accidents fatal or otherwise, arising out of or in the course of employment.

TRADE UNIONISM AND TRADE UNION LAW

The earliest known trade unions in India were (1) The Bombay Millhands Association, a loose organisation formed in 1880 for the purpose of memorialising Government for improvements in factory law and which soon became moribund after the passing of the 1891 Act, (2) The Amalgamated Society of Railway Servants of India and Burma formed in 1897 by Anglo-Indians and Donned European employees on railways, more as a friendly society than a combination for securing concessions, and (3) The Bombay Postal Union which was formed in 1907. The Kanjar Hitwardhak Sabha Bombay, which came into existence in 1910 was a body of social workers who were interested in questions connected with the general welfare of labour and was an association rather for the workers than of the workers. Apart from the cases cited the trade union movement as this is known in the West, did not begin in India till almost after the end of the Great War. Trade organisations were however not unknown and trade or craft guilds had a definite place in the social economy of the village communities. Each trade or craft was the monopoly of a particular caste and the organisation that existed for each occupational caste was known as a *guild*. The two main functions of these guilds were (1) to regulate the relations between the members *inter se*, and (2) to deal with questions affecting the relations of the caste as a whole *vis à vis* the community. The *panchayats*, as the executives of these guilds were called enforced their decisions on their members by means of social sanctions and their demands on the community by means of *hatala* i.e., withholding of service. These guilds differed from modern trade unions in that they did not consist of wage earners, were not open to members outside the particular castes concerned, and that they had no written rules or regulations. Their background was more social than industrial and they were a type of close trade unions. Contact with the West and the gradual industrialisation of the country, however, introduced cleavages in the solidarity of the village communities and consequently into the homogeneity of the old craft guilds which began to disintegrate and disappear only to emerge later in a form more suited to modern industrialism.

The decade following the end of the World War witnessed rapid developments in the field of trade unionism in India but it must be frankly admitted that organised association of the workers in the country is far below the stage of development which it has reached in Great Britain and in many of the other industrialised countries of the world. The reason for this can be put in a nutshell, lack of a will to organise as far as the workers are concerned and organised opposition to association by workmen from their employers. Such success as the movement has met with is due largely to a series of entirely fortuitous circumstances. The origin of the post-war movement is clearly traceable to the distant lag in wages behind prices and the consequential heavy fall in real wages. Large masses of ignorant and illiterate industrial

workers were compelled, through sheer inability to make ends meet to strike work. After they had struck work they were unable to formulate their demands and to offer organised resistance without outside assistance. Here is where the outsider who had no knowledge of industry got his chance to step into the movement and to become a labour leader. Some of these labour leaders were men who had the good and welfare of labour genuinely at heart. But many went into the movement merely for the opportunities which it would give them for coming into the limelight. Whereas the former went about affairs with a measure of considered moderation, the latter were mere tub thumpers who liked hearing their own voices and who strung together all kinds of impossible and preposterous demands in the hope that by doing so they would transport Indian industrial labour at once into an Arcadia. Both these types of leaders together with some of the more intelligent of the workers constituted themselves into strike committees. These committees when they were first formed secured a considerable measure of success in so far as concessions in wage rates were concerned, but, whereas many of these self appointed committees fell into a state of inanition on the conclusion of a dispute, a good few of them emboldened with the success they had met with, set themselves to the task of creating permanent associations or trade unions of the workers. These were the beginning of the trade union movement in India and within a period of five years (1919 to 1923) scores of unions were formed in all parts of the country. As there are no official records to show the names of and the memberships claimed by these earlier bodies nothing definite can be stated with regard either to their number or to their total membership, but it can be safely asserted that the movement had made a fair penetration on the railways, in postal and telegraph departments among seamen and in the textile industry in Ahmedabad City, and in some other centres. If an estimate may be attempted it would perhaps not be incorrect to say that at the beginning of the year 1924 there were about 150 unions in India with a total membership of about half a million workers.

The pressing need for a co-ordination of the activities of the individual unions was recognised at a very early stage of the movement and both central and provincial federations were formed. A central organisation at the apex was also necessary because only such a body could make recommendations with regard to the personnel of the labour representation on Indian delegations to the annual sessions of the International Labour Conference. Thus the All India Trade Union Congress was formed in 1920 on a national basis. The Central Labour Board, Bombay, and the Bengal Trades Union Federation were formed in 1922. The All India Railwaymen's Federation, co-ordinating all unions of railwaymen on an industrial basis, was formed in the same year and this was closely followed by the creation of both provincial and central federations of unions of postal and telegraph employees. These bodies received a

very generous measure of recognition both from the Railway Board and the Director General of Posts and Telegraphs in India. In the former case, half yearly conferences are held between the representatives of the Railway Board and the Railwaymen's Federation and at these conferences all the more important questions connected with railway establishments are discussed and as great a measure as possible of agreed solutions are arrived at.

Although there are a few unions of jute mills workers in Bengal and four or five unions of textile workers in Bombay City, the trade union movement has not made any appreciable progress in the two chief centres of these two important industries in India. The main reason for this is that the leaders at the head of these unions hold widely diverging views and cannot compose their differences sufficiently enough to enable them to meet on a common platform. Another important reason in the purely personal opinion of the compiler of this note, is the existence, in these industries, of the all powerful jobber whose interests in the labour which he brings to his mill would be severely undermined if the workers began to feel that they were independent of him in the matter of the removal and redress of their minor grievances. It is true that the Bombay Ginn Kamgar Union—a communist organisation formed at the commencement of the general strike of six months in the cotton mill industry in Bombay City in 1928—claimed a membership of over 50,000 at the end of that year, but this union lost its membership almost entirely after the disastrous general strike which it conducted in 1929. The latter strike killed the movement in the cotton mill industry in Bombay and although such of the existing unions as were left have been making frantic efforts to regain their hold on textile labour they have entirely failed to do so and the present unions are carrying on a purely nominal existence with very small figures of membership. A third reason is organised opposition to trade unionism by employers and the victimisation of workmen who take the lead in trade union activities.

In an earlier section it was stated that had employers in Indian industry had the sagacity and the foresight towards the end and immediately after the close of the Great War to have taken the trouble to adjust wage rates to the increases in the levels of prices and so to balance real wages, the history of industrial strife in India round about and during the third decade of the present century might have been entirely different. To a limited measure the history of the trade union movement in India too might have been somewhat different. Trade unionism was bound to come. The Treaty of Versailles in providing for the creation of an International Labour Organisation and the holding of periodical international conferences had laid down that the delegates representing labour from the States Members should be chosen by national labour organisations. Representatives of Indian labour had attended the earliest of these conferences and had had an opportunity of studying the growth and the powerful position of workmen's associations in the West, and on their return to India they had set themselves to the task of forming trade unions in the country.

This was an entirely new development in the eyes of the Indian employer. One powerful group of employers who had hitherto not organised set themselves to form an association whose primary object was to be to combat trade unionism. Every possible move to frustrate combination by their workmen was adopted and where departmental orders against taking interest in trade union activities were disobeyed, the workmen concerned were either dismissed or in cases where the larger organisations had other branches, were transferred to one or the other of such branches. Victimisation of the trade unionist, except in the city of Ahmedabad where a strong union had been formed in the spinning section of the cotton textile industry in that centre under the leadership of Mr. M. K. Gandhi whom the Ahmedabad millowners could not possibly displease on political grounds was rampant. The trade union movement, therefore, instead of getting its most important support from within the ranks of labour itself, was thrown by Indian employers into the willing hands of the outside agitator and, unfortunately for Indian trade unionism, no body of outsiders versed in proper trade union methods and principles was available. Such outsiders as could collect some of the hot heads among the workers in particular units or industries, formed unions in those units or industries, but again with the exception of Ahmedabad and also of certain sections of railways which were manned by a more intelligent and literate type of persons, these unions were hardly representative of the workmen in the organisations concerned owing to the smallness of their membership as compared with the total number of workers employed.

As far as recognition by the employers was concerned trade unions were faced with a three edged weapon. On one side workmen taking interest in trade union activities were victimised; on another, the majority of the employers refused to recognise unions whose executives were composed of outsiders; and on the third an amendment passed in the Indian Penal Code in 1913 for the purpose of dealing with criminal conspiracies was such as to make trade unions doing the only kind of work for which they are generally formed illegal bodies in the eyes of the law. We have already dealt with the first two of these three questions. As far as the third is concerned the matter was brought to a head by the historic Buckingham Mill case of 1920 in which the Madras High Court granted an interim injunction against the strike committee of the Madras Labour Union forbidding them to induce certain workers to break their contracts of employment by refusing to return to work. This was a bolt from the blue for the trade union movement in the country. Trade union leaders suddenly discovered that they were liable to prosecution and imprisonment for *bona fide* union activities and it was at once apparent that some legislation for the protection of trade unions was necessary. In March 1921 the Legislative Assembly of the Government of India, on the motion of Mr. N. M. Joshi, then General Secretary of the All India Trade Union Congress, passed a resolution recommending that Government should introduce legislation for the registration and protection of trade unions. Opposition to such a measure from

associations of employers was however so great that it was five years before the necessary legislation could be placed on the Statute Book. The Indian Trade Unions Act was passed in March 1926 and was brought into operation with effect from 1st June 1927.

THE INDIAN TRADE UNIONS ACT, 1926

Apart from the necessary provisions for administration and penalties, the Indian Trade Unions Act 1926 makes provision for three groups of matters: (1) conditions governing the registration of trade unions; (2) the obligations to which a trade union is subject after registration; and (3) the rights and privileges accorded to registered unions. Trade Union has been defined in such a way as to cover both combinations of workers and of employers but not of workers and employers, and persons under the age of 15 are debarred from membership of any registered union.

Registration—Any seven or more members of a union can apply for registration but no union can be registered unless (1) its rules provide for certain statutory matters which have been laid down in Section 6, and (2) its executive is constituted in accordance with the requirements of Section 22 which lays down that at least fifty per cent of the executive must consist of members actually engaged in the unit or group of units which the union proposes to cover. The registration of a union may be cancelled or withdrawn at any time by the Registrar on the application of the union itself or if the Registrar is satisfied that the certificate has been obtained by fraud or mistake or that the union has ceased to exist or has wilfully and after notice contravened any provision of the Act or if it has allowed any rule which is inconsistent with the Act to continue in force or has rescinded any rule which is required by the Act. Any union aggrieved by the refusal of a Registrar to register it or by the cancellation of its registration may prefer an appeal to a judge appointed by the local Government for the purpose and in the event of the dismissal of such an appeal the aggrieved party has the right of a further appeal to the High Court.

Obligations Imposed on Registered Trade Unions—The general funds of registered trade unions cannot be spent on objects other than those specified in Section 15 of the Act nor on political objects, but the Act makes provision for the creation of a separate political fund subscription to which may be collected from such members as voluntarily desire to contribute to it. All registered unions are required to submit annually to the Registrar duly audited statements of accounts in prescribed forms together with changes in officers and the executive and a copy of the rules corrected up to date. Notices of all changes in the rules or of the registered name or the registered address of the office of the union, of amalgamations with other unions or of dissolution must be submitted to the Registrar in prescribed forms within prescribed periods of their occurrence. Failure to carry out these obligations may result either in the cancellation of a union's registration or by the imposition of a fine. The further Act requires that the

rules of every registered union should make adequate provision for the inspection of books of accounts and lists of members by the officers and members of the union.

Rights and Privileges of Registered Trade Unions—The Act confers on registered unions the right to corporate existence and of perpetual succession with power to acquire and hold both movable and immovable property and to enter into contracts. A registered trade union is immune from prosecution for criminal conspiracy in respect of an agreement, unless it is one to commit an offence, made between its members for the furtherance of a trade dispute or for restraint of trade and from any legal difficulties arising therefrom. It also enjoys immunity from civil suits in certain cases. As this immunity is not enjoyed by unregistered trade unions Mr N. M. Joshi introduced a private Bill in the Legislative Assembly in 1927 to amend the Indian Penal Code with the object of protecting such unions from the law of criminal conspiracy. The Bill was circulated to the various Provincial Governments in India for opinion but was stoutly opposed, mainly on the ground that it would discourage registration. The Government of India concurred with this view and as a result of Government opposition to it the Bill was defeated on the 8th September 1928 on a motion for its reference to a Select Committee.

The administration of the Act is entirely on a provincial basis and each local Government is required to appoint a Registrar of Trade Unions. A union is to be registered in the province in which its head office is situated and if this is transferred to another province the registration has to be transferred to that province. All provincial Governments are empowered to make rules for the manner in which the annual audit of registered unions should be carried out for prescribing the forms and the manner in which unions may apply for registration and in which registered unions should forward the required notices, etc., to the Registrar, and for the fees payable for registration and inspection of the register and other documents pertaining to any registered union. Unlike the various other pieces of labour legislation in India which have been subjected to frequent revision there has been no amendment of the Indian Trade Unions Act except for a slight modification which was made in 1928 in Section 11 regarding appeals in order to clarify the provisions of that section and the present law on the subject continues to remain the same as it was when that Act was first passed in 1926.

EXTENT OF REGISTRATIONS UNDER THE ACT.

Trade unions were at first slow to seek registration under the Act. There had been no prosecutions under the 1913 amendment of the Indian Penal Code for criminal conspiracy in the case of strikes conducted by unions since the Buckingham Mill case of 1920 and with the enjoyment of this immunity in practice most of the existing unions thought that registration involved obligations *re* maintenance of proper books and accounts audit and the submission of notices and statements of annual accounts and restrictions *re* the framing of rules in accordance

with the requirements of the Act and on expenditure which could be incurred which were too disproportionate in comparison with the rights and privileges which registration conferred. The impetus to registration however came from the employers who in many cases insisted on registration prior to recognition—in many cases even registration did not secure recognition—and the first organised move in this direction came from the railways and the Bombay Millowners Association who, on the breaking out of the general strike in the Bombay cotton mills in April 1928 refused to enter into any negotiations (except with the representatives of registered unions). The Bombay Textile Labour Union which had been formed in 1926 by Messrs N. M. Joshi and R. R. Likhale was among the first to seek registration under the new Act, but three other unions of cotton mill workers in Bombay City had not registered and these at once applied for registration as soon as the Bombay Millowners made registration a condition of recognition. After this, several unions

all over India sought registration under the Act but in many cases registrations were short lived because they had to be cancelled owing to failure to submit annual returns or for non compliance with the other requirements of the Act. It is of interest to observe that the Ahmedabad Textile Labour Union which is the biggest and best organised trade union in India refrained on purely political grounds, from registering until the end of 1935 and it only did so then on account of the probable decision of the Delimitation Committee to make registered textile unions in Ahmedabad a basic constituency for the return from that centre of labour representatives to the Bombay Legislative Assembly which would come into being as the result of the new Government of India Act of 1935. The following table shows the numbers of registered unions on all the provincial registers in British India at the end of each financial year together with the membership and income of those which furnished returns. The figures exclude cancellations of registration.

Registered Trade Unions in British India

Year	Number of registered trade unions	Unions furnishing returns		
		Number	Membership	Income Rs (In lakhs)
1927-28	29	28	100,619	1.64
1928-29	75	65	181,077	3.17
1929-30	104	90	242,355	4.33
1930-31	119	106	219,115	4.07
1931-32	131	121	235,693	4.78
1932-33	170	147	237,369	5.57
1933-34	191	160	208,071	5.03
1934-35	213	183	284,918	5.29

The percentage of female membership in the above figures is very small indeed. In 1927-28 it was 1,166; in 1932-33 it was 5,090 and in 1934-35 only 4,837 or less than 1.69 per cent of the total membership in that year. Out of the 213 registered unions on the 31st March 1935, 56 unions were in Bengal, 49 in the Bombay Presidency, 32 in the Madras Presidency and 30 in the Punjab. No other province had more than fifteen. Ajmer Merwara had only one with a membership of 193. The figures given in the above table for membership and income are theoretical because they include persons who have not paid their subscriptions and income which has not been recovered. If the membership of 284,918 in the 183 unions which furnished returns for the year ending 31st March 1935 is analysed it is found that 156,103 were employed on railways and that 55,414 were seamen. The membership in 25 registered unions of textile workers was only 23,721. The Bombay Presi-

dency is the only province in India which regularly collects information and statistics in connection with all trade unions. The following table shows the growth of the trade union movement in that province—

Growth of Trade Unions in the Bombay Presidency (excluding Sind)

Year	Number of unions	Membership
1923	17	38,963
1926	54	69,514
1929	92	1,93,733
1930	86	1,25,313
1932	89	1,07,189
1935	108	1,06,201
1936	99	88,191

If the figures contained in the above table for the year 1936 (1st December) are analysed by industries, the results are as set out below —

Distribution of Membership of Bombay Unions

Class of industry	Number of unions	Membership	Percentage to total membership
Textile	16	35,253	39.97
Seamen	8	19,565	22.18
Railways	37	13,488	15.30
Posts and Telegraphs	2	11,393	12.92
Municipal	32	7,064	8.01
Miscellaneous	4	1,428	1.62
Total	99	88,191	100.00

Of the 16 unions of textile workers with a membership of 36,411, six vertical unions of cotton mill workers in Ahmedabad which are under the control of the Ahmedabad Textile Labour Union claim a membership of 25,164. Of the remaining unions, five with a total membership of only 9,575 are in Bombay City.

RECOMMENDATIONS OF THE ROYAL COMMISSION

The recommendations made by the Royal Commission on Indian Labour in connection with the existing law relating to trade unions were as follows —

(1) The Act should be re-examined in not more than three years time and all limitations imposed on the activities of registered unions and their officers and members should be re-considered so as to ensure that the conditions attached to registration are not such as to prevent any well conducted and *bona fide* union from applying for registration.

(2) All unions should be able to secure free of charge the conduct of their audit by officials of Government.

(3) Section 22 of the Act should be so amended as to provide that ordinarily not less than two thirds of the officers of a registered trade union shall be actually engaged or employed in an industry with which the union is concerned and

(4) A registered trade union should not be precluded from initiating and conducting co-operative credit or supply societies.

(5) Government should take the lead, in the case of their industrial employees, in making recognition of unions easy and in encouraging them to secure registration.

The Government of India have not accepted the fourth recommendation and have deferred action on the first and the third. The second recommendation re free official audit has been given effect to in some provinces but not in others. The last recommendation has been implemented and revised rules on the subject have been issued.

THE PROGRESS OF THE TRADE UNION MOVEMENT IN INDIA

In the absence of any reliable statistics and information on the growth and activities of trade unions in India outside the Bombay Presidency, it has not been possible to deal with the development of the movement from an all India point of view. The Labour Office of the Government of Bombay has collected full information re all trade unions in the Bombay Presidency once in every three months since the middle of 1922 and this information has been incorporated in Quarterly Reviews in the *Labour Gazette* published monthly by that office, but similar information is not available for the other provinces in India. Every province however compiles in annual administration report on the working of the Indian Trade Unions Act, 1926, and the Government of India publishes a general report based on the information contained in the provincial reports. These reports are unfortunately confined only to questions in connection with the administration of the Act—numbers of registrations and cancellations of registration membership of registered unions and consolidated statements of their accounts—and they contain little if any information about the activities of the unions themselves.

We have so far dealt with the development of the trade union movement in India until the coming into operation of the Trade Unions Act. Up to date statistics based on such figures as are available have also been given. We shall now proceed to conclude this review with a rapid survey of the main events in the movement since 1927. The height of the movement was reached in 1928-29 when communists sat on the top of the world of Indian labour. Communist leaders had captured almost every important union in India except the textile union in Ahmedabad and they had succeeded in securing a membership of over 50,000 textile workers in Bombay City for their Bombay Girni Kamgar Union. The membership figures of the various other unions which they controlled also showed remarkable increases. Their main object in getting into the trade union movement, however, was to use it as a tool for the

furtherance of their revolutionary principles and doctrines for the overthrow of the existing Government and the uprooting of capitalism. The success which they had met with as the result of the general cotton textile strike of 1928 in Bombay was, as subsequent events have proved, purely adventitious. The doctrines they had preached to the masses during that and the oil-strike of the winter of that year were responsible for rioting in Bombay City on a scale previously unknown. Thirty-one of the ring leaders of the movement were arrested early in 1929 on charges of organised conspiracy and were taken to Meerut for trial. This has been dealt with in an earlier section. Such of the communists as remained unarrested engineered the general cotton textile strike in Bombay of the year 1929. This lasted for more than three months and was called off only after the publication of the report of a Court of Enquiry appointed by Government and which allocated the whole of the blame for this unwarranted strike to the Bombay Girm Kamgar Union. The publication of this report and the effects of the 1929 strike dealt a blow to the trade union movement from which it has not yet recovered. The workers were left thoroughly disillusioned and they lost all faith in the *bona fides* even of genuine trade unionism.

The communists not content with the mischief they had wrought in the ranks of individual trade unions made a successful attempt in 1929 either to capture or to break the All India Trade Union Congress. They affiliated the Bombay Girm Kamgar Union with a membership of 54,000 and the G I P Railway Workers Union with a membership of 41,000 to that body during the year and with the assistance of the voting strength which these two unions together with some of their other unions gave them they captured both the Congress and its Executive Committee at the tenth session of the Congress which was held in Nagpur in that year. Resolutions were adopted favouring the affiliation of the Congress to international communist organisations and for the boycott of the Royal Commission on Indian Labour, the International Labour Conference and the Round Table Conferences on Indian Reforms. Moderate trade unionists under the leadership of Mr. N. M. Joshi thereupon seceded from the Congress and formed a new organisation called the Indian Trades Union Federation.

At the eleventh session of the All India Trade Union Congress held at Calcutta in July 1931 a further split occurred in its ranks and the extreme left wing under the leadership of Messrs S. V. Deshpande and B. T. Randive broke away to form the All India Red Trade Union Congress. By this time, however, trade unionism in India was at a thoroughly low ebb and none of the three national organisations could by any manner of means make a claim to speak on behalf of Indian labour, but, as the Congress had already decided to boycott the International Labour Conference, the Government of India accepted the Indian Trades Union Federation as the body competent to recommend delegates for the International Labour Conference.

With a view to bring about unity in the ranks of Indian labour, a committee called the Trade Union Unity Committee was appointed at a

representative conference held in Bombay on the 10th May 1931 under the auspices of the All India Railwaymen's Federation. This Committee found that three different and distinct sections of labour were in existence in India—(1) the communist group, (2) the liberal group and (3) the rest—and that the gulf which divided the communists from the other sections was not bridgeable. The Committee, therefore, recommended a platform of unity for the remaining sections of labour in India. It was proposed to organise and unite all unions which accepted this platform of unity under a new federation to be called the National Federation of Labour. At a joint meeting between the General Council of the Indian Trades Union Federation and the Provisional Committee of the National Federation of Labour held at Calcutta in April 1933 the two federations were amalgamated on the basis of the platform of unity as finally evolved by the Trade Union Unity Conference but subject to certain modifications and the new organisation was named the National Trades Union Federation. In 1933, the two sections of the All India Trade Union Congress composed their differences and it was agreed that the parent body should be recognised as the central organisation of the working classes in India. In the month of February of the same year an agreement was reached between the representatives of the All India Trade Union Congress and the National Trades Union Federation by virtue of which a Joint Committee of the two organisations was to be formed with a view to exploring the possibilities of common action with the assistance of the affiliated unions of both. Another direction in which an effort towards common action on agreed matters was made was the agreement entered into between the National Federation of Labour and the All India Congress Socialist Party for joint action on specific political and economic issues.

Up to the moment of writing the Joint Committee of the All India Trade Union Congress and the National Trades Union Federation have not been able to achieve much in the direction of unity. The troubles in the fundamental doctrines to which each of these two bodies adheres. Whilst the Federation believes in the economic advancement of the masses through their Liberal spokesmen in the Legislatures, the Congress is of opinion that the welfare of the working classes in India can only be attained through complete political emancipation.

ENFRANCHISEMENT OF LABOUR UNDER THE NEW CONSTITUTION

The question of representation of labour in the central and provincial legislatures has in recent years assumed considerable importance owing to the growing interest taken by the general public in labour matters. Under the constitution established by the Government of India Act 1919 both the Governor General and the Provincial Governors had powers to make a certain number of nominations to the Central Legislative Assembly and to the Provincial Legislative Councils. The majority of such nominations were to be from the ranks of Government officials but both the Governor General and the Provincial Governors were permitted to exercise their option in nominating persons from

other outside interests in order to remedy inequalities of representation. In pursuance of this power one nominated seat in the Legislative Assembly and one nominated seat in the Legislative Councils of Bengal and Bombay were reserved for representatives of labour. The Governors of Punjab, the Central Provinces, Bihar and Orissa and Assam followed suit and nominated one member each for labour interests in their respective Councils. A little later, the labour representation in Bengal was increased to two and in Bombay to three seats.

The question of the enfranchisement of labour under the new constitution received considerable attention from every Commission and Committee appointed in connection with the reforms—(1) the Provincial Franchise Committees set up by the various Provincial Governments in India in 1914, (2) the Franchise Sub-Committee of the Indian Round Table Conference, (3) the Indian Franchise Committee, (4) the Provincial Delimitation Committees set up by local Governments in India, and (5) the Indian Delimitation Committee set up in 1935 under the chairmanship of Sir Lawrence Hammonds. Several alternative schemes of representation were considered. The Royal Commission on Indian Labour were of opinion that the method which was likely to be most effective in securing the best representation of labour was that of election by registered trade unions. The Indian Franchise Committee were, however, unable to accept trade unions as the sole basis of representation and they recommended representation through constituencies composed of registered trade unions and also through special labour constituencies composed of workers in factories employing a minimum of ten persons in selected areas and centres. On the basis of a combination of these two methods the Committee recommended 38 seats for labour in the Provincial Legislatures—eight each for Bombay and Bengal, six for Madras, four each for Bihar and Orissa and Assam, three each for the United Provinces and the Punjab and two for the Central Provinces. With regard to the representation of labour in the Federal Assembly, the Indian Franchise Committee recommended that labour should get the same extent of representation as commerce, viz. eight seats. Election should as far as possible be through registered trade unions except in the case of provinces such as Bengal and Assam where trade unions in the two chief industries of jute and tea are either too weak or non-existent. In such cases the method of representation should be considered at the time of the delimitation of constituencies. These various proposals were accepted by the Third Round Table Conference and by the Joint Select Committee of Parliament on Indian Constitutional Reforms with the exception of a slight reshuffling of seats consequent on the decision for the separation of Sind and Orissa. These two new provinces were to get one seat each at the expense of Bombay and Bihar and Orissa and the number of seats in the Federal Assembly was increased from eight to ten of which one was to be a non-provincial seat and the remaining nine to be distributed among the provinces Bombay and Bengal getting two each and one seat each going to Madras, Bihar, the United Provinces, the Central Provinces and Assam.

The Indian Delimitation Committee, whose report was published in February 1936, laid down the following requirements which a trade union should fulfil before it can be included in the electorate—

(1) It should have been in existence for two years and have been registered for one year before the date fixed for the preparation of the electoral roll.

(2) Its membership should not have fallen below 250 during the year preceding the preparation of the electoral roll.

(3) It must have complied with any rules made under the Indian Trade Unions Act for the inspection of books by the Registrar and for professional audit, and

(4) Its fulfilment of the preceding conditions should have been attested by a tribunal to be appointed by the Governor.

The Committee further recommended that the Indian Trade Unions Act should be so amended as to invest local Governments with the power of inspecting the registers of registered trade unions and to make Government or professional audit of their accounts compulsory. As regards the qualifications of an elector in a labour constituency, the Committee recommended that (1) he must have attained the age of 21 years, (2) he has had a place of residence in the province for six months immediately preceding a date to be fixed by the local Government, (3) in the case of a trade union constituency, he belongs to a registered trade union included in the constituency and has paid up his subscription for the twelve months preceding the date of the preparation of the electoral roll, (4) in the case of a special labour constituency he has been in continuous employment in a factory or a mine for a period of not less than 180 days in the year preceding the date of preparation of the electoral roll, and (5) he is not employed in a clerical, supervisory, recruiting or administrative capacity. The qualifications laid down by the Committee for a candidate are that he should have attained the age of 25 years, satisfied the conditions laid down in the Fifth Schedule to the Government of India Act and that he should be an elector either in the constituency for which he stands or in any other labour constituency in the province concerned. As far as the method of election is concerned, the Indian Franchise Committee were of opinion that where a trade union constituency is confined to a single area voting might be direct but where it covers two or more different centres election should be through an electoral college composed of delegates elected in each union in the proportion of one for each group of 100 workers. The Indian Delimitation Committee were, however, strongly in favour of direct election, whether in trade union or in special labour constituencies, unless there were quite decisive practical difficulties in the way but they favoured the principle of electoral colleges in the case of certain unions of railway workers.

As far as the actual constituencies for the Provincial Legislative Assemblies are concerned the Indian Delimitation Committee recommended that out of the eight seats given to labour in Bengal, two seats should be with trade union

constituencies for registered unions of railway and water transport workers and six for special labour constituencies as follows. Registered factories in Calcutta and suburbs, Howrah Barrackpore and Hooghly (one seat each) one seat for coal mines in the Assol sub division of the Burdwan District and one seat for tea garden labour in the Jalpaiguri and the Darjeeling Districts. In the Bombay Presidency Ahmedabad textile unions and railway unions in Bombay get two seats each, the Bombay textile unions and unions of seamen and dock workers get one seat each and textile labour in Sholapur City gets one seat on the basis of a special labour constituency. Of the six seats in Madras all railway unions in the presidency and unions of textile workers in the Madras District get one seat each and the four remaining seats are divided between special labour constituencies of (1) textile workers in Coimbatore and Malabar (2) Madras City dock and factory labour (excluding railways and textiles), (3) Vizagapatnam dock and factory labour, and (4) West Godavari Kistna and Guntur factory labour. In the United Provinces all registered trade unions get one seat and the two remaining seats are allocated to industrial factory labour in Cawnpore and

industrial labour in Lucknow Agra, Aligarh and Allahabad. In the Punjab, the North Western Railway Union gets one seat and the two remaining seats have been allocated to industrial labour in special labour constituencies composed of certain districts of East and North Punjab. In Bihar registered mining unions in Dhanbad are allotted one seat and three go to special labour constituencies for (1) Jamshedpur factory labour, (2) Monghyr and Jamilpur factory labour, and (3) Hazaribagh mining labour. In the Central Provinces, trade unions in Nagpur City get one seat and the remaining seat goes to a special labour constituency of industrial labour employed in certain areas in the rest of the provinces. The one seat in Orissa will be for a special constituency for the whole province and the allocation of the four seats in Assam will vary at successive elections between tea gardens in different districts. As far as representation in the Federal Assembly is concerned, the proposals vary between the allocation of the two seats for the Bombay Presidency between all registered unions in Bombay and Ahmedabad, to the Governor of the Province acting at his own discretion at each successive election in Assam.

In the following table we reproduce the names of the various persons elected to the different Provincial Legislative Assemblies in India from different Labour Constituencies—

MADRAS LEGISLATIVE ASSEMBLY

Mr C. Krishnamurthi Ayl
Mr C. Cheluvathi Chetti Garu
Mr N. G. Rameswami Naidu Ayl
Mr P. R. K. Saama Ayl

Mr Subbaito Kirumakaram Garu
Mr V. V. Narasimham Garu

Railway Trade Unions
Textile Trade Unions
Textile Workers
Madras City Dock and Factory Labour (excluding Textile and Railway Labour)
Vizagapatnam cum East Godavari Dock and Factory Labour
West Godavari cum Kistna cum Guntur Factory Labour

BOMBAY LEGISLATIVE ASSEMBLY

Mr D. K. Jagtap
Mr Gubayrilid Nandu
Mr K. K. Desai
Mr Timmadis M. Mehta
Mr S. H. Jhabyala
Mr A. H. Mirza
Mr R. A. Khedgikar

Bombay City and Suburban Textile Unions
Ahmedabad Textile Unions (Two Seats)
Ditto
Railway Unions (Two seats)
Ditto
Trade Unions of Seamen and Dock Workers
Sholapur City Textile Labour

BENGAL LEGISLATIVE ASSEMBLY

Mr J. N. Gupta
Mr Aftab Ali
Mr Suresh Chandra Banerjee
Mr Niharindra Dutt Mazumdar
Mr Sibnath Banerjee
Mr M. A. Zaman
Mr B. Mukerjee
Mr Litta Sirdar

Railway Trade Unions
Water Transport Trade Unions
Calcutta and Suburbs (Registered Factories)
Barrackpore (Registered Factories)
Howrah (Registered Factories)
Hooghly cum Scramore (Registered Factories)
Collieries (Coal Mines)
Bengal Dovers (Western) Darjeeling Sadar,
Bengal Dovers (Eastern) and Kurseong

UNITED PROVINCES LEGISLATIVE ASSEMBLY

Mr Raja Ram Shastri	Trade Union Constituency
Mr Suraj Prasad Awasthi	Cawnpore Industrial Factory Labour
Mr B K Mukerjee	Industrial Factory Labour in Lucknow, Agra, Allahabad and Aligarh

PUNJAB LEGISLATIVE ASSEMBLY

Mr Lalji Sita Ram Mehra	Trade Unions
Mr Dewan Chaman Lal	East Punjab
Mr Ahmad Baksh	North Punjab

BIHAR LEGISLATIVE ASSEMBLY

Nil	Mining Trade Unions
Mr Babu Natha Ram	Jamshedpur Factory Labour
Nil	Monghyt cum Jamalpur Factory Labour
Mr Babu Khetra Nath Sen Gupta	Hazratnagar Mining Labour

C P AND BERAR LEGISLATIVE ASSEMBLY

Mr G S Page	Trade Union Labour
Mr V R Kilappa	Factory Labour

ASSAM LEGISLATIVE ASSEMBLY

Mr Bideshy Pan Tanti	Doom Dooma, Dinsukia and Didingarh
Mr Phulrab Chandra Das	Jorhat Nazira and East Golighat
Mr Babu Binode Kumar J Sarwan	Thakurbati Biswanath and Puncir
Mr Babu Purni Sarai Piridi Ahli	Sikhar Srimangal and Longu Valley

ORISSA LEGISLATIVE ASSEMBLY

Mr Babu Pyari Sankara Roy	Orissa Labour Constituency
---------------------------	----------------------------

THE FUTURE OF TRADE UNIONISM IN INDIA.

The proposals of the Indian Delimitation Committee with regard to the formation of certain constituencies for the return of representatives of labour to the Federal Assembly and to the Provincial Legislative Assemblies on the basis of registered trade unions are bound to have some effect both on the formation of new unions and of the registration of such of those as have not yet registered under the Indian Trade Unions Act. It is also probable that registered unions will make better endeavours than they have hitherto done in maintaining proper books of accounts and registers of members in view of their compulsory examination by officials of Government for the purposes of preparing electoral rolls. At the same time however, the imposition of these further restrictions on the conduct of the affairs of registered trade unions might very well tend to dissuade several interested outsiders from continuing at the helm of affairs of their respective unions, and it is quite possible that in the absence of such leadership many unions will tend to disintegrate and disappear. As far as the workmen in Indian industries are concerned, trade unionism has not

taken on anywhere near to the extent which it has with workmen in the West. And, as has already been stated above, the will to organise is unfortunately lacking. Things might have been different had the labour franchise been limited entirely to registered trade unions but in most provinces outside the Bombay Presidency the majority of the constituencies are special labour constituencies with which trade unions are in no way concerned. It is also very doubtful whether an Indian industrial worker will part with a monthly quota of his already meagre income for union subscriptions merely for the right of a vote. The experience of the last fifteen years shows that most of the unions which became defunct went to the wall owing mainly to the fact that their officials were not able to collect the necessary subscriptions from the members for the reason that the Indian workman will not part with money for a purely problematic advantage. He wants a return for his outlay in the form of an increase in his wages and if he does not get this within a reasonable period he pays no union subscriptions. The Ahmedabad Textile Labour Union is, happily, in a somewhat different position because in addition to its having an excellent conciliation and arbitration machinery for the redress of minor grievances and the discussion of major

issues it provides a host of welfare schemes in the form of hospitals and dispensaries, education and facilities for recreation, co operative stores and cheap grain shops, etc., and its members get more than value for their money. In addition, the union is under the control of extremely disinterested, able and zealous officials who have made the union their life work. The office of the union with its hundred or more clerks is a beehive of industry.

Unfortunately for the trade union movement in India, there are few if any unions which are run on the model of the Ahmedabad Textile Labour Union. The vast majority of those which have been kept alive through the zeal of interested outsiders are hollow structures with no funds and bolstered figures of membership—

bolstered in order to convince the employers concerned re their *bona fides* for recognition. No trade union movement can stand on foundations such as these. It is possible, however, that with the spread of education and literacy, Indian industries will attract a more educated type of workman who will be able to persuade his fellows of the advantages of organised combination and that a healthier movement built on more solid foundations will take the place of the hollow structure which exists to day. Whilst there are no indications for optimism there is, at the same time, no cause for pessimism in the matter but the hopes of all persons interested in the welfare of the labour movement in India are as far as trade unionism is concerned, in the laps of the gods.

INDUSTRIAL DISPUTES AND TRADE DISPUTES LEGISLATION.

In the first part of this note on Labour in India in which we have given a complete survey of the growth of the labour problem in this country from its first beginnings in the seventies of the last century up to the present day we have dealt at some length with all the more important industrial disputes, and we have also given the findings and the recommendations of the various committees and departmental enquiries instituted in connection with them. We have also given statistics of industrial disputes in India during certain periods of intense industrial strife and we have traced the growth of conciliation and arbitration machinery culminating in the passing, by the Government of Bombay of the Bombay Trade Disputes Conciliation Act of 1934. In view of this there is very little left to be said in this particular section and our remarks will therefore be confined to a brief description of the Indian Trade Disputes Act 1929 and to the all India statistics of industrial disputes during the last fifteen years.

THE TRADE DISPUTES ACT, 1929

With the exception of sections 1 and 2 which deal with short title, extent, duration etc and interpretations, and section 19 which deals with rule making powers, the main body of the Trade Disputes Act, 1929 falls into three parts. The first provides for the appointment of Courts of Enquiry and Boards of Conciliation (sections 3 to 14), the second contains special provisions with regard to strikes in public utility services (section 15) and the third deals with illegal strikes and lockouts (sections 16 to 18). The first part of the Act relating to the establishment of tribunals for the investigation and settlement of trade disputes was based generally on the British Industrial Courts Act of 1919 and its detailed provisions were adopted for the most part from clauses in that Act. The main difference is that whereas the British Act sets up a standing and permanent Industrial Court, the Conciliation Boards which the Indian Act makes provision for are intended to be appointed *ad hoc* like the Courts of Enquiry, in order to deal with particular disputes.

The Governor General in Council, in the case of railways or concerns under the control of the Government of India and the local Government in the case of all other concerns or groups of concerns, have power to refer any matters appearing to be connected with or relevant to any trade dispute which exists or is apprehended between an employer and his workmen to a Court of Enquiry for report or to refer the whole dispute to a Board of Conciliation for promoting a settlement thereof. Where no reference is made by either party or where a reference is made to Government by only one party, the appointment or otherwise of a Court or a Board is entirely at the discretion of Government but where both the parties to a dispute apply either conjointly or separately for the reference of the dispute to a Court or a Board it is obligatory on Government to proceed to appoint a Court or a Board, as the case may be provided that Government are satisfied that the persons applying represent the majority of each party. The objects of Courts of Enquiry which may be composed of an independent chairman and other independent persons or only one independent person would be to investigate and report on such questions connected with the dispute as might be referred to them. The settlement of the dispute would depend on the force of public opinion on the Court's findings. The objects of Boards of Conciliation which may consist of one independent person or one independent chairman and two or four other members comprised of equal numbers of persons representing the interests of both the parties to a dispute and to be nominated by the parties concerned would be to secure a settlement of the dispute. Provisions are contained in the Act to enable both Courts and Boards to enforce the attendance of witnesses and the production of documents. Neither party is under any obligation to accept the findings of a Court or the advice of a Board but in practice both parties would be expected to do so.

The second part of the Act which covers public utility services makes it a penal offence for persons employed in such services to go on strike without giving fourteen days' notice in

writing to the employer of their intention to do so. Penalties are also provided for persons abetting such an offence. This provision is based on the principle that persons whose work is vital to the welfare of the community generally should not be entitled to enter into a strike before sufficient time has been given to examine the merits of their grievances and to explore the possibilities of arriving at a settlement. Provisions of a somewhat similar type are also to be found in the Indian Post Offices Act and in a number of Municipal Acts in India, and the principle is one which has been widely accepted in other countries. Among public utility services have been included railways postal, telegraph or telephone services, undertakings supplying light or water to the public, and any system of public conservancy or sanitation.

(Clauses 16 to 18 of the Act relating to illegal strikes and lockouts closely follow the provisions of sections 1, 2 and 7 of the British Trade Disputes and Trade Unions Act, 1927, but the provisions are only applicable in the case of those strikes and lockouts which satisfy both of two conditions. In the first place, the strike or lockout must have objects other than the mere furtherance of a trade dispute within the industry to which the strikers or employers belong, and, in the second place, the strike or lockout must be designed or calculated to inflict severe, general and prolonged hardship upon the community and thereby to compel Government to take or abstain from taking any particular line of action. Persons furthering illegal strikes or lockouts are liable to punishment while those refusing to take part in them are protected from trade union disabilities to which they might otherwise be subjected.

The life of the original Act was limited to five years but as a result of the recommendation made by the Royal Commission on Indian Labour in the matter an amending Act was passed in 1934 placing it permanently on the Statute Book. During the period of nearly eight years for which the Act has been in operation, it has only been made use of on four occasions—once by the Government of Bombay when they appointed a Court of Enquiry in the year 1929 to enquire into the general strike in cotton mills in Bombay City in that year, twice by the Government of India who appointed a Board of Conciliation in 1930 in connection with a dispute in the Bombay, Broda and Central India Railway which arose over the question of the transfer of a number of workmen from the railway's workshops in Bombay to the new workshops which they were starting in Dohad, and another Court of Enquiry in 1931 to enquire into and report on the grievances of the large numbers of workers who were retrenched on all Indian railways during that year and once by the Government of Burma. The Government of India are considering a further amendment of the Act in connection with the Royal Commission's recommendations for the appointment of conciliation officers. With regard to action by provincial Governments, the Commission recommended that every local Government should have an officer or officers whose duty it would be to undertake the work of conciliation and to bring the parties privately to agreement. The Commissioner of Labour in Madras the Director of Industries in the Punjab

the Director of Statistics and Labour Commissioner in Burma and Deputy Commissioners and the Director of Industries in the Central Provinces have already been entrusted with powers as conciliation officers. As has already been stated at the beginning of this section, events leading up to the passing of the Bombay Trade Disputes Conciliation Act in 1934 and the appointment of the Commissioner of Labour in the Bombay Presidency as the ex officio Chief Conciliator have already been dealt with in the general survey. The scope of that Act has also been surveyed and statistics as to its working up to 31st March 1937 have been given. Reference has also been made elsewhere to the excellent private conciliation and arbitration machinery which exists in the textile industry in Ahmedabad for the examination and settlement of all industrial disputes. It will be seen, therefore, that as in almost all the advanced industrial countries of the world, conciliation in India too has come to be regarded as a matter of first rate importance in the settlement of industrial disputes.

STATISTICS OF INDUSTRIAL DISPUTES

Statistics of industrial disputes in India have only been collected since 1921. The following table sets out the number of disputes in each year since 1921, the number of persons affected by these disputes and the total time lost in man days.

Industrial Disputes in India, 1921-35

Year	Number of disputes	Number of workpeople involved	Number of working days lost
1921	396	600,351	6,984,426
1922	278	435,434	3,972,727
1923	213	301,041	5,051,704
1924	133	312,462	8,730,918
1925	151	270,423	12,578,129
1926	128	186,811	1,097,473
1927	129	131,655	2,019,970
1928	203	306,851	31,647,404
1929	141	532,016	12,165,691
1930	118	196,301	2,261,731
1931	166	203,008	2,408,123
1932	118	128,099	1,922,437
1933	146	164,938	2,168,961
1934	159	220,808	4,775,550
1935	145	114,217	973,473

THE INTERNATIONAL LABOUR CONFERENCE.

Reference has already been made in the preliminary sections of this note to the creation, by the Treaty of Versailles, of an International Labour Organisation and to the work of the International Labour Conference. Since the holding of the first session of the Conference in Washington in 1919, twenty-one further sessions have been held till the end of the year 1936 and a total of fifty-eight Conventions have been adopted. We give below, in serial order, the year and the place at which each of the twenty-two sessions of the Conference were held, the composition of the delegation from India, and the titles of the different Conventions which were adopted at each session. In the notes on the composition of the delegation Government Delegates are represented by the capital letter G, Employers Delegates by the letter F, and Workers Delegates by the letter W. The names of the technical advisers to the Government, Employers and Workers Delegates have been omitted in all cases. Symbols (full meanings and explanations of which are given at the end of this section) are placed beside the titles of the Conventions with regard to which action has already been taken by the Government of India. In all cases where no symbols appear alongside the titles, no action has been taken.

1st Session (Washington, 1919). Indian Delegation—Government—Sir Atul Chatterjee and Sir Louis Kershaw, Employers—Sir Alexander Murray, Workers—Mr N M Joshi.

Conventions

- 1 Hours of Work (Industry)—(AB)
- 2 Unemployment—(AC)
- 3 Childbirth
- 4 Night Work (Women)—(AB)
- 5 Minimum Age (Industry)—(D)
- 6 Night Work (Young Persons)—(AB)
- White Phosphorus—(D)

2nd Session (Geneva, 1920). G—Sir Louis Kershaw and Capt D F Vines, F—Sir Thomas Delgate—Mr A M Mazarello.

Conventions

- 7 Minimum Age (Sea)—(B)
- 8 Unemployment Indemnity (Shipworkers)—(B)
- 9 Placing of Seamen

3rd Session (Geneva, 1921). G—Sir Atul Chatterjee and Mr I N Gupta, F—Sir Nowroji Saklatvala, W—Mr N M Joshi, Secretary—Mr A G Clow.

Conventions

- 10 Minimum Age (Agriculture)
- 11 Right of Association (Agriculture)—(AC)
- 12 Workmen's Compensation (Agriculture)
- 13 White Lead (Painting)
- 14 Weekly Rest (Industry)—(AB)
- 15 Minimum Age (Trimmers and Stokers)—(AB)

16 Medical Examination of Young Persons (Sea)—(AB)

4th Session (Geneva, 1922). G—Sir Bhupendra Basu and Sir Louis Kershaw, F—Sir Alfred Pickford, W—Mr N M Joshi, Secretary—Mr C H Silver.

5th Session (Geneva, 1923). G—Sir Dadibhai M Dabland and Sir Louis Kershaw, F—Sir Joseph Kay, W—Mr K C Roy Chowdhury.

6th Session (Geneva, 1924). G—Sir Atul Chatterjee and Sir Louis Kershaw, F—Sir Alexander Murray, W—Mr Joseph Baptista.

7th Session (Geneva, 1925). G—Sir Atul Chatterjee and Sir Louis Kershaw, F—Sir Thomas Smith, W—Mr N M Joshi, Secretary—Mr R N Gilchrist.

Conventions

- 17 Workmen's Compensation (Accidents)
- 18 Workmen's Compensation (Occupational Disease)—(AC)
- 19 Equality of Treatment (Accident Compensation)—(AB)
- 20 Night Work (Bakeries)

8th Session (Geneva, 1926). G—Sir Atul Chatterjee and Sir Louis Kershaw, F—Sir Arthur Froom, W—Mr Lajpat Rai, Secretary—Mr R N Gilchrist.

Conventions

- 21 Inspection of Emigrants—(AC)
- 22 Sickmen's Articles of Agreement—(AB)
- 23 Repatriation of Seamen

Conventions

- 10th Session (Geneva, 1927). G—Sir Atul Chatterjee, Sir Louis Kershaw and Dr R P Paranjpe (Substitute), F—Mr G D Bull, W—Mr V V Giri, Secretary—Mr S Lal.

Conventions

- 24 Sickness Insurance (Industry, etc)
- 25 Sickness Insurance (Agriculture)
- 11th Session (Geneva, 1928). G—Sir Atul Chatterjee and Dr R P Paranjpe and Mr J C Walton (Substitute), F—Mr Narottam Morjee, W—Mr Diwan Chaman Lal, Secretary—Dr R C Rawlley.

Conventions

- 26 Minimum Wage Fixing Machinery
- 12th Session (Geneva, 1929). G—Sir Atul Chatterjee and Dr R P Paranjpe and Mr A G Clow (Substitute), F—Mr Kasturba Lal Dhillon, W—Mr N M Joshi, Secretary—Mr A Dhillon.

Conventions

- 27 Marking of Weight (Packages Transported by Vessels)—(AB)
- 28 Protection against Accidents (Dockers)

13th Session (Geneva 1930) G—Sir Atul Chatterjee and Sir Geoffrey Corbett and Mr C W A Turner (Substitute) E—Mr Jidunath Roy W—Mr M Daud, Secretary—Mr C W A Turner

14th Session (Geneva 1930) G—Sir Atul Chatterjee and Dr J P Pannipie and Mr A Liff (Substitute), I—Mr A T Ojha W—Mr S C Joshi Secretary—Mr G Graham Dixon

Conventions

29 Forced Labour

30 Hours of Work (Commerce and Offices)

15th Session (Geneva 1931) G—Sir Atul Chatterjee and Mr A G Clow I—Mr Walchand Hirchandani, W—Mr R J Bakhshi, Secretary—Mr N A Mehrbin

Conventions

L = Legislation in progress or in preparation

GOVERNMENT ADMINISTRATION OF LABOUR QUESTIONS

The central co-ordinating authority in India for questions connected with labour in most industries is the Department of Industries and Labour of the Government of India with a member of the Viceroy's Executive Council holding the portfolio. Questions connected with the labour employed in docks and the mercantile marine are dealt with by the Department of Commerce. All railway workshops and running sheds employing twenty or more persons are factories subject to the Indian Factories Act,

the central executive authority for which is the Department of Industries and Labour, but apart from the control which this Department and the Provincial Governments exercise over railway workshops and running sheds all classes of railway labour are under the control of the Railway Board which is itself under the control of the Department of Commerce. Under the Devolution Rules made under the Government of India Act, 1919, Regulation of Mines and Inter Provincial Migration were central subjects

whereas industrial matters included under the head factories and welfare of labour fall within the scope of the provincial legislatures and although the Government of India has passed central legislation in connection with most questions affecting the welfare of labour—in order to secure uniformity of treatment in all provinces—the administration of the various Acts connected with factories workmen's compensation, trade unions, payment of wages, the plugging of child labour, etc., falls on the local Governments who have to bear the entire cost of administration, as it is not permissible under the constitution for the central Government to incur any expenditure from central revenues on the administration of provincial subjects. This constitutional position is perhaps to some extent responsible for the opposition shown by some of the local Governments to labour measures on which their views have been invited by the Government of India during recent years. The Governor General in Council exercises control over the administration of the Acts passed by the central legislature in two ways. In the first place he is vested by Statute with the general power of superintendence, direction and control and secondly these Acts in most cases reserve certain powers to him to make the powers conferred on Local Governments subject to his control. The general principle observed by the Government of India, however, has been to grant to the provinces as far as possible in the administration of the various Indian Acts. The central Government in the Department of Industries and Labour however maintains control in connection with the Indian Mines Act.

The Royal Commission on Indian Labour recommended that the possibility of making labour legislation both a federal and a provincial subject should receive adequate consideration and that if federal legislation were not practicable, effort should be directed to securing that as early as possible the whole of India should participate in making progress in labour matters. For Indian States in which there was appreciable industrial development the Commission thought that the Industrial Council which they recommended should be set up would offer a suitable channel for co-operation. The whole question was discussed at the address of the various Round Table Conferences which were held in London in connexion with the new reforms, and Mr. N. M. Joshi who represented the interests of Indian labour at these conferences pressed that it is possible labour legislation should be a federal subject. Owing largely to Mr. Joshi's efforts the Joint Parliamentary Committee decided for concurrent legislation. The Government of India Act, 1919 lays down that the following subjects may be legislated for concurrently both by the Federal Legislature and by the Provincial Legislatures—

- (1) Factories, regulation of the working of mines but not including mineral development
- (2) Welfare of labour, provident funds, employers' liability and workmen's compensation
- (3) Trade Unions, industrial and labour disputes,

THE CENTRAL GOVERNMENT

Reference has already been made to the establishment by the Government of India of a special labour Bureau in 1920 and to the abolition of this office in 1923 in pursuance of a recommendation made in the matter by the Indian Retrenchment Committee. The Department of Industries and Labour has however endeavoured to carry on as much as possible of the work of that Bureau but owing to its limitations in staff and personnel it is not in a position to initiate and conduct all India enquiries into wages and conditions of employment in Indian industries. The present executive staff of the Department of Industries and Labour is as follows—

Member in charge The Honourable Sir THOMAS STEWART K C I L C S I C S

Secretary The Honourable Mr. A. G. CROW C S I C E I C S

Joint Secretary S. N. ROY Esquire C I L I C S

Deputy Secretary C. M. KERR Esquire, I C S

BENGAL

The Government of Bengal appointed a labour Intelligence Officer in the year 1920. Labour laws were to be administered in the Commerce Department but the Revenue Department continued the administration of the Assam Labour Immigration Act. The labour Intelligence Officer was to keep a record of industrial disputes in the Province and also of labour organisations. From time to time, circumstances permitted he was to conduct special enquiries. He was however not provided with an adequate staff for the purpose. The labour Intelligence Officer was also the Deputy Secretary to the Government of Bengal in the Commerce Department and after the coming into effect of the Indian Trade Unions Act, 1926, he was also appointed Registrar of Trade Unions. The Royal Commission on Indian Labour recommended that Bengal should have a properly staffed Labour Office on the same lines and with at least the same staff as the Labour Office of the Government of Bombay, but owing to financial stringency this has not yet been possible. The Workmen's Compensation and the Trade Unions Acts are administered by separate officers who have their own staffs for the purpose. The Indian Mines and the Trade Disputes Acts and the Bengal Workmen's Protection Act, 1934 are administered by the Commerce Department which since the 1st April 1937 has been renamed the Commerce and Labour Department.

Commissioner for Workmen's Compensation R. H. PARIKH Esq. I C S

Registrar of Trade Unions A. HUGHES Esq. I C S

Chief Inspector of Factories T. L. MCBETH, Esq. A. M. I. (Mech.)

MADRAS

The Government of Madras appointed a Labour Commissioner in the year 1920 to watch and study at all times the conditions of labour particularly industrial labour, throughout the Presidency and to keep Government informed by periodical reports of its movements and tendencies and of the existence of any disputes between employers and employed. The settlement of labour disputes and prevention of strikes are features of his work but his interference in such disputes is limited to tendering his offices to settle them. In the case of disputes affecting the internal administration of a railway he may interfere only if both sides agree to his intervention but he must obtain the previous sanction of Government in each case. He is also the Protector of Depressed Classes in which work most of his time is occupied. On a par with the Labour Commissioner Bengal, the Labour Commissioner in Madras has also no special statistical office to deal with labour statistics and no reports have been published of any special inquiries into questions connected with industrial labour in the Presidency. Since the creation of the office the conduct of periodic censuses into agricultural wages has, however been placed in his hands.

Commissioner of Labour and Rural Uplift. G. W. PRITCHETT, Esq., I.C.S. This officer is also Chief Inspector of Factories, Commissioner for Workmen's Compensation and Registrar of Trade Unions.

BOMBAY

Of all the Provincial Governments in India, the Government of Bombay have always maintained a progressive lead in their zealous and earnest solicitude for the welfare and well being of the industrial labour employed in the province and the real pioneer work in the field of labour information and statistics in India during the last fifteen years has been done by the **BOMBAY LABOUR OFFICE** which was established in 1921 by Lord Lloyd, then Governor of Bombay. In the government resolution announcing the establishment of this office the following were declared to be its functions—

(1) *Labour Statistics and Intelligence*—These relate to the conditions under which labour works and include information relating to the cost of living, wages, hours of labour, family budgets, strikes and lockouts, and similar matters.

(2) *Industrial Disputes*—As experience and knowledge are gained and the activities of the Labour Office develop it will promote the settlement of industrial disputes when these arise and

(3) *Legislation and other matters relating to Labour*—The Labour Office will advise Government from time to time as regards necessary new legislation or the amendment of existing laws.

When the Labour Office was first started it was placed in charge of a Director of Labour. The post of the Director of Labour, was however abolished in 1926 and the Labour Office was

placed under the charge of the Director of Information whose designation was changed to Director of Information and Labour Intelligence. With a view to implementing the recommendation of the Royal Commission on Indian Labour in the matter the Government of Bombay in May 1933 again changed the designation of the Director of Information and Labour Intelligence to Commissioner of Labour and Director of Information. With this change in designation the administrative control of the Factory and Boiler Departments was transferred from the Collector of Bombay to the Commissioner of Labour and the Commissioner of Labour was also appointed ex officio Commissioner for Workmen's Compensation and Registrar of Trade Unions. Under the Bombay Trade Disputes Act 1934 the Commissioner of Labour has also been appointed ex officio Chief Conciliator. In addition to the Commissioner there are four gazetted officers attached to the Labour Office. Three of these are Assistant Commissioners of Labour at headquarters in Bombay and the fourth who is called the Labour Officer at Ahmedabad is stationed at that centre. There are also three full time lady investigators but these are not gazetted appointments. The office staff contains two Statistical Superintendents, three senior clerks, twelve junior clerks, two stenographers, one typist, one cashier, one despatcher and one daftri. The activities of the office comprise (1) prices and cost of living (2) wages and hours of labour (3) rents (4) economic and social conditions of various communities (5) unemployment (6) industrial disputes (7) trade unions, (8) other industrial and labour intelligence (9) international labour intelligence (10) labour legislation, (11) the *Labour Gazette* and (12) library.

The *Labour Gazette* has been published monthly since September 1921. It is intended to supply complete and up to date information on Indian labour conditions and especially the conditions existing in the Bombay Presidency and to supply to local readers the greatest possible amount of information regarding labour conditions in the outside world. The *Labour Gazette* circulates to many different countries and is perhaps the only publication of its kind in India from which foreigners interested in labour and economic conditions in India can obtain accurate and up to date information. It has also hitherto been practically the only medium through which the work and publications of the International Labour Office have been made regularly available to people in India.

In the *Labour Gazette* statistics are regularly published for working class cost of living index numbers for Bombay, Ahmedabad and Sholapur, wholesale price index numbers for Bombay and Karachi, retail food prices for five important centres in the Bombay Presidency for industrial disputes in the Bombay Presidency and for workmen's compensation, prosecutions under the Indian Factories Act, and the employment situation. A new working class cost of living index number has been compiled for Ahmedabad and statistics with regard to this have been published in the issues of the *Labour Gazette* since January 1930. A working class cost of living index number for Sholapur has also been published. Quarterly information is also col-

lected with regard to all known trade unions in the Bombay Presidency and full information is published in the *Labour Gazette* every three months.

A substantial grant is allowed by the local Government to the Labour Office for the purchase of books and the Labour Office has accumulated a very useful and fully catalogued library on labour, industrial and economic matters. The Labour Office library is open to research workers in Bombay. In addition to books the library contains bound copies of all the more important periodicals received from Labour Ministries, and International and research organisations in various parts of the world.

The present staff of the Labour Office is as follows —

Commissioner of Labour and Director of Information, Commissioner of Workmen's Compensation and Registrar of Trade Unions—I. F. GENNING, Esq., C.B.E. Barrister at Law, J.P.

Assistant Commissioners of Labour—S. R. Deshpande, Esq., B. LITT. (Oxon), N. A. Mehrban, Esq., B.A. F.S.S. and S. V. Joshi, Esq., B.A. (Cantab). Mr. Joshi is also Assistant to the Registrar of Trade Unions—Bombay Presidency.

Labour Officer at Ahmedabad—V. P. Keshu, Esq., M.A.

PUNJAB

In the Punjab the Director of Industries ordinarily looks after all necessary matters in connection with Labour. He is also the Registrar of Trade Unions. The Workmen's Compensation Act is administered by the Senior Sub-Judges at Lahore, Ferozpur, Amritsar, Lyallpur, Ambala, Multan, Rawalpindi and Sirazidha and by the Deputy Commissioners in the other Districts.

Director of Industries and Registrar of Trade Unions—RAI BAHADUR LALA RAM LAL M.B.E.

CENTRAL PROVINCES

The Department of Commerce and Industry is the administrative authority which deals with all labour questions. The Director of Industries is in immediate charge of all matters relating to labour. He is also Registrar of Co-operative Credit Societies and Registrar of Trade Unions. The Factory Office is also under his general supervision. There is no special Labour Office or Labour Officer in the Central Provinces but the factory staff is utilised for collecting such information on labour questions as may be required from time to time. A Board of Industries, consisting of representatives of the employers and the employed has been in existence since the year 1914 and all matters affecting the interests of labour are considered by this Board but the Board acts purely in an advisory capacity.

Director of Industries and Registrar of Trade Unions—C. O. DESAI, Esq. I.C.S.

BURMA

In Burma a Labour Statistics Bureau with a special officer in charge was set up in June 1925. This Bureau conducted an extensive investigation into the standard of life and the cost of living of the working classes in Rangoon in 1927 and the results of this enquiry were published in the form of a special report in 1928. As a measure of economy, the Labour Statistics Bureau was placed under the charge of the Chairman of the Rangoon Development Trust in 1931, and this office was made in ex officio Commissioner of Labour. An Assistant Commissioner of Labour is Registrar of Trade Unions and Commissioner for Workmen's Compensation for the Rangoon District. The officer holding this post at present is Mr. Dhilma Raj.

Commissioner of Labour—W. H. PAYTON, Esq. I.C.S.

UNITED PROVINCES

In the United Provinces almost all departments of the local Government deal with various phases of questions connected with labour up to the end of 1934. Labour as such was with the Home Member. Electricity was with the Finance Member, the factory inspection staff was under the control of the Director of Industries, boiler inspection was under the control of the Public Works Department. The Registrar of Co-operative Societies was appointed ex officio Registrar of Trade Unions. In 1935 however a more uniting policy was adopted and the Director of Industries was appointed Director of Statistics and ex officio Commissioner of Labour for the general administration of all questions connected with labour.

Director of Industries and Statistics—R. I. SHIVDASANI, Esq. I.C.S.

SIND

Sind since its separation from the Bombay Presidency has modelled its administration of all labour questions on Bombay and the Government of Sind have appointed a Commissioner of Labour who is also Registrar of Trade Unions. There are no provincial laws dealing with labour problems in Sind nor were there any under contemplation as we go to press.

Commissioner of Labour and Registrar of Trade Unions—J. M. ADWANI, Esq. B.A.

OTHER PROVINCES

In Assam the main question connected with labour is that concerning the recruitment of labour for tea plantations from other provinces. As inter-provincial migration is a central subject, the local Government are not very actively interested in the special consideration of other labour questions. Labour conditions in Bihar, Orissa, Assam, Punjab and the North West Frontier Province are not considered such as to justify the appointment of Labour Commissioners. In Orissa the Economic Commissioner (J. R. DAIN, Esq. C.I.E. I.C.S.) is the Registrar of Trade Unions. In the North West Frontier

Province, the Secretary to Government in the Legislative Department has been entrusted with the work of industrial and labour disputes. In the newly separated Province of Bihar, the Director of Industries (S. M. DHAK ISQ I C S) looks after all matters connected with labour but this Province has a separate Registrar of Trade Unions (L. O. HILL ISQ I C S). In Assam Mr. A. S. A. COOTE I C S is the Controller of Emigrant Labour but as no trade Unions have as yet been registered in this Province there is no Registrar of Trade Unions functioning but for purposes of the Act, the Registrar of Joint Stock Companies is ex officio Registrar of Trade Unions. In Ajmer Mr. W. R. the Assistant Commissioner Ajmer (AKHIL HUSAIN, ISQ I C S) is Registrar of Trade Unions.

LABOUR LAWS IN INDIAN STATES

Few Indian States have any labour legislation but most of them are of little industrial importance. The only States which have more than 5,000 persons employed in factories and mines are Hyderabad, Mysore, Indore, Baroda, Jammu and Kashmir, Gwalior and Travancore. Most of these States have a Factories Act which however is much below the standard of the corresponding Act in British India. In recent years there has been a tendency on the part of certain capitalists to endeavour to evade the provisions of the factory law in British India by establishing mills or factories in the territories of Indian States.

ROYAL COMMISSION'S RECOMMENDATIONS

The Royal Commission on Indian Labour recommended that Labour Commissioners should be appointed both for the Central and in all the local Governments except Assam. Labour Commissioners should be selected officers who should hold the appointment for a comparatively long period. They should be responsible for the publication of labour statistics, should have the right to enter all industrial establishments and should be generally accessible both to employers and labour in order to act as conciliatory officers.

Where there is danger of establishments being transferred to Indian States in order to escape regulation, an effort should be made to obtain the co-operation of the adjoining States. The action taken by the various provinces on this recommendation has already been dealt with. The most important recommendation made by the Commission in connection with Government administration of matters connected with labour was however for the setting up of an Industrial Council which would enable representatives of employers of labour and of Governments to meet regularly in conference to discuss labour measures and labour policy. It was suggested that the Council should meet annually and its president should be elected at each annual session. The secretary of the Council should be a permanent official responsible to it for current business. The functions of the Council would be (1) the examination of proposals for labour legislation referred to it and also to initiate such proposals, (2) to promote a spirit of co-operation and understanding among those concerned with labour policy and to provide an opportunity for an interchange of information regarding experiments in labour matters, (3) to advise Central and Provincial Governments on the framing of rules and regulations, and (4) to advise regarding the collection of labour statistics and the coordination and development of economic research. On the 7th March 1935 Mr. P. N. Sippy moved a resolution in the Council of State urging the establishment of the Industrial Council on the lines suggested by the Commission. Mr. D. J. Mitchell speaking on behalf of Government expressed sympathy with the resolution. He did not deny that the creation of such an Industrial Council would be of very great value but there was no great hurry for it. He quoted the Commission and said they were not for its immediate establishment. The situation had considerably altered since the recommendation had been made in 1931 and there was a possibility under the new constitution that labour would be decentralised. In that case there was the danger that legislation passed in autonomous provinces would come into conflict with the centre. In view of this he thought that the creation of such a Council at this stage was not desirable. The resolution on being put to the vote was negatived by 22 votes against and seven for.

Sea Routes between India and Europe.

The Indian port for the direct journey to and from Europe is Bombay. There are ordinarily five lines of steamers by which the journey to and from the West via Bombay can be performed, either by sea all the way or—and in some cases only—by sea part of the way and by rail across Europe. They are the P & O, the Anchor Line, the City and Hall Line and the Lloyd Triestino. The Dollar Line steamers are available for Western passages only. There are ordinarily other services between Calcutta and the West, by steamers sailing round Ceylon and several lines connect Colombo with Europe.

Of the latter the Orient, the Messageries Maritimes, the Bibby Lines, N Y K, Australian Commonwealth and Royal Dutch Lines are the chief besides the P & O. The Bibby and Henderson services extend to Rangoon. The new railway between India and Ceylon greatly increases the importance of the Colombo route for Southern India. The shortest time between London and Bombay is 11 days via Marseilles by P & O Express Vols. The following are the fares which are convertible at approximately current rates of exchange —

Peninsular and Oriental S N Co

CIVIL AVIATION

The development of internal aviation services in India was first essayed by Lord (then Sir George) Lloyd during his Governorship of Bombay (1918-23). Lord Lloyd succeeded in securing the inauguration of a postal mail service between Karachi and Bombay. This was carried in R A F machines. The use of these aeroplanes complicated the matter from the outset. The service was not warmly supported by the public. The effort failed.

The general attitude of the Government of India for some time after this was that as no air services in the world had yet been run without a Government subsidy and as India had no money available for such a purpose a general development of air services in India must await more prosperous times. The pressure of external conditions in favour of Indian aerial enterprise gradually increased. The inauguration of French and Dutch air services across India, as well as the institution of a regular weekly service between England and Karachi and the general increase of civil aviation in all parts of the world and of visits of flyers of different nations to India stimulated both Government and public opinion. India had become a party to the International Air Convention and under this was under a moral obligation to provide ground facilities for aircraft from other countries.

The problem of internal air services was freshly taken up by the Government of India in

the Department of Industries and Labour when Sir Bhupendranath Mitra was member of Government for that portfolio. Force of circumstances had already necessitated the appointment of a Director of Civil Aviation and the first holder of the post was Lt Col F C Sheldermine O B E.

Non official members of the Assembly, under the leadership of Dr Moonje, then an elected member, for some time strongly pressed Government to institute a practical system for the training of young Indians in Civil Aviation. They foresaw that the development of civil aviation in India was only a matter of time and their great desire was to prevent it following in the wake of the mercantile marine and the commissioned ranks of the army, in which Indians came to the fore under modern conditions only in time to be faced with competition by Britishers who were first in the field. The upshot of this agitation was an arrangement by which young Indians might be sent to England for training with a view to their future employment in the Civil Aviation Department as aerodrome officers, inspectors of aircraft and engines, etc. Eight lads were dispatched for the opening of this system. Others followed and results have been successful. These men are not trained primarily as commercial pilots, but a development of their training, if they show special aptitude and desire to adopt a pilot's career, is always in view. This is a wise pre-

caution and some of them take pilots' certificates. All of them receive a certain amount of training as pilots and they also go through a post graduate course at the Imperial College of Science and Technology and a period of attachment to selected aircraft works and to the London Terminal Aerodrome at Croydon. The course lasts for two years and three months during which time the men receive scholarships amounting to £240 per annum. A condition of eligibility for these scholarships is that applicants must possess a B.Sc. degree in engineering or physics.

As time proceeded further special measures have been taken for the particular training of Indians for appointments in the Civil Aviation Directorate and on ground staffs.

Internal Air Services—Sir Bhupendranath Mitra was in due course obliged to reconsider the question of assisted internal airmail services in India. An arrangement was made by which the Imperial Airways Service between Croydon and Karachi was, on 30th December 1929, extended to New Delhi, mails from and for Europe being carried to and for each week. This conveyance of mails between New Delhi and Karachi was performed under a special arrangement, the chief point of which was that the service was conducted by the Postal Department of the Government of India and that Imperial Airways (chartered to them machines for the purpose. This meant, in effect, that the Western service of the Airways Company continued to Delhi, but that technically the service from Karachi eastwards belonged not to them but to the Government of India. Passengers as well as mails were carried. On the expiration of the period for which the contract on these lines was arranged the Government of India decided not to renew their charter with Imperial Airways and adopted the alternative course of contracting with the Delhi Flying Club to carry the weekly Karachi Delhi air mails to and from. Passengers were also carried by this service. This, like the earlier special arrangement with Imperial Airways was obviously a transitional plan. It came into operation early in 1932. It filled the need of the moment, pending the development of a permanent scheme.

Before Sir Bhupendranath Mitra could officially develop the matter, he was succeeded in charge of the Departmental portfolio by Sir Joseph Bhore and the latter entered with enthusiasm into the problem. Its solution was largely assisted by a great deal of spare work carried out by Col. Schindler before he resigned his appointment as D.C.A. in order to take up the corresponding one in England. A scheme was worked out under the direction of Sir Joseph Bhore for the institution of a weekly air service between Karachi and Calcutta in connection with the weekly arrivals and departures of air mails conveyed by Imperial Airways Ltd., from and to England. If the Government of India had at this time taken no steps towards the organisation of a service of the kind they would have been unable to prevent Imperial Airways or some other non-Indian concern from establishing one and the authorities in India were determined that civil aviation within India should be Indian in character, either

through the development of private enterprise or through the institution of Government owned services.

The arrival of acute financial stringency following on the world depression necessitated the abandonment of the Government Karachi Calcutta service in 1931. Four Avro 10 aero planes had already been purchased for the service and they were sold, one of them being retained for the use of their excellencies the Earl and Countess of Willingdon who had newly arrived in India on the appointment of the Earl to be Viceroy. The machine continued in their Excellencies' service until 1934 when a new up-to-date biplane was purchased for their use and their old one was sold to Indian National Airways, Ltd.

Efforts to attain the desired result were revived successfully in 1933. Arrangements were made with the British Government and Imperial Airways Ltd. for the extension of the London Karachi air service across India from Karachi to Singapore as a link in the England Australia air service. A private company Indian Transcontinental Airways, Ltd. was formed with rupee capital and a majority of Indian Directors, in which shares are held by Imperial Airways Ltd. 51 p.c., Indian National Airways Ltd. 25 p.c. and the Government of India 24 p.c. This company operates jointly with Imperial Airways a weekly service from Karachi to Singapore where it now connects with Qantas Empire Airways weekly service from Singapore to Australia.

Indian National Airways Ltd. was established largely through the efforts of Mr. R. L. Grant Govan (C.I.) to participate is a shareholder in Indian Transcontinental Airways and to develop feeder and other internal services in North India. They opened a bi-weekly service between Calcutta and Rangoon and a daily service between Dacca and Calcutta with prospects of extension to Assam. Under a ten year contract with the Government of India they also instituted a weekly service from Lahore to Karachi to link with Imperial Airways London Karachi services. The Rangoon and Dacca services from Calcutta were abandoned in 1935 owing to lack of public support.

Before all these developments however the first move had taken place in Western India. Through the enterprise of Tata Sons Ltd., under a ten year contract with the Government of India a feeder service was started in 1932 between Karachi, Bombay and Madras, connecting at Karachi with the London Karachi service. It now includes Hyderabad in its schedule. An extension of the service to Colombo is contemplated. Aerodromes for it in the extreme north of India have been organised and the Ceylon Government have recently provided one at Colombo.

In Burma Irrawaddy Flotilla and Airways Ltd. operate a weekly service between Rangoon and Mandalay and hope to extend it to Moulmein and Iloilo.

From the beginning of 1935 the Imperial Airways London Karachi service and with it the Trans India service up to Calcutta and the feeder services Karachi Lahore and Karachi

Bombay Madras have been operated twice weekly. The bi-weekly trans-Indian service has since been extended to Australia and will shortly become almost daily, being flown five times a week each way. The initiative in this development was taken by His Majesty's Government. Early in 1937 they reached an agreement with the Government of India about it and the Government of India simultaneously negotiated in agreement with the Government of Ceylon for the extension of the Indian section of the service to Colombo. According to the latest programme the new service will partially be introduced in October 1937 and fully established in January 1938. The Australian section of the extended service will come into operation somewhat later. The inland air services of India will be multiplied accordingly, that is to say, the Karachi Lahore air service will fly five times a week each way in connection with the weekly and easterly flights of the main trunk service and the Titi service, which now flies from Karachi via Bombay to Madras and back twice a week, will be extended from Madras to Colombo and will also be flown five times weekly each way. Delhi will not under the new scheme be upon the direct trunk trans-Indian line of flight but will be linked with it by a subsidiary service.

Of the new five trunk line flights per week there will be performed by flying boats and two by land aeroplanes, as at present the routes across India being slightly different for the machines, alighting on land and for those alighting on water. Flights by night as well as by day and complete meteorological and lighting services for day and night flying are being organised and will be ready before the start of the new system. All first class mail matter will be conveyed by the new trunk service as soon as it is instituted and the lowest letter postage from India to England will be the same as it now is for land and steamer transport namely 2½ annas, though for this sum the weight which may be sent will be only 4 ounce, which is what can now be sent by air mail for 7½ annas. The outward postage rate will similarly be adjusted to a level comparable with the rate now charged for land and sea transport.

Civil Aviation Progress—India set up new records in air traffic in 1935 according to the Annual Report for 1935. 6 of the Directorate of Civil Aviation of the Government of India. The mileage of air routes in India at the end of 1935 totalled 6,393 compared with 5,830 in 1934. Figures for individual enterprises, however, suggest that the value of aviation to business is not yet properly appreciated: the number of private owned air craft only being 33 as against 42 the previous year.

The figures for mails and passengers carried to and from India by Imperial Airways were 82.2 tons and 983 respectively compared with 59.2 tons and 666 in 1934. Mail traffic on the Trans-India service increased to an even more satisfactory rate, the percentage increase for the year reaching 128.5 per cent, compared with 39 per cent on the Croydon Karachi section.

Instruction in Aviation—Instruction in Aviation is given in India through Clubs founded for the purpose. There are eight of these. Above them is the Aero Club of India

and Burma, Secretary Mr Southern. The Aero Club is wholly independent of Government having financially supported by the other clubs, and acts as a co-ordinating body for those others taking up with Government points of interest to them all and so on. The eight instructional clubs are the Delhi Flying Club, Bombay Flying Club, Bengal Flying Club (Calcutta), U P, Flying Club (Lucknow), Madras Flying Club, Madras Northern India Flying Club (Lahore), Rhodpur Flying Club, Karachi Aero Club. The eight instructional clubs are under the direct control of the director of Civil Aviation. Indian National Airways Ltd have also established a Flying School in Rangoon for the training of pupils in aviation. The aeronautical training Centre of India, Ltd formed by a number of leading Indians opened an extensive School at the civil Aerodrome, New Delhi in October 1935, for the training of aeronautical engineers. Capt A. L. B. Paden formerly Assistant Director of Civil Aviation with the Government of India was appointed first Governor & Principal with a staff of highly qualified directors and at the beginning of 1936 workshops with the most modern equipment are in course of erection. The Centre is for the accommodation of 80 students. Its training courses last from years. The cost to each student is about Rs. 6,000 including the fees for the whole course and keep.

The Club movement dates from March 1927 when as a result of the interest taken in the subject by Sir Victor Sassoon Bt. M.L.A., it was discussed by the Indian Legislative Assembly. An encouraging atmosphere was thus created and in the same month Aero Club of India was formed composed of about 40 members of the Assembly. Its first meeting was held in Simla in September of the same year and during the next three months 100 more members of the Assembly and 197 other members joined. Strong committees were then formed in Delhi, Calcutta, Bombay and Allahabad with the object of developing interest in the movement and in order to utilise the Government grants which were at this time proposed and the formation of local clubs followed. The Aero Club entered into an agreement with the Royal Aero Club of Great Britain and thereby became its official representative in India and Burma.

Legislation—Air navigation in British India was till recently governed by the Indian Aircraft Act 1911. It was found to be very much out of date in the face of the rapid development of aviation and in August 1934 the British Indian Central Legislature passed the Indian Aircraft Act 1934, replacing the old Act and giving powers to the Government of India to make rules to meet modern developments and to enable them to implement the provisions of the International convention for the Regulation of Aerial Navigation 1919, to which India is a party. During the same session, legislation (the Indian Carriage by Air Act) defining the law of Carriage by air in India was also carried out.

Indian Air Races—The Government of India in December, 1927, received from Sir Victor Sassoon a letter saying that subject to a grant of Rs. 30,000 to the Aero Club for the year 1928-29 and a grant of Rs. 20,000 to each club formed, he would bear

any deficit between the Club's income and expenditure until the grants became available. This they agreed to and they further announced that they would provide for each club an initial equipment of two aeroplanes, a spare engine and a contribution towards the cost of a hangar where no hangar was already available. These grants commenced as from the 1st April 1928 and were to continue for two years. The Club subvention terms, after extension, were revised by the Government of India in 1935. Under the new terms the Aero Club of India receives nothing from Government. Each club receives a fixed subsidy of Rs. 12,000 a year if it maintains three machines, Rs. 10,000 for two machines or Rs. 8,000 for one machine, plus Rs. 300 for each 'A' pilot trained *ab initio* and Rs. 100 for each 'A' license renewed. The maximum subsidy payable to any club is Rs. 20,000. The terms are for three years.

The first Indian air race was flown over a Delhi Agra Jhansi Lucknow Agra Delhi course in February 1932, and was very successful. There was a similar race over approximately the same course in February 1933 when the entries were good and included two competitors who specially came out from England for the contest and the event was again completely successful.

The origin of these two races was the offer by Their Excellencies the Viceroy (the Earl of Willingdon) and the Countess of Willingdon, of a Challenge Trophy for such a race.

There was no race in 1934. One was programmed for December 1934 to be flown from Calcutta to Bombay with a halt for one night at Cawnpore. Six months' notice was given and substantial cash prizes in addition to the Viceroy's Challenge Trophy, were offered, but only six entries were received. The Aero

Club Committee in their announcement to this effect said that in their opinion the programme was too ambitious for the class of competitors who had hitherto entered, most of whom could not afford to fly to the start, race over 1,200 miles and then fly home again. They added: 'Air racing like every other form of racing costs money and can only be encouraged by the patronage of wealthy sportsmen and in India this has been the exception rather than the rule up to now. The funds annually available to pay for the race are limited and as soon as the length of the race and the number of stops are increased the cost of organisation rapidly increases. The running of the first race cost Rs. 5,600 and that of the second Rs. 5,354. The only funds regularly available for the purpose are the interest on one lakh of rupees given by Sir V. Sessoon to form an Indian Flying Fund for flying sport prizes. The Fund is held by a Trust the members of which are the Director of Civil Aviation and the Chairman of the Aero Club.'

The club held in February, 1936, a two-day race from Madras via Bombay to New Delhi. Entries were received not only from different parts of India but from abroad. The race was a great success. It was won by an Indian amateur competitor and it was noted as having contributed in an important degree to general air-mindedness in India.

Director, Civil Aviation—Mr. E. Tymms
C.I.F., M.O.

Deputy Director, Civil Aviation—Mr. G. L. Girdler

Chief Inspector of Aircraft—Mr. A. S. I. McNeill, M.B.E.
Engineer Officer I—Capt. A. G. Wyatt, R.F.C.
Engineer Officer II—Mr. H. J. Paterson, R.F.C.

THE SUEZ CANAL

Opened formally in 1869 the Suez Canal constitutes an artificial waterway about 103 miles long linking Port Said on the Mediterranean with Suez on the Red Sea. The Canal shortens the route from England to Calcutta and Bombay by 3,660 and 4,300 miles respectively also, of course substantially reducing the distance to Australia. Using the Canal, the Mediterranean fleet could reach the Singapore base in less than three weeks. The alternative route round the Cape lengthens Britain's lines of communications by about 4,000 miles.

Control and Finance

The Suez Canal is controlled by a company whose property valued in the market at £120,000,000 passes to the Egyptian Government when the concession expires on November 17, 1968. This is of course in default of other arrangements. The British Government owns 14 per cent of the shares thanks to Disraeli's celebrated coup in 1875 when for £4,000,000 he bought the majority of the bankrupt Khedive's holdings. The shares are now valued at £84,000,000 and the current profits amount to

about £1,500,000 a year. To date they have earned the British Treasury some £43,000 in dividends. Most of the remaining shares are held in France, but not by the French Government, which does not own a share. The Board comprises 21 Frenchmen, 10 Britishers and a Dutchman. Only three of the British directors represent the British Government, the remaining seven represent British shipping and commercial interests. Incidentally nearly 60 per cent of the total tonnage passing through the Canal is British. The Chairman of the Company is the Marquis de Vogüe. The enterprise is managed in Egypt, has its London offices at 6, Bishopsgate and holds its monthly Board meetings in Paris.

Development

Since the War the work of widening, deepening and straightening the Canal has been taken in hand with redoubled vigour. Operations are directed from Ismailia. When the Canal was opened in 1869 the width was 72 feet and the depth about 26 feet 2 inches. The declared policy of the Canal Company in regard to the deepening of the Canal is to offer a slightly

greater depth of water than that available in ports east of Suez. It is claimed that, with the exception of Sydney there is no Eastern port which at low tide has a greater depth of water than that now provided in the Canal throughout the full length of nearly 100 miles. Today the Canal is on an average 45 feet deep and 70 yards broad. It can be traversed in just under thirteen hours. About 10 ships can pass in the 24 hours. One ship has, however, still to tie up to let a second pass though there is plenty of room for both. It is feared water displacement might bring about a collision. There would also be a danger of grounding. The biggest vessel yet to navigate the Cut was of 27,000 tons. It is doubtful if vessels like the HOOD and RODNEY both over 42,000 tons could navigate the canal easily in its present state. Further expansion appears inevitable.

Neutrality

Absolute neutrality is the law of the Company, as was made clear during the Italo Abyssinian war. Referring to the request that the Canal should be closed to Italian ships, the Marquis de Vogüe, Chairman of the Board of Directors, addressing the annual general meeting of the Company on June 8, 1936, observed: "It (neutrality) is stated in the Act of Concession and in the Statutes. Furthermore it is guaranteed by an international Convention of 29th October, 1888, expressly confirmed by the Treaty of Versailles. Article I of this Convention says in the following terms, that 'the Suez Maritime Canal will always remain free and open in time of war as in time of peace to all merchant or war vessels without flag distinction, and it adds that the Canal will never be subject to the right of blockade'."

If by an act of force, which nothing entitles one to anticipate, any Power thought of forbidding entry into the Canal to ships of another Power that action would be equivalent to an act of war with all its consequences. As for your Board the question of closing the Canal could not arise and they were never called upon to discuss it.

The provisions of the Convention are that subject only to the exercise of the right of legitimate self defence and to action to improve the safety of the Canal there can be no restriction provided that the rules are observed on the free use of the Canal. On two occasions in the past the Canal has been closed and on a third the question of free use was raised. The first was in 1882 six years before the signature of the Conventions when during the revolt of Arabi Pasha against the Khedive of Egypt, the safety of the Canal was thought to be imperilled. During the

Spanish American war of 1898 the attempt of the Spanish Fleet to call at Suez on its way through the Canal was frustrated by the Canal authorities in accordance with the provisions of Article IV of the Convention. The third occasion on which the Canal was closed was during the Great War when free access and transit was stopped for a short period during which the Egyptian territory and the safety of the Canal were actually endangered by the advance of the Turkish forces.

Traffic

Due to the Italo Abyssinian conflict and of the transport of troops and supplies resulting therefrom traffic through the canal in 1935 reached 5992 transits representing 32,811,000 tons net registered. The year 1929 a year of great world prosperity is the only one which has given the Canal a greater tonnage and that by a mere two per cent. Deducting the tonnage of ships engaged in this temporary traffic it was found that the duly commercial movement was slightly under 28½ million tons. This was one of the smallest totals of the last ten years. Compared with 1924, it represents a reduction of about three million tons. The beginning of 1936 showed the same characteristics as in 1935 that is increase of the maritime movement and reduction in the movement of cargo. In the first four months the net tonnage showed an increase of 37 per cent over the corresponding period of the year before. As to the cargo traffic nearly all items constituting return traffic showed a reduction.

A remarkable feature has been the substantial lowering in the Suez Canal dues. Since April 1937 dues of the Suez Canal Company on Indian vessels have been reduced from 7s. to 6s. a ton on vessels in ballast from 3s. 6d. to 3s. a ton and passenger dues from 12s. 4d. to 6s. per head. The rates for loaded and ballast vessels were lowered on July 1, 1936, by 6d. and 3d. respectively per ton so that within a year two reductions have been made. The diversion of commercial traffic to the Cape shows that the Company will keep steadily in mind the importance of continuing to encourage traffic to use the canal. With modern methods of ship construction increased speed and lower fuel consumption the Cape route is an alternative to the Canal has become a business proposition. Specially as with many types of cargo the time occupied by the voyage is not within limits of serious importance provided deliveries at regular intervals can be assured. Doubtless the Company's policy respecting dues has been influenced by increasing signs of a tendency to avoid the Canal.

Travel in India.

Thirty years ago a tour in India was possible only to the wealthy, the leisured and those who had friends in the country. The cost of the journey was very high, the methods of transportation were very slow, and the facilities for travel were so indifferent that he was a bold man who consigned himself to the mercies of the country without a sheet of letters of introduction. Now the mail which is posted in London on Thursday night, reaches Bombay in 14 days, and the passenger can travel by the same route and with the same speed as the mail. It is also possible to reach Bombay in 11 days from Genoa or Venice by means of the Lloyd Triestino line. A dozen lines have covered the sea route between Europe and India and Ceylon with a plexus of regular services while Imperial Airways have a weekly service from Croydon to Karachi and from there the Indian State Air Service takes you to Delhi and before long it is hoped to Calcutta. The Indian Railways provide facilities on the trunk lines equal to many of the best services in Europe and the Indian hotel has grown into a really comfortable caravanserai.

The traveller to India has a choice of many ports by which he may enter. To the majority of visitors from Europe and the West Bombay provides their first glimpse of India while others enter by Calcutta, Madras and Karachi and via Colombo.

Owing to its geographical position Bombay is known as the Gateway of India through which for more than a century, the import and export trade of India has largely passed. Ash purple against the dawn, the spurs of the Western Ghats thrones of mystery stand sentinel about the inner sanctuary of Bombay Harbour. Among and above these mountain heights Wellington fought the battles which earned for him his early military greatness. Every schoolboy knows the story of the Mahratta campaigns, they are but one—the Mahrattas—of the races within races that populate this vast country where two hundred and twenty-two different vernaculars are spoken. There is never an end to the land of India. You will find life in its most up-to-date form and next to it the customs and habits of a nation which have not changed for hundreds of years. Life will surge past you in a picturesque procession. You will hear a medley of strange sounds—the tinkle of the temple bells, the throb of the drum, the chant of the muezzin announcing that God is Almighty and Mohammed is his Prophet, the song of the Sharma the cry of the wild beast in the jungle. The tropical sun blazing like a ball of molten gold in a turquoise sky, the silver moon sailing across the purple vault of heaven will awaken in you feelings which you have never known before. If the visitor seeks variety and picturesqueness, there is no region in all the world so full of vivid colour, of populous cities of buildings designed by master architects of bygone days of diverse races, of absorbing subjects for study and

observation such as the customs, religions, philosophy and art of one of the oldest civilisations.

To the true lover of nature the botanist and the naturalist, India can offer every charm in forest, mountain, valley, cultivated plain, and wild waste.

To the sportsman, it can furnish sport such as few countries can give, the tiger in the forest, the great mihser in many rivers, the wily snipe on the floods, the strong winged duck, the jinking pig and many another kind.

To the mountaineer the Himalayas offer the highest mountains in the world and some of the few famous peaks which are still unclimbed.

To the statesman, businessman or politician who seeks rest and change without idleness, India presents a sense of busy administration, a nation in the making and an experiment such as has never before been tried.

Bombay itself is cosmopolitan like many of the world's great ports and in it you will find jostling each other in the streets representatives of half the races of mankind. The towers of Silence and the Caves of Elephanta are among the sights to be seen. Elephanta is one of those delightful islands which are freely scattered upon the waters over which Bombay reigns as Queen.

But Bombay is a gateway and through it many interesting trips await the visitor and northwards to Delhi he has the choice of two routes either by the G. I. P. Railway via the Ellora and Ajanta Caves, Sanchi, Gwalior, Agra and Muttra or by the B. B. & C. I. Railway via Baroda and through Rajputana with its famous cities of Mount Abu, Udaipur, Ajmer and Jaipur to Agra and Muttra. If you decide to go by the G. I. P. Railway route you will find at Ajanta frescoes which rival many of the old frescoes found in Europe, while at Ellora are the most wonderful caves in the world, mountains cut into colossal sanctuaries. You will be able to compare the work of the Buddhists, the Jains and the Brahmins and learn more of Indian mythology than many hours of study will give you. At Sanchi are Buddhist buildings dating back to 150 B.C. The stone carvings are remarkable and are well worth a visit. As you proceed further north, Gwalior is reached. The great Fort of Gwalior has been described by Fergusson as the most remarkable and interesting example of a Hindu palace of an early age in India. Seventy miles further on lies Agra and of all the romantic cities of India, Agra must surely come first for it contains that crowning glory in marble the **Taj Mahal**. Generations have come and gone since that far day when that most splendid of emperors Shahjehan bowed his head before his wife's coffin in the vault of the finished Taj. The building is better known than any other in the world. Visit it by moonlight and later by

daylight if you must. By moonlight its seduction is irresistible. Sit on the steps by the entrance gate and watch the moon drift above the trees and the ring of silver light stealing round the base of the dome and creeping gently upwards to the pinnacle. See it also in the fading evening light when amber and rose and gold the sun sinks in the west behind the crenelated ramparts of Agra Fort. If you must visit it in the broad light of noonday then forget the first view from the gateway and wander awhile about the gardens where you will find exquisite glimpses of snowy structures so light and graceful that they seem to rest on air of buoyant cupola and climbing rampant. Here is grandeur as well as beauty.

The Taj Mahal, however, is only one of the many interesting sights of Agra, and its Fort, Itmad ud Daulah's Tomb, Akbar's Tomb 5 miles from Agra, and Fatehpur Sikri the deserted city of Akbar about 23 miles distant are all well worth a visit. No other fortress in the world presents so great an appearance of knightly splendour, of proud and noble dignity or with a more sovereign grace, crowns its red bastions with so wonderful a collection of palaces, mosques, halls of state, baths, kiosques, balconies and terraces as Agra Fort a mile and a half in circumference with walls 70 feet high faced with red sandstone. The vigorous style of decorative architecture that Akbar introduced into his red sandstone palaces was embellished by his grandson Shah Jahan who was largely responsible for the delicate inlay work and the low reliefs in white marble. There are no buildings to equal these except those found in the Palace in Delhi Fort which Shah Jahan built when he transferred his headquarters to Delhi. Akbar's vigorous but supremely attractive style appears at its best in Fatehpur Sikri which he built in his joy at the realisation of his fondest hopes when his son Jahangir was born.

Here in the year 1569 A.D. on a lonely eminence Akbar founded his city and there began to rise as if by magic those great battlemented walls the magnificent palaces and courtyards the great mosque and the other superb specimens of the skill of the Moghul stone masons which stand to this day a source of endless wonder and admiration to visitors.

The traveller moves northward past Muttra and Brindaban, famous places of Hindu pilgrimage due to their association with the birth and early life of Lord Krishna until Delhi is reached. Delhi, the capital of India, in days gone by and now the Imperial Capital of India has no rival in greatness as all men know that he who holds Delhi holds India. Here the visitor will find much that will interest and enthral him. Here he can trace the growth and fall of dynasty after dynasty, here he will find some of the best examples of the work of the Moghul Period at its zenith as he wanders with muffled feet in the great courtyard of the largest mosque in India, the Juma Masjid, or in Shahjahanabad, the Fort and Palace of Shahjahan whose halls rival those of the palace in Agra Fort with their delicate inlay work in marble and their gardens. Here are crumbling memorials of the Mutiny, Hindu Rao's house the Kashmir Gate beneath which some still

salute dead Home and Salkhed as they pass, the tree numbered sites of redoubt and battery, Nicholson's grave, Asoka's pillar, the site of the great Durbār.

Kutab, the first of the so called seven cities of Delhi with its Kutab Minar, 238 feet in height erected in the 12th century A.D. of red and cream sandstone overlooks the plain where many of the pages of history were written. The Kutab Minar, tapering from the base to the summit, is divided by five corbelled balconies while on the fluting is carved an intricate design in which are introduced verses from the Koran. In the main courtyard stands the famous pillar of solid wrought iron devoid of rust and dating back to about 400 A.D. Visitors to Delhi should not miss seeing the Kutab for it is unique in India.

New Delhi the eighth city of Delhi, is worthy to rank with its seven predecessors, Kutab, Siri, Tughlakabad, Jahanabad, Firozabad, Puarana Qila and Shahjahanabad, the present day Delhi. Here you find an example of town planning carried out by some of the leading architects and engineers in the world on a site where they could start with a free hand.

If you decide to take the route northwards from Bombay via Rajputana, then you will see another but equally interesting side of India. Rajputana, the land of chivalry, attracts the visitor as few places do. Alone at Udaipur is there in its perfection the fairy palace of one's childhood, just such a long cataract of marble terraces and halls falling into the waters of a mountain encircled lake as the illustrator of an Andrew Lang fairy book delights to draw.

Mount Abu, the Rajput Olympus, combines the delights of a hill station with one of the historic homes of the gods. The Dilwara Temples the masterpiece of Jain architecture contain some of the finest carvings in India. Forests of marble columns, carved and polished till they resemble Chinese ivories, are linked by flying arches that twist and twine from pillar to pillar like exquisite creepers, softening outlines and producing the effect of a symphony of graceful movement.

Northwards from Delhi is the Punjab and the North West Frontier Province whence most of the recruits for the Indian Army come. Here you will find Amritsar the home of the Sikhs. Lahore, one of the most ancient and famous cities of India, the Khyber Pass, the historic gateway into India from the North the flourishing cities of the Canal Colonies which have risen up since British Engineers have harnessed the waters of the Punjab the Land of the Five Rivers which formerly ran to waste and many another city. Through the Punjab also you will travel to reach Kashmir, famous since the days of the Moghul Emperors.

The glory of Amritsar is the Darbar Sahib (the Golden Temple). The pavements of the sacred tank are all of marble from Jaipur and the tank itself contains a sheet of water 510 feet square. In the midst approached by a marble causeway, rises the Golden Temple, nearly cubical in form and decorated with wonderful richness.

Lahore grew in importance with the dawn of Moghul supremacy when Babar, the founder

of that dynasty, made it a place of Royal Residence, reminiscences of which are to be found to day in the pleasure gardens, tombs, mosques and pavilions of Moghul architectural beauty which have won undying fame for that dynasty here and elsewhere in India

Khyber Pass, the great natural highway into India through the almost impregnable mountain barrier of the North West Frontier, is rich in historical association and has from time immemorial been the route by which conquering hosts have passed into India to disturb the peace of her people and continually alter their destiny. It is still the great trading route between India and the Central Asian States. On Tuesdays and Fridays when the continual string of caravans of great shaggy camels laden with merchandise, accompanied by stern strong and picturesquely dressed men with their women and children from Central Asia are moving to and from Afghanistan, the pass presents a most interesting and unique sight.

Kashmir, described by poets as an emerald set in pearls, is a land of rich forests and upland pastures, of slow flowing rivers and glittering mountain torrents, ringed with an almost unbroken girdle of mountain snow capped all the year. If you can imagine Venice set in the heart of Switzerland that is Srinagar, the capital of Kashmir. Life is good as you glide along the face of the lakes in a houseboat when the lotus flower is out and the banks are one mass of colour with the snow capped mountains in the background. When days are warm on the lakes a trip can be made up the valleys and you can live in Arcady and see the bear in his native haunts and the mountain deer on the hill tops.

For those who have arrived at Delhi via Bombay an interesting return trip can be made via Benares and Calcutta. Many visitors however enter India via Calcutta and from here also many interesting tours can be made.

Calcutta one of the first trading ports of the British East India Company in India was founded by Job Charnock, it is now the second largest city in the Empire. Its public buildings the Indian museum the Fort the Jain Temple the Hindu bathing ghats along the river front, the Hindu shrines, are all worthy of attention.

Before winding your way towards Delhi trips should be made to Darjeeling to see the roof of the world and Mount Everest the highest mountain and to Puri, the home of the famous temple of Jagannath. The ambition of every visitor to Darjeeling is to see Mount Everest the world's highest peak, and in order to do so they must travel some 7 miles away past Ghoom station to Tiger's Hill (8,514 ft.) as from Darjeeling the mountain is not visible. The best time to see sunrise on Mount Everest is in the early Spring or late Autumn. Then at the end you will find a view unequalled in any other part of the world. Twelve peaks over 20,000 feet with the awe inspiring Kanchenjunga in the centre are spread out before you.

Puri also is an easy run from Calcutta. There in front of the gate of the temple is the famous black marble pillar, one of the most beautifully worked things in India with a tiny figure of the

Dawn on its capitol. Incongruous as it may seem, in Puri all caste vanishes. The significance of this can be understood only by those who know India. Once a year the image of Vishnu is carried in procession upon the famous Jagannath cars to the Garden Temple. These cars 45 feet high standing on solid wooden wheels seven feet in diameter, are dragged along by the devotees.

Twenty miles north of Puri, along the sea coast or 54 miles by motor road stands the Black Pagoda at Konarak, the temple of the Sun God Surya.

On the road to Delhi the visitor will travel through the Gangetic plain, one of the most fruitful areas of India. Here he will find cities sacred to the Hindus such as Budd Gaya and Benares, cities intimately connected with the mutiny like Lucknow and Cawnpore and other flourishing cities.

Budd Gaya is one of the most famous and most interesting of all the sacred sites of the Buddhists for it is the scene of the Great Renunciation and the Enlightenment of Gautama afterward named Buddha. It marks the site of his long penance and his final victory over worldly desire.

Benares is reputed to be the oldest city in India, but there is no authentic record how old it is except that it is mentioned in those two great Hindu epics the Mahabharata and the Ramayana which deal with events long before the Christian era. Benares is, however, one of the most holy cities in India for the Hindu and its spiritual significance is shown in the quotation: "Happy is the Hindu who dies in Benares for he is transported at once to Svarga (Heaven) in Paradise on Mount Kailash, north of Lake Manasar where the great three-eyed ascetic seeing the past the present and the future, sits in profound meditation."

Benares rests on the banks of the Ganges and floating down the river in a boat the sight of Aurangzeb's Mosque and the many picturesque temples and ghats recalls to one's imagination through the dim vistas of time the endless processions of devout people wending their way down the narrow lanes to the temples with fragrant garlands to hang round the necks of the gods or to wreath in solemn devotion the emblem of Shiva's divinity.

About 4 to 5 miles away from Benares lies Sarnath where Buddha preached his first sermon after obtaining divine wisdom at Gaya and in the adjoining Deer Park is a Museum of Archaeology of vivid interest.

Lucknow is a city hallowed by memories of a grim struggle of heroic deeds and noble sacrifice, its appeal to the Westerner is influenced by its historical connections, its beautiful buildings and the mysterious glamour so closely associated with the East. Legend connects the founding of the city with Lakshmana, son of King Dasaratha of Avodhya and brother of Rama the mythical hero of the Ramayana, the epic poem of the Hindus, but Lakshmanpur or Lucknow as it is now called was at its greatest under the five Kings of Oudh (1732-1856).

All visitors wend their way to the Residency and pay homage to the gallant band who held it during the Mutiny against terrific odds.

until relieved by Sir Colin Campbell. The deeds of Lawrence who was in command until he was killed and of Havelock who made his historic but unsuccessful attempt to rescue the garrison and was himself besieged are well known.

Cawnpore is one of the most important industrial cities of India and here you will find up-to-date factories, a symbol of the West with the teeming bazaars where business is still carried on as it has been done for generations.

Northern and Central India is, however, not the only interesting part of India and the South can show you sights unlike those in any other part of the World. South India is a land of temples, full of the most wonderful carving while Mysore, one of the most progressive Indian States, can show you fine buildings, falls higher than Niagara and wonderful scenery.

Madras is the capital of the Madras Presidency and the third largest town in India and the Presidency includes that part of India which was one of the first in which English and other foreign nations settled. The visitor will still find in the large houses belonging to the merchant Princes with their far spreading compounds, in the conveyances still used by the local inhabitants and in the scenery, which is the India of the old picture books, traces of what India used to be when first the English settled there.

Mysore commemorates in its name the destruction of Mahasura, a minotaur or buffalo headed monster by Chamundi, the form under which the consort of Siva is worshipped as the tutelary goddess of the ruling family. Mysore State is a picturesque land of mountain and forest presenting the most diversified and beautiful scenery. The Capital which bears the same name as the state is a city with many fine buildings and a visitor to India who wishes to see the working of an up-to-date Indian States situated among wonderful scenery cannot do better than visit Mysore. Elephants range throughout the southern forests and from time to time keddah operations are undertaken when wild elephants are captured in stockades. Tigers, leopards and bears are numerous and bison are found in certain forests. The famous Gersoppa Falls present one of the most beautiful sights of wild untarnished nature to be found in India. Many of the temples contain examples of the finest carving, and Seringapatam famous as the capital of Tipu Sultan and about nine miles from Mysore is well worth a visit. For those who are travelling from Bombay to Colombo an interesting trip can be arranged via Mysore.

At **Madura** and Trichinopoly will be found examples of some of the best and most interesting work in South India.

Madura has been aptly described by European scholars as the 'Athens of South India' and from time immemorial has been the abode of South Indian culture in all its aspects.

It contains one of the finest and largest temples in South India and unlike many other temples the tourist is allowed to wander without restrictions over most of it. Near Shiva's shrine and in

the hall of Mantapam of a Thousand Pillars can be seen some of the finest carving in stone in all the world. The workmanship is so fine the chiselling so delicate that one is lost in silent admiration as one looks at the representations of the Hindu Pantheon and at the graceful figures of men, women and animals.

Trichinopoly is noted for its rock temple and about three miles away is Srirangam with its famous temple which is claimed as the earthly abode of Vishnu the Lord of Creation.

No one visiting India should miss the opportunity of seeing **Burma** for it is a country of extraordinary charm a country of contrasts. Whatever be your hobby, whatever be your interest, be it sport, history, ethnology or botany, or should you be merely fond of beautiful scenery you will find a greater variety in Burma than in probably any other country. You can see huge snowy ranges and alps spangled with rhododendrons and flowers unknown to science. You can find magnificent jungles almost impenetrable to man bordering rushing torrents, or yet against you can see emerald green paddy fields and great winding rivers in the plains. Should you be adventurous and seek the wilder regions, you will find great gaps in the frontier unvisited by civilised men and peopled by head hunters, Chins, Nagas and the fierce Black Lisu. Yet you will also find civilisation in the big cities like Rangoon and Maymyo. Rangoon the capital, is of special interest in that it possesses the famous Shwe Dagon Pagoda, the S cred Golden Pagoda visited by more pilgrims than any other Buddhist Temple in Indo China.

This short account of India is not intended to be comprehensive and does not even mention many of the interesting places to be visited but it is hoped that it will give some indication of the wonderful pageantry, the magnificent buildings of an older age, the sport, and the many things of interest which India and India alone can offer.

December, January and February are the most pleasant months for a visit to India. The days are pleasantly cool and except on the seaboard the nights are cold. India speaking broadly has no winter except in the far north. It is a land of sunshine and colour. But the traveller arriving before November or staying in the country beyond the month of March must expect to find the tropical sun asserting its sway unless he wends his way to fair Kashmir or to one of the hill stations of India. Simla, the summer capital of India, Darjeeling the delightful or one of the many others situated among the hills of India.

Standard Tours

The planning of an itinerary for an Indian or Burman tour will depend upon the port of arrival, the port of departure, personal desires of the party and the time available. Any of the leading tourist agencies such as Thos Cook & Son, Ltd., the American Express Co., Cox & Kings (Agents) Ltd., Army & Navy Stores, Grindlay & Co., Messrs Jeena & Co., Bombay, etc., and the Publicity Officers of all the more important Railways as well as the Manager Indian Railways Publicity Bureau,

57, Haymarket, London and the Resident Manager, Indian Railways Publicity Bureau, 'Delhi House', 38 East 57th Street, New York will work out tours to suit the convenience of individual parties. Many of the leading tourist companies will also arrange for inclusive and conducted tours. There are certain places, which are very well known such as Delhi, Agra, Benares, Darjeeling, Jaipur, the Khyber Pass,

Kashmir and Mysore, but there are innumerable other places almost as well known containing sights which cannot be equalled in other parts of the world. Puri, Lucknow, Amritsar, Udaipur, Mount Abu, Gwalior, Lillora and Ajanta Caves and Madura are a few of them while in Burma, Mandalay and the famous old cities of Ava and Amaraapura nearby are well worth a visit.

HOTELS IN INDIA, BURMA, CEYLON AND MALAYA.

AURA — Cecil, Laurie's Great Northern, Imperial

Air Routes.

Three Air Services pass from Europe through India and onwards to the East Imperial Airways and K L M maintain a regular bi weekly service between Europe and India, and Air France maintains a regular weekly service between Europe and India Imperial Airways Eastbound aircraft arrive at Karachi each Monday and Thursday and Westbound aircraft depart from Karachi each Wednesday and Saturday

2 K L M Eastbound aircraft arrive at Karachi each Saturday and Tuesday, and West bound aircraft depart from Karachi each Saturday and Tuesday The journey between Karachi and London by Imperial Airways is made in 5½ days, and the journey between Karachi and Amsterdam by K L M is made in 2½ days

3 Air France Eastbound aircraft arrive Karachi each Monday, and Westbound aircraft depart from Karachi each Wednesday The journey between Karachi and Paris by Air France is made in 4½ days

4 The particulars of fares weight of baggage allowed and conditions of carriage may be obtained from any travel agent

5 **Indian Air Services**—There are two Companies operating scheduled air lines in India

I Tata Sons Ltd and

II Indian National Airways, Ltd

A Tata Sons Limited (Aviation Department) of Bombay commenced operating a weekly airmail service in 1932 connecting at Karachi with Imperial Airways The route is from Karachi via Bhuj, Ahmedabad Bombay, Hyderabad (Deccan) to Madras During the monsoon June to September this service is operated via Poona instead of via Bombay owing to the fact that Juhu Aerodrome becomes unserviceable during the wet weather From the 1st of January 1935 this service was duplicated and now runs bi weekly In 1935 Tata Sons Ltd established a weekly service from Bombay via Goa, and Cannanore to Irivandrum This service operates during the six winter months every year and closes during the monsoon Both services carry mails and passengers (Under the Empire Air Mail Scheme, which is likely to come into force from 1st October 1937, the frequency of Tata's Karachi Madras service is expected to be increased to four services a week and the service will simultaneously be extended to Ceylon) Negotiations for a service to Delhi via Indore, Gwalior and Bhopal are nearly complete and the Company expects to run a regular bi weekly service to Delhi after the monsoon this year

B Indian National Airways Ltd. with headquarters at Delhi commenced operating in 1933. Regular services were established between Calcutta and Rangoon, Calcutta and Chittagong, and a daily service between Calcutta and Dacca. These services were closed owing to lack of support in 1935. In December 1934 Indian National Airways commenced operating a weekly mail service between Karachi and Lahore under an agreement with the Government of India. On the 1st of January 1935 this service was duplicated to connect with the duplicated Imperial Airways services at Karachi and the route now runs from Karachi *Via* Jacobabad, Multan to Lahore. Northbound aircraft leave Karachi each Monday and Thursday and Southbound aircraft arrive Karachi each Wednesday and Saturday. The time table is shown below—

Hill Stations

In India especially during the months of April and May, and at Christmas time, everybody tries as much as possible to take a holiday in the hills. Being anything from 2,000 to 8,000 feet above the level of the sea and difficult of access for motor traffic, the hill stations are delightfully cool and peaceful. Here one can usually ride, walk, play tennis and golf, or simply laze in beautiful surroundings and forget all about the trials of work and prickly heat. These are the principal hill stations in alphabetical order—

Darjeeling (8,000 ft)—From Darjeeling the highest mountain peaks in the world can be seen. The temperature averages 2° above that of London all the year round, that is, it neither exceeds 80° in summer nor falls below 30° in winter. Darjeeling is the summer seat of the Government of Bengal. To reach it, the traveller must start from Calcutta by taking train to Siliguri, a journey of 10 hours. From Siliguri the journey is completed either by motor or hill railway in about 6 hours. The principal hotels in Darjeeling are the Mount Everest, the Grand (Rockville) and the Park.

Kangra Valley—The Kangra Valley is situated about 100 miles east north east of Lahore at the foot of the Dhaul Dhar Range of the Himalayas. There are magnificent landscapes and many historic temples and buildings. The visitor must take train from Lahore to Pathankot where he changes over the newly opened narrow gauge railway running between Pathankot and Jogindarnagar in Mandi State. Places to stay at are Dalhousie, Dharmasala and Kangra. The best hotels at Dalhousie are Stiles's Grand View and the Arra Moor, and at Dharmasala the Switzers.

Kashmir—Perhaps the most famous beauty spot in the world can be reached by taking train (either G I P or B B & C I) from Bombay to Rawalpindi (about 48 hours) whence the remainder of the journey is accomplished by motor. The average height of the valley is about 6,000 feet, and it is entirely surrounded by the lofty, snow-capped ranges of the Karakoram and Himalaya. Visitors usually stay either at Srinagar or Gulmarg. At Srinagar one can live at Nedou's Hotel or in boarding houses, or one can hire a houseboat and live on the River Jhelum. At Gulmarg Nedou's is the only hotel. As at Srinagar visitors usually take up their quarters in wooden huts rented through the Srinagar agencies or in tents.

Kodaikanal (7,000 ft)—Regarded by many as the most beautiful of South India's hill stations, it is situated on the precipitous southern side of the Palni Hills overlooking the plains. Reached by metre gauge from Madras to Kodaikanal Road and thence by a 4 hours motor run. The Carlton is the principal hotel. There are also boarding houses.

Matheran (2,500 ft)—The nearest hill station to Bombay, ideal for walkers and anybody wanting rest and quiet. Reached by taking train from Victoria Terminus, Bombay, to Neral (about 1½ hours) whence Matheran may be reached by hill railway (2 hours) or by pony, rickshaw, or on foot by a good walker. Stay at the Rugby Hotel.

Mahabaleshwar (4,500 ft)—Until recently, when expenditure had to be cut down, the summer seat of the Government of Bombay. Those who do not motor the whole way from Bombay a distance of about 180 miles, usually take train to Poona and then hire a car from Poona to Mahabaleshwar. Mahabaleshwar is noted for its delightful vegetation, orchids and lilies bloom in April and May. Hotels—Race View and Frederick.

Mount Abu (4,500 ft)—An ideal place for combining the pleasures of a mountaineering holiday with the interests of an archaeological excursion. Reached by B B & C I trains to Ahmedabad, thence by metre gauge to Abu Road, whence the journey is completed by car. The Kalyutana Hotel is recommended. There is also a Dak Bungalow containing four furnished rooms, permission to use which must be obtained from the Assistant Engineer, P W D, Mount Abu.

Murree (7,000 ft)—The summer headquarters of the Northern Command. Magnificent views and walks. Visitors take train to Rawalpindi whence they complete the remaining 37 miles by car. The principal hotels are the Cecil and the Viewforth.

Mussoorie (7,500 ft)—Much frequented on account of its exceptionally fine climate. Reached from Bombay by G I P or B B & C I trains to Dehra Dun, a journey of 35½ hours, where it is necessary to change over to motor which reaches Mussoorie about two hours later. The leading hotels are the Cecil, Charleville, Hackman's Grand, and the Savoy.

Naini Tal (6,500 ft)—Is the summer residence of the Governor of the United Provinces. From Bombay there are two ways of getting there. The first is to take either G I P or B B & C I train to Muttra, thence by metre gauge to Kathgodam, and thence by motor (2 hours). The second route which takes about 5 hours longer is to take G I P train to Lucknow and then change over to the metre gauge railway. The Grand, Metropole and Royal are the best hotels.

Ootacamund—Familiarly known as Ooty, is situated on the famous Nilgiri Hills at an altitude of 7,500 feet. The mean average of temperature for the year from sunrise to sunset is 57.33 degrees. Ootacamund is the administrative centre of the District and the seat of the Government of Madras for six months of the year from April to September. Reached either by taking train to Mysore (40 hours from Bombay) and then changing to motor car for five hours, or by taking train to Mettupalayam via Madras and thence by hill railway to Ootacamund. The principal hotels are the Savoy and Cecil.

Pachmarhi (3,500 ft)—Situated on a plateau in the Mahadeo Hills, is the summer quarters of the Government of the Central Provinces. A delightful hot-weather health resort. Reached by G I P railway to Pipariya via Jabulpore, and a two hours' motor journey. The best hotel is the Hill.

Simla (7,000 ft.)—The summer headquarters of the Government of India, is situated on several small spurs of the lower Himalayas. Towards the end of September, and in October and November Simla enjoys the best climate in the world. Reached from Bombay by taking

G I P or B B & C I train to Kalka and thence either by hill railway or motor. There are many good hotels and boarding houses. The leading hotels are the Cecil (Clarks), Cloristophins Grand Gables (at Mashobin) and Wildflower Hall (Mahrasu).

CLIMBING IN THE HIMALAYAS

Owing to their immensity and the time and cost involved in undertaking expeditions into the Himalayas a great deal of mountaineering and exploration remains to be done in the world's highest mountain range. There are over fifty summits of 25,000 ft. and of these only one, Kamet (25,447 ft.) has been scaled, whilst there are innumerable lesser summits of such formidable difficulty, owing to the comparatively recent geological formation of the range, that judged by modern mountaineering standards the majority are inaccessible. The highest peak is Mount Everest, which by latest measurements is 29,141 ft. Next come Kanchenjunga and K2, both about 28,150 ft., though which is the higher of the two is not certain.

Pioneer Climbers—Mountaineering in the Himalayas began some eighty years ago when surveyors crossed high passes and scaled peaks in the course of their work. Among these pioneers must be mentioned the Schlagintweit brothers, who in 1855 reached a height of 23,229 ft. on the Eastern Tbi Gamin, one of the subsidiary peaks of Kamet, whilst I. S. Pocock of the Survey of India set up a plane table at 22,040 ft. in the same district. Another notable early explorer was the famous botanist Sir Joseph Hooker who, in 1849, explored the Sikkim valleys of Kanchenjunga and made attempts to climb Kanchenjunga, 22,700 ft. and Paulunri, 23,180 ft. Some remarkable explorations were also carried out by the Pandits of the Survey of India. Among these men was Babu Sarat Chandra Das who traversed the Jonsong La, 20,200 ft.

Later in the nineteenth century came Sir Martin (now Lord) Conway who, in 1892, made explorations in the Karakoram Himalayas particularly in the region of the Baltoro Glacier the greatest of Himalayan glaciers and climbed a peak of 23,000 ft. Sir Francis Younghusband also made explorations in the Karakoram and accomplished the first crossing of the Karakoram Pass. The Duke of the Abruzzi also made a number of expeditions into this range and reached a height of 25,000 ft. on the Bride Peak. Mountaineering developed rapidly in the twenties, and a bold attempt was made by A. F. Mummery, Professor N. Collie and Brigadier General the Hon. C. G. Bruce to climb Nanga Parbat. In a final attempt on the mountain Mummery and his two Gurkhas were lost. In 1899 D. W. Freshfield made the first circuit of Kanchenjunga and explored the Nepal side of the mountain.

A New Phase—Meanwhile, thanks to Brigadier General Bruce, Gurkhas, and later Sherpas and Bhotis were trained for mountaineering and, with the advent of first class portage, Himalayan mountaineering entered on a new phase. Dr and Mrs Bullock Workman made a number of expeditions into the Karakoram and W. W.

Graham made a number of remarkable ascents with Swiss guides, including an ascent of K2, 24,000 ft., which has been the subject of much controversy. K2 was later attempted by two Norwegians, Messrs. Rubenstein and Monrad Aas who got within a few feet of the top.

The present century opened with a number of remarkable ascents by Dr A. M. Kellas, who died during the 1921 Everest expedition. He climbed several great peaks including Kanchenjunga, Paulunri and Chomomo and made expeditions to the Central Himalayas where, with Colonel H. T. Morshead he reached in 1920 an altitude of 23,500 ft. on Kamet.

In 1907 Brigadier General Bruce, Dr F. G. Longstaff and A. L. Mumm explored the Gubwal Himalayas and reconnoitred Kamet. After this Longstaff, with the Swiss guides Alexis and Henri Brocherel, ascended Trisul 23,406 ft. which, until the Jonsong Peak, 24,344 ft., was climbed in 1930 remained the highest summit reached. In 1911 and 1912 attempts were made to climb Kamet by C. E. Mace and his Swiss guides and a height of 23,500 ft. was gained. Captain Morris Slingsby also attempted Kamet at this time.

Attempts on Kanchenjunga—The first attempt on Kanchenjunga was made in 1903 but ended in disaster. Lieut. Pirche and three porters being killed by an avalanche. The second attempt in 1929 was made by a solitary American, L. E. Farnum, who lost his life. In the same year a determined attempt was made by a party of British Mountaineers led by Paul Bauer. A height of over 25,000 ft. was reached on the north-east spur before bad weather forced the party to retire.

In 1930 a fourth attempt was made by an International Expedition led by Professor G. Dyhrenfurth. The party attempted the mountain from the Nepal side, but were repulsed by an ice avalanche which killed one of the porters. Subsequently they ascended a number of peaks including the Ramthang Peak, 23,200 ft. and the Jonsong Peak 24,344 ft.

The fifth attempt in 1931 was made by Banner and his party, but failed at a slightly greater elevation than was attained in 1929. One of the party, H. Schaller and a porter were killed by a fall during the expedition.

In the summer of 1931 a party of young British climbers led by Mr. F. S. Smythe succeeded in reaching the summit of **Mount Kamet** (25,447 ft.) the first peak over 25,000 ft. to be climbed.

Mount Everest—A description of the attempt to climb **Mount Everest**, the highest mountain in the world may be divided under three headings: the reconnaissance expedition of 1921, the first attempt in 1922 and the second in 1924.

The preliminary expedition for the reconnaissance of the approaches to Mt. Everest, carried out its work in the most complete manner under the leadership of Lt. Col. C. K. Howard Bury. The approaches to Mt. Everest on all its northern faces were thoroughly examined, and relations were established with all the local authorities. On the information and experience of the reconnaissance expedition the second expedition to Everest was organised and set off the following year under the leadership of Brig. Gen. the Hon. C. G. Bruce. Capt. G. I. Finch and Capt. J. G. Bruce succeeded with the help of oxygen in reaching the height of 27,300 ft. During this expedition seven men were killed when an avalanche swept them over an ice cliff some 60 feet high.

The 1924 expedition was again commanded by Brig. Gen. Bruce. But owing to his ill health Lt.-Colonel F. E. Norton took on the command. It consisted of F. E. Norton and Dr. T. H. Somervell reached a height of 28,200 feet. Then a final attempt was made by G. L. Mallory and A. C. Irvine. They were assisted by a supporting party consisting of N. E. Odell and J. de V. Hazard. On June 6th they left the 25,000 feet camp with three porters who carried loads for them up to 26,800 ft. On June 8th they left camp for their attempt and were never seen again. On June 10th for the third time Odell climbed up to the 27,000 feet camp but could find no sign of Mallory and Irvine, and communicating with Norton evacuated the mountain.

The expedition of 1933 followed a successful effort by Lt. Col. J. L. R. Weir, Political Officer in Sikkim to obtain the permission of the Tibetan Government for a further attempt to climb the mountain. An Everest Committee was formed under the aegis of the Royal Geographical Society and the Alpine Club and Mr. Hugh Rutledge, formerly of the I.C.S., accepted its invitation to take charge of an expedition. Included in its members were Mr. E. S. Smythe, leader of the successful Kamet Expedition of 1931, and Capt. T. St. J. Birnie, F. E. Shipton and Dr. C. R. Greene climbed Kamet with Mr. Smythe in 1931. The Expedition reached Calcutta in February and forthwith proceeded to its main task.

The expedition established its base camp in the Rongbuk Valley on April 17th and on April 21st Camp I was established. Thenceforward the expedition was dogged by exceptionally bad pre-monsoon weather which greatly hindered the establishment of camps and made the ascent to the North Col 23,000 ft. prolonged and arduous work. Camp IV, 22,800 ft. was not established until the middle of May after a 40 feet ice wall on the North Col slopes had been climbed. The expedition was equipped with wireless which enabled weather reports to be received from the meteorological authorities at Alipore. One installation was at Darjeeling, one at the base camp and a third at Camp III, 21,000 ft. Camp III was linked to the North Col by field telephone so that messages could be received up to 23,000 ft. from the plains of India in a short space of time.

Owing to a series of blizzards and high winds Camp V was not established until May 22nd.

But it was pitched at 25,500 ft. several hundred feet higher than previously. The party was then cut off for three days by a furious blizzard and eventually had to retreat to Camp IV. The Camp was re-established on May 28th and on May 29th Wyn Harris, L. Wager and J. B. Longland continued the ascent and finally pitched Camp VI at 27,400 ft., 600 ft. higher than in 1924, after a magnificent effort on the part of the porters. Longland then brought the porters down but had a terrible time in a blizzard and only by exercising great mountaineering skill steered them down to Camp V. The following morning Wyn Harris and Wager made a reconnaissance of the route to the summit and failing to discover a route along the crest of the north east ridge finally followed the same route as Norton in 1924. They were stopped by dangerous conditions at 28,100 ft. and returned to Camp VI where they met Shipton and Smythe who had come up from Camp V after which they descended to Camp V. The following morning Shipton and Smythe were unable to leave Camp VI owing to a high wind but on June 1st they made their attempt on the summit.

An hour and a half after leaving the Camp Shipton had to return owing to some internal trouble. Smythe carried on alone and reached approximately the same point as Wyn Harris and Wager before he was forced to retreat owing to the deep powdery snow resting on the steep slabs. Shipton descended to Camp V the same day in very bad weather and Smythe spent a third night at Camp VI descending to Camp IV next day in a blizzard. Owing to foot-blisters, strained hearts, and high altitude deterioration the party had to retire to the base camp. A week later they returned to Camp III to make another attempt. Owing however to the breaking of the monsoon this had to be abandoned and the expedition returned to Darjeeling.

An extraordinary attempt to climb Everest was made in 1934 by Maurice Wilson, a young airman. Having penetrated Tibet in disguise he marched to Everest and with a few porters succeeded in reaching 21,000 feet. He then went on alone and nothing more has since been heard of him until his body was discovered near the site of Camp III, 21,000 feet, by Mr. E. E. Shipton's party in 1935.

The 1936 Expedition was led by Mr. Hugh Rutledge and included three of the 1933 climbers Messrs. Shipton, Smythe and Wyn Harris and one of the 1933 Signals Officers, Lieut. Smyth Windham. It encountered exceptionally bad weather and unusual conditions. Before the monsoon snowstorms rendered the mountain unclimbable and the usual pre-monsoon north-west wind was backing to clear the snow away. However, Camp IV on the North Col was established as scheduled and the party were in position to attack the summit when the weather broke and two feet of snow forced them to retreat down the dangerous slopes of the North Col. To cap this discomfort the monsoon arrived on the exceptionally early date of May 24th. Two attempts were made to reopen the route to the North Col but on both occasions the party were in great danger and the attempt had

to be abandoned when Shipton and Wyn Harris were carried down by an avalanche and nearly lost their lives. Subsequently reconnaissance parties ascended the main Rongbuk glacier and examined the west side of the North Col which in spite of Mallory's unfavourable verdict was found to be not only practicable but also dangerous in monsoon conditions than the east side.

A SEVENTH EXPEDITION TO MOUNT EVEREST is being planned for 1938 the Tibetan Government again having given permission through Mr B. T. Gould, the Political Officer for Sikkim who has been on a mission to Lhasa. It is probable that this expedition will be a small one as it is now believed by most mountaineers that a small expedition by virtue of mobility is well suited for psychological reasons has a better chance of success on Everest. It is probable that 1936 marks the end of a stage in Himalayan mountaineering and that this in the future will revert to small privately organised expeditions which have been so successful in the past.

Early in 1935 the Tibetan Government granted permission for a further attempt to take place from June 1935 to June 1936 inclusive.

As there was no time to organise an attempt on the summit it was decided to send out a small party under the leadership of Mr L. E. Shipton. This had as its objects: Collection of data as to monsoon snow and weather conditions, examination of alternative routes from the west the trying out of new men for the summit attempt, physiological observations, a stereo photogrammetric survey, examination of meteorological data on the North Col.

This expedition proved that Everest cannot be ascended during the monsoon and that the only hope of an ascent is during the period immediately before the monsoon.

Conditions during the monsoon are extremely dangerous and the party had a narrow escape from an enormous avalanche that fell from the slopes of the North Col.

During the course of this reconnaissance two dozen peaks over 20,000 feet high were recorded.

Aerial Expedition—An interesting aside to the exploration of Everest was an aerial expedition undertaken in 1933 for the purpose of photographing the mountain from the air. This venture was financed by Lady Houston. Major L. V. S. Blacker, formerly of the Guides, was its leader and in charge of its survey work, Lord Clydesdale, chief pilot, Lt. Lt. A. McIntyre second pilot and Major P. T. E. Horton, its London manager. Two specially equipped aeroplanes, adaptations of the well known Wapiti, were provided. A special point in their equipment was the provision of compressed oxygen for supply through gas masks to the aviators at high altitudes. The expedition was not permitted to fly across the Tibetan frontier, so as to circle Mt. Everest, but both machines successfully flew over the peak and several good photographs were taken of it. By permission of the Nepal Government a line of flight from Purnea, the base of the expedition, across Nepal territory to Mt. Everest was taken and along this good survey photographs as the somewhat poor visibility at the time of the flight, in April, permitted.

An interesting mountain flight of which details were published in 1933 was one from Raisalpur to Gilgit and back undertaken by the R. A. F. at Raisalpur in the course of its routine duties in October, 1932. The expedition was commanded by F. Lt. Isaac and was made by five of the machines ordinarily in use by the Force. The distance from Raisalpur by way of the Indus Valley and past Nanga Parbat to Gilgit is 236 miles. It was covered in 2 hrs. 20 mins. on the outward flight and in 2 hrs. 5 mins. on the return journey. From Gilgit the machines further proceeded upon flight over the Hunza, Nagar and Rakjot areas. Brilliant photographs of Nanga Parbat and Rakaposhi as well as of other places of importance or interest were taken.

The year 1932 saw a well organised expedition to **Mount Nanga Parbat**. It was conducted by Dr. Merkl of Munich and included Lt. R. N. Frier of the Gilgit Scouts who acted as transport officer, an American Mr. Rand Herron and Miss J. Knowlton of Boston U.S.A. Several determined attempts to reach the summit of the mountain in August were brought to an end by the break-up of the weather before they attained success.

The Disaster of 1934—In 1934 Herr Merkl returned to the attack with an even stronger party, which included a number of well known German and Austrian mountaineers and Captains Frier and Singler of the Indian Army as transport officers. Fatality early overtook the expedition Herr Drexel dying of pneumonia. Owing to various delays Camp IV was not established until the end of June. The party then proceeded to rush to the peak leaving only skeleton camps behind. Finally after a height of 25,600 feet had been reached and Camp VIII established at 24,800 feet a terrible blizzard broke. The party retreated but owing to the storm and ill equipped camps retreat became a route during which no fewer than nine lives were lost. Herren Merkl, Wenzelbach and Wieland and six Darjeeling porters men who had accompanied the 1933 Everest Expedition. Of the Europeans only the two Austrians Herren Schneider and Aschubienner escaped whilst of the surviving porters all of whom were frostbitten. One or two spent a week without food or shelter.

This is the worst Himalayan mountaineering disaster that has yet occurred.

Another expedition to the Karakoram took place in 1934 under the leadership of Dr. G. Dyhrenfurth. All four peaks of Queen Mary were climbed. The highest of these has been triangulated as 24,340 feet but the party state it to be more than 1,000 feet higher.

In 1934 Messrs F. L. Shipton and H. W. Filman, by a magnificent piece of exploration and mountaineering succeeded in penetrating the hitherto impenetrable Kasha Gunga to the glacier basin of **Nanda Devi**, thereby solving a problem that had vexed the minds of Himalayan mountaineers for many years and completing the work of pioneers such as Dr. J. G. Longstaff and Mr. Hugh Ruttledge. Messrs Shipton and Filman also crossed from Badrinath to Gangotri via the Satorath Pass and explored the head of the Gangotri Glacier. Profiting by the discovery of the route to the Nanda Devi basin

an Anglo American party led by Professor T. Graham Brown of the Physiological Institute, Cardiff successfully scaled Nanda Devi via its south west ridge. Messrs H. W. Filman and N. F. Odell being the climbers to reach the summit. This expedition was remarkable in that owing to the sickness of the porters the climbers had to carry their own camp up the mountain. This is the finest and most difficult peak yet climbed in the Himalayas.

Lt Col. C. F. Stoehr, R.E., and Lt D. M. Burn, R.E. lost their lives on 12th August 1932, while climbing on Panjtarni, near Pahigam in Kashmir.

Several expeditions have lately been made into the Himalayas by members of the Himalayan Club, especially expeditions into Sikkim by members of its Eastern Section.

In 1935 an attempt to scale a Peak 36, 25,400 feet in the western Karakoram was made by Lieut. J. Walker, Lieut. T. Hunt, Dr. T. S. Carslaw and W. R. Brotherhood, R.A.F. A series of blizzards were experienced but the party reached a height estimated as 24,500 feet. There is no great difficulty between this point and the summit.

In the Autumn of 1935 the summit of Kabru was reached by Mr. C. R. Cooke who was accompanied to the foot of the final rocks by Mr. G. Schobirth who was forced to give up owing to a high altitude cough and the risk of frostbite. This ascent was made on November 18th, an unusually late date and is of great interest in proving that high Himalayan peaks can be climbed in early winter at least.

The 1936 French expedition to the Karakoram like the Everest expedition encountered very bad weather and accomplished little.

After Nanda Devi the most remarkable ascent of 1936 was that of SINOCHU, a peak once designated as the embodiment of impenetrability in the Kachhounjia range. This was made by a small German party under the leadership of Herr Paul Bauer. Sinochu is one of the most beautiful peaks in the Himalayas.

Other ascents in Sikkim were made by Mr. Marco Pallis's party who attempted Simvu unsuccessfully and by Mr. C. R. Cooke and Mr. F. Spencer Chapman who ascended several peaks of over 20,000 feet including the Eluted Peak.

In May 1937 another attempt was made to climb Nanda Parbat by a German expedition headed by Dr. Wien. News reached Simla on June 20 that disaster had overtaken the expedition and subsequently it was learned that the entire party of climbers with the exception of one survivor Dr. Luft had perished. Eight of the nine members of the expedition were killed along with nine Gurka porters. Mountaineering experts are of the opinion that the season was not very propitious for the ascent of the peak which is considered to be more accessible in the autumn.

THE SURVEY OF INDIA are now very active and Major Osmaston and Mr. E. B. Shipton spent the summer and autumn in Garwal and Kumaon. Mr. Shipton and Lilian are to make an expedition for surveying purposes to the Shik-gam in 1937 whilst Captain P. R. Oliver and Mr. J. S. Smythe are planning an expedition to Garhwal and Kumaon and if permission is obtained to Kailas and Gauri Mandhata in Tibet.

The Himalayan Club—Was founded on 17th February 1928, at New Delhi with the object of encouraging and assisting Himalayan travel and exploration and extending knowledge of the Himalayas through science, art, literature and sport. The initiation of this Club was due to the Hon.ble Sir Geoffrey Corbett, Secretary, Commerce Department of the Government of India and to Major Kenneth Mason, M.C., R.E. Assistant Surveyor General. Its membership is over 350 including three lady members and its president is Sir Henry Hugh Governor of the United Provinces. Major Gueterbock is Hon. Secretary.

TIDAL CONSTANTS

The approximate standard time of High Water may be found by adding to or subtracting from the time of High Water at London Bridge given in the calendar, the corrections given as below—

The New Capital.

The transfer of the capital of India from Calcutta to Delhi was announced at the Delhi Durbar on December 12, 1911. It had long been recognised as necessary, in the interests of the whole of India, to de-provincialise the Government of India, but this ideal was unattainable as long as the Government of India were located in one Province, and in the capital of that Province—the seat of the Bengal Government—for several months in every year. It was also desirable to free the Bengal Government from the close proximity of the Government of India which had been to the constant disadvantage of that Province. To achieve these two objects the removal of the capital from Calcutta was essential. Its disadvantages had been recognised as long ago as 1868, when Sir Henry Maine advocated the change. Various places had been discussed as possible Capitals, but Delhi was by common consent the best of them all. Its central position and situation as a railway junction, added to its historical associations told in its favour, and, as Lord Crewe said in his despatch on the subject, "to the races of India, for whom the legends and records of the past are charged with so intense a meaning, this resumption by the Paramount Power of the seat of venerable Empire should at once enforce the continuity and promise the permanency of British sovereign rule over the length and breadth of the country."

The foundation stone of the new capital was laid by the King Emperor on December 15, 1911, the finally selected site being on the eastern slopes of the hills to the south of Delhi on the fringe of the tract occupied by the Delhi of the past. The land chosen is free from liability to flood, has a natural drainage, and is not manworn. It is not cumbered with monuments and tombs needing reverent treatment, and the site is near the present centre of the town of Delhi. A Committee consisting of Surgeon General Sir C. P. Lukis, Mr H. T. Keeling, C.S.I., A.M.I.C.E., and Major J. C. Robertson, I.M.S., was appointed to consider the comparative healthiness of the site and of an alternative one to the North of the existing city. Their report, dated 4th March, 1913, states that "the Committee, after giving full consideration to the various points discussed in the above note, is bound to advise the Government of India that no doubt can exist as to the superior healthiness of the southern site, the medical and sanitary advantages of which are overwhelming when compared with those of the northern site."

The Town Plan and Architecture—A report by a Town-Planning Committee, with a plan of the lay-out, was dated 20th March 1913. Work was begun in accordance with it and its main lines have been followed throughout. The central point of interest in the lay-out, which gives the motif of the whole, is Government House, and two large blocks of Secretariats. This Government centre has been given a position at Raisina hill near the centre of the new city. Sir Edwin Lutyens is the architect for Government House and Sir Edward Baker for the Secretariats. The former building is

estimated to cost approximately Rs 140 lakhs and the latter groups were originally estimated to some Rs 124 lakhs. The provision made in the design of the Secretariats for extensions in case if used has already partly been utilised. The Secretariat personnel has largely increased in the past few years and numerous additional rooms had to be provided to make room for Army Headquarters, which moved into the new capital at the end of the Simla season, 1929. To the east of the forum, and below it, is a spacious forecourt defined by an ornamental wall and linked on to the great main avenue or park way which leads to Indrapat. Across this main axis runs an avenue to the shopping centre. Other roads run in different directions from the entrance to the forum. The axis running north-east towards the Juma Masjid forms the principal approach to the new Legislature Chambers. They are officially described as the Council House and the road is named Parliament street. The railway station for the new city finds its place about half way between the old and new cities off the road through Pahargunj which lies to the west of Old Delhi in the direction of the Ridge. The main roads or avenues range from 76 feet to 150 feet in width with the exception of the main avenue east of the Secretariat buildings where a parkway width of 1,175 feet has been allowed. The principal avenues in addition to the main avenues are those running at right angles to the main east to west axis.

In October, 1912, by proclamation, there was constituted an administrative enclave of Delhi under a Chief Commissioner. This enclave was entirely taken from the Delhi district of the Punjab and its total area is 573 square miles. On the basis of the Census of 1911, the population of the area originally included in the Province was 398,269 and of the new area 14,552, or a total of 412,821. The population of the Municipal town of Delhi was 2,29,144. The plans of the New Capital allow for a population within it of 70,000. Its present population is approximately 40,000. Sites have been allotted for forty Ruling Princes and Chiefs to build houses for their own occupation during their visits to the new city, and several of these habitations have been erected.

There was, as regards architecture, a prolonged battle of the styles' over Delhi. Finally, to use the language of the architect, it has been the aim 'to express within the limit of the medium and of the powers of its users, the ideal and the fact of British rule in India, of which the New Delhi must ever be the monument.' The inspiration of the designs is manifestly Western, as is that of British rule, but they combine with it distinctive Indian features without abandoning the architect's aim to avoid doing violence to the principles of structural fitness and artistic unity.

Cost of the Scheme—It was at first tentatively estimated that the cost of the new capital would be four million sterling and that sum was given in the original despatch of the Government of India on the subject. Various factors afterwards increased the amount, the chief of these being the immense rise in

places since the war, and the Legislative Assembly were informed by Government on 23rd March 1921, that the revised estimates then amounted to 1,307 lakhs of rupees. This amount included allowances for building new Legislative Chambers and Hostels for Members of the Indian Legislature, which were not allowed for in the earlier estimates. The New Capital Enquiry Committee, in its report published in January 1923, estimated the total expenditure at Rs 1,292 lakhs including Rs 42 lakhs for loss by exchange. Actual expenditure upto approximately the end of 1929 was Rs 14 crores. This may be taken as the figure for the completion of the main project.

The Project Estimate contains certain items such as land, residences, water supply, electric light and power, and irrigation on which recoveries in the form of rate or taxes will, in addition to meeting current expenditure, partially at any rate cover the interest on the capital outlay whilst there are other items on which some return on account of the sale of leases, general taxes and indirect receipts is secured. The project after being completed and closed, was reopened in 1933-34. This became necessary owing to the need to increase residential accommodation for officers and staff and facilitated by a period of cheap money. Government utilised the occasion for extending the residential accommodation for visiting members of the Indian Legislature. The population of the new city is now about 80,000. Practically all the building sites within it (except in a small area where shortcomings in drainage are a handicap) are taken up and the time for extending the layout is almost arrived.

Progress of the work—The construction of New Delhi was made it satisfactory speed having regard to the curtailment of the Budget allotment in consequence of the war and the absence of officers and other establishments at the war. The Secretariats were so far advanced that there were transferred to them from Calcutta in October, 1924, the offices of the Accountant General, Central Revenues and the headquarters of the Royal Air Force in India were also housed in them in the winters of 1924-25 and 1925-26. The original programme of residential buildings for Government officers and staff of various grades were then nearly completed. The whole of the civil side of Government moved from Old Delhi into their quarters in the new Secretariats on coming down from Simla in November, 1926. All Government Departments, including the Army Departments and Army Headquarters and R. A. F. Headquarters, have their offices in the new Secretariats, of which the builders have already had to carry out the first section of the extension provided for in the architects' plans. The Members of H. E. the Viceroy's Executive Council including H. E. the Commander in Chief, live in their new official residences in the new capital. H. E. the Viceroy took up his residence in the new Government House there on 23rd December 1929. His Excellency until then resided in the Delhi season at Viceregal Lodge in Old Delhi. The Government of India in 1927 devoted special consideration to the question whether their ordinary annual 5 months residence in Delhi should be extended each year to 7 months

and early in 1928 decided in consultation with the India Office to endeavour to stay in Delhi for half of each year, the new order being introduced for trial in 1928 by keeping the Secretariat in New Delhi till mid April and bringing it down Simla from again in mid October. The experiment was not very successful and was not repeated till 1932-33 when Retrenchment Committees had strongly recommended a longer stay in Delhi in order to extract rent for a longer period from the seasonal official occupants of its residential buildings, the rents in Delhi being higher than those for residences in Simla. It remains to be seen whether the consequent profit will exceed the additional general expense of keeping staff down in the heat. An early descent from Simla to New Delhi was postponed in the autumn of 1931 on account of a report by the Public Health Commissioner on the general unhealthiness of the Winter Capital in October. But various factors including especially the increasing length of the winter Legislative Session are tending to override argument and make prolongation of the Delhi Season in the spring necessary.

There has in recent years been an increase in malaria-biting mosquitoes and consequential fever in New Delhi. This led to a special inquiry in 1936. The inquiry showed that both Old and New Delhi are ringed about with prolific mosquito breeding places, one of the worst being the area utilized for sewerage outfall. The water borne sewage of both Old and New cities is dealt with in a farm which when the new city was built was placed immediately outside its southern boundary. The Government of India after the 1926 inquiry were forced to adopt a new scheme for the removal of the farm to a more distant site and chose one some four miles further away from the city. Anti malaria operations on a large scale, scientifically directed, are now in progress.

Art Decorations—The Government of India in 1927 approved a scheme for the encouragement of Indian artists by providing facilities for the decoration of certain buildings in New Delhi. The outlines of the scheme are briefly as follows. A certain number of domes and ceilings in the New Secretariat Buildings at Delhi suitable for decoration were selected. The various schools of art in India, as well as individual artists, were invited through local Governments, to send in by the beginning of March 1928 small scale designs for approval by a Committee. After approval by the Committee both as regards the design and colour the pictures were to be drawn out and painted to full size on canvas, and, if finally approved by the Committee fixed according to the maroufuge process *in situ*. Other techniques, such as fresco or tempera, were optional. Artists or schools of art, who sent in small scale drawings had to bear the initial expense of preparing them. When these were approved by the Committee, the out of pocket expenses paid in addition to a suitable honorarium Government undertook to pay for the finished pictures done from approved sketches but gave no guarantee that the finished paintings will permanently be preserved. Government intimated that historical or allegorical subjects would be given preference over religious ones and English artists living in India

were barred from competition, the work being strictly reserved to Indian artists. Numerous artists submitted designs, especially those of Western India, and with such satisfactory results that the specially appointed Expert Committee approved of nearly all. A great deal of painting has now been completed and the work was continually progressing until the world wide depression in recent years dried up funds.

All India War Memorial—H. R. H. the Duke of Connaught on 10th February 1921, laid the foundation stone of an All India War Memorial at the southern end of the Central Vista. The place chosen is a fine position in the centre of the circular Princes' Park and the construction of the building was for economy's sake proceeded with slowly. The memorial was formally inaugurated by Lord Irwin in February 1931 in the presence of representatives of every unit of the army in India of the Royal Air Force and of a large concourse of official and other spectators.

George V Memorial—It was decided in 1936 to erect a memorial statue to His Late Majesty, King Emperor George V in Princes' place, the large park like area lying between the All India War Memorial and the Purana Qila. The origin of this proposal was a movement started among the Ruling Princes sometime previously to erect a white memorial statue to His Majesty in the new city and this scheme had made considerable progress when His Majesty died. The matter was then considered in a broader light and in consultation between their Highnesses and His Excellency the Earl of Willingdon. The Princes agreed to merge their scheme in a larger one for an All India Memorial to His Late Majesty. H. R. H. the Viceroy issued an appeal for subscriptions to the major scheme and he and Her Excellency the Countess of Willingdon opened the general subscription list with a donation of Rs. 5,000. Sir Edwin Lutens was invited to submit a design for a memorial and His Excellency the Viceroy and the representatives of the Ruling Princes inspected Princes' place with a view to a statue being erected there and in particular had a temporary wooden structure erected so that they might judge how a statue of the same dimensions would appear from different viewpoints. The statue of His Late Majesty is to be in bronze and will show His Majesty seated under a lofty canopy.

Public Institutions—It was proposed during 1914 that a higher college for Chiefs should be established at Delhi and in this connexion a conference of Chiefs and Political Officers was held at Delhi at which the Viceroy presided. The proposal is still "under consideration" to implement it would require an estimated capital outlay of Rs. 12½ lakhs.

The Government of India further in the Spring session of their Legislature in 1922 introduced and carried a Bill for the establishment of a unitary teaching and residential **University of Delhi**, the buildings for which would be erected in the new capital. The plan was to provide a local university on the model recommended for Dacca University by the Calcutta University Commission. The provision of funds for the complete realisation of the university being a matter

of time it was decided to commence work with the existing colleges in their present buildings and to permit them gradually to modify their organisation. The initial work of organisation was quickly effected by the Executive Council. Unfortunately the inability of the Government of India to allot considerable funds was a severe handicap. It was hoped that H. R. H. the Viceroy would be able to lay the foundation stone of the university buildings in November, 1922, but this proved impracticable. The general question of the finances of the University was in 1927 the subject of inquiry by a special Committee appointed by Government for the time being. The University was housed in the temporary buildings in old Delhi occupied by the Civil Secretariat until 1929 and in 1931 the old Viceregal Lodge was allocated to it for its future home.

The new city was the scene of notable inauguration ceremonies in February, 1931. The first of these was the unveiling of four "**Dominion Columns**" suitably placed about the great place between the two Secretariat blocks. The columns are of red stone, surmounted each by a gilded merchantman of the old style in full sail. The columns are designed to resemble the historic ones erected in various parts of the land by Asoka and were presented by Canada, Australia, New Zealand and South Africa. The first two and fourth of these Dominions sent their own representatives to perform the ceremony of unveiling. New Zealand nominated a Member of the Government of India to act in her behalf for the same purpose.

A New Delhi Municipal Committee with its own permanent official Chairman and Secretariat was established in 1932.

H. H. the Maharaja of Bhavnagar having offered Rs. 5,00,000 for the provision of some amenity in the new city, the Government of India decided to utilize the sum for the provision of a Stadium. The ground which they took for this was a large area lying immediately below the western walls of the Purana Qila i.e., between them and Princes' place. This area was originally marked by Sir Edwin Lutens in his plan to be an ornamental lake. Practical consideration led to its abandonment for that purpose and the area was laid out as a park. A large proportion of the Maharaja's Rs. 5,00,000 was utilized for the provision of a large brick grandstand overlooking the central portion of the park taken for the Stadium.

City Extension—The main direction for the future extension of the new city is southward where for some three miles beyond the limits of present development Government have land in their possession and have placed it at the disposal of the City administration. The New Delhi Civil Aerodrome lies immediately southward of the existing new city boundary on the southern side and H. R. H. the Earl of Willingdon in February 1936, opened alongside the high road there a fine new Willingdon Air Station which is furnished with the most modern equipment for day and night flying. Building has already taken place in the same neighbourhood. The scene of the next town planning seems likely to be in the area lying between the new city and New Delhi Cantonment.

Freemasonry in India.

In 1728 a dispensation was granted by the Grand Lodge of England to Geo. Poinfrett, Esq. authorising him to "open a new Lodge in Bengal. Of his personage nothing further is known but under Capt. Farwinter, who in the following year succeeded him as Provincial Grand Master of India, a Lodge was established in 1730, which in the Engraved Lists is distinguished by the arms of the East India Company, and is described as "No 72 at Bengal in the East Indies." The next Provincial Grand Masters were James Dawson and Zech Gee, who held office in 1740 after whom came the Hon. Roger Drake, appointed 10th April 1755. The last named was Governor of Calcutta at the time of the attack made on the settlement by Surajah Dowlah in 1756. Drake missed the horrors of the Black Hole by escaping and was accused of deserting his post, but, though present at the retaking of Calcutta by Admiral Watson and Clive, it is improbable that he resumed the duties of his masonic office after the calamity that befell the settlement.

The minutes of the Grand Lodge inform us that William Mackett, Provincial Grand Master of Calcutta, was present at the meeting of that body, November 17th, 1760, and we learn on the same authority that at the request of the "Lodge in the East Indies" Mr. Cullin Smith was appointed P. G. M. in 1762. At this period it was the custom in Bengal "to elect the Provincial Grand Master annually by the majority of the votes of the members present from amongst those who passed through the different offices of the (Prov.) Grand Lodge and who had served as Dep. Prov. Grand Master." This annual election as soon as notified to the Grand Lodge of England was confirmed by the Grand Master without its being thought an infringement of his prerogative. In accordance with this practice, Samuel Middleton was elected (P. G. M. circa) in 1767 but in passing it may be briefly observed that a few years previously a kind of roving commission was granted by Earl Ferrars in 1762-64 to John Bluvitt, Commander of the "Admiral Watson, Indianman" for East India where no other Provincial Lodge is to be found. Middleton's election was confirmed October 31st 1768 and, as the dispensation forwarded by the Grand Secretary was looked upon as abrogating the practice of annual elections, he accordingly held the office of D. G. M. Unfortunately the records of the P. G. L. date back only to 1774, and thus much valuable information is lost to us. This Grand Lodge continued working until 1792 when it ceased to meet. It seems that the officers were selected from only two Lodges much to the dissatisfaction of the other Lodges, and resulted in most of the dissatisfied bodies seceding and attaching themselves to the Athol or Ancient Grand Lodge. In 1813 at the Union both the Ancients and Moderns in Calcutta combined and gave their allegiance to the **United Grand Lodge of England** and have since been working peaceably under the

Provincial Grand Lodge of Bengal which was revived in that year and in 1840 created a District Grand Lodge.

Madras—The earliest Lodge in Southern India (No. 222) was established in Madras in 1752. Three others were also established about 1766. In the same year Capt. Edmund Pascal was appointed P. G. M. for Madras and its Dependencies and in the following year another Lodge was established at Fort St. George. In 1768 the Athol (or Ancients) invaded this District and in 1782 established a Provincial Grand Lodge and both these Provincial Grand Bodies continued working peaceably side by side until the Union. Indeed, though not generally known, these two Grand Bodies made an attempt at coalition long before any such movement was made by their parent bodies, the Grand Lodge of England, and the Ancient Grand Lodge, and Malden in his History of Freemasonry in Madras states that in a great measure they succeeded. At the Union in 1813 all the bodies in Madras gave their allegiance to the United Grand Lodge. One event worthy of note was the initiation in 1774 at Trichinopoly of the eldest son of the Nawab of Arcot, Umdat ul Umra, who in his reply to the congratulations of the Grand Lodge of England stated "he considered the title of English Mason is one of the most honourable that he possessed." This document is now stored in the archives of the United Grand Lodge.

Bombay—Two Lodges were established in this Presidency during the 18th century, Nos. 231 at Bombay in 1758 and 569 in Surat in 1798 both of which were carried on the lists until the Union when they disappeared. A Provincial Grand Master, James Todd, was appointed but there is no record that he exercised his functions and his name drops out of the Freemasons' Calendar in 1799. In 1801 an Athol Warrant was granted (No. 322) to the 78th foot which was engaged in the Maratha War under Sir Arthur Wellesley. In 1818 Lord Moria was asked to constitute a Lodge to be known by the name of St. Andrew by eight Masons residing there and also to grant a dispensation for holding a Provincial Grand Lodge for the purpose of making the Hon. Mountstuart a Mason, he having expressed a wish to that effect. The Petitioners further requested "that his name might be inserted in the body of the warrant, authorising them to instal him after being duly passed and raised a Deputy Grand Master of the Decan." Of the reply to this application no copy has been preserved. Lodge Benevolence was established in Bombay in 1822.

In 1823 a Military Lodge "Orion in the West" was formed in the Bombay Artillery and installed at Poona as No. 15 of the Coast of Coromandel. It seems from Lane's records that in 1830 it was discovered that this Lodge was not on the records of the United Grand Lodge of England. A

Warrant was subsequently issued bearing date 19th July 1833. According to the early proceedings of this Lodge, members were examined in the 1st Degree and passed to the chair in the Fourth Degree for which a fee of three gold mohurs was charged. In the following year a second Lodge was established at Poona by the Provincial Grand Lodge of Bengal which however left no trace of its existence. In 1825 the civilian element of "Orion" seceded and formed the 'Lodge of Hope' also at Poona No 802.

Here "Orion" unrecognized at home aided in the secession of some of its members who obtained a warrant, on the recommendation of the Parent Lodge from the Grand Lodge of England. Two years later it was discovered that no notification of the existence of "Orion" in the West had reached England, nor had any fees been received, although these including quartermasters had been paid into the Provincial Grand Lodge Coast of Comorandel. It was further ascertained that in granting a warrant for a Bombay Lodge the Provincial Grand Master of Comorandel had exceeded his powers. Ultimately a new warrant No 598 was granted as already stated in 1833. Lodge "Perseverance" was started in Bombay No 818 in 1828. Up to this time the jurisdiction of the Grand Lodge of England in India had not been invaded but in 1838 Dr James Burnes was appointed by the Grand Lodge of Scotland P. G. M. of Western India and its Dependencies. No Provincial Grand Lodge however was formed until 1st January 1838. A second Scottish Province of Eastern India was started which on the retirement of the Marquis of Tweedale was absorbed within the jurisdiction of Dr Burnes, who in 1846 became Provincial Grand Master for all India (including Aden) but with the proviso, that this appointment was not to act in restraint of any future subdivision of the Presidencies. Burnes may be best described as being in 1836, in ecclesiastical phrase as a Provincial Grand Master "in partibus infidelium" for whatever Lodges then existed throughout the length and breadth of India were strangers to Scottish Masonry. But the times were propitious. There was no English Provincial Grand Lodge in Bombay and the Chevalier Burnes, whose nature had endowed with all the qualities requisite for Masonic Administration, soon got to work and presented such attractions to Scottish Freemasonry that the strange sight was witnessed of English Masons deserting their mother Lodges, to such an extent that these fell into abeyance in order to give support to Lodges newly constituted under the Grand Lodge of Scotland. In one case, indeed a Lodge "Perseverance" under England went over bodily to Scotland, with its name, jewels, furniture and belongings and the charge was accepted by Scotland. This Lodge still exists in Bombay and now bears No 338 on the Register of Scotland. From this period, therefore, Scottish Masonry flourished and English Masonry declined until the year 1848 when a Lodge St George No 549 on the Rolls of the Grand Lodge of England was again formed at Bombay, and for some years was the solitary representative of English Masonry in the Province. In 1844 Burns established a Lodge "Rising Star" at Bombay for the admission of Indian gentlemen the result of which is seen at the present day. Thus the seed, planted at Irichinopoly in 1774 by the initiation

of Umdat ul Umra has borne fruit, resulting in the initiation of thousands of Indian gentlemen of all castes and creeds, and which has gone far to establishing that mutual trust between West and East, a distinguishing characteristic of Speculative Freemasonry. A Provincial Grand Lodge was re-established in Bombay in 1860, and converted into a District Grand Lodge in 1861.

The Grand Lodge of England—All three Constitutions of the United Kingdom, the United Grand Lodge of England, the Grand Lodge of Ireland and the Grand Lodge of Scotland hold jurisdiction in India. By far the largest is the first, the next largest is the third and the number of Lodges under Ireland is as yet small. The Grand Lodge of England divides its rule under Five District Grand Masters independent of each other and directly subordinate to the Grand Master of England by whom they are appointed.

Bengal

- 70 Lodges Rt Wor Bro Eric Studd P. G. D., M. L. A., Dis. G. Master, Dy. D. G. M., Edward A. H. Blunt, C. T. E., O. B. F., I. C. S. P. G. D., Assist. D. G. M., F. W. Hockenhill P. G. D.

Punjab

- 24 Lodges Rt W. Bro Rev Canon G. D. Barne, M. A., C. T. E., O. B. F., V. D., Lord Bishop of Lahore, District Grand Master H. J. O. Garratt P. G. D., Dy. D. G. M.

Burma

- 20 Lodges Rt W. Bro Dr N. N. Parekh P. G. D., District Grand Master, Jivany Hormusji C. T. E., I. S. O. P. A. G. Reg. Dy. D. G. M.

The Grand Lodge of Scotland exercises its rule through a Grand Master of all Scottish Freemasonry in India, who is nominated by the Lodges under the jurisdiction subject to confirmation by the Grand Lodge of Scotland. Dr Sir Fenulji B. Nariman Kt., K. H. J. P. is the present incumbent of the office, and controls 76 Lodges. Under him the several districts are in charge of the following Grand Superintendents—

- 1st Col J. Galbraith Gill R. A. M. C. D. S. O. O. B. I. M. C., G. Supdt. Northern India
G. Tindsay, G. Supdt., Central India
Morley Williams, Supdt., Southern India
A. Logan, G. Supdt., Eastern India
F. L. Adv.—Burma

The Grand Secretary is R. W. Bro. Khan Bahadur J. C. Mistree J. P., 17, Murzban Road, Fort, Bombay.

The Grand Lodge of Ireland granted a warrant to establish a Lodge at Kurnal in 1837, but it was short lived. An attempt was made in 1869 to establish a Lodge in Bombay, but on the representation of the Grand Secretary of England, to the Deputy Grand Secretary of Ireland that it would be objectionable to create a third maenonic jurisdiction in the Province there being two already, viz, English and Scottish, the Grand Lodge of Ireland declined to grant the warrant. In 1911, however, a warrant was sanctioned for the establishment of Lodge "St. Patrick" and since that year three other Lodges have sprung into being, one of which is now defunct.

The Irish Constitution is governed in India by a Grand Inspector for India who is Wor Bro Mr Justice Munroe of the Lahore High Court. He has two Grand Inspectors, one for the Bombay Presidency, who is Wor Bro A. Finan, and one for Bengal who is Wor Bro E. A. Rodgers.

Eleven Lodges are working in India at the following places:

	<i>Bombay</i>
Nos	319, 419, 648
	<i>Calcutta</i>
Nos 203 382	464, 465 490 and 567
	<i>Lahore</i>
	No 19
	<i>Simla</i>
	No 458

Royal Arch Masonry—Under England the District Grand Master in any District is nearly always created also Grand Superintendent, who generally appoints his Deputy as Second and another Companion as Third Principal.

Under Ireland there is no local jurisdiction and under Scotland the office is elective subject to confirmation.

The five English Districts are constituted as under—

- | | |

Royal Arch Masonry under Scotland has a separate constitution to Craft Freemasonry. The District Grand Chapter of India is at present ruled by M E Comp Sir Shapoorjee B. Billimoria Kt, M B E, J P, under whom there are about 32 Chapters in India. The Grand Secretary of all Scottish Freemasonry in India is also District Grand Scribe E. of Scottish R A Masonry.

There is one Irish Chapter in Calcutta.

Mark Masonry—Under England, Mark Masonry is worked under the Grand Mark Lodge of England and Wales, and divided into separate Districts, but in most cases the District Grand Master is also District Grand Mark Master.

The Mark degree is incorporated with the Royal Arch degree in Irish Chapters. The Mark degree is worked in some S C Lodges, but mostly in R A Chapters, in which the excellent R A M and other degrees can be obtained. S C Chapters insist upon candidates being Mark Master Masons before exaltation. The Mark degree in Scottish Craft Lodges is conferred by the Rt Wor Master as the S C Craft does not recognise the ceremony of Rt W Mark Master. This is confined strictly to Chapters. Each Chapter has a Lodge of M M M working under its charter. Separate charters for Mark Lodges are only issued by the G Chapter of Scotland.

Royal Ark Mariner—The Royal Ark Mariner degree is worked in the English Constitution by Lodges attached to Mark Lodges. Its ruler is the District Grand Mark Master and only Mark Master Masons can take this degree. There are 11 R A M Lodges under Bengal, 4 under Bombay, 4 under Madras and 4 under Punjab.

Other Degrees—There are many side degrees worked in India, of the Ancient and Accepted Rite, no degree higher than the 18° is worked in India under England, but under Scotland the 30° is worked. The Knight Templar Degree is also worked in several places under both English and Scottish jurisdictions. There are fourteen 18th Degree Chapters working in India.

The Red Cross of Constantine has two Conclaves working in India. With them are worked the degrees of K H S and Kt of St. John. They are governed by the Grand Council in England direct.

The Conclaves working in India are—

No 43 Bombay and No 160, Simla

The Order of the Secret Monitor has 7 Lodges under Bombay and 6 under Madras.

Benevolent Associations—Each District works its own benevolent arrangements which include the Relief of Distressed Masons, educational provision for the children of Masons and maintenance provision for widows in poor circumstances.

All information will be given to persons entitled by the District Grand Secretary in each District. The names and addresses of District Grand Secretaries are given below —

D G S, Bengal

H W Barker, P D G W (Madras), 19, Park Street, Calcutta

D G S, Bombay

Khan Bahadur Palanji N Davar P A G R, P D G W, 'Freemasons' Hall, Ravelin Street, Fort, Bombay

Scientific Surveys.

Zoological Survey of India—It was established in 1916, when the Zoological and Anthropological Section of the Indian Museum was converted into a Survey on a basis similar to that of the Geological and Botanical Surveys. The Indian Museum itself dates back to 1875 and at the outset the Zoological and Anthropological collections consisted almost entirely of material handed over by the Asiatic Society of Bengal whose members had been accumulating systematic collections since 1814. Organised zoological investigation in India has thus been in continuous progress for nearly 120 years. From the foundation of the Museum in 1875 to the time when the Zoological and Anthropological Section was established as a separate Survey, the Curator (or as he was subsequently termed the Superintendent of the Indian Museum) has been a zoologist and among the officers who have held the appointment have been such well known members as Anderson, Wood Mason, Alcock and Annandale.

The Survey is unique and that all its officers are Indians. The main functions of the Survey are to investigate the fauna of India and to arrange and preserve the section in the Zoological and Anthropological galleries of the Indian Museum. In addition the Survey issues two series of publications upon Zoological research, namely *The Records* and *The Memoirs* of the Indian Museum and an Anthropological work entitled "Anthropological Bulletins from the Zoological Survey of India."

Botanical Survey—The Botanical Survey department of the Government of India is under the control of a Director who is also Superintendent of the Royal Botanic Garden, Calcutta. There is a staff at headquarters of one officer for systematic work and at the Indian Museum a curator who is engaged in the development and maintenance of the Industrial Section. The Director holds administrative charge of the Government of India's cinchona operations in Burma of quinine manufacture in Bengal and of the distribution of cinchona products to the Government of India's areas of distribution in Upper India.

The existence of the Botanical Survey, like that of the Geological Survey, has both a cultural and an economic justification. On general grounds it is obvious that a progressive Government should acquaint itself with the physical fact of the area it administers and although apart from the cinchona operations the activities of the Survey cannot be said to have much immediate economic applicability—consisting as they do of investigations and researches into the systematics, physiology, ecology, and histology of plants—the work accomplished in pure botany at the Royal Botanic Garden during the last century and a half has exercised a profound and far-reaching influence upon the development of Agricultural Science and Forestry in India.

Survey of India—The first authoritative map of India was published by D'Anville in 1752, when the exploration of the then unknown India was still largely in French hands. It had been compiled from routes of solitary travellers and rough charts of the coast.

The Survey of India may be said to have been founded in 1767—ten years after the battle of Plassey—when Lord Clive formally appointed

Major James Rennell the first Surveyor General of Bengal, at that time the most important of the East India Company's possessions, though there were earlier settlements in Madras and Bombay.

Rennell's maps were originally military reconnaissances and latterly chained surveys based on astronomically fixed points, and do not pretend to the accuracy of modern maps of India based on the rigid system of triangulation commenced at Madras in 1802 and since extended over and beyond India. Even now however the relative accuracy of these old maps makes them valuable in legal disputes, as for instance in proving that the holding of a Bengal landowner was a river area at the time of the Permanent Settlement of 1793, so that he is debarred from its benefits.

From these beginnings, this department has gradually become primarily responsible for all topographical surveys, explorations and the maintenance of geographical maps of the greater part of Southern Asia, and also for geodetic work.

Geodesy means the investigation of the size, shape and structure of the earth, and the geodetic work of the department consists of primary (or geodetic) triangulation, latitude, longitude and gravity determinations. From these the exact "figure of the earth is obtained whereby points fixed by triangulation can be accurately located on its curved surface. This system of fixed points holds together all topographical and revenue surveys, and the existence of such a system from the early days of the department has obviated the embarrasments caused in other countries where isolated topographical surveys have been started without a rigid framework with the inevitable result that they could not be fitted together.

A geodetic framework is therefore essential in any large survey, but there are a number of other activities, all of them ultimately utilitarian in which can be suitably combined with its execution, and the following are some of these which are carried out in India.

Precise levelling for the determination of heights,

Tidal predictions and publication of Tide Tables for forty one ports between Suva and Singapore.

The Magnetic survey,

Observation of the direction and force of gravity,

Astronomical observations to determine latitude, longitude and time,

Seismographic and meteorological observations at Dehra Dun.

Indian geodesy has disclosed by far the largest known anomalies of gravitational attraction in the earth's crust, which have recently led to a consideration of the whole theory of isostasy.

Topographical Surveys—In the past the department used to carry out the large scale revenue surveys for most of India, and was still conducting this work for Central and Eastern India and Burma in 1905.

Though revenue survey is primarily a record of individual property boundaries and is concerned with the surface features, ground levels

and exact geographical position essential to a topographical survey, it was on the whole found economical to carry out both surveys together.

By 1905 however, all the Provinces had taken over the revenue surveys for which they had always paid, and the Survey of India was enabled to concentrate its energies on a complete new series of modern topographical maps in several colours on the 1 inch to 1 mile scale.

This new series had been rendered necessary by the natural demand for more detailed information to be shown on maps, especially as regards the portrayal of hill features by contours, proper classification of communications and—more recently—air traffic requirements.

It was intended that this 1905 survey should be completed in twenty five years, and then revised periodically every thirty years. Owing however to the war and more recent retrenchments only two thirds of the programme had been completed by 1932, in spite of a reduction of scale for the less important areas.

Although new surveys covering from thirty to sixty thousand square miles—an area comparable to that of England—are carried out every year, the maps of a large part of the country are still over 50 years old, printed mostly in black only, and have hill features shown by roughly sketched form lines or hachures, such changes in town sites, canals and communications as have been embodied in them have not been surveyed on the ground but entered from outside information.

Owing to the serious financial situation in 1931, the establishment of the department was severely cut down and its annual expenditure halved, in consequence of which the modern survey of India cannot now be completed before 1950.

The obsolescence of the present series of modern maps of India is acknowledged.

In 1905 a Commission was constituted to consider the existing maps of India. It was estimated that it would take about 25 years to complete a survey of the sub-continent but the War followed by retrenchment campaigns delayed progress greatly. Out of a total of 1,884,687 square miles which is the area of India including Burma, 1,251,528 square miles have now been mapped, and it is hoped that the remaining third will be done in about 15 years time.

While some of these unsurveyed places are in remote tracts like the Naga hills of Assam and the high Himalayas most are accessible. The areas in Central Burma, Eastern Bengal, North Bihar, South Bombay, Gujarat, Sind and Western Rajasthan have yet to be mapped on modern lines.

The work is now being done by 10 parties distributed all over India, including the Himalayas where one party operates from April to June till the rains start and again from September till such time as work is rendered impossible by cold. For the other parties the winter is then field season the rains being devoted to drawing.

It is not yet known what will happen to the survey of Burma as a result of the separation of that country from India. It is likely that the present Survey of India will carry on the work,

Burma bearing her share of the cost. The activities of the Survey of India have gone beyond the borders of India in the past. Nepal for instance, was surveyed and mapped at the request of the local authorities in 1927.

Large Scale Surveys—Surveys and records of international, state and provincial boundaries have always formed an important item of topographical work, and in recent years numerous Guide Maps have been published of important cities and military stations where the 1 inch to 1 mile scale is inadequate.

Miscellaneous—While expending on topographical and geodetic work all funds allotted by Imperial Revenues, the department is prepared to undertake or aid local surveys, on payment by those concerned, such as

Forest and cantonment surveys,

Riverine, irrigation, railway and city surveys.

Surveys of tea gardens and mining areas, with such control levelling as is necessary for these operations.

Administrative assistance is also given, and executive officers, lent in aid of the revenue surveys of various Provinces and States.

The Printing Offices at Calcutta and Dehra Dun also carry out work for other Government departments, such as special maps, illustrations for Reports and all diagrams for patents.

The Mathematical Instrument Office of this department assists all Government departments, as well as non-officials, by maintaining a high standard of instrumental and optical equipment and by manufacturing and repairing instruments which would otherwise have to be imported from abroad.

Military Requirements and Air Survey—The department is also responsible for all survey operations required by the army, and is in a position to meet the rapidly increasing complexity of modern military requirements, especially in air survey.

In view of its high military importance air survey work for civil purposes is receiving all possible encouragement and assistance, and the latest methods of mapping from photographs taken from the ground are being studied experimentally.

The flying and photography for air mapping done by this department are at present carried out by the Royal Air Force or the Indian Air Survey Company, a commercial firm with headquarters at Dum Dum.

Administration is by the Surveyor General under the Education, Health and Lands Department of the Government of India.

The Headquarters Office is at Calcutta under the Assistant Surveyor General, and there are four Directors, one for the Map, Publication and other technical offices at Calcutta, and three for three of the five Survey of India Circles into which the country is divided, the other two Circle areas (covering Burma and South India) are administered personally by the Surveyor General.

Of the three Circle Directors, one also administers the Geodetic Branch at Dohra Dun in addition to his topographical survey Circle.

Any enquiries regarding surveys, maps or publications may be addressed either to the Headquarters Office or to the Survey Director or Independent Party concerned, whose addresses are Director, Map Publication Calcutta, Director, Geodetic Branch, Dohra Dun, Director, Frontier Circle, Simla, Director, Eastern Circle, Shillong, Officer in Charge No. 6 (South India) Party, Bangalore and Officer in Charge No. 10 (Burma) Party, Maymyo.

Indian Science Congress—The Indian Science Congress was founded largely owing to the efforts of Prof. P. S. Macmahon and Dr. J. L. Simonsen. These two gentlemen worked jointly as Honorary General Secretaries of the Congress till 1921. The Asiatic Society of Bengal undertakes the management of the Congress finances and publishes annually the proceedings of the Congress. The objects are (1) to encourage research and to make the results generally known among science workers in India, (2) to give opportunities for personal intercourse and scientific companionship and thus to overcome to some extent one of the chief drawbacks in the life of workers in science in India, (3) to promote public interest in science, for this end the Congress is held at different centres annually, and evening lectures open to the public form an important part of the proceedings of each Congress.

The Congress which is progressive and vigorous meets in January each year. The proceedings last for six days. The Hon. of the Local Government is Patron of the Congress; the Congress session is opened by a Presidential Address delivered by the President for the year. The President is chosen annually; the different sections being represented in turn. The sections are (1) Agriculture, (2) Physics and Mathematics, (3) Chemistry and Applied Botany, (4) Zoology and Ethnography, (5) Botany, (6) Geology, (7) Medical Research, when the sections meet separately each section is presided over by its own President also chosen annually. The mornings are devoted to the reading and discussion of the papers, the afternoons to social functions and visits to places of interests, in the evenings public lectures are delivered.

The Indian Research Fund Association—This Association which is a much older body than the National Research Council in England, was constituted in 1911 with a sum of rupees five lakhs (£33,000) set aside as an endowment for the prosecution and assistance of research, the propagation of knowledge and experimental measures generally in connection with the causation, mode of spread and prevention of communicable diseases. It can claim to be amongst the pioneers in organised medical research on a large scale and has been referred to by other countries in very complimentary language. Still better, it has been copied by several other nations.

During 1929 the constitution of the Governing Body was altered by the Government of India. It was considered that, in view of the largely increased activities of this Association, the Governing Body, which had hitherto most expeditiously and economically conducted

the business of the Association should be now made more representative in character. It was accordingly enlarged by including two non-official members from the Legislative Assembly, one from the Council of State, two from the Medical Faculties of the Universities and one non-medical scientist. The creation of a Recruitment Board in India for selecting the personnel employed by the Association and of a Consultative Recruitment Board in England also came under the consideration of Government. It was further decided that the Governing Body of the Indian Research Fund Association should be the co-ordinating agency for the research activities of the All India Institute of Public Health which is being built at Calcutta and of the proposed Central Medical Research Institute.

The Conference of **Medical Research Workers** is drawn from all parts of India and consists of experts in their particular lines of research, discussed yearly the general policy of research work in India as well as the detailed schemes which are proposed to be undertaken by the Indian Research Fund Association in the following year. The results of these discussions are available to guide the members of the Scientific Advisory Board of the Indian Research Fund Association in making their recommendations for the programme of the following year. The Advisory Board also meet in December and examine all the proposals for research work and recommend a scheme of research for the guidance of the Governing Body of the Indian Research Fund Association.

The official organ of the Association is the 'Indian Journal of Medical Research,' which has a wide international circulation. The Association also publishes 'Indian Medical Research Memoirs,' which are supplementary to the 'Journal.'

Since its inception a great number of inquiries have been carried out under the auspices of the Association and great expansion of its activities has taken place from small beginnings.

The **principal inquiries** are the Malaria Survey of India, which is a Central organisation located at Kasauli and Karnal, plague research at the Hukim Institute Bombay, cholera inquiries of different classes and under different research workers at the Calcutta School of Tropical Medicine and at Kasauli, Shillong and Madras, kala-azar inquiry at Calcutta and Kasauli, nutritional research by Major Genl. Sir Robert McCarrison at the Nutritional Research Institute, Coonoor, anti-rabic vaccine inquiry at Kasauli and inquiries classified under ichthyology, diarrhoea and filariasis, maternal mortality and morbidity in childbirth, bionomics and early stages of phlebotomus, protozoal parasites, cancer in India, skin diseases (actinomycosis, tinea imbricata, favus, ringworm, psoriasis, molluscum contagiosum, pityriasis rubra), indigenous drugs, drug addiction and statistics (charts showing weekly deaths from cholera, small pox and plague in the major provinces).

The Malaria Survey of India, which now enjoys international recognition, is constantly called upon to advise as to the best methods for malaria prevention in India. As part of the activities of this organisation and in commemoration of Sir Ronald Ross intimate association

with India, an experimental malaria station was opened in Karnal in January 1927 and is known as The Ross Field Experimental Station for Malaria. Besides carrying out experiments in connection with the prevention of malaria annual classes are held at which candidates from all over India are shown the latest methods for dealing with the malaria scourge and are instructed how these methods should be applied. In connection with the Malaria Survey of India and in order to assemble all facts relating to malaria, a new publication has been started known as the Records of the Malaria Survey of India, of which up to date four numbers have been issued.

The programme for each year involves an expenditure of Rs 10 lakhs or more and the institution of 40 or 50 investigations.

Geological Survey—The ultimate aim of the Geological Survey of India is the preparation of a geological map of India upon the accuracy of which the solution of most geological problems ultimately depends. Maps accompany the reports on the various areas in the publications of the Department and a large amount of information is made available to the public. Such maps represent pioneer work which enables prospectors and mining engineers to cut short their preliminary investigations and to start where the Geological Survey has left off. During the preparation of the geological map and the general survey of the country, mineral deposits of importance are sometimes discovered. Such discoveries are investigated and the results are published without delay and every endeavour is made to induce private firms to take up the exploitation of the minerals discovered. Collections of minerals, rocks and

fossils are accumulated and exhibited in the public galleries of the Indian Museum, situated in Calcutta. Some of the most interesting and scientifically valuable additions to the collections in recent years have been the remains of anthropoid apes of great age discovered at different places in the Siwalik Hills, a range which for hundreds of miles runs parallel to the Himalayas at a short distance below the foot hills of the latter, and is largely composed of Himalayan detritus. The Geological Survey helps in the spread of geological education in India by the presentation of mineral, rock and fossil specimens to educational institutions. The knowledge gained concerning the geological structure of India and the composition of the rocks that compose the strata enables the department to help in the solution of engineering problems connected with the selection of sites for dams for reservoirs, the safety of hill slopes and foundations and the suitability of particular building stones for particular purposes. The Department is also often able to advise on problems concerned with the supply of water. As a result of the knowledge gained concerning the structure and disposition of the mineral deposits of India, the Department is also in a position to give advice concerning the conservation of the mineral resources of the country. The investigation of earthquakes in India and of all meteorites which fall in India are part of the duties of the Department. The Geological Survey also undertakes the examination and identification without fee, of any minerals, rocks and fossils sent in by private observers. The publications of the Survey include the Memoirs, Records and Palaeontologia Indica. The Survey headquarters are in Calcutta.

Posts and Telegraphs

POST OFFICE

The control of the Posts and Telegraphs of India is vested in an officer designated Director General of Posts and Telegraphs whose office is attached to the Department of Industries and Labour of the Government of India. For the efficient working of the Department there is a Finance Officer, Posts and Telegraphs, and an Ex-officio Deputy Secretary, Finance Department. There is also a Deputy Director General, Finance, attached to the office of the Director General of Posts and Telegraphs who assists the D. G. generally in examining matters containing financial implications. The superior staff of the Direction, in addition to the Director General himself, consists on the postal side of one Senior Deputy Director General, one Deputy Director General (postal services), five Assist Deputy Directors General and one Personal Assistant to the Director General.

For postal purposes, the Indian Empire is divided into eight circles, namely, Bengal and Assam, Bihar and Orissa, Bombay, Central, Madras, Punjab and North West Frontier, United Provinces and Sind and

Baluchistan. Each of the first seven is in charge of a Postmaster General and the Sind and Baluchistan Circle is controlled by a Director Posts & Telegraphs. The Central Circle comprises roughly the Central Provinces and the Central India and Rajputana Agencies. With effect from 1-4-1937, Burma Circle was separated from the Indian Posts and Telegraphs Administration and it started its career under a separate administration under the new Government of Burma.

The Heads of Circles are responsible to the Director General for the whole of the postal arrangements in their respective circles, including those connected with the conveyance of mails by railways, inland steamers, and air services. All the Postmasters General are provided with Deputy and Assistant Postmasters General while in the Sind and Baluchistan Circle, the Director is assisted by an Assistant Director. The eight Postal Circles are divided into Divisions, each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspector

Generally there is a head post office at the headquarters of each revenue district and other post offices in the same district are usually subordinate to the head office for purposes of accounts. The Postmasters of the Calcutta, Bombay, and Madras General Post Offices and of the larger of the other head post offices are directly under the Postmasters-General. The Presidency Postmasters have one or more inspecting Postmasters subordinate to them. When the duties of the Postmaster of a head office become so onerous that he is unable to perform them fully himself a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required, one or more Assistant Postmasters are employed. The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance. Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local sub-treasuries. The officer in charge of such an office works it either single handed or with the assistance of one or more clerks according to the amount of business.

Branch offices are small offices with limited functions ordinarily intended for villages and are placed in charge either of departmental officers on small pay or of extraneous agents, such as school masters, shopkeepers and holders or cultivators who perform their postal duties in return for a small remuneration.

The audit work of the Post Office is entrusted to the Accountant General Posts and Telegraphs who is an officer of the Finance Department of the Government of India and is not subordinate to the Director General. The Accountant General is assisted by Deputy Accountants General all of whom, with the necessary staff of clerks, perform at separate headquarters the actual audit work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1883 a large number of sub post offices and a few head offices perform telegraph work in addition to their postal work and are known by the name of combined offices. The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph offices working under the control of the Post Office.

The **Inland Tariff** (which is applicable to Ceylon and Portuguese India except as indicated below) is as follows —

	When the postage is prepaid	When the postage is wholly unpaid	When the postage is insufficiently prepaid
Letters			
Not exceeding one tola	Anna Pies	Double the prepaid rate (chargeable on delivery)	Double the deficiency (chargeable on delivery)
And every additional tola	0 6		
<i>Book and pattern packets</i>			
For the first two and a half tolas or fraction thereof	0 6		
For every additional two and a half tolas, or fraction thereof in excess of two and a half tolas	0 6		
Postcard			
Single	9 pies		
Reply	1 anna 6 pies		
(The postage on cards of private manufacture must be prepaid in full)			
<i>Parcels (prepayment compulsory)</i>			
Parcels not exceeding 800 tolas in weight —			
	Rs a		
Not exceeding 40 tolas	0 4		
For every additional 40 tolas or part of that weight	0 4		
Registration is compulsory in the case of parcels weighing over 440 tolas			
These rates are not applicable to parcels for Ceylon and Portuguese India			
		Registration fee	Rs a
		For each letter, postcard, book or pattern packet, or parcel to be registered	0 4
		<i>Ordinary Money Order fees</i>	
		On any sum not exceeding Rs 10	0 2
		On any sum exceeding Rs 10 but not exceeding Rs 25	0 4
		On any sum exceeding Rs 25 upto Rs 600	0 4
		for each complete sum of Rs 25 and 4 annas for the remainder, provided that if the remainder does not exceed Rs 10, the charge for it shall be only 2 annas	
		In the case of money orders for Ceylon and Portuguese India, the rates prescribed for foreign rupee money orders are applicable	

Telegraphic money order fees—The same as the fees for ordinary money orders plus a telegraph charge calculated at the rates for inland telegrams for the actual number of words used in the telegram advising the remittance, according as the telegram is to be sent as an "Express" or as an "Ordinary" message. In addition to the above a supplementary fee of two annas is levied on each inland telegraphic money order.

In the case of Ceylon the telegraph charge is calculated at the rates shown below—

Express—Rs 2 for the first 12 words and 3 annas for each additional word.

Ordinary—Rs 1 for the first 12 words and 2 annas for each additional word. Telegraphic money orders cannot be sent to Portuguese India.

Value payable fees—These are calculated on the amount specified for remittance to the sender and are the same as the fees for ordinary money orders.

Insurance fees

	A	P
Where the value insured does not exceed Rs 100	0	4
Where the value insured exceeds Rs 100 but does not exceed Rs 150	0	4
Where the value insured exceeds Rs 150 but does not exceed Rs 200	0	5
For every additional Rs 100 or fraction thereof over Rs 200 and upto Rs 1,000	0	2
For every additional Rs 100 or fraction thereof over Rs 1,000	0	1

As regards Portuguese India see Foreign Tariff.

Acknowledgment fee—For each registered article 1 anna.

The Foreign Tariff (which is not applicable to Aden, to Ceylon or to Portuguese India except as indicated below), is as follows—

Letters

To Great Britain and Northern Ireland, Egypt (including the Sudan) and all British Colonies, Dominions and possessions except Palestine and Transjordan

2½ annas for the first ounce and 2 annas for each additional ounce or part of that weight

To other countries, colonies or places except to Aden, Ceylon and Portuguese India to which Indian inland rates apply

3½ annas for the first ounce and 2 annas for each additional ounce or part of that weight

Postcards, single 2 annas
" Reply 4 annas

Printed Papers—½ anna for every 2 ounces or part of that weight.

Business Papers—1 for a packet not exceeding 10 ounces in weight 3½ annas

For every additional 2 ounces or part of that weight 1 anna

Samples—1½ annas for first 4 ounces and 1 anna per 2 ounces thereafter.

Parcels

Parcel postage varies for different countries as shown in the Foreign Post Directory included in the Post and Telegraph Guide. Information relating to the rates of postage on parcels for Great Britain and Northern Ireland is given below—

(i) Parcels not exceeding 20 lbs in weight and addressed to Great Britain and Northern Ireland are forwarded as mails to the British Post Office, the rates of postage applicable to such parcels being as follows—

	Via Gibraltar	Over land
	Rs a p	Rs a p
For a parcel—		
Not over 3 lbs	1 8 0	1 13 6
Over 3 lbs, but not over 7 lbs	2 12 0	3 1 6
" 7 " " 11 "	3 15 0	4 2 6
" 11 " " 20 "	6 3 0	7 3 0

These parcels are delivered by the post office and the postage paid carries them to destination.

(*) Parcels which exceed 11 lbs but which do not exceed 50 lbs (the maximum allowed) in weight are forwarded from India through the medium of the P & O S N Co, and are delivered at destination under arrangements made by that Company. The postage charge applicable to such parcels is twelve annas for each pound, or fraction of a pound. The parcels are delivered free of charge within a radius of one mile from the Company's Head Office in London, if addressed to any place beyond that radius, carrier's charges are levied from the addressee on delivery. Parcels thus forwarded through the P & O S N Co cannot be insured during transit beyond India, but must, if they contain coin, etc., be insured during transit in India. No acknowledgment of delivery can be obtained in respect of these parcels, nor can such parcels be transmitted to Great Britain and Northern Ireland under the value payable system.

Limits of Weight**Letters**—4 lbs 6 oz

Printed Papers and Business Papers—To Great Britain and Northern Ireland, and the Irish Free State, British Australasian Colonies, Hong kong, Malaya, the Straits Settlements, (including Labuan British) and the Federated Malay States of Perak, Selangor, Negri Sembilan and Pahang, Togo (British) the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—5 lbs

To Aden or Ceylon—No limit

To all other destinations—4 lbs 6 oz

Samples—To Great Britain and Northern Ireland, and the Irish Free State, Hong kong, Malaya, the Straits Settlements (including Labuan British) and the Federated Malay States of Perak, Selangor, Negri Sembilan and Pahang, Togo (British) the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—5 lbs

To Aden or Ceylon—200 tolas

To all other destinations—1 lb 2 oz

Parcels—11 lbs or 20 lbs**Limits of Size**

Letters—35 inches in length breadth and thickness taken together and 2½ inches in any one direction. If in form of roll 39 inches in length plus twice the diameter and 31 inches in any one direction

Printed Papers and Business Papers—To Ceylon—2 feet in length by 1 foot in width or depth. If in form of roll, dimensions are 30 inches in length and 4 inches in diameter

To all other destinations—35 inches in length, breadth and thickness taken together and 2½ inches in any one direction. If in form of roll, 39 inches in length plus twice the diameter and 31 inches in any one direction

Note—Printed papers sent open, without a cover or wrapper in the form of cards whether folded or not, should not measure less than 4 inches in length and 2½ inches in width

Samples—To Great Britain and Northern Ireland, and the Irish Free State, Ceylon, Hong kong, Malaya, the Straits Settlements (including Labuan British), and the Federated Malay States of Perak, Selangor, Negri Sembilan and Pahang, the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—2 feet in length by 1 foot in width or depth

To all other destinations—35 inches in length, breadth and thickness taken together and 2½ inches in any one direction. If in form of roll,

dimensions in all cases are 39 inches in length plus twice the diameter and 31 inches in any one direction

Money Orders—To countries on which money orders have to be drawn in rupee currency, the rates of commission are as follows—

	Rs	a
On any sum not exceeding Rs 10	0	3
On any sum exceeding Rs 10 but not exceeding Rs 25	0	6
On any sum exceeding Rs 25	0	6

for each complete sum of Rs 25 and 6 annas for the remainder, provided that, if the remainder does not exceed Rs 10, the charge for it shall be only 3 annas

To countries on which money orders have to be drawn in sterling, the rates are as follows—

	Rs	a
On any sum not exceeding £1	0	4
" " exceeding £1 but not exceeding £2	£2	0 7
" " " £2 " £3	£3	0 10
" " " £3 " £4	£4	0 13
" " " £4 " £5	£5	1 0
" " " £5		1 0

for each complete sum of £5 and 1 rupee for the remainder, provided that if the remainder does not exceed £1 the charge for it shall be 4 annas, if it does not exceed £2 the charge shall be 7 annas, if it does not exceed £3, the charge shall be 10 annas and if it does not exceed £4, the charge shall be 13 annas

Insurance fees (for registered letters and parcels only)

Registration fee

For each letter, packet and packet of printed or business papers and samples 3 annas

For insurance of letters and parcels to Aden and Ceylon and of letters to Portuguese India—Insurance fees mentioned under Inland Traffic

For insurance of letters and parcels to Burma, British Somaliland, Mauritius, Seychells, and parcels to Portuguese India

Where the value insured does not exceed Rs 180 Annas 4½

For every additional Rs 180 or fraction thereof 4½

For insurance of letters and parcels to Great Britain and Northern Ireland and to British Possessions and Foreign countries (other than those mentioned above) to which insurance is available

Where the value insured does not exceed £ 12 Annas 4½

For every additional £12 or fraction thereof 4½

Acknowledgment fee—3 annas for each registered article 1 anna in the case of registered article addressed to Aden, Ceylon or Portuguese India

Magnitude of business in Post Office—

At the close of 1935-36 there were 103,568 postal officials, 23,695 post offices and 169,288 miles of mail lines. During the year 1,180 million articles, including 13 million registered articles were posted. Stamps worth Rs. 67.4 millions were sold for postal purposes, over 40 million money orders of the total value of Rs. 796 millions were issued, 382 thousands of Indian Postal Orders to the value of over Rs. 9 lakhs were sold, a sum of Rs. 186.7 millions was collected for tradesmen and others on

V. P. articles over 3.3 million insured articles valued at 992.5 millions of rupees were handled. Customs duty aggregating about 7.2 million rupees was raised on parcels and letters from abroad, pensions amounting to about Rs. 16.6 millions were paid to Indian Military pensioners and nearly 15,000 lbs. of gunnery were sold to the public. On the 31st March 1936 there were 3,542,000 Savings Bank accounts with a total balance of Rs. 672.5 millions and 92,100 Postal Life Insurance policies with an aggregate assurance of Rs. 178.7 millions.

TELEGRAPH DEPARTMENT

Telegraphs—Up to 1912 the telegraph system in India was administered as a separate department by an officer designated Director General of Telegraphs who worked in subordination to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced in the Bombay and Central Circles from the 1st July 1912. The fundamental principles of this scheme which followed closely the system in force in the United Kingdom and several other European countries were that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the Postmaster General assisted by a Deputy Postmaster-General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs Subordinate to this officer there were several Divisional Superintendents who were assisted by a number of attached officers.

In 1914 the complete amalgamation of the two Departments was sanctioned by the Secretary of State and introduced from 1st April. The superior staff of the Direction, in addition to the Director General himself, consists on the engineering side of a Chief Engineer, Telegraphs, with one Personal Assistant. For traffic work there is a Deputy Director General with two Assistant officers. In the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes India was divided up into five Circles, each in charge of a Director. For Burma special arrangements were considered necessary and the engineering work is in charge of the Postmaster General who is a Telegraph officer specially selected for the purpose. These six Circles were divided into twenty-one Divisions each of which is in charge of a Divisional Engineer. On the 1st July 1922 Sind and Baluchistan circle was formed with its headquarters at Karachi. This circle is in charge of a Director of Posts and Telegraphs. On the 31st March 1924 there were 7 Circles and 20 Divisions. With a view to complete fusion of the three branches of work on the lines of the Burma Circle, the engineering work of the Bombay and Central Circles was brought under the control of the respective

Postmaster General in 1925 and this unification proved an unqualified success and was gradually extended to other circles. The fusion was completed in March 1930. The telegraph traffic and the engineering branches in the circles are now controlled by the Postmasters General.

To help the Director General in the administration of wireless matters there is a Deputy Director General Wireless who is assisted by two officers.

The audit work of the Telegraph Department is, like that of the Post Office, entrusted to the Accountant General, Posts and Telegraphs, assisted by a staff of Deputy and Assistant Accountants General.

With effect from 1.4.1937 Burma Circle was separated from the Indian Posts and Telegraphs Administration. It now forms part of the Government of Burma which started its independent career on and from that date.

Inland Telegraphs and Tariff—Telegrams sent to or received from places in India or Burma or Ceylon are classed as inland telegrams. The tariff for inland telegrams is as follows—

For delivery in India			
<i>Private and State</i>			
Express Ordinary			
	Rs.	a	Rs. a
Minimum charge	1	2	0 9
Each additional word over 8	0	2	0 1
For delivery in Burma			
<i>Private and State</i>			
Express Ordinary			
	Rs.	a	Rs. a
Minimum charge	2	4	1 2
Each additional word over 8	0	4	0 2
For delivery in Lhasa (Tibet)			
<i>Private and State</i>			
Express Ordinary			
	Ex-press	Ordinary	Ex-press
	Rs.	a	Rs. a
Minimum charge	1 8	0 12	2 0 1 0
Each additional word over 12	0	2 0 1	0 3 0 2
The address is charged for			

Additional charges	
Minimum for reply-paid telegram	Minimum charge for an ordinary telegram
Notification of delivery	Minimum charge for an ordinary telegram
Multiple telegrams, each 100 words or less	4 annas
Collation	One half of the charge for an ordinary telegram of same length
For acceptance of an Express telegram during the hours when an office is closed	If both the offices of origin and destination are closed 2
	If only one of the offices is closed 1
	If the telegram has to pass through any closed intermediate office an additional fee in respect of each such office 1
	The usual inland charge plus a fixed fee of 8 annas
Signalling by flag or semaphore to or from ships—per telegram	Amount actually necessary
Boat hire	4 annas
Copies of telegrams each 100 words or less	For delivery in India 4 annas
Press telegrams	For delivery in Ceylon 4 annas
Minimum charge	For delivery in India 4 annas
Each additional 5 words over 40 in respect of India, each additional four words over 32 in respect of Ceylon	0 2 0 1 0 2
The address is free	

Foreign Tariff—The charges for foreign telegrams vary with the countries to which they are addressed. The rates per word for telegrams to countries in Europe, America, etc., are as follows—

	Ordinary	Deferred	Day Letter Telegram
	Rs a	Rs a	Rs a
Europe via I R C—			
Great Britain and Northern Ireland	0 14	0 7	0 5
Irish Free State	1 0	0 8	0 5½
Belgium	1 2	0 9	0 6
Holland	1 2	0 9	0 6
Germany	1 4	0 10	0 7
Switzerland	1 4	0 10	0 7
Spain	1 4	0 10	
France	1 8	0 9½	0 6½
Italy City of the Vatican	1 5	0 10½	
Other Offices	1 4	0 10	0 7

	Ordinary	Deferred	Day Letter Telegram
	Rs a	Rs a	Rs a
Norway—			
Svalbard	1 7	0 11½	
Other Places	1 4	0 10	0 7
Bulgaria	1 5	0 10½	0 10
Russia	1 5	0 10½	0 7
Turkey	1 5		
Czechoslovakia	1 5	0 10½	0 7
Union of South Africa and S W Africa via I R C	1 15	0 15½	0 10½

America via I R C—

N A Cables			
Ontario, Quebec, Nova Scotia, etc	1 11	0 13½	0 9
Manitoba	2 1	1 1	0 11
Vancouver B C	2 3	1 1½	0 12
New York, Boston, etc	1 11	0 13½	0 9
Philadelphia, Washington etc	1 13	0 14½	0 10
Chicago	2 0	1 0	0 11
San Francisco, Seattle, etc	2 3	1 1½	0 12
Buenos Aires	3 4	1 10	1 1½
Rio de Janeiro	3 2	1 9	1 1
Valparaiso	3 4	1 10	1 1½
Jamaica	3 4	1 10	1 1½
Havana	2 5	1 2½	0 12

Urgent Telegrams—

Rate double of ordinary rate

Day Letter Telegrams—

Minimum charge for 25 words

Code telegrams are accepted at 3/5 th of the ordinary rate (*Vide clause 425 P & T Guide*)

Telegrams are accepted at all Government Telegraph Offices

Usual rules apply regarding Registration Reply Paid, etc

Full lists published in Posts and Telegraphs Guide

Radio-Telegrams—For radio telegrams addressed to ships at sea from offices in India and transmitted via the coast stations at Bombay, Calcutta, Karachi, Madras or Port Blair the charge is thirteen annas per word (ordinary) or eight annas per word (code) in nearly all cases

The following are the charges (excluding supplementary charges) for radio telegrams from offices in India transmitted to ships at sea through the coast stations mentioned in the preceding paragraph—

	Total charge per word
	Ordinary Code
	Rs a Rs a
(1) All Government or Private Radio telegrams, excepting those mentioned in (2) to (4) below	0 13 0 8
(2) Radio telegrams to His Britannic Majesty's Ships of War or Ships of the Royal Indian Navy	0 8 0 5
(3) Radio telegrams to Spanish or Swedish ships	0 12 0 7½

The sender of a radio telegram may prepay a reply. He must insert before the address the instruction R P followed by mention in Rupees and annas of the amount prepaid, e.g., R P 7 8. This expression counts as one word.

DAILY LETTER TELEGRAMS

Daily Letter Telegrams in plain language, which are dealt with telegraphically through out are accepted on any day of the week, and are ordinarily delivered to the addressee on the morning of the second day following the day of booking. They are subject to the conditions prescribed for Deferred Foreign telegrams with certain exceptions as stated below.

The charge for a Daily Letter Telegram is ordinarily one third of the charge for a full rate telegram of the same length and by the same route subject to a minimum charge equal to the charge for 25 words at such reduced rate including the indication DLT.

The late fee system does not apply to Daily Letter Telegrams and such telegrams are not accepted during the closed hours of an office.

On Indian lines Daily Letter Telegrams are transmitted after Deferred Foreign telegrams.

The only special services admitted in daily letter telegrams are Reply paid, Poste Restante, Telegraph restante and telegraph redirection under orders of the addressee.

Growth of Telegraphs—At the end of 1897-98 there were 50,305 miles of line and 155,088 miles of wire and cable, as compared with 100,444 miles of line including cable and 490,676 miles of wire including conductors respectively, on the 31st March 1936. The numbers of departmental telegraph offices were 257 and 97 (including 19 Radio offices) respectively, while the number of telegraph offices worked by the Post Office rose from 1,634 to 4,303.

The increase in the number of paid telegrams dealt with is shown by the following figures—

		1897-98	1935-36
Inland	{ Private	4,107,270	13,520,831
	{ State	860,382	844,227
	{ Press	35,910	631,427

Foreign	{ Private	1897-98	1935-36
	{ State	735,679	2,145,225
	{ Press	9,896	29,220
		5,278	79,808
		5,764,415	17,250,738

The outturn of the workshops during 1935-36 represented a total value of Rs 20,82,700.

Wireless—The total number of departmental wireless stations open at the end of 1935-36 was thirty five, viz., Akyab Allahabad (two stations), Bassein, Bombay, Calcutta (two stations), Cheduba, Chittagong, Delhi (two stations), Diamond Island, Gaya, Jodhpur Jutogh, Karachi (two stations), Lahore, Madras (3 stations), Nagpur, Ormara Panni Peshawar, Port Blair, Rangoon (4 stations), Sandheads (two pilot vessels), Sandoway, Tavoy and Victoria Point of which only Cheduba Ormara Panni, Port Blair and Victoria Point booked telegrams direct from the public.

Seven of these stations were designated coast stations for communication with ships at sea and thirteen worked as aeronautical stations in connection with regular air services.

The Duplex high speed service between Rangoon and Madras continued to work satisfactorily. With the separation of Burma from India in 1937, the Wireless stations at Akyab Bassein Cheduba, Diamond Island Rangoon Sandoway, Tavoy and Victoria Point are no longer under the control of the Indian Posts and Telegraphs Administration.

Telephones—On the 31st March 1936 the number of telephone exchanges established by the Department was 362 with 21,923 straight line connections and 4,029 extension telephones. Of these exchanges, 207 were worked departmentally. The number of telephone exchanges established by Telephone Companies was 25 with 43,364 connections.

The total staff employed on telegraphs, telephones and wireless on the 31st March 1936 was 13,340.

Posts and Telegraphs—The capital outlay of the Indian Posts and Telegraphs Department during and to the end of the year 1935-36 was Rs 30,91,000 and Rs 17,52,11,000 respectively. The receipts for the year ended 31st March 1936 amounted to Rs 11,47,57,000 and charges (including interest on capital outlay) of Rs 11,47,10,000 the result being a net gain of Rs 47,000.

Public Health.

The history of the Public Health departments in India goes back for about sixty years. During that period great improvements have been effected in the sanitary condition of the towns, though much remains to be done, but the progress of rural sanitation which involves the health of the great bulk of the population has been slow, and incommensurate with the thought and labour bestowed on the subject. The reason lies in the apathy of the people and the tenacity with which they cling to domestic customs injurious to health. While the inhabitants of the plains of India are on the whole distinguished for personal cleanliness, the sense of public cleanliness has ever been wanting. Great improvements have been effected in many places, but the village house is still often ill ventilated and over populated, the village site dirty, crowded with cattle, choked with rank vegetation, and poisoned by stagnant pools, and the village tanks polluted, and used indiscriminately for bathing, cooking and drinking. That the way to improvement lies through the education of the people has always been recognised."

Of recent years the pace has been speeded up as education progressed, education developed, and funds were available. In a resolution issued in May 23rd, 1914, the Government of India summarised the position at that time, and laid down the general lines of advance. This resolution (*Gazette of India*, May 25th, 1914) should be studied by all who wish to understand the attitude of the Government of India towards sanitation prior to the passing of the Reform Act of 1919. It will be found summarised in the Indian Year Book of 1922 (page 475 *et seq.*) and earlier editions. One of the greatest changes effected by the Reform Act of 1919 was the transfer of sanitation to the provinces making it a subject directly responsible to local control through Ministers. This condition continues under the further Reform Act of 1919.

The Public Health Commissioner with the Government of India in a general review of health organisation in British India which he laid in January, 1923, before the Interchange Study Tour organised for Medical Officers of Health from the Far Eastern Countries by the Health Organisation of the League of Nations, concluded that the State effort in regard to Health Organisation in British India is one of no mean importance that it has evolved over a couple of centuries during which many mistakes in policy must be admitted, that it has provided the Officers and the stimulus necessary for laying the foundations of medical education, that it has tried to uphold the ethical standards of western medicine and that in which ever way it is regarded it is an effort of which no Government need be ashamed. He quoted the remark of the Government of India in their Resolution of 1914 that in the land of the ox cart one must not expect the pace of the motor car.

The Public Health Commissioner in his annual report for the year 1922 noted the

introduction of the political element into health matters as a result of the Reforms and said that the improvements being introduced before the Reforms were in some provinces now in a fair way to maturing but that in other provinces with less appreciation of the actual needs so far from adding to the organisation as they have found it have shown a desire to scrap even some of what they originally possessed. But, he says though the picture is neither bright nor the future rosy, it is becoming increasingly evident that a considerable section of the Indian community is thinking seriously on these public health problems amid much futile and destructive criticisms of State and municipal efforts here and there valuable and suggestive criticism can be met with which goes to prove my contention.

India's birth rate in 1925 was nearly twice that of England and Wales, her death rate was twice that of England and Wales and nearly three times that of New Zealand and her infantile mortality rate was nearly 24 times that of England and Wales and nearly 44 times that of New Zealand. The information furnished for the great group of infectious diseases of world import, i.e., plague, cholera, small-pox, yellow fever, typhus, malaria and dysentery shows (as the Public Health Report already cited) that if we except typhus and yellow fever, India is one of the world's reservoirs of infection for the others and the main reservoir of infection for plague and cholera. The significance of these facts must add to the Commissioner, be obvious to all who think. Briefly their implication is that India's house, from the public health point of view, is sadly out of order and that this disorder requires to be attended to. It is not for India to say that so far as she is concerned prevention is impossible. If we think of the effect of sunlight on tubercle ridden children or the effect of feeding on rickets, scurvy and beriberi of the way in which malaria, cholera, yellow fever, dengue, ankylostomiasis and filariasis can be and have been over come we need have no fear in regard to India provided the necessary measures are put into operation. These observations are as true to day as when they were written.

The Public Health Commissioner in an address before the annual congress of the Far Eastern Association of Tropical Medicine, held in Calcutta in December, 1927, urged the importance of instituting a Central Ministry of Health which should be charged with the functions of co-ordinating the policies and activities of the departments concerned in the several provinces and with keeping them abreast of scientific progress. There is at present no Public Health Act for the whole of India, nor under existing administrative arrangements is one immediately possible, but the desirability of the Central Ministry of Health and of such an Act is likely to be urged in the course of the revision of the Constitutional Reforms now in progress.

Chief Causes of Mortality

595

The following table of vital statistics is taken from the Public Health Commissioner's latest annual report —

Province	Birth Rates (per mille)		Death Rates (per mille)	
	1934	Previous 5 years	1934	Previous 5 years
Delhi	37	46	29	29
Bengal	29	27	23	22
Bihar and Orissa	32	34	25	24
Assam	30	29	19	19
United Provinces	35	36	26	24
Punjab	38	41	26	26
N W Frontier Province	30	28	20	21
Central Provinces and Berar	43	45	36	32
Madras	35	37	24	24
Coorg	25	23	23	24
Bombay	34	37	24	26
Burma	29	28	20	19
Ajmer Merwara	34	33	29	26
British India	34	35	24.9	24

Mortality during 1934

Chief Causes of Mortality — There are three main classes of fatal diseases — specific fevers, diseases affecting the abdominal organs, and lung diseases. Intestinal and skin parasites, ulcers and other indications of scurvy widely prevail. The table below shows the number of deaths from each of the principal diseases and from all other causes in British India and death rates per 1,000 during 1934 —

D—Deaths

R—Ratio per mille

Province	Cholera	Small pox	Plague	Fevers	Dysentery and Diarrhoea	Respiratory Diseases	All other causes
A W F P	D 61.5 R 3			40,873	255	3,151	4,741
Punjab	D 178 R 1	1,692	8,069	461,317	12,411	55,570	110,538

Statistical health reports for all India are always inevitably submitted and belated owing to the number of provinces from which returns have to be collated

The Public Health Commissioner in his most recently published report which concerns the year 1934, shows the density of population per square mile throughout India to average 310, the infantile mortality 187 per 1,000 and the vital index 155.8. He points out that the death rate and the infantile mortality rate were both higher and the birth rate lower than in the preceding year. Such fluctuations in the recorded rates must be expected under our present system of registration and too much stress should not be laid upon them. The annual increase of 9 per mille is well below the high figure of 14 recorded in 1933 but fluctuation in this figure also is a feature of Indian statistics. The principal causes of death show comparatively little change except that cholera deaths were almost three times as many in 1934 as in 1933 and the deaths from fevers are shown to be 400,000 higher than in 1933.

Again, pointing out that birth rates, death rates and the like in India compiled from records known to be incomplete and inaccurate and reminding us that population is enumerated at the census is the only accurate piece of information on which in India opinion concerning vital statistics can be based, the Public Health Commissioner turns to the gravity of the position arising from the continued high rate of natural increase in the population and deals particularly with the problem of food supply. He says that agricultural research is continuously showing the way to increased yields from the soil and that in the present state of our knowledge it is not sufficient positively to assert that food production cannot keep pace with population increase. He declares that although there is evidence of wide spread under nutrition in India there is no evidence that the evil is worse fed now than formerly. But even he says, "If food production keeps pace with population increase India needs more than this." A higher standard of living, with all that this brings in the way of improved health and well-being is a pressing need which can only be obtained in a predominantly agricultural country by a considerable increase in food production or a pronounced drop in the annual increment of population.

There is he says, a considerable volume of opinion among those qualified to judge that the age of females at marriage is rising, a tendency which is calculated to reduce fertility and therefore to lower the birth rate.

In the report of the Public Health Commissioner for 1933 it was stated that by 1941, if a conservative estimate, the population of India will probably considerably exceed a figure of 400 millions. Since then estimates have been made by Dr. Raja of the All India Institute of Hygiene and Public Health Calcutta, of the probable population of India in 1941 using three methods. The Public Health Commissioner quotes his results which are as follows —

(1) Assuming that the rate of increase in the period 1921-31 will be repeated the enumerated census population of 352,827,778 in 1931 will be 390,258,582 by 1941.

(2) The growth of population in a country is determined by four factors, the birth and death rates and the figures for immigration and emigration. Migration as a source of increase in population in view of restrictions that have been placed on the admission of Indians into other countries. During the decade, 1921-31 the outward balance of migration was about a million and three quarters, only about 5 per cent of the total increase of nearly 31 millions during the ten years. The birth rate in British India has been steady from the beginning of the century while the death rate has shown a tendency to decline during the past ten or twelve years. Using the specific mortality rates corrected for growth of population it has been shown that the trend is downwards for both sexes at all age periods except 60 and beyond, during the years 1921 to 1931. Persons aged 60 and over constitute only about 4 per cent of the total population of the country and Dr. Raja therefore thinks that it is safe to assume that at least in the immediate future the lowered death rate is likely to persist. When growth is not characterised by violent fluctuations short term predictions of sufficient accuracy can be obtained by the use of equations which have no justification except that they describe past events satisfactorily. To the figures for natural increase curves of increasingly higher order were fitted by Professor J. A. Fisher's method of fitting regression lines and as it was seen that the straight line and second order parabolæ gave better fits than the immediately higher ones the expected increases in population between 1931 and 1941 as given by the two curves were calculated. On the assumption that the rate of increase in birth India to which alone the figures related was applicable to the whole of the country Dr. Raja estimated the population in 1941 to be 401,425,517 as given by the straight line and 399,522,174 by the second order parabolæ.

(3) By fitting Proles or Poiné's logistic curve to the enumerated populations of India for the census years 1872-1931 corrected for addition of territory and improvements in census methods, finding 150 millions and 600 millions as the lower and upper limits, the logistic curve gives a very low rate of growth viz. 4.56 per cent for the ten years 1931-41 and an expected population by 1941 of 368,922,562.

The Public Health Commissioner comments on these calculations says, "In considering the results of the three methods there can be little doubt that the prediction given by the logistic curves is a grave under estimate and that the figure of 400 millions mentioned in last year's report is subject to abnormal visitations of epidemics or famines, likely to be near the mark."

Natural increases resulting from excess births over deaths for decennial periods from 1881 (since when registration of births has been carried out in all the Provinces) to 1930 and for individual from 1926 to 1934 are given in the following table —

	Annual number of births	Birth rate per 1,000	Annual number of deaths	Death rate per 1,000	Annual excess of births over deaths
1871-1880	Not available		3,540,202	20	
1881-1890	4,565,687	24	3,058,578	26	492,891
1891-1900	7,174,694	34	6,662,417	31	512,277
1901-1910	8,591,136	38	7,657,513	34	933,623
1911-1920	8,810,018	37	8,142,364	34	667,654
1921-1930	8,345,304	33	6,347,063	26	1,998,301
1926	8,395,679	33	6,460,610	27	1,935,069
1927	8,316,705	33	6,099,729	25	2,206,977
1928	8,882,577	37	6,180,114	26	2,702,459
1929	8,565,341	36	6,276,391	26	2,297,950
1930	8,690,714	36	6,483,449	27	2,207,265
1931	9,135,890	33	6,615,099	23	2,520,791
1932	9,054,506	34	5,805,666	22	3,248,840
1933	9,678,876	36	6,096,787	22	3,582,089
1934	9,288,897	34	6,856,244	24	2,432,653

THE HEALTH OF THE BRITISH ARMY

General Health statistics of the British Army in India during the year 1934

1934	Average Strength	Admissions		Deaths		Invalids sent Home		Invalids Discharged in India		Invalids finally discharged in United Kingdom		Average Constantly sick	
		No	Ratio per 1,000	No	Ratio per 1,000	No	Ratio per 1,000	No	Ratio per 1,000	No	Ratio per 1,000	No	Ratio per 1,000
Officers	44	1,006	429.2	16	6.83	37	15.78					64	05.14
British Ranks	51,429	11,216	574.1	121	2.22	511	9.33					1,411	13.25
British Ranks wives	1,180	1,996	311.6	10	2.25	36	12.50					47	23.10
British Ranks wives — partition		848										33	22
British Ranks children	6,032	2,076	299.6	82	11.83	16	2.31					64	95.9
Others		2,330		29		50						67	17

Among officers of the British Army in India 429.2 per thousand of strength were admitted to hospital during the year compared with 457.8 in 1933. There were 16 deaths giving a ratio of 6.83 per thousand compared with 18 and 6.37 in 1933. The average constantly sick in hospital was 31.0, or 11.50 per thousand of strength as compared with 33.91 or 14.50 per 1,000 in the preceding year. There were 1.54 or 577.6 per 1,000 treated as outpatients.

Of British soldiers 574.1 per 1,000 were admitted to hospital compared with 609.6 in 1933 and 589.5 in 1913. There were 121 soldier deaths or 2.22 per thousand of the strength compared with 2.96 per thousand in 1933. The most important causes of mortality among soldiers were —

Local injuries	27
General injuries	17
Pneumonia	11
Enteric group of fevers	17

The number sent home as invalids was 511 or 9.39 per thousand of the strength compared with 503 or 9.15 per thousand in 1933.

Among women and children (British Officers' Ranks) 1,396 women or 11.6 per thousand of the strength were admitted to hospital compared with 1,368 or 11.2 per thousand in 1933. Of the children 2,077 or 299.6 per thousand of the strength were admitted to hospital, compared with 1,887 or 281.9 in 1933.

The principal cause of admission to hospital troops was tonsillitis of which there were 259 cases; diseases next in order being bronchitis with 184 cases, dysentery 160, diarrhoea 145, malaria 140, constipation 70, cellulitis 63, measles 60, pneumonia 62, enteritis 50, manition 30.

HEALTH OF THE INDIAN ARMY FOR THE YEAR 1934

	Average strength	Admissions		Deaths		Invalids sent to U.K.		Invalids discharged in India		Average constantly sick	
		No.	Ratio per 1,000	No.	Ratio per 1,000	No.	Ratio per 1,000	No.	Ratio per 1,000	No.	Ratio per 1,000
Officers	2,097	703	335.2	94	29	62	86			233	11.13
Indian Ranks	117,276	5133	43.8	2502	2.10			669	5.62	1,919	39
Followers	1,741	7612	437.6	1201	4.9			107	4.00	279	29
Others *	9	2559		2				89			

* Includes Reservists, Indian Territorial Force, Royal Indian Marine, Indian State Forces, R.A.F. Civilians and Prisoners.

The admission rate of officers/sick in hospital for 1934 was 352.2 per thousand of strength as compared with 347.5 in 1933. Among soldiers 43.8 or 156.8 per thousand of strength were admitted to hospital compared with 40.9 per thousand in 1933. There was thus a decrease of 34.1 per thousand on the 1933 figures. The death rate among Indian soldiers during 1934 was 2.10 per thousand as against 2.39 per thousand in 1933.

LEPROSY IN INDIA

It is exceedingly difficult to give anything approaching an accurate estimate of the total number of lepers in the Indian Empire to-day. Leprosy has been known in India for over 3,000 years. In 1921 when a Census was made, leprosy was regarded as an *infirmity* like blindness, insanity and deaf-mutism, and the supposed number of lepers was tabulated along with these. The number counted was 102,513 as against 109,094 in 1911. But it was recognised doubtful if this figure represented anything more than the more advanced cases and that possibly a majority of this number were the beggar and pauper lepers who are seen all over the country. Dr. F. Muir, M.D., F.R.C.S., the Leprosy Research Worker at the Calcutta School of Tropical Medicine, said that recent figures obtained from a carefully conducted but limited survey, tend to confirm the computation that there are roughly from a half to one million people in India suffering from leprosy.

Early in the year 1924, the British Empire Leprosy Relief Association was constituted in England with H. R. H. The Prince of Wales as Patron, the Viscount Chelmsford as Chairman of the General Committee and H. E. the

Viceroy of India as one of the Vice Presidents following its formation and in view of the good results being obtained from the newest treatment of leprosy, H. E. the Viceroy felt that the time was auspicious for the inauguration and carrying on of an earnest campaign with the object of ultimately stamping out leprosy from India.

His Excellency invited certain gentlemen representing various interests to form an Indian Council of the Association which he formally inaugurated at a public meeting in Delhi on the 27th January 1925.

A general appeal for funds in aid of the Association was issued by His Excellency the Viceroy on the date of the inauguration of the Indian Council which was closed after a year with realizations amounting to over Rs. 20,00,000 which was invested in the end of 1928. The investments amounted to Rs. 20,63,065 yielding an annual revenue of over Rs. 1,22,000.

The policy and principles of the British Empire Leprosy Relief Association, Indian Council, with regard to provincial committees

are expressed in its 'Memorandum on the method of conducting the anti leprosy campaign in India' which was published in 1926. This document sought to bring out the following main points which according to the latest scientific researches should be the basis upon which all efforts ultimately to eradicate leprosy must rest —

(1) Pauper lepers form only a small fraction of the leper population, and the disease is common among all classes of the community

(2) Segregation is not the most appropriate method of dealing with lepers, for

(a) financially it would be impossible,

(b) any attempt to impose forcible segregation would drive patients, particularly those who are suffering from the earlier stages of the disease to conceal their misfortune and, as has been the case where such means have been adopted only the more advanced and obdient lepers would be segregated

(3) The majority of the advanced cases are not highly infectious and are less amenable to treatment while the early cases in which the disease has made but little outward manifestation can be controlled by treatment

(4) The strongest hope of stamping out the disease lies in providing facilities for the treatment of early cases

The Indian Council therefore, while it did not desire to minimise the usefulness of homes and asylums for the care of lepers strongly recommended that the efforts of the Provincial Committees should, for the present at least, be concentrated upon the establishment of dispensaries to serve the following objects —

(a) to induce patients to come forward at an early stage in the hope of recovery instead of hiding their malady till it becomes more advanced, more infectious and less remediable and so

(b) to shut off the sources of infection as the number of infectious cases will continually tend to diminish and the opportunities for infecting the next generations will become fewer

The Council's main work during the first several years of its life has been organisation and planning and the outlining of a programme of work varied by the selection of the most fruitful soils for experimentation in methods of work. One valuable product of its activities is the fact that the leper is becoming less prone to hide his disease and there is an increase of general interest in the subject

The survey figures published by the Council have aroused much interest throughout India and many Provincial Governments give grants in aid for asylums, homes and clinics. Through the generosity of the Council and of the Calcutta School of Tropical Medicine training in modern methods of treatment is given to doctors sent up by all Provinces and several Indian States and they in turn pass on their training to others in their own parts of the country. The Calcutta School commenced leprosy teaching in 1920 and still continuing it and has obtained most valuable results. Treatment has consequently improved and early cases are more readily coming forward than formerly

His Excellency the Viceroy is the President of the Indian Council, the Director General of the I.M.S. the Chairman of the Governing Board, Sardar Bahadur Palwant Singh Puri the Honorary Secretary

BLINDNESS IN INDIA

All over the East and in fact in most tropical and sub-tropical countries blindness is very prevalent and only of recent years have people begun to realise that much of this blindness can be relieved and still more of it if not most of it, could, with proper measures taken be prevented. In Egypt, renowned for its sufferings from blindness it was a gift of some £13,000 made by Sir Ernest Cassel at the beginning of this century that was the initiation of that fine ophthalmic service which began under the guidance of Mr. MacCallan, has now spread all over the country and gives medical treatment to three or four hundred thousand patients a year. Northern Africa, Turkey, Persia, India and China are all countries where there is a very high incidence of blindness and suffering from eye disease, and where western medicine has not yet penetrated sufficiently deeply to make much impression on the mainly rural and illiterate populations. There is a great trachoma belt extending from China into Eastern Europe stopped only from spreading all over the West by the higher standard of living, sanitation and cleanliness which the European nations have attained

India is in this great **Blindness Belt**. According to the last census returns there are 480,000 totally blind persons in this population of more than 300 millions. That is an incidence of

14 totally blind to every thousand of the population. But the census figures are notoriously defective and in several districts a special count has been made of the totally blind and wherever this has been done the census figures have been found to be much too low. Thus in the Nisik district an incidence of at least 4.38 per thousand was found as against the census figure of 1.74. In Ratnagiri an incidence of 1.5 was found as against the census figure of 0.7. In Bijapur 2.6 is against 0.7. In the United Provinces a Deputy Commissioner had a count made and found no less than 9 per thousand. In Palampur 7 per thousand was found. If as is not unlikely this sort of error of under-estimation in the census report is general then it is not unreasonable to suppose that the real number of totally blind persons in India is more like 14 millions than the half million shown in the census returns

These are the figures for total blindness and they by no means give the full picture, for they include only totally blind of both eyes and say nothing of the much greater number who from neglected eye diseases are partially or even nearly blind and whose happiness and efficiency are thus greatly impaired. The term 'blindness' has a different interpretation in every country. In a report on the Prevention of Blindness, published by the League

of Red Cross Societies these different interpretations are shown. In the United States blindness is defined as "inability to see well enough to read even with the aid of glasses, or for illiterates, inability to distinguish forms and objects with sufficient distinctness", and in Egypt a person is accounted blind who cannot see fingers at a distance of one metre. If such persons were counted in our statistics of total blindness in India, there is little doubt that the figure would be very much larger than those indicated above. Recently the **All-India Blind Relief Association** has made an analysis of a very large number of patients attending its camps and dispensaries, and has found that among these patients for every totally blind person there are three with more or less dimmed vision the result of eye disease. It appears not unlikely that the true ophthalmic condition of India would be represented by figures showing one and a half million totally blind persons, and in addition to these four and a half million with more or less impaired eyesight.

Associations known as "**Blind Relief**" Associations have been working for several years in Western India in conjunction with Government hospitals to alleviate this affliction of blindness. The number of eye doctors in India is notoriously small and those there are stay mostly in the large towns. The Associations work by means of travelling hospitals which bring relief to the villages in the rural areas. They also work by means of trained village workers whose duty it is to find out the 'hidden blind' and get them to the medical centre for relief to find out cases of small pox (a constant source of blindness in children), to inspect new born

children for the detection of ophthalmia neonatorum to keep registers of all blind and partly blind persons and persons suffering from eye disease, and to treat in the villages simple cases of conjunctivitis or sore eyes. Since their inception the Associations have been the means of restoring sight to thousands of blind people and of preventing blindness in many thousands more. The work is capable of indefinite extension and the need for some such organisation has been shown.

The **All-India Blind Relief Association**—(The Green Star Society) exists to co-ordinate and centralise the various Associations in the mofussil and to extend their work. It is under the patronage of the Governor of Bombay and has for its life President Mr C G Henderson (late I C S) who founded and managed for many years all the branch Associations working in Western India. It is affiliated to the International Association for the Prevention of Blindness, which has its headquarters in Paris and was formed on September 14th 1929, under the auspices of the League of Red Cross Societies and the American Society for the Prevention of Blindness. The Organising Secretary is J. Crawford Hutchinson, 112 Town Hall, Bombay.

Considerable progress was made in 1934 with a scheme which the Indian Red Cross Society is carrying out in co-operation with the National Institute for the Blind, London, for training teachers in the prevention of eye disease. The National Institute gave £20 for organising eye courses for the teachers and £120 for the distribution of literature. Courses of instruction are being organised and general publicity done.

THE MATERNITY AND CHILD WELFARE MOVEMENT

Amongst the most pressing problems of India is a health is that presented by the appalling maternal and infant mortality. The figures for maternal mortality are not accurately known but they are certainly not less than 10 per thousand live births often more. It has been calculated that every year no fewer than 2 million Indian babies die, while many others survive only to grow weak and feeble from unhygienic surroundings during infancy. A noteworthy feature has been the further progress of the infant welfare movement which owes much to the All India Maternity and Child Welfare League initiated by Lady Chelmsford and also to the Indian Red Cross Society which aims at gradually establishing a network of child welfare centres in most of the large towns in India. The amalgamation of these two Bodies which has taken place forming the Maternity and Child Welfare Bureau will undoubtedly increase and develop the work. In all the great centres of population work is now being done for the training of midwives, for the instruction of mothers and for the care of babies. Training centres for Indian and Anglo-Indian women have been opened in order to spread the elements of infant hygiene to other parts of India. Most hopeful sign of all, Indian ladies are beginning to interest themselves in this work in large numbers. But such is the magnitude of the field, that a consistent widespread effort on a scale hitherto impossible must be under-

taken, if any appreciable reduction is to be made in the appalling mortality of young children.

Centres of Activity are organised on a provincial basis, though the various provinces differ considerably in the nature of the work undertaken and the amount of organisation displayed. It is noteworthy that the work is most co-ordinated and most energetically carried on where there are persons appointed under the Director of Public Health whose special duty it is to foster Child Welfare activities.

The care needed by the wives and children of sepoys in the Indian Army is being increasingly realised and nowhere more than in the units themselves. The result has been in the last few years the opening of much work in this direction. Much of it is purely medical work which in the absence of families hospitals for the Indian soldiers is a necessity. But genuine child welfare activities are also present in some centres many of them assisted by the M & C W Bureau Indian Red Cross Society which has undertaken the organising work in place of the Lady Birdwood Army Child Welfare Committee. A remarkable feature of this movement is the keenness of the men themselves to aid it realising as they do the benefit to their own women and children. There are now very few cantonments where some work of this kind is not going on.

So far all the schemes have devoted their attention to educating women in the elements

of mothercraft and attempting to preserve infant lives and improve child health. In a land of so many languages and superstitions progress will necessarily be slow and India has yet to decide whether she will work intensively and try to rear a few well developed children as far as adolescence or extensively attempt to bring a large number of infants through the first critical months, only to have them perish at a later stage from the many ills that childhood is heir to in a land of great poverty under nourishment, epidemics and famine. In Western lands the Child Welfare Movement has no more marked characteristic than its inability to stop expanding. Its ramifications know no bounds. Its inevitable corollaries are endless and like the banyan tree it will no doubt in India also develop innumerable fresh roots, medical supervision, dental clinics, better housing, open air playgrounds etc. etc. But these are not yet. Its preliminary task is to educate the mothers of India to the enormity of allowing two million

babies to perish every year and to convince them of the equally important fact that a high death rate always spells also a high damage rate of sickly, under developed, incompetent citizens.

The maternity and Child Welfare Bureau, which works in connection with the Indian Red Cross Society, spent a large proportion of its funds in 1934 on education. It maintained three schools for training health visitors, plus two nursery schools. Assistance was also given to the Welfare Centre which provides field work for the students taking the Diploma in Maternity and Child Welfare at the All India Hygiene Institute at Calcutta. The Bureau provides a central adviser on the subject and thus helps co-ordinate work in different provinces. The Victoria Memorial Scholarship fund is earmarked for the training of indigenous and other midwives.

Director, Maternity and Child Welfare Bureau
Dr. Jean M. Orkney, W.M.S.

INDIAN RED CROSS SOCIETY

When the war first broke out, what is generally termed Red Cross work was undertaken in India and Mesopotamia by the St. John Ambulance Association and by a number of provincial organisations working on independent lines. From August 1916 the central work was taken over by the Indian Branch of the Joint War Committee of the Order of St. John of Jerusalem and the British Red Cross Society. The final report of that Committee shows that up to June 1920 its total receipts amounted to Rs. 1,77,85,716 of which some 17 lakhs had been contributed by the British Red Cross Society. It had spent about 67 lakhs in Mesopotamia, nine lakhs on the Afghan War and Waziristan Expedition. In Mesopotamia and India combined it had spent on Red Cross objects in all about 117 lakhs.

It closed its career in June 1920 under the following circumstances. In the summer of 1919, an invitation had been received to join the International League of Red Cross Societies having for its object the extension of Red Cross work in the sphere of purely civil activity. Though there was then no formally constituted Red Cross Society in India, the invitation was accepted thus giving India a distinct position in a world wide League of humanitarian societies. A Bill to constitute an Indian Red Cross Society was introduced by Sir Claude Hill in the Imperial Legislative Council in March 1920, and only passed into law as Act XV of 1920. This Act handed over the balance of the Joint War Committee to the new Society, and authorised it not only to direct the utilization for war purposes of the capital funds at its disposal but also to devote the interest, as far as possible, for civil purpose. As contemplated in the Act of constitution of the Society, its activities are completely decentralized, and are being carried on through twenty-two Provincial and State Branches under which there are numerous sub branches.

The objects on which the funds of the Society may be spent are—

1. The care of the sick and wounded men of His Majesty's Forces whether still on the active list or demobilised.

2. The care of those suffering from Tuberculosis, having regard in the first place to soldiers and sailors, whether they have contracted the disease on active service or not.

3. Child welfare.

4. Work parties to provide the necessary garments, etc. for hospitals and health institutions in need of them.

5. Assistance required in all branches of nursing, health and welfare work, ancillary to any organisations which have or may come into being in India and which are recognised by the Society.

6. Home Service Ambulance Work.

7. Provision of comforts and assistance to members of His Majesty's Forces whether on the active list or demobilised.

The Society has five grades of subscribing Members, namely, Honorary Vice Presidents, Patrons, Vice Patrons, Members and Associate Members. Their respective subscriptions are Rs. 10,000, Rs. 5,000, Rs. 1,000, Rs. 12 annually or a consolidated payment of Rs. 150 and anything between Re. 1 and Rs. 5 annually or consolidated payment of Rs. 50. At the end of 1933 there were 12,500 adult members of these various grades.

To stimulate interest in the aims and objects of the Society amongst the future generations a Junior Red Cross movement has been instituted which embraces the student population. The Punjab Provincial branch has taken the lead in furthering this movement. Other provinces are now following suit and at the end of 1931 the number of members was 252,941.

Constitution.—His Excellency the Viceroy is President of the Society. The Managing Body ordinarily consists of a Chairman to be nominated by the President and 25 members of the Society of whom 12 are the Vice Presidents nominated by Provincial or State Branches, 8 elected by the Society at the Annual General Meeting from among the members of the Society, and 5 nominated by the President.

The present Chairman of the Managing Body is Sir Lincoln Burdon K.C.I.F., C.S.I., I.C.S. and the Organising Secretary, Miss Norah Hill, A.R.R.C.

Finances—The operations of the Joint War Committee were brought to a close in June 1920 with a capital investment of the face value of Rs 56,88,000 and Rs 8,01,500 '66 in floating and fixed deposit accounts. The Society has since invested further funds in various securities and its finances at the end of December 1933, stood at a capital investment of the face value of approximately Rs 67½ lakhs. The income derived from the capital of the Society, (which

is 3½ lakhs at present) after providing for certain liabilities of the Central Society, is distributable under the Act to the Provincial Branches in proportion to their contributions to the Central 'Our Day' Fund.

A most useful and promising aspect of the Indian Red Cross Society is the organisation of a junior branch, which has attained great popularity, especially in the Punjab, where also it has gladly been taken up in girls' schools.

ST JOHN AMBULANCE ASSOCIATION (Indian Council)

The St John Ambulance Association was founded in 1877 by the Order of the Hospital of St John of Jerusalem in England, and has for its objects—

(a) The instruction of persons in rendering First Aid in cases of accident or sudden illness and in the transport of the sick and injured.

(b) The instruction of persons in the elementary principles and practice of nursing and also of hygiene and sanitation, especially of a sick room.

(c) The manufacture, and distribution by sale or presentation of ambulance material and the formation of ambulance depots in mines, factories, and other centres of industry and traffic.

(d) The Organisation of Ambulance Corps, Invalid Transport Corps, and Nursing Corps.

(e) And generally the promotion of instruction and training, out of works for the relief of suffering of the sick and injured in peace and war independently of class, nationality, or denomination.

An Indian Council of the Association was constituted on a regular basis in 1910. It has since issued over 200,000 certificates of proficiency in First Aid, Home Nursing, Home Hygiene and Sanitation and over 10,000 tokens such as Vouchers, Medallions, Labels, and Tokens for special proficiency in those subjects. The object of the Association is not to rival, but to aid, the medical man, and the subject matter of instruction given at the classes

qualifies the pupil to adopt such measures as may be advantageous pending the doctor's arrival, or during the intervals between his visits.

During the year 1934 27,821 persons attended 1,801 courses of instruction in First Aid, Nursing, Home, Home Hygiene and Sanitation and of these 17,722 qualified for the Association's certificates, i.e., 16,260 in First Aid, 910 in Home Nursing, 490 in Hygiene and 102 in Sanitation. A new course, Domestic Hygiene and Mothercraft, introduced in 1932 attracted 8 classes with 147 candidates of whom 114 qualified.

The Association has five grades of members, namely Patrons, Honorary Councillors, Life Members, Annual Members and Annual Associates. Their respective subscriptions are Rs 1,000, Rs 500, Rs 100, Rs 5 and Rs 2.

The income of the Indian Council at headquarters consists primarily of interest on securities, a fixed annual grant from Government fees for certificates and membership subscriptions.

Then Excellencies the Viceroy and the Marchioness of Linlithgow and His Excellency the Commander in Chief are President, Lady President and Chairman respectively, with 17 members form the Indian Council. The general business of the Indian Council is conducted by an Executive Committee of which the Hon.ble Sir Ernest Bardon, Kt., C.S.I., C.I.E., J.C.S., is the Chairman, Miss Norah Hill, A.K.C., the General Secretary.

INSANITY AND MENTAL HOSPITALS IN INDIA

The accommodation for the treatment in British India of persons who suffer from mental disorders is still very inadequate. In the Indian States the condition of affairs is even worse, for with the sole exception of Mysore State which has a small and highly archaic mental hospital at Bangalore, there are no mental hospitals in existence so that persons suffering from all forms of mental disease are confined in the Jails where, of course, no provision exists for any kind of treatment. According to the last Census (1931) out of a total popula-

tion of 352,837,778 (India and Burma) there are 120,304 persons insane, making a proportion of insane to sane of 3 per every 10,000. In the United Kingdom the proportion of insane to sane is roughly 40 per 10,000, while in New Zealand it is as much as 45 per 10,000. In reviewing these figures it must be borne in mind that those of the United Kingdom and New Zealand include the 'feeble minded', an item that is not included in the figures for British India.

For the care of the 120,304 Insanes of India and Burma there exists accommodation in mental hospitals for 9,518. Hence only one person in eight out of the total insane population can obtain accommodation in institutions which exist especially for their care and treatment. In

fact the available institutions were overcrowded to the extent of 42 per cent.

The following table gives the number of mental hospitals in each province during 1927, the total population of each institution and the number discharged cured and died —

Provinces	No of Mental Hospitals	Admitted and readmitted during the year	Total Population of Mental Hospitals			Discharged cured	Died	Daily average		Criminal Lunatics
			Males	Female	Total			Strength	Sick	
Assam	1	164	697	144	841	121	23	687	60	291
Bihar and Orissa	2	198	1,272	412	1,684	84	45	1,487	69	5
United Provinces	3	469	1,610	443	2,053	449	158	1,550	134	77
Punjab	1	391	1,161	298	1,459	128	68	1,097	79	265
Central Provinces	1	95	442	118	560	53	31	469	17	141
Bombay	6	865	2,047	852	2,899	380	159	2,108	112	176
Madras	3	655	1,771	558	2,329	920	114	1,727	301	268
Burma	2	314	1,449	232	1,681	188	70	1,332	42	65
Total	19	3,151	10,449	3,037	13,506	1,621	688	10,477	514	1,811

It will be observed that there is no separate mental hospital in Bengal though some provision is made in a general hospital. Insanes from this province are treated in one or other of the two mental hospitals at Ranchi. All Mental hospitals are under the direct control of the Provincial administrative medical officers except the European Mental Hospital at Ranchi which is controlled by a Board of Trustees presided over by the Commissioner of Chota Nagpur. The so-called Central Mental Hospitals that is to say, the Mental Hospital at Madras, North Yeravda (Bombay), Lahore (Punjab), Agra (United Provinces of Agra and Oudh) and Rangoon (Burma), as well as the two Mental Hospitals at Ranchi (one for Europeans and Americans and one for Asiatics and Africans) are administered by whole time medical officers who are usually trained alienists. The Administration of the remaining Mental Hospitals in British India and Burma lies with the Civil

Surgeon of the locality in which they happen to be situated. According to recent authoritative report it is probably true to state that only one Mental Hospital in the whole of India can claim any pretension to be up to date as regards organisation, staffing and equipment and that is the Mental Hospital for Europeans at Ranchi. All the others are for the most part over crowded and under staffed, thus rendering anything approaching treatment on modern lines out of the question. The only province in India which has so far displayed some appreciation of the importance of bringing the prevention and treatment of mental disorders into line with conditions in civilised countries is Madras. The local Government of this province has achieved a notable advance in its attitude towards mental disorders by providing in the construction of the new General Hospital at Madras, accommodation for the treatment of early cases of mental diseases.

National Association for Supplying Medical Aid by Women to the Women of India.

The National Association for Supplying Medical Aid by Women to the Women of India was founded by the Countess of Dufferin in 1885, the object being to open women's hospitals and women's wards in existing hospitals, to train women doctors, nurses and midwives in India, and to bring these out when necessary from Europe. An endowment fund of about 6 lakhs was obtained by public subscription. In addition branches were formed in each Province, each branch having its own funds and each having a number of Local Committees and Zenana Hospitals affiliated to it.

The Central Fund gives grants in aid to several Provincial branches, it gives scholarships to a number of women students at the Medical schools of Bombay, Calcutta, Madras and Delhi. It has in the past brought from England a certain number of European medical women

It has assisted by grants in aid the building of a number of zenana hospitals in different parts of India. It has affiliated to it 13 Provincial branches and a number of Local Committees.

The Government of India subsidize the Countess of Dufferin's Fund to the extent of Rs 3,44,306 per annum to maintain a Women's Medical Service for India—this service consists of 44 officers, with a training reserve of 8 doctors and a junior service of 6 assistant surgeons. Medical women either British or Indian holding registrable British qualifications are eligible for the senior service.

The President is H. E. The Marchioness of Willington. The Hon. Secretary is the Surgeon to H. E. The Viceroy, and the Secretary Dr M. V. Webb, C.M.O., W.M.S., Red Cross Building, New Delhi and Viceregal Estates, Simla.

THE WOMEN'S MEDICAL SERVICE FOR INDIA

This Service is included in the National Association for supplying medical aid by women to the women of India, generally known as the Countess of Dufferin's Fund and is administered by the Executive Committee and Council of that Fund. The Government of India has so far allotted the sum of £25,000 per annum towards its maintenance. The present sanctioned cadre is forty-four first class medical women, with a training reserve of 8 women graduates in medicine of Indian Universities. Recruitment of the service is made (a) in India by a medical sub-committee of the Council which includes the Director General, Indian Medical Service, the Honorary Secretary to the Council and the Chief Medical Officer, Women's Medical Service (b) in England, by a sub-committee, including a medical man and two medical women conversant with conditions in India. These sub-committees perform the duties of a medical board examining candidates for physical fitness and for return to duty after invaliding.

The Council determines what proportions of the members of the Service is to be recruited in England and in India respectively. In the original constitution of the Service, duly qualified medical women who are in the service of or who have rendered approved service to, the Countess of Dufferin's Fund, are to have the first claim to appointment, and thereafter special consideration is to be paid to the claims of candidates who have qualified in local institutions and of those who are natives of India.

Qualifications—The qualifications are that the candidate must be (a) a British subject resident in the United Kingdom or in a British Colony or in British India, or a person resident in any territory of any Native Prince or Chief under the suzerainty of His Majesty exercised through the Governor General of India or through any Governor or other officer subordinate to the Governor General

of India (b) Must be between the ages of twenty-four and thirty at entry (c) She must be a first-class medical woman, i.e., she must possess a medical qualification registrable in the United Kingdom under the Medical Act, or an Indian or Colonial qualification registrable in the United Kingdom under that Act but this condition does not apply at the original constitution of the Service to medical women in charge of hospitals who, in the opinion of the Council are of proved experience and ability (d) The candidate must produce a certificate of health and character. But the Council reserves the power to promote to the Service ladies not possessing the above qualifications, but who have shown marked capacity. Members of the Service are required to engage for duty anywhere in India. After one year of probation has been satisfactorily passed their appointments are confirmed.

The Training Reserve of the Women's Medical Service—This Service has a sanctioned cadre of eight and is open to women graduates in medicine of the Indian Universities. Salaries range from Rs 200 to Rs 300 per month with furnished quarters or the equivalent in money, to those employed in India.

2. Two of the eight members of the reserve but not more at any one time may be deputed to Europe by the Executive Committee for post-graduate training, and shall receive a stipend at the rate of £200 a year each paid quarterly and return passage. Any member not so deputed shall be employed in India.

3. Ordinarily four years shall be spent in the reserve before a member is considered for appointment to the Women's Medical Service, but the Executive Committee shall have power to shorten this period in special cases. Service in the reserve shall be considered by the Executive Committee when appointments are being made to the Women's Medical Service but shall not of itself constitute a claim to appointment.

VICTORIA MEMORIAL SCHOLARSHIPS.

The Victoria Memorial Scholarships Fund was organised by Lady Curzon in 1903, in order to secure a certain amount of improvement in the practising dais of India. A sum of about 6½ lakhs was obtained by public subscription, and centres were organised in each Province to carry out the objects of the Fund. An additional Rs 1,39,000 was allotted to the Fund from Their Majesty's Silver Jubilee Fund in 1935. Over 2,000

midwives have been trained in addition to large numbers who have been partially trained. Of late years the Fund has done much to pave the way for the registration and supervision of indigenous dais. It has also done much propaganda work. The Fund is now administered by the Maternity and Child Welfare Bureau of the Indian Red Cross Society.

LADY HARDINGE MEDICAL COLLEGE AND HOSPITAL

The Lady Hardinge Medical College was opened by Lord Hardinge on the 17th February 1916. It is a residential Medical College staffed entirely by women, and was founded to commemorate the visit to Delhi, in 1911, of the Queen Empress. Lady Hardinge took the initiative in raising funds by public subscription to meet the cost of buildings and equipment. Thirty lakhs of rupees, in all, have been given for these purposes mostly by the Ruling Princes and Chiefs of India. After Lady Hardinge's death in 1914, it was suggested by Her Imperial Majesty Queen Mary that the institution should serve as a memorial to its founder and be called by her name.

The Governing Body includes the Director General Indian Medical Service, the Chief Commissioner of Delhi, the Chief Engineer, Delhi Province, the Educational Commissioner with the Government of India, the Chief Medical Officer, Women's Medical Service, a representative elected by the All India Association of Medical Women, the Surgeon to H.E. the Viceroy, an Indian member of the Council of State, 2 Indian members of the Legislative Assembly, a private Indian citizen of Delhi, a private lady resident of Delhi, the Civil Surgeon of New Delhi and the Agent, Imperial Bank of India, Delhi. The Honorary Secretary who is also a member of the Governing Body is the Deputy Director General Indian Medical Service. The Deputy Accountant General, Central Provinces, acts as Honorary Treasurer.

The College and Hospital, together with separate hostels for 100 Medical students and 70

nurses and residences for the medical and teaching staff, occupy a site of 55 acres in New Delhi within easy reach of old Delhi city. The grounds are enclosed and adequate provision is made for the seclusion of both students and patients from outside observation. Strict observance of purdah cannot, however, be guaranteed in the case of students. As the hospital patients are all women or children, it is for example, necessary that students should, in their final year, attend a brief course of instruction on men patients at the Civil Hospital, Delhi. The College buildings contain a Library, Museum, Lecture Rooms, Laboratories and offices. Hostels are provided for Hindu, Moslem, Sikh and Christian students. The hospital is a fine modern building with accommodation for 200 in-patients and a commodious out-patients department. The College and Hospital are supported by a grant of Rs 3,11,000 from the Government of India, supplemented by grants from Provincial Governments and Indian States. Students are prepared for the Intermediate Science Examination and the M.B., B.S. degree of the Punjab University, with which the College is affiliated.

Attached to the Hospital there are (1) a Training School for Nurses, and (2) a Training School for Dispensers. All particulars as to admission and training may be obtained in the case of (1) from the Nursing Superintendent, Lady Hardinge Medical College Hospital, Delhi, and in the case of (2) from the Lecturer on Pharmacy, at the same address.

NURSING

Whilst India cannot show the complete chain of efficiently nursed hospitals which exists in England, there has been a great development of skilled nursing of recent years. This activity is principally centred in the Bengal, Madras, and Bombay Presidencies, where the chief hospitals in the Presidency towns are well nursed, and where large private staffs are maintained, available to the general public on payment of a prescribed scale of fees. These hospitals also act as training institutions, and turn out a yearly supply of fully trained nurses, both to meet their own demands and those of outside institutions and private agencies. In this way the supply of trained nurses, English, Anglo Indian and Indian, is being steadily increased. In Bombay the organisation has gone a step farther, through the establishment of the Bombay Presidency Nursing Association, c/o St. George's Hospital,

Bombay. This is composed of representatives of the various Nursing Associations in charge of individual hospitals, and works under the Government. The principle on which the relations of this Association with the local Associations is governed is that there shall be central examination and control combined with complete individual autonomy in administration.

State Registration of Nurses for all India is much required. A meeting was held in Bombay in 1923 when Nurses from the Presidency met to discuss the question. It is desired that India should have its own State Register as in the United Kingdom, South Africa, New Zealand, Australia, Canada and Burma, and that the current and examinations should be brought into line with these countries. Government has proposed to establish a Provincial Register preparatory to an All India Register.

Nursing Bodies—The Secretary of the Calcutta Hospital Nurses Institution is Mr A R Nicholson, Allahabad Bank Buildings, Calcutta. The names and addresses of the other Nursing bodies in Calcutta are Lady Minto's Indian Nursing Association (Bengal Branch), 4 Hungerford Street, Lady Rogers' Hostel for Indian Nurses, 144, Russa Road South, Nurses Academy, 6, Suburban Hospital Road, and Nurses Bureau, 37, McLeod Street. In Madras there is the General Hospital, with a staff of 62 nurses, the Government Maternity Hospital, the Caste and Gosha Hospital at Kilpauk, the Royapetta Hospital and the Ophthalmic Hospital also the Lady Amphill Nurses Institute and the South Indian Nursing Association (now amalgamated). The Association has under its management—*The Lady Amphill Nurses Institute*, Western Castle Mount Road, Madras. Fully trained and experienced nurses for all cases of illness both among Europeans and Indians are always available. *The Lady Walrond Nursing Home*, Western Castle Mount Road, Madras, and *Nilgiri Nursing and Convalescent Home*, Ootacamund for Medical Surgical and Maternity cases. The Nilgiri Nursing Home affords admirable facilities for convalescents.

Bombay Presidency—The Bombay Presidency was amongst the first in India to realise the value of nursing in connection with hospital work. The first steps were taken on the initiative of Mr L. R. W. Forrest at St George's Hospital, Bombay, where a regular nursing cadre for the hospital was established together with a small staff of nurses for private cases. This was followed by a similar movement at the J J and Allied Hospitals and afterwards spread to other hospitals in the Presidency. Ultimately the Government laid down a definite principle with regard to the financial aid which they would give to such institutions agreeing to contribute a sum equal to that raised from private sources. Afterwards, as the work grew, it was decided by Government that each nursing association attached to a hospital should have a definite constitution and consequently these bodies have all been registered as Associations under Act 21 of 1860. By degrees substantial endowments have been built up, although the Associations are still largely dependent upon annual subscriptions towards the maintenance of their works. This Association was incorporated under the Societies Registration Act of 1860 in the year 1911, with the primary object of establishing a nursing service from which the Nursing staff at Government aided hospitals under management of Nursing Association might be recruited. This function, however, was never carried out by the Bombay Presidency Nursing Association, and under the present circumstances it appeared to the Committee improbable that it could be carried out, but up to now the auxiliary function of the examining and granting certificates to nurses and midwives, and maintaining a register of qualified nurses and midwives and also maintaining a Provident Fund for the employees of the affiliated associations have been successfully carried out from 1911 to 1933. Memorandum, Rules and By laws of the Association were however revised brought into line with the actual working of the Association. Towards

the end of 1927, the Committee decided that some steps must be taken to do so and accordingly appointed a sub-committee to consider the revision and amendment of the Memorandum, Rules and By laws. The Sub-Committee reported that it appeared to be impossible to amend and revise the present rules piecemeal and that the only way to put things in order would be to draft an entirely fresh constitution and rules.

After fully considering the Sub-Committee's report the Committee agreed that the Association be incorporated by an Act on the line of the Registration Act in the United Kingdom. Pending the passing of the Act the new Memorandum of Association having received the approval of Government was brought into operation from 1st April 1929.

Lady Minto's Indian Nursing Association—In 1906 this Association was inaugurated, replacing the Punjab and Up-country Nursing Association for Europeans in India, which society, established in 1892, had accomplished much useful work in this country. Owing, however, to lack of funds it was found impossible to continue its administration and to carry out the expansion of the work so urgently called for. The name of the helpers identified with the premier Association to whom the public must ever be indebted are the Hon. Lady Lyttleton, Lady Helen Munro Ferguson and Mrs. Cottrill, while Mrs. Shepherd, by her indefatigable efforts, is truly entitled to be regarded as the pioneer of a trained nursing system throughout the greater part of India. The late Lady Curzon worked energetically to provide an enlarged Nursing organisation, but mainly owing to financial reasons, she was unable before she left India to bring the scheme to fruition. The Home Committee of the existing Association, recognising the need for expansion, consented to take over the present Association and approached Lady Minto before she left England in 1905 for co-operation towards this project and after much consideration and discussion with the Government of India, Lieut. Governors and Commissioners of Provinces, the present Association was established. An appeal by Lady Minto addressed to the public both in England and India, was responded to most generously and sufficient funds were collected to form an endowment fund, which has in spite of fluctuations increased a little with time. The assistance of a Government grant is much valued, as it enables Homes for the Sisters to be kept up in six Provinces in India and in Burma. At the request of the Home Committee the enlarged Association was renamed the "Lady Minto's Indian Nursing Association."

The duties of the Home Committee are, as before, largely concerned in dispatching—as required—suitably trained and carefully selected Nurses for service on the staff of the Association in India. Thus, Europeans who are members of this Association are enabled to obtain skilled nursing at moderate charges on a sliding scale of fees determined by the income of each patient. The boon of obtaining good nursing at moderate terms is much appreciated, the rates of subscriptions being really an insurance against illness.

Her Majesty the Queen is a Patron of the Association. Her Excellency The Marchioness of Linlithgow is President of the Central Committee in India.

Hon. Secretary: Lt. Col. H. A. Elliot, M.B.E., M.C., M.B., I.R.C.S., I.M.S.

Chief Lady Superintendent: Miss G. Beckett. Address—Central Committee, L.M.I.N.A., Viceregal Lodge, Simla and Red Cross Building, New Delhi.

Secretary, Home Committee: Miss M. E. Ray, R.R.C., 10, Witherly Mansions, Earls Court Sq.

Nurses Organizations—The Association of Nursing Superintendents of India is now amalgamated with the Trained Nurses Association of India and has the one set of officers. The Trained Nurses' Association of India and the Association of Nursing Superintendents of India are not Associations to employ or to supply nurses, but are organizations with a membership wholly of nurses with the avowed objects of improving and unifying nursing education, promoting *esprit de corps* among nurses, and upholding the dignity and honour of the nursing profession. The Associations have a membership of 472 including nurses trained in ten or more different countries, Europeans, Americans, New Zealanders, Australians and Indians. The Association of Superintendents was started in 1905 as the Association of Nursing Superintendents of the United Provinces and the Punjab, but by the next year its membership had spread over the country to such an extent that the name was changed to include the whole of India. The Trained Nurses Association was started in 1908 and a monthly Journal of Nursing began to be published by the two Associations in February, 1910. The Associations are affiliated with the International Council of Nurses.

The Trained Nurses' Association of India was founded and incorporated with the Association of Nursing Superintendents in 1908. Its objects are (a) to uphold in every way the dignity and honour of the Nursing profession, (b) to promote a sense of *esprit de corps* among all nurses, (c) to enable members to take counsel together on matters affecting their profession, (d) to elevate nursing education by obtaining a better class of candidates, (e) to raise the standard of training, (f) to strive to bring about a more uniform system of education, examination and certification for trained nurses both Indian and European, and (g) to arrange reciprocity between different provinces, States and other countries. Nurses eligible for membership are those holding a certificate of not less than three years' general training in a recognised training school. The Trained Nurses Association of India is affiliated with the International Council of Nurses and its affiliated Associations are the Health Visitors' League and the Midwives Union. The official organ of the Association is called The Nursing Journal of India. The Association has 800 members and 304 student nurses.

Patrons: H. E. The Marchioness of Linlithgow, Lady Brabourne, Bombay and H. E. Lady Marjorie Baskin, Madras.

President: Miss M. E. Abram, S.R.N., Matron Superintendent, Presidency General Hospital, Calcutta.

Vice Presidents: Miss D. Chudwick, S.R.N., S.C.M., Matron Superintendent, Government Hospital for Women and Children, Feroze, Madras; Miss A. Wilkinson, S.R.N., S.C.M., Matron, St. Stephen's Hospital, Delhi.

Secretary: Miss Diana Hartley, S.R.N., S.C.M., 1, Mudavakkam Tank Road, Kilpauk, Madras.

THE WOMAN SUFFRAGE MOVEMENT

Hon. Secretary and Treasurer: Miss Gadsden, General Hospital, Madras.

Within the abnormally short period of eleven years the Woman Suffrage movement has risen in India, swept through the country sympathetically and achieved the political enfranchisement of women in all the nine British Provinces and in four Indian States.

Three fundamental causes have led to this remarkable success: first, the deep veneration that is given by the Hindu and Muhammadan religions to the feminine aspect of life equally with the masculine as shown by the importance of goddesses, by the necessity for the presence of the wife at all ceremonies performed by a Brahman, by the idea of the sacred mystery of womanhood, veiled by the purdah, and by the general veneration of motherhood. Secondly, the time was psychological, for a new era was beginning for the Indian people by the introduction of a Scheme of Reforms in Indian government which was planned to give a basis of representative government on a much extended scale. The door was being opened to complete self-government but only men were

being invited to enter through it, although women compose half the people of the country and it had been by the joint efforts of men and women that the agitation for reform in the government had been made. The men and women of India were too awakened and too just to allow this injustice to remain undressed. Thirdly, the long and strenuous agitation for the vote by women in Britain and America and their recent victories had brought vividly to the consciousness of all educated Indian men and women the whole question of the inclusion of women in public life, and it was also a national and international necessity that Indian women should be given as high a status as women in other parts of the Empire.

Though the **Municipal franchise** had been granted to the women of the Bombay and Madras Presidencies over fifteen years ago it was so limited in numbers that it did not make a large impact on women's consciousness and indeed no protest was made when it was suddenly withdrawn from Madras women some years later. Over 1,700 women are qualified to vote for the Bombay Corporation and a fair percentage of these have polled at each elec-

tion, and similarly in other Municipalities in that Presidency women have exercised their vote responsibly and intelligently. Since 1922 over 100 women have become Municipal Councillors and members of Local Government Boards. Their appointment has chiefly been by nomination, but there have been notable seats won by election in open contest with men such as the election of all the four women who first entered the contest for seats in the Bombay Corporation, also the instance in which the single woman contestant in the Municipal elections in Lucknow secured the largest poll of any of the candidates. Many important local reforms have been secured by this large band of women Councillors and every year sees a greater number of women serving on these local Councils and Boards.

It was owing to the rise of the political agitation for Home Rule between 1914 and 1917 that women began to wake up to their position of exclusion by British law from any share in representative government. The interment of one of their own sex, Dr. Besant, stimulated political activity and political self-consciousness amongst women to a very great extent. The moment for the ripe public expression of their feelings came when the Secretary of State for India came to India to investigate and study Indian affairs at first hand in 1917.

During the Hon. E. S. Montagu's visit only one Women's Deputation waited on him but it was representative of womanhood in all parts of India, and it brought to his notice the various reforms which women were specially desirous of recommending the Government to carry out.

The first claim for women suffrage for Indian women was made in the address presented to Mr. Montagu at this historic **All-India Women's Deputation** which waited upon him in Madras on the 18th December 1917. The section referring to enfranchisement merits full quotation.

"Our interests, as one half of the people, are directly affected by the demand in the united (Hindu Muslim Reform) scheme (1) that the Members of the Council should be elected directly by the people on as broad a franchise as possible, and in the Memorandum (3) that the franchise should be broadened and extended directly to the people." We pray that, when such a franchise is being drawn up, women may be recognized as 'people,' and that it may be worded in such terms as will not disqualify our sex, but allow our women the same opportunities of representation as our men. In agreeing with the demand of the above mentioned Memorandum that a full measure of Local Self Government should be immediately granted we request that it shall include the representation of our women, a policy that has been admittedly successful for the past twenty years in Local Self Government elsewhere in the British Empire. The precedent for including women in modern Indian political life has been a marked feature of the Indian National Congress, in which since its inception women have voted and been delegates and speakers, and which this year finds its climax in the election of a woman as its President. Thus the voice of India approves of its women being considered responsible and acknowledged citizens, and we

urgently claim that, in the drawing up of all provisions regarding representation, our sex shall not be made a disqualification for the exercise of the franchise or for service in public life."

The year 1918 was devoted to converting the Government forces to the justice and expediency of Indian Woman Suffrage, but this proved a more difficult matter. It was a disappointment first that though the Secretary of State had given a sympathetic reply to the All-India Women's Deputation, yet when the Scheme of Reforms, drawn up by him and Lord Chelmsford as the outcome of his visit to India was published no mention of women was made though the widening of the electorate was one of the reforms suggested. When the Southborough Franchise Committee was formed to investigate the suggestions regarding the franchise in this Scheme, the women suffragists took every means to bring to the notice of the Committee all the evidence which showed the need for and the country's support of, the inclusion of women in the new franchise.

After the introduction of the **Government of India Bill** into Parliament in July 1919, a number of Indian deputations proceeded to London to give evidence before the Joint Select Committee of Members of both Houses of Parliament which had been appointed to place the Reforms on a workable basis. Mrs. Annie Besant, Mrs. Sarojini Naidu and Mrs. and Mrs. Harabai Tata were the women who were heard by the Committee in support of the extension of the franchise to women in India.

The House of Commons decided that the question was one for Indians to answer for themselves and while retaining the sex disqualification in the Reform Bill they framed it a **Fictitious Rules** in such terms that if any Provincial Legislative Council should approve by a resolution in favour of women's franchise, women should be put on the electoral register of that Province. This was the only provision regarding franchise matters which might be changed before a 10 years' time limit. Until after that period women were ineligible for election as Legislative Councillors.

Re-viewing the position about ten years later the Simon Commission showed the extremely limited extent to which women were enfranchised in the manner set out above had become qualified as electors. Except in Burma where it was comparatively high the percentage of women electors to adult female population was less than one. In Madras it was one in Bombay 8 in Bengal 3, in the United Provinces 4 in Bihar and Orissa 5 and in Assam 2—in Burma it was 4.6 per cent.

Madras led the way in the matter of women's franchise and under the operative provision of the Government of India Act women became enfranchised. Other provinces followed suit and at the time of the inquiry by the Simon Commission seven out of the nine provinces had acquired the right. Very soon women began to adorn the benches in legislative chambers first by nomination and then by election. And they justified the confidence placed in them by sponsoring and successfully carrying through many measures of uplift and reform in regard to the status and influence of women. They had so

much proved their worth that the Simon Commission remark in their report "The women's movement in India holds the key of progress, and the results it may achieve are incalculably great. It is not too much to say that India cannot reach the position to which it aspires in the world until its women play their due part as educated citizens."

Basing their conclusion on these observations, the Simon Commission wished to bring about a substantial increase in the existing ratio of women to men voters. In exercising the option allowed to them of enfranchising women "on the same terms as men", the provincial legislatures did indeed make a significant gesture, but so long as the qualification to vote was almost entirely based on property, it remained a gesture, because Indian women do not own property in their own right.

The Simon Commission affirmed that a further step in developing women's suffrage in India should be taken immediately and added "It may perhaps be found possible to add to the present qualifications two others, namely, (i) being the wife, over 25 years of age, of a man who has a property qualification to vote and (ii) being a widow over that age, whose husband at the time of his death was so qualified. In addition the educational qualifications should apply to women over 21 as well as to men. The Simon Commission maintained that women's suffrage should be a cardinal point of the 'franchise system' and suggested qualifications for the vote which will not confine it to the few women who have property qualifications.

During the last ten or fifteen years, the women of India have made enormous progress in several directions. A great awakening has dawned on them. The raising of the age of consent for marriage, the abolition of the practice of dedicating girls to temples, the demand for legal and property rights *vis a vis* man embodied in some of the reform measures—all have tended to raise the status of Indian women in their own eyes as well as in the eyes of the world. They have marched from reform to reform, and their outlook is for ever widening. The Gandhi movement evoked an unprecedented outburst of service and sacrifice among Indian women who were thrown into the thick of a political struggle from which they emerged fully conscious of their political rights and responsibilities. The part played by the two representatives of Indian womanhood at the India Round Table Conferences held in London brought them in the lime light.

Small wonder, therefore, that the Government of India Act of 1935 gave Indian women political rights far in advance of those enjoyed by them before that date. In terms of number of seats, women have been allotted 6 seats out of a total of 150 reserved for British India in the Federal

Council of state and 9 out of a total of 250 so reserved in the Federal Assembly. In the Provincial Assembly, women have reserved to them 8 seats in Madras, 6 in Bombay, 5 in Bengal, 6 in the United Provinces, 4 in the Punjab, 4 in Bihar, 3 in the Central Provinces and Berar, 1 in Assam, 2 in Orissa and 2 in Sind.

But by far the greatest improvement in women's political rights occurred in the liberalisation of the franchise qualifications affecting them. Women have been enfranchised who have the property qualification in their own right, or are wives or widows of men so qualified, or are wives of men with a service qualification, or are pensioned widows or mothers of members of the military or police forces, or who possess a literacy qualification. Women not holding the requisite qualification in their own right are required to apply to be enrolled, stating their derived qualification, but this procedure has been waived in respect of some provinces. By means of such enfranchisement, it is estimated, more than six million women (against 315,000 under the Act of 1919) have been given the right to vote, compared to 29 million men.

It is noteworthy, too, that men and women can vote both in general constituencies and in special constituencies. Women can vote in and contest elections to the upper House in provinces where bicameral legislatures have been set up.

Indian Women have hailed this as a welcome improvement in their political status and the elections that were held early in 1937 to the various Provincial Legislatures showed that they were alive to their responsibility under the new Franchise. Women were very much in evidence at the polls, even in purdah ridden provinces. The work of their representatives in the legislatures will, it is hoped, make them more and more eager properly and zealously to discharge their responsibilities.

Though the Women's Indian Association was the only Indian women's society which had woman suffrage as one of its specific objects almost all other women's organisations have combined in special efforts for the gaining of municipal and legislative rights and among the ladies who have identified themselves specially with the movement are Lady A. Bose, Lady T. Sadasivalar, the Begum of Cambay, Mrs Sarojini Naidu, Mrs Jalji Jehangir Petit, Mrs Tata, Mrs Wadia, Mrs Jinarajadasa, Mrs M. E. Cousins, Mrs Srirangamma, Mrs Chandrasekhara Iyer, Miss S. Sorabji, Mrs Khedkar, Dr Mistry, D. Muthulakshmi Ammal, Mrs Saraladevi Choudhury, Mrs Kumudini Basu, Mrs K. N. Roy, Lady Shafi, Mrs Hassan Imam, Miss S. B. Das, Mrs P. K. Sen, Mrs Rustomji Faridoon B., Mrs B. Rama Rao, Mrs Deep Narajji Singh, Mrs Raschid, Mrs van Gildemeester etc.

The School of Oriental Studies.

This School was established by Royal Charter in June 1916. The purposes of the School (as set out in the Charter) are to be a School of Oriental Studies in the University of London to give instruction in the Languages of Eastern and African peoples, Ancient and Modern, and in the Literature, History, Religion, Law, Customs and Art of those peoples, especially with a view to the needs of persons about to proceed to the East or to Africa for the pursuit of study and research, commerce or a profession, and to do all or any of such other things as the Governing Body of the School consider conducive or incidental thereto, having regard to the provision for those purposes which already exists elsewhere and in particular to the coordination of the work of the School with that of similar institutions both in Great Britain and in its Eastern and African Dominions and with the work of the University of London and its other Schools.

The School occupies temporary premises at Vandon House, Vandon Street Westminster, S.W.1. Plans are under consideration for the new building of the School on the Bloomsbury Site of the University of London.

The School provides teaching in many subjects. The work is carried out in six

departments as follows: (i) India, Burma and Ceylon; (ii) The Far East; (iii) The Near and Middle East; (iv) Africa; (v) Phonetics and Linguistics; (vi) History and Law. In a considerable proportion of the spoken languages instruction is given by teachers belonging to the countries where the languages are spoken, as it is the aim of the Schools to provide as far as possible both European and Oriental Lecturers in the principal languages included in the curriculum.

Courses on the History, Religions, and Customs of Oriental and African countries form a special feature in the teaching of the School. There is a whole-time Professor in Phonetic. It is intended to record fully in phonetic symbols all the languages taught at the School.

Courses are also provided in Indian Law and the History of India, and arrangements are made from time to time for special courses of lectures to be given by distinguished orientalists not on the staff.

The Fisheries of India.

The fisheries of India, potentially rich, as yet yield a mere fraction of what they could were they exploited in a fashion comparable with those of Europe, North America or Japan. The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish cured as well as fresh, from the growing population of the great cities within reach of the seaboard. The caste system however, exerts a blighting influence on progress. Fishing and fish trade are universally relegated to low caste men who alike from their want of education the isolation caused by their work and caste and their extreme conservatism, are among the most ignorant

suspicious and prejudiced of the population extremely averse to amending the methods of their forefathers and almost universally without the financial resources requisite to the adoption of new methods, even when convinced of their value. Higher caste capitalists have hitherto fought shy of associating with the low caste fishermen, and except in large operations on new lines these capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan it appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and improved apparatus and methods.

Madras

The Madras coast line of 1 750 miles is margined by a shallow water area within the 100 fathom line of 40 000 square miles outside of the mere fringe inshore. This vast expanse of fishable water lies idle and unproductive. The surf swept East coast is singularly deficient in harbours whereon fishing fleets can be based and so from Ganjam to Negipattinam the unsinkable catamaran composed of logs tied side by side is the only possible easy-going fishing craft. Its limitations circumscribe the fishing power of its owners and consequently these men are poor and the produce of their best efforts meagre compared with what it would be if better and larger boats were available and possible. The West coast is more favoured. From September till April weather conditions are good enough to permit even dugout canoes to fish daily. No difficulty is found in beaching canoes and boats throughout this season. The fishing population is a large one. In the census taken by the Department of Fisheries in 1927-28 the fisher population on the West coast totalled 114,502. The esteemed table fish of the coast consist of the Seer (*Cybinum* or *Scomberomorous*), Pomfret (*Apolectus* and *Stromateus*) several large species of Horse Mackerel (*Caranx*), Jew fish (*Sræenidae*) Whiting (*Sillago*), Thread fins (*Polynemus*) Sardines (*Clupea*), and Mackerel (*Scomber*). In economic importance, however shoaling fish and fish of inferior quality such as Sardine (*Clupea*) Mackerel (*Scomber*) Catfish (*Iruus*) Ribbon fish (*Trichurus*), Goggles (*Caranx crumenophthalmus*) and Silver bellies (*Levognathus* and *Caza*) take precedence of the former. Sardine and Mackerel overshadow all others. So greatly in excess of food requirements are the catches of sardines that every year large quantities are turned into oil and manure. Fishing outside the 5 fathom line is little in evidence save by Bombay boats (Ratnigiri) which are engaged in drift netting for bonito, seer and other medium sized fishes. These strangers are enterprising fishers and bring large catches into Malpe and Mangalore and other convenient centres the material is largely cured for export.

The Madras Department of Fisheries — As Government attention has been given in Madras over a longer period to the improve-

ment of fisheries and a larger staff concentrated upon the problems involved than elsewhere this Presidency has now the proud position of knowing that her fisheries and collateral industries are better organised and more progressive than those in other provinces. The credit for the wonderful success which has been achieved and the still greater promise of the future is due in large measure to the wise and cautious plans of Sir F. A. Nicholson who from 1905 to 1918 had the guidance of affairs entrusted to him. In 1905 he was appointed on special duty to investigate existing conditions and future possibilities. In 1907, a permanent status was given by the creation of a fisheries bureau and this in turn has developed into a separate Department of Government which till August 1923 was being administered by Mr James Hornell, F.L.S., as Director and, is now controlled by his successor Dr B. Sundara Raju, M.A., Ph.D. The activities of the Department have greatly expanded since its inception.

The activities of the Department are so varied and far reaching that it is difficult even to enumerate them in the space available, much less to give details. So far its most notable industrial successes have been the reform of manufacturing processes in the fish oil trade, the creation of a fish guano industry and the opening of an oyster farm conducted under hygienic conditions. The most noteworthy result of technological research conducted by the department is the production of sardine oil with vitamin A potency equal to one fourth that of cod liver oil and the discovery of four other India sea fish which yield oils with a high vitamin A content. Oil from the South Indian shark liver is ascertained to contain more than 4.2 times vitamin A potency than cod liver oil. Twenty five volumes have been issued to date. All this work has been carried on under serious handicap for want of adequate staff and equipment.

The educational work of the Department is becoming one of its most important branches whether it be specially training teachers for schools in fishing villages or training men in the technology of curing, canning and oil manufacture, in co-operative propaganda and

in the supply of zoological specimens for the use of college classes and museums. The last named has filled a long felt want and is contributing materially to the advancement of the study of Zoology throughout India. There is now no need to obtain specimens from Europe as they can be had from the Research Assistant, Fisheries Station, Ennur Madras, at moderate prices.

Fish Curing—Fish curing is practised extensively everywhere on the Madras coasts its present success is due primarily to Dr Francis Day who after an investigation during 1869-71 of the fisheries of the whole of India, pressed for the grant to fishermen of duty free salt for curing purposes within fenced enclosures. He advocated much else but the time was not ripe and the salt concession was the sole tangible result of his long and honourable efforts. His salt suggestions were accepted by the Madras Government, and from 1882 a gradually increasing number of yards or bonded enclosures were opened at which salt is issued free of duty and often at rates below the local cost of the salt to Government. At present there are 162 fish curing yards scattered along the coast excluding 4 yards in the Ganjam District transferred to the newly formed Orissa Government on 1st April 1936. During the year 1935-36 1,68,654 mounds of fresh fish were brought to these yards for curing and 27,905 mounds of salt were issued for the purpose. The transactions in these yards resulted in a surplus revenue over expenditure of Rs. 1,06,882.

Pearl and Chank Fisheries—While there is no prospect of pearl-fishing for some years to come, owing to the absence of spit fall in the bank, a distinctive revival in the chank trade was evidenced in the keen competition for the purchase of the last two seasons' chanks. A total of 23,473 chanks were fished during the year 1935-36, and gross revenue of Rs. 98,753 was realised. The curing of Pearl oysters in captivity with the implied possibility of the production of cultured pearls near Krushadai Island Pamban started in 1933 has been successful and there are now four years' old oysters living in the farm. Another experiment in marking of chanks started in 1931 to study the rate of growth, mortality and migration of the chank in its natural haunt is continuing and so far 2,089 chanks have been marked and liberated.

The Inland Fisheries—The Inland Fisheries of Madras compare unfavourably with those of Bengal. Many of the rivers dry up in the hot season and few of the many thousands of irrigation tanks throughout the province hold water for more than 6 to 9 months. As a consequence, inland fisheries are badly organised and few men devote themselves to fishing as their sole or even main occupation. The custom is to neglect or ignore the fishery value of these streams and tanks so long as they are full of water, only when the streams shrink to pools and the tanks to puddles do the owners or lessees of the fishing rights turn out to catch fish. The result is a dearth of fish throughout the greater part of the year, a glut for a few days, and often much waste in consequence. The chief fresh water fishes of economic importance are the Murrel, notable for its

virtue of living for a considerable period out of water, and various carps including Laboe, Catla and the well known favourite of sportsman in India the Mahseer. Cat fishes and Hilsa. In the Nilgiris, the Rainbow Trout has been acclimatised and thrives well. The Government working in conjunction with the Nilgiri Game Association maintain a hatchery at Avalanche where quantities of fry are hatched and reared for the replenishment of the streams of the plateau. Fishing rights in the large irrigation tanks were transferred from Government to local authorities many years ago, these tanks are now being reacquired by Government in order that they may be stocked periodically by the Department, the results so far have shown a profit on the operations. To breed the necessary fry, 7 fish farms are in operation. In these the chief fish bred are the Gourami, obtained from Java, and *Etioplosur tenuis* which has the excellent attribute of thriving and breeding as well in brackish as in fresh water, both protect their eggs while developing a useful habit. Both the Gourami and *Etioplosur* are largely vegetarian in diet. The Department has been endeavouring to establish a little the quick growing carp of great economic importance into the nursery system since 1922 and direct proof of the success of the efforts of the department has been obtained by the capture of hundreds of young catla at almost all the inlets and sluices in the Tanjore District. A further activity is represented by the breeding of small fishes especially addicted to feed upon the aquatic larvae or mosquito quoes. These are supplied in thousands to municipalities and other local authorities at a nominal price, for introduction into mosquito haunted sheets of water, these anti-malarial operations have proved successful in the places where the local authorities have given proper attention to the direction given.

Marine Aquarium—Perhaps a word if necessary about this institution at Madras. The building was constructed under the auspices of the Superintendent, Government Museum, Madras and was thrown open to the public on 21st, October 1909. The Superintendent, Government Museum had charge of the Aquarium for ten years till 1919 when it was transferred to the Department of Fisheries. Ever since its opening, being the first institution of its kind in Asia it has been immensely popular with the public. The present building which is antiquated in design has sunk several feet below the general level of the beach and during rains the floor is flooded with water causing loss of income to the Aquarium and damage to the walls. It is therefore proposed to build a new and up to date building for the Aquarium, with modern fitting and up to date equipment. A total of 114,124 persons visited the Aquarium during 1935-36 and the receipts amounted to Rs. 11,958 against an expenditure of Rs. 6162.

Deep Sea Fishing and Research—The annual report of the Public Health Commissioner with the Government of India for 1933 states that the total land area of British India amounts to only 2.44 acre per head of the population and allowing for forests and uncultivated and fallow lands only 0.72 acre per head is under food crop quite insufficient for even the present

population, and that the population is increasing at an alarming rate and by 1941, will probably reach 400 millions. The findings of the census of 1931 is that Agriculture has reached its maximum production under present conditions. Fisheries therefore is the only prime source of food supply to supplement Agriculture, and the Department has been endeavouring to play its true and proper part in improving the catches and methods of sea going fishermen to augment the fish supply of the Presidency.

The fisherman has a fairly exhaustive knowledge of the fisheries along the coast up to 7 fathoms. If the catches of fish are to be improved it is necessary to ascertain—

- (1) what kinds and quantities of fish are available beyond 7 fathoms, and,
- (2) how to exploit these deep sea fisheries economically

The survey of deep sea fisheries by the trawler *Lady Goschen* was abruptly terminated in 1931-32 as a measure of retrenchment. Brief though the survey was it disclosed the existence of important off shore fisheries unsuspected before. The wealth of fish off Negapatnam reported by the trawler was of sufficient importance to attract the notice of Japanese fishermen thousands of miles away. Even then it was realized that if Madras was to benefit by the survey, the allied duty of enabling the local fishermen to exploit the off shore fishing grounds by suitable craft and tackle must be shouldered by the Department. The *Yorkshire Motor Coble* was decided on as the most suitable modern fishing boat to supplant the local catamaran and canoe on a surf beaten harbourless coast, and one was acquired in 1930-31. In the years of depression however the financial stringency of Government had precluded experiments and demonstration with the *Coble*. This year the Government were able to sanction the appointment of a Master Fisherman and staff for the purpose and the projected trials with the *Coble* and the Drift, Danish Seine, and American Purse or Ring nets are expected to commence shortly.

Rural Pisciculture—As a result of the recommendation of the Royal Commission on Agriculture that all practical measures should be adopted to add fish to the diet of the cultivator thereby improving his nutrition, a scheme of rural propaganda was inaugurated in 1930. An Assistant Director with necessary staff was appointed to advise ryots in the stocking

of village ponds which number over 100,000 in the Presidency. The work though begun in July 1930 lasted only for 13 months and had to be abruptly stopped as a measure of retrenchment. It was however possible to complete during this short period a survey of ponds in 98 villages, 2,172 wells and 264 ponds in these villages were examined. Though it has not been possible to give satisfactory help to the numerous enquirers for want of staff and funds advice on matters regarding rearing of fish in ponds and wells are being given as far as possible.

Welfare Work—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improvement of the condition of the fisherfolk. On Sir Frederick Nicholson's initiative, the Department has always recognised the duty of spreading among them education and the habits of thrift, temperance and co-operation. The work has been specially successful on the West Coast. The number of fishermen's co-operative societies in 1935-36 on the west coast was 49.

The need for special efforts to promote co-operation among fisherfolk and to renew and stimulate co-operative societies to more efficient work has been recognised by Government for some years. The Committee on Fisheries recommended that all co-operative work among fishermen both on the West and East Coasts in the Presidency should be done by the Fisheries Department and that, on the analogy of the system in vogue in the Labour Department, the staff of Inspectors of Co-operative Societies should work under the Fisheries Department, the Co-operative supplying trained Inspectors and auditing the books of the societies. The Government partially accepted the recommendations and sanctioned the deputation of 2 Inspectors of Co-operative Societies for exclusive work among fishermen under the department.

To promote the education of fishermen a training institution was opened in the middle of 1918 at Calicut to train teachers to work in elementary schools for the fisherfolk. The pupil teachers under training are familiarised with the work carried on in the fishery station at Tanur. They are given practical instructions in fishing a boat having been purchased for the purpose. In some places the villagers themselves started the schools and then handed over to the Departments. In other places schools were opened by the Department at the request of the fishermen.

Bengal & Bihar & Orissa.

The fishing value of this extensive deltaic region lies primarily in the enormous area occupied by inland waters—rivers, creeks, jheels, and swamps,—to say nothing of paddy fields and tanks. These swarm with fish and, as the Hindu population are free to a large extent from the aversion to fish-diet which is widely prevalent among the better castes in the south, the demand for fish is enormous. Rice and

fish are indeed the principal mainstays of the population and not less than 80 per cent of the people consume fish as a regular item of diet. It is calculated that 1.6 per cent of the population is engaged in fishing and its connected trades, a percentage that rises to 2.6 in the Presidency, Rajshahi, and Dacca Divisions. 644,000 persons in Bengal subsist by fishing with 324,000 maintained by the sale of fish,

and this in spite of the fact that fishing is not considered an honourable profession. As a fresh water fisherman the Bengali is most ingenious his traps and other devices exceedingly clever and effective—in many cases too effective—so eager is he for immediate profit, however meagre this may be. The greatest inland fishery is that of the hilsa (*Clupea alba*) which annually migrates from the sea in innumerable multitudes to seek spawning grounds far up the branches of the Ganges and the other great rivers. Other valued and abundant fishes are the rohu (*Labeo rohita*) and the katla (*Calia calia*), mrigela (*Channa argus*), prawns and shrimps abound everywhere. Of important fishes taken in the lower reaches of the rivers and in the great network of creeks spread throughout the Sunderbans, the bektli (*Lateolabrax*) and the mullets are the most esteemed, apart from these estuarine fish the most valuable sea-fishes are the mango-fishes (*Polynemus*), pomfrets. The sea fisheries are as yet little exploited, the fishermen of Orissa, where alone coastal fishing is of any local importance, having no sea craft save catamarans of inferior design and construction.

Following the inquiry begun in 1906 by Sir K. G. Gupta, an investigation of the steam trawl potentialities of the head of the Bay of Bengal was undertaken the trawler *Golden Crown* being employed for the purpose. The results showed that there are extensive areas suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the Indian Museum. For various reasons, the chief perhaps being the hostility of vested interests, the lack of cold storage facilities and the loss of time involved by the trawler having to bring her catches to Calcutta instead of sending them by a swift tender, the experiment was financially a failure and was dropped. With ever increasing demand for fish in Calcutta and the concurrent rise in prices, the prospects of remunerative steam trawling are now much more, steam trawling companies being floated in the imme-

diate future. The trade is a difficult one to organize and without a rare combination of technical fishery knowledge and far-sighted and comprehensive organization the danger run by the investing public will be considerable. Originally one Fisheries Department served the needs of the two provinces of Bengal and Bihar and Orissa. Separation was effected in after which fisheries in Bengal were administered by the Director of Agriculture. The Bengal Fishery Department was abolished under retrenchment in 1923. There is no immediate prospect of reconstitution of the Department. In Bihar and Orissa, Fisheries form a section of the Department of Industries.

Bengal Fisheries Department has of necessity a more limited scope for its activities than in the case of Madras. Practically no coastal minor industries exist, neither do the natural conditions lead us to suppose that any can be created without extreme difficulty, and in the absence of a great trawl industry which alone might be able to call into existence factories devoted to the uplift of the general utilization of fish by-products. Apart from this, much can be done by its officers for the uplift of the general fishing population with a view to free them from the tyranny of the mahajans (fish contractors and middle men) and enable them to put more capital into their business and to conduct it co-operatively. This is necessarily extremely slow work, but a beginning has been made and a number of fishermen's co-operative societies have been formed. Their example is calculated to effectively serve the purpose of propaganda. The fishery wealth of Bengal is enormous and nothing but good can come out of intensive investigation and propaganda.

Fresh water mussels are used extensively at Dacca in the manufacture of cheap pearl buttons and in many cases pearls also are found in the mussels which the pearl dealers gather and sell in the various parts of India. The Dacca bangle factories carry on an important local industry of very ancient standing, their material is almost entirely obtained from the South Indian and Ceylon chank fisheries already alluded to.

Bombay.

Whereas Bengal's fisheries are at present confined principally to inland waters, those of Bombay are concerned, save in Sind, almost entirely with the exploitation of the wealth of the sea. Bombay is favoured with a coast line abounding with excellent harbours for fishing craft, a fair-weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the sister Presidencies. Bombay sea fisheries are of very great importance financially as well as economically and, there is ample scope for most useful work in improving curing methods, in introducing canning and in the development of minor marine industries particularly those connected with the utilization of by-products.

The Director of Industries administered the subject of "Fisheries" from 1918 and had for a time two officers in the Department engaged upon fishery investigation and development. A steam trawler was bought for work in Bombay waters in 1920 and began work in May 1921 off Bombay. The experiment continued until February 1922, and the trawler was subsequently sold to the Government of Burma. At the outset the results seemed promising, but the experiment as a whole showed that the cost of maintaining a trawler of the type used could not be met by sales of fish at current market rates. Cold storage has since been installed at the principal fish market in Bombay, but for a trawler special facilities are needed also for rapid

coaling, supplying ice and stores, and for unloading catches. More than this a change is needed in the mediæval conditions under which the local fish market is conducted and there is much to be done in popularising little known species of edible fish, such as karel, palu, tambusa, and particularly the ray or skate which formed on the average 25 per cent. of the total catch but which is so little esteemed locally that it sold on the average at the rate of 100 lbs for a rupee.

Vast strides have been made in the Bombay fishing industry in the course of the past five years, the two latter years of which will always remain an eventful date in its history. This progress is in a large measure due to the awakening among the fishermen, who are traditionally a conservative people, and the introduction of reforms among them is a very gradual process, as strongly ingrained prejudices and customs have to be overcome.

No survey of the fishing industry in the Bombay Presidency in recent years can be complete without a reference to Mr. H. T. Sorley's valuable report on the Marine Fisheries of the Bombay Presidency, published in 1933. The volume is a storehouse of information bearing on the Presidency's fishing industry and the fish trade in general, and contains numerous useful suggestions by the adoption of which the prospects of the fish trade of the Presidency may be improved.

Mr. Sorley has observed that the industry is neither expanding nor declining and that the supply of fish discloses no signs of diminution. Elaborating this view he proceeds to point out that the fishermen are healthy and moderately prosperous in comparison with others belonging to a similar social stratum.

Mr. Sorley's more important recommendations are —

1. The establishment of a marine aquarium in Bombay and Karachi if they are able to pay their way as the Madras aquarium does.

2. The establishment of a bureau of fisheries information.

3. The advisability of the transfer of the fish curing yards to the control of the Local Government, and

4. The encouragement by the Bombay University of marine biological research.

Mr. Sorley in the course of his report also referred to the value of employing fast motor launches to transport fish to the consuming centres in Bombay from the catching sites.

New Era Started—A move in the above direction was made towards the end of the year 1933, when the Government of Bombay launched an experiment implementing in some ways the above suggestions. The experiment was formally inaugurated by Sir Frederick Sykes, the then Governor of Bombay at Danda. The experiment was undertaken in co-operation with the head of the fishing community at Danda. For the purpose of the experiment a launch was obtained on loan from the Royal Indian Navy

(then the R. I. M.) and suitable alterations were made on it to adapt it to the purpose of a carrier launch. The results achieved by the working of this launch were very encouraging. The rapidity with which the fish was transported in a much fresher state than had till then been possible aroused the interest of the fishermen, who realised the benefit to their trade of using fast motor transport to bring the fish to Bombay from the catching fields.

Encouraged by the results, Government placed in 1934 an order for the construction of two launches the "Lady Sykes" and the "Sir Frederick Sykes" for the use of the fishermen at Danda. The year 1936 saw the addition of the "Lady Brabourne" to their number. She, too, was built by a local firm and is a great improvement, both in point of size and engine equipment, on her predecessors.

The launches have been operating between Bombay and the Kınara coast. They transported during the short fishing season in 1935-36 a total of 2,25,000 lb of fish, which would normally have never come to Bombay. The success that attended the working of the launches encouraged private individuals to invest in similar vessels to transport fish. The number of privately owned launches at present is three.

A unique feature of the Bombay Government's fisheries scheme is the provision made to train youths of the fishing community in the running and maintenance of motor launches with the ultimate object that they may eventually be able to take charge of their own launches whenever they decide to go in for these on an extensive scale. The benefit of fishermen is the paramount consideration kept in the forefront of the whole scheme, which aims at confining the entire fishing trade to the fishing community itself and eliminating the need of employing technical hands who are not fishermen by either caste or vocation.

Lastly a fisheries information bureau has also been set up. The function of this bureau will be to collate and supply information connected with the local and other fisheries. The information collected by the bureau will be useful to the fishing industry, as it will furnish information not now available to them.

The more important sea fish are pomfrets, sole and sea perches among which are included the valuable Jew fishes (*Scæna* spp.) often attaining a very large size and notable as the chief source of "fish-maws" or "sounde", largely exported from Bombay for eventual manufacture into isinglass. The finest of Bombay fishing boats hail from the coast between Basseln and Surat. These boats are beautifully constructed, attain a considerable size, and are capable of keeping the sea for weeks together. In the season they fish principally off the Kutch and Kathiawar coasts and in the mouth of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow nets, which are left down for several hours and hauled at the turn of the tide. The chief catches are bombil (Bombay ducks), pomfrets and Jew fishes. The first named are dried in the sun after being strung through the mouth

upon lines stretched between upright posts South of Bombay the fishermen of Ratnagiri and Rajapur make use of another and lighter class of fishing boat, specially designed for use in drift-net fishing. Fine hauls of bonito seer (a large form of mackerel) and allied fishes are often made during the season from September to January and later of shark and ray fish. For the latter specially large and powerful nets are employed. For apart from the fair season, when fishing is not usually remunerative, many of the larger Bombay fishing boats are employed as small coasters, a fact which shows how large they run in size.

The provision of cold storage facilities in Bombay marks a new departure in the marketing of perishable products and commodities and is a sign that the Indian capitalist is developing a greater interest in fish than heretofore. These facilities have been mainly designed with a view to making a large supply of fish available in the Bombay market.

Inland Fisheries—Government at the beginning of 1936 approved of a scheme for the development of inland fisheries in the Presidency. A statute in the first instance will be made at Bandra, a suburb of Bombay, where two tanks have been obtained on loan from the Pandra Municipality for the purposes of the experiment.

The experiment will be extended to other parts of the Presidency in the light of the experience gained at Bandra. Government have sanctioned a sum of Rs. 10,000 for inland fisheries work.

In **Sind** considerable sea-fishing is carried on in the neighbourhood of Karachi chiefly for large and coarse fish such as soormai, shark, rays and few fishes. In order to prevent destructive exploitation of oyster beds the plucking of oysters is confined to licensed fishermen and is limited to a few months of the cold weather. The demand for oysters for edible purposes is considerable but although many seed pearls are procurable it does not pay to work the beds for these purposes and the export of such seed pearls to China for use in medicine ceased many

years ago. Considerable fisheries exist in the River Indus, chiefly for the fish known as palla, which are annually leased out by Government for about Rs. 20,000.

The existence of small pearl fisheries almost within Bombay city itself, will come as a surprise to many. The fisheries dot Bombay City seaface on its south western and north eastern sides. Apart from these two sites, pearl oyster fisheries are also to be found at Thana, a suburb of Bombay about 20 miles away and at various places in the Kolaba district, facing Bombay on the eastern side of the harbour. The south western site in Bombay City where pearl fisheries have been recently discovered is situated in blocks Nos 3 to 7 of the Back Bay reclamation scheme. Pearl beds are also found in the Karachi harbour. These pearls are produced by the window pane oyster, but the pearls, apart from being limited in numbers are of indifferent quality.

The revenue derived from the various pearl fisheries is meagre. They are not leased out regularly every year, but only when a sufficient number of pearl oysters subsist on the beds.

Bombay Presidency's resources in respect of edible oysters are very limited. There are few places suited to the cultivation of oyster particularly certain areas in Sind and some sites in the Ratnagiri and Kanara districts. The best oysters by far are derived from the Sind oyster beds. Oysters found elsewhere in the Presidency are generally small and undersized.

In the Gulf of Cutch two pearl fisheries exist, one for the true pearl oyster, the other for the window pane oyster. The former is carried on by His Highness the Maharaja of Jamnagar the other partly by this Prince and partly by the administration of His Highness the Maharaja Gaekwar of Baroda. The latter industry owes its local existence to the enterprise of the Baroda Government which in 1905 obtained the services on deputation of Mr. J. Hornell formerly Director of Fisheries in Madras, for the purpose of examining the marine potentialities of the Baroda territory in Kathiawar.

Burma

Fresh, dried and salted fish and fish paste are consumed by Burmese people. The value of fish imported from foreign countries (chiefly from Straits Settlements) was 15.16 lakhs in 1935-36. The exclusive right of fishing throughout the province of Burma belongs by custom to the country to Government, and the Burma Fisheries Act provides for the protection of this right and for conceding the enjoyment of it to the people subject to certain restrictions for the conservation of the fish.

Revenue—The economic value of any industry or tract of country can to some extent, be judged by the revenue it yields. The fisheries yielded a substantial revenue (about 37.22

lakhs per annum during the last decennium) and therefore they are one of the most important sources of national wealth. The demand declined to seventy per cent of this amount in the year 1935-36 owing to trade and economic depression. Some open lakes, pools of water and small rivers are classed as *kasabali* fisheries and are leased by Government to the highest and best bidders at public auction for periods varying from one to five years. The total number of leaseable fisheries in the province is 3,434 of which 1,612 lie in the Irrawaddy Division, and 538 in Moulmein—one of the five districts in that division.

The Delta consists of a series of saucer shaped islands, many of which have embankments

round the greater part of them along the north east and west, in the hollows of these islands most of the fish come into spawn, and with the floods which overflow the embankment during October the young fry come down country from Upper Burma

Licenses for fishing in all open fisheries are issued annually to persons who pay the prescribed fees for the specified classes of fishing implements. The greatest revenue from licenses comes from Mergui District where not only is the Pearl industry carried on, but leases for

collecting green snails and sea slugs are issued

The principal kinds of fish caught in nets on the sea-coast are (1) Kakkuyan, (2) Kathabaung (3) Kathahmyin and (4) Kabalu. These are generally made into salt fish. The creek and fresh water fish from fisheries are generally *ngakhu*, *ngayan* and *ngagyn*. Most of them are sold fresh, but some are converted into salt fish. The fish caught in the rivers are generally *ngathalauk*, *Ngagyn* and *Ngamyinyin*. *Kakalaung* and *Ngaponna* which are found in small quantities elsewhere in India are sold in abundance in the Rangoon market

The Punjab.

During the year 1935-36 there was no marked change in the operations of the Fisheries Branch of the Agricultural Department. The activities of the Fishing Section were limited mainly to the issue of licenses and the discouragement of poaching. The number of fishing licenses issued was 7,319 as against 7,544 during the previous year, the decrease being mainly due to poor fishing owing to shortage of water in certain rivers and streams.

The catches of fishermen were poor or below average in several districts except in Ambala, Bialkot, Ferozepore, Rawalpindi, Attock and Kangra districts. The chief reason for poor catches was shortage of water in the streams and rivers on account of insufficient rainfall. The biggest fish caught in the Beas river in Kangra District during the year was a Mahasir of 53 lbs in weight.

Two hundred and forty three Angling licenses or trout fishing in Kulu were issued as against

212 last year. This shows that the trout fishing in the Beas and its tributaries in Kulu is on the increase. In March and April, 1936, fishing was excellent but subsequently it became rather difficult because water became dirty on account of snow water coming down earlier and the monsoon also started earlier this year. On the whole the Anglers got good sport in Beas river, but fishing above Manali was poor. The mortality among ova of both Brown Trout and Rainbow Trout was less during the year under report than in the previous year. The losses in Rainbow fish still continue to be higher than in the case of Brown Trout. Sixteen Rainbow Trout died of Fin rot disease. The carp at Chhanawan did not spawn during the spawning season of 1935. The factors, which induce this fish to spawn, has yet to be determined. Larvicidal fish are flourishing. They spawned in the Chhanawan tank and in the Botanical Experimental tank at Lyallpur. Two thousand, three hundred and eighty five were supplied to ten centres during the year.

Travancore.

This State has affiliated fisheries to the Department of Agriculture and with the help of two officers trained in Madras and another officer trained in Japan and America the Department has already accomplished a notable amount of development work and a scheme for further development is being worked out. Special attention has been given to the regulation of fisheries in backwaters, to the establishment of co-operative societies

among the fishing community and to the introduction of improved methods of sardine oil and guano production. Useful work has been done by one of the officers in elucidating the life-histories of the more valuable food fishes and prawns. Improved methods of curing fish are being introduced. A cold storage plant will shortly be erected in Trivandrum for freezing and preserving fish. Special Schools have been opened for the education of fisher lads.

The Forests

Even in the earliest days of the British occupation the destruction of the forests in many parts of India indicated the necessity for a strong forest policy, but whether or not our earlier administrators realized the importance of the forests to the physical and economic welfare of the country the fact remains that little or nothing was done. The year 1855 marked the commencement of a new era in the history of forestry in India, for it was then that Lord Dalhousie laid down a definite and far sighted forest policy. Further progress was delayed for a time by the Mutiny, but from 1860 onwards forest organization was rapidly extended to the other provinces. The earlier years of forest administration were beset with difficulties, which is not surprising considering that the Department was charged with the unpopular duty of protecting the heritage of Nature from the rapacity of mankind—a duty which naturally roused the antagonism of the agricultural population of India. Exploration, demarcation and settlement followed by efforts to introduce protection and some form of regular management, were the first duties of the Forest Department. Work on these lines, which is not yet completed in the more backward parts of the country, has been pursued steadily from the commencement and in consequence large tracts of forest have been saved from ruin and are gradually being brought under efficient management. Whatever may have been the opinions held in some quarters half a century ago as to the need for a policy such as that expressed in Lord Dalhousie's memorable enunciation of 1855, there is no longer any doubt that results have amply justified the steps taken, and that in her forests India now possesses a property of constantly increasing value, the future importance of which it is hardly possible to over-estimate.

Types of Forest—More than one-fifth of the total area of British India (including the Shan States) is under the control of the Forest Department. These areas are classified as reserved, protected or unclassified State forests. In the reserved forests rights of user in favour of individuals and the public are carefully recorded and limited at settlement while the boundaries are defined and demarcated, in the protected forests the record of rights is not so complete, the accrual of rights after settlement not being prohibited, and the boundaries are not always demarcated, while in the unclassified forests no systematic management is attempted, and as a rule the control amounts to nothing more than the collection of revenue until the areas are taken up for cultivation or are converted into reserved or protected forests. The total forest area of British India (including the Shan States) on 31st March 1930 was 249,710 square miles or 22.6 of the

total area. This was classed as follows: Reserved 107,753; Protected 6,263; Unclassed State 135,694.

Throughout this vast forest area, scattered over the length and breadth of India from the Himalayan snows to Cape Comorin and from the arid juniper tracts of Baluchistan to the eastern limits of the Shan States, there is, as may be imagined, an infinite variety in the types of forest vegetation, depending on variations of climate and soil and on other local factors. Broadly speaking, the following main types of forest may be distinguished—

(1) **Arid country forests**, extending over Sind, a considerable portion of Rajputana, part of Baluchistan and the south of the Punjab, in dry tracts where the rainfall is less than 20 inches. The number of species is few, the most important tree being the babul or kikar (*Acacia arabica*), which however in the driest regions exists only by the aid of river inundations.

(2) **Deciduous forests**, in which most of the trees are leafless for a portion of the year. These forests, which extend over large areas in the sub-Himalayan tract, the Peninsula of India and Burma, are among the most important, comprising as they do the greater part of the teak and sal forests.

(3) **Evergreen forests**—These occur in regions of very heavy rainfall, such as the west coast of the Peninsula, the eastern sub-Himalayan tract, and the moisture parts of Burma are characterized by the great variety and luxuriance of their vegetation.

(4) **Hill forests**—In these the vegetation varies considerably according to elevation and rainfall. In the Eastern Himalaya, Assam and Burma, the hill forests are characterized by various oaks, magnolias and laurels, while in Assam and Burma the Khasia pine (*Pinus khasya*) grows gregariously at elevations of 3,000 to 7,000 feet. In the North-Western Himalaya the chief timber tree is the deodar (*Cedrus deodara*), which occurs most commonly at elevations of 6,000 to 8,000 feet, and in association with oaks or blue pine (*Pinus excelsa*), towards its upper limit the deodar merges into very large areas of spruce and silver fir, while below it are found extensive forests of the long-needled pine (*Pinus longifolia*) which is tapped for resin.

(5) **Littoral forests**—These occur on the sea coast and along tidal creeks. The most characteristic trees belong to the mangrove family (*Rhizophoraceae*). Behind the mangrove belt is an important type of forest occasionally inundated by high tides, in which the most valuable species is the "sundri" (*Heritiera jones*).

Forest Policy—The general policy of the Government of India in relation to forests was definitely laid down in 1894 by the classification of the areas under the control of the Department into four broad classes, namely—

(a) Forests the preservation of which is essential on climatic or physical grounds. These are usually situated in hilly country where the retention of forest growth is of vital importance on account of its influence on the storage of the rainfall and on the prevention of erosion and sudden floods.

(b) Forests which afford a supply of valuable timbers for commercial purposes, such, for example, as the teak forests of Burma, the sal forests of Northern Central and North Eastern India and the deodar and pine forests of the North Western Himalaya.

(c) Minor forests, containing somewhat inferior kinds of timber and managed for the production of wood, fodder, grazing and other produce for local consumption. These forests are of great importance in agricultural districts.

(d) Pasture lands—These are not 'forests' in the generally understood sense of the term but grazing grounds managed by the Forest Department merely as a matter of convenience.

These four classes of forest are not always sharply divided from each other and one and the same tract may to a certain extent be managed with more than one object.

Administration—The forest business of the Government of India is carried out in the Department of Education, Health and Lands. The Inspector General of Forests is also President of the Forest Research Institute at Dehra Dun and is the technical adviser to the Government of India in forest matters. Under the Constitution of 1919 Forests were made a transferred subject in Bombay and Burma where they had long been administered by the Provincial Governments and in 1924 the Reforms Inquiry Committee presided over by the late Sir Alexander Muddiman, Home Member of the Government of India, recommended that they be transferred in other provinces now unless any local Government on examination of the position can make out a convincing case against the transfer to its own province. The Constitution of 1935 included Forests in the Schedule of Provincial subjects throughout India.

Territorial charges—The various provinces are divided into one or more Forest Circles, each in charge of a Conservator of Forests. Provinces containing three or more circles also have a Chief Conservator who is the head of the Department for his province. Circles are divided into a number of Forest Divisions, in charge of members of the Imperial or Provincial Forest Service. These Divisions in most cases correspond to civil districts. Each Division contains a number of Ranges in charge of junior members of the Provincial Service or of Forest Rangers or Deputy Rangers. Heavy Divisions are also sometimes divided into Subdivisions. The Ranges are further subdivided into a number of beats or protective charges held by Forest Guards or in some cases by Foresters.

Non territorial changes—Apart from territorial changes there are various important posts of a non territorial nature connected with Forest Research and Education, the preparation of Forest Working Plans, and other special duties.

The Forest Service—The Forest Service comprises three branches—

(1) The Indian (Imperial) Forest Service with a sanctioned total personnel of 379 officers consisting of the Inspector General of Forests (Chief Conservators, Conservators, Deputies and Assistant Conservators). Of these 281 have been recruited direct to the service. The officers of this service are recruited as probationers subject to the following methods prescribed in the Indian Forest Service (Recruitment) Rules, 1928—

- (a) by nomination in England in accordance with such supplementary regulations as may be prescribed by the Secretary of State in Council
- (b) by competitive examination in India in accordance with such supplementary regulations as may be prescribed by the Governor General in Council,
- (c) by direct appointment of persons selected in India otherwise than by competitive examination,
- (d) by the promotion on the recommendation of local Governments of members of the Provincial Forest Service,
- (e) by the transfer of promotion of an officer belonging to a branch of Government Service in India other than Provincial Forest Service.

Further recruitment to the Indian Forest Service whether by promotion or direct appointment, has been suspended until a decision is reached on the recommendation of the Services Sub Committee of the Indian Round Table Conference in regard to the provincialisation of the Indian Forest Service.

In Bombay and Burma where Forests in 1919 became transferred subject new services called the Bombay and Burma Forest Services Class I were created to take the place of the Indian Forest Service.

(2) **The Indian Forest Engineering Service**—This service was created in 1919 but since 1922 no further recruitment has been made. Some of the Forest Engineers have been transferred to the Indian Forest Service or the Indian Service of Engineers and some have resigned or have retired. The future strength is not expected to remain at more than three (one each in Bombay, Madras and Punjab).

(3) **The Provincial Service**—Formerly it consisted of Extra Deputy and Extra Assistant Conservators of Forests. All Extra Deputy Conservators who were considered to be fully qualified to hold a major charge were transferred to the Indian Forest Service in 1920. The class of Extra Deputy Conservators has been abolished and the service now consists of Extra

Assistant Conservators only. The fixation of the strength of the personnel of the service rests with the local Governments.

Owing to the establishment of a course for the training of probationers for the Indian Forests Service at Dehra Dun since 1926 the Provincial Service course ceased to exist from 1928. The I F S College was also closed down at the end of Oct. 1932 as a result of the stoppage of recruitment to the Indian Forest Service and as a measure of economy.

(4) The Subordinate Service consists of forest Rangers (about 840), Deputy Rangers (about 900) Foresters (about 2 000) and forest Guards (about 11 500). The Rangers have hitherto since 1919 been trained at three different centres—the Forest College at Dehra Dun (for provinces other than Burma, the Central Provinces, Bihar and Orissa, Bombay and Madras) the Burma Forest School at Pynmana (for Burma) and the Madras Forest College at Combarator (for Madras, Bihar and Orissa, Bombay and the Central Provinces). These three institutions were established in 1878, 1898 and 1912 respectively. The training of subordinates below the rank of Ranger is carried out in various local forest schools and training classes.

The whole problem of the organisation and training of Forest Officers was thrown into the melting pot by the 1935 Constitution reforms and has not yet been settled. Recruitment for the Indian Forest Service having ceased because Forests have become Provincial, the Provincial Governments have to take measures for filling appointments as members of the old I F S, though retirement and otherwise cease to hold them. As Forests cannot properly be divided into Provincial watertight departments a system of all India organisation of training and service may be resuscitated, but that could only be done through provincial co-operation and the new Provincial Governments have not yet had time to consider the matter.

Dehra Dun Forest College.—The Forest College at Dehra Dun completed the sixtieth year of its existence in March 1937. As a result of the economic depression and consequent retrenchment it was closed for two years in 1933 owing to the reduced demand for Forest Rangers from the Provinces.

The College owes its origin to a memorandum submitted in September 1857 by Sir Dietrich Lindis, the first Inspector General of Forests to the Government of India, in which he urged the desirability of creating a national Forest School in India, with the object of preparing students for the executive charge of a range and of enabling Forest Rangers to qualify for promotion to the superior staff. Forestry he said must cease to be a subject of foreign introduction; it must become naturalised before it could be regarded as established on a safe and permanent basis.

The hopes of Sir Dietrich have to day been fully realised. All over India the executive charge of ranges and even divisions is now being held by students of Dehra Dun or the daughter college at Combarator and students of the College have become heads of the Service in other parts of the British Empire.

During these 60 years the area under the control of the Forest Department has increased from about 18 000 square miles in 1877 to about 250 000 square miles, which is nearly 23 per cent of the whole area of British India. Over 100,000 square miles are reserved forest, permanently given to the production of timber. The whole area of 250 000 square miles has been surveyed and demarcated and nearly 73,000 square miles are under properly sanctioned working plans.

During the first quinquennium 1869-70 to 1873-74 the revenue amounted to Rs. 56½ lakhs and the expenditure to Rs. 39½ lakhs, leaving a surplus of Rs. 17 lakhs. In the year 1932-33, in spite of the world wide depression, the revenue was a little over Rs. 3½ crores and the expenditure nearly Rs. 2,90,00,000, and the surplus Rs. 8½ lakhs.

In 1887 the crudest form of selection was the only form of forest management possible. To day there are available detailed tables of yield and volume and much knowledge of the silvicultural requirements of individual species has been accumulated. Forests have been provided with a network of roads and firelines.

Speaking of the progress made during these years Mr. C. G. Freyer the Inspector General of Forests, at the opening of the College in 1935, said that forestry as developed in India was the equal of that in any other country in the world. Silvicultural systems quite different from anything existing on the Continent of Europe had been developed to meet India's particular needs, and while most countries deal with a very limited number of species forestry in India was concerned with every type of vegetation, from tropical rain forest to temperate coniferous forest.

Research.—For the first fifty years of the existence of the Forest Department in India no attempt was made to organize the conduct of forest research, and thus to co-ordinate and elaborate the scientific knowledge so necessary to successful economic working. A commencement in organized forest research was at last made in 1906 by the establishment, at the instance of Sir Sainthill Lardley Wilmet, then Inspector General of Forests of a Forest Research Institute at Dehra Dun. The Forest Research Institute is under the administrative control of the Inspector General of Forests who is also the President. There are five main branches of research, namely, Silviculture, Forest Botany, Forest Economic Products Entomology and Chemistry, each branch being in charge of a research officer. The Timber Testing expert is engaged temporarily on short term contract. Indian Assistants have been appointed to receive the necessary technical training and experience with the object of eventually taking the place of experts if and when properly qualified. The Wood Technology, Paper Pulp, Wood Preservation and Seasoning Sections are in charge of Indian experts who have received special training in their various subject in Europe and America.

As a result of Mr R S Pearson's long and able administration of the Forest Economic Branch, the Government of India now have at Dehra Dun a series of forest workshops and experimental laboratories without parallel anywhere else in the world and official reports show that the value of the experimental work done in them is daily exemplified by the unending stream of inquiries received from persons doing business in timber and other forest products, not only in India but elsewhere in the world. The officers in charge of this branch received their training mostly in Europe and America and their efficiency is of a very high order.

Since 1906 research work has been prosecuted energetically so much so that in 1920 a new scheme was sanctioned for the expansion of the staff and site of the Institute. Since then new land has been acquired, on which new buildings have been built for accommodating the various expanded branches and the new machinery obtained from the United Kingdom. As a result of this, steady progress has been made in the investigations which should ultimately lead to the fuller and better utilization of the raw products produced by Indian forests.

Forest Products—Forest produce is divided into two main heads—(1) Major produce, that is timber and firewood and (2) Minor produce, comprising all other products such as bamboos, leaves, fruits, fibres, grass, gums, resins, barks, animal and mineral products, etc. The average annual outturn of timber and fuel from all sources averages about 350 million cubic feet. This was undertaken a few years ago at the initiation and development of certain large exploitation schemes, especially in Madras, which had indifferent success. It was hoped in Madras by utilising modern American methods to extract and utilise very large quantities of valuable timbers, but the final result proved that this extensive exploitation was justified neither by the stand of timber in the forests nor by the possibilities of satisfying markets. The provincial Government after this experience adopted a more cautious policy.

An important measure for the development of forests in the Andamans was sanctioned by the Government of India. Hitherto, elephants had been employed for extraction of timber, with the result that only the fringe of the forests could be touched. The new plan is for the employment of American methods. American logging machinery was purchased and an American expert engaged to take charge of the work. Owing, however, to the wide spread depression in the timber trade the employment of mechanical methods for the extraction of timber had to be suspended. Elsewhere in India a great part of the trade in timber lies in the hands of contractors who are regarded as on

the whole trustworthy if sufficient control over their operations is maintained.

Forest Industries—The important role which the forests of a country play in its general commercial welfare and in providing employment for its population is not always fully recognized.

If accurate estimates were available for India, they would no doubt show that apart from the jungle population which is directly dependent on the forests and the large numbers of woodcutters, sawyers, carters, carriers, raftmen and others working in and near them, employment on an enormous scale is provided to persons engaged working up the raw products. Among these latter may be mentioned carpenters, wheelwrights, coopers, boat builders, tanners, rope makers, lac manufacturers, basket-makers, and many other classes of skilled labourers. The Indian census shows over a million people and their dependents so employed in British India and nearly a further half million in Indian States, but these are probably below the actuals, as much forest labour is not whole-time labour, devoting seven or eight months in the year to forest work and the rest to agriculture. With the opening up of the forests, the extension of systematic working, the wider use of known products, and the possible discovery of new products, a steady and extensive development of industries dependent on the forests of India may be confidently anticipated in the future.

Financial Results—The growth of forest revenue, expenditure and surplus during the past 70 years has been steady. Gross revenue, before the recent world wide depression caused a temporary disorganisation of all trades steadily increased until it amounted to some Rs. 6 crores a year, surplus revenue amounting to upwards of 40 per cent of gross revenue. Most of the provinces ordinarily show a steady increase of surplus.

Agencies—An agency has been established in India by the Government of India for the sale of Government timber. Indian timber marketing in England (especially Andaman timbers) is now done under the direction of a Timber Adviser who is attached to the Office of the High Commissioner for India. This trade has not yet been raised to a satisfactory level, because, according to the official explanation, "the intense conservatism in English timber trade and the difficulty of obtaining a footing for little known timbers have combined to make satisfactory sales very difficult."

Bibliography—A large number of bulletins and other publications has been issued by the Forest Research Institute, and of these a list can be obtained from the President, Forest Research Institute and College, New Forest, Dehra Dun, U P.

(b) Includes 13 000 on account of recruits under the head Forest Research Institute and College

(e) Includes Rs 13.05 on account of Receipts under the new Forest Research Institute and College Includes expenditure under heads Imperial (Rs 46 667) Forest Research Institute and College

2) After taking into account deficits under Imperial (Rs 46 667) Forest Research Institute and College (Rs 5,93 890) Includes (Appendix E under heads Imperial (Rs 46 667) Forest Research Institute and College (Rs 6,00,310)

e) After taking into account deficits under Imperial (1846-66) Forest Research Institute and College (1853-88)

WIRELESS TELEGRAPHY AND TELEPHONY

Beam Stations—The year 1927 saw the commencement of Beam wireless services on the Marconi system between India and the United Kingdom. Powerful transmitting and receiving stations erected at Poona and Dhond respectively by the Indian Radio Telegraph Company are connected by land lines with the Central Telegraph Office in Bombay, whilst stations at Skegness and Grimsby are similarly connected with the General Post Office in London, and the circuits are so arranged that messages are exchanged between Bombay and London without intermediate handling at the Beam stations at either end. The huge aerial systems at Poona and Dhond each supported on five steel towers 287 feet in height are landmarks over a distance of many miles. The service was inaugurated by His Excellency the Viceroy on 23rd July 1927 at the Central Telegraph Office, Bombay, when His Excellency transmitted a message to the King and His Majesty's reply was received a few minutes later.

It is noteworthy that the opening of the Beam wireless service coincided with a reduction in rates by the cable companies. The Eastern Telegraph Co. which operates the cable from Europe to India, has become merged in the New Imperial and International Communications Ltd.

For reasons of economy, most of the inland wireless stations in India were practically closed down and placed in charge of Care and Maintenance parties which carry out tests twice a month, the exceptions being Peshawar Radio, which always maintained official communication with Kabul in Afghanistan and Kashgar in China, and Jutogh Radio, which receives British Official Wireless sent out from Oxford and Rugby and passes the messages to Reuter's Agency for distribution to subscribing newspapers. The stations at Delhi and Allahabad have now been equipped with apparatus to enable them to function as aeronautical wireless stations and they are used as such. The wireless installations at Karachi and Calcutta have been modified so as to meet all the wireless requirements of aircraft passing over India. New stations equipped for aeronautical communication purposes have been erected at many places for the purpose of providing constant communication with aircraft in flight, the most up to date system having been installed.

The Indian coast stations have been maintained in a state of high efficiency and many improvements effected. The application of the Baudot system to the high speed continuous wave wireless stations at Madras Fort and Mingaladon (Rangoon) has proved extremely satisfactory, and a large portion of the traffic between Southern India and Burma is regularly worked by this direct route instead of the circuitous route *via* Calcutta. The traffic is interrupted occasionally by atmospheric interference, particularly during the hot weather but the difficulties have been largely overcome by handspeed working during the worst periods.

For many years the Bombay station known as Bombay Radio was located on Butcher Island in the Harbour but during 1927 a fine new station equipped with modern apparatus was erected and taken into service at Santa Cruz, just outside the limits of Bombay Municipality.

Radio telegrams exchanged with ships at sea by coast stations in India and Burma continue to increase in number, and total many thousands per annum. Official telegrams are exchanged with the British Naval Station at Matara (Ceylon) *via* Bombay Radio. Regular services are also maintained between Burma and the Malay Peninsula *via* Rangoon and Penang and between Burma and Sumatra, whilst radio traffic is passed between Madras and Colombo when the normal route is interrupted.

Wireless telephonic communication between pilot vessels, lighthouses and shore stations are maintained by the Port Trusts at Bombay and Rangoon. In March 1931, telephonic communication between Bombay and London was established for the first time. The conversations were initiated from the *s.s. Belgenland* a tourist ship lying in Bombay Harbour and were made possible through the courtesy of Standard Telephones and Cables Limited in conjunction with the International Marine Radio Company.

Safety at Sea—A noticeable feature of wireless development during recent years has been the provision of direction finding apparatus at Bombay and Karachi and facilities at other coast stations whereby ships at sea equipped with direction finding apparatus can obtain bearings on coast stations and thus determine their position with a remarkable degree of accuracy. The latest style of Marconi beacon was erected on Kennedy Island during 1931 to guide shipping approaching Bombay harbour. All ships equipped with wireless direction finders will now be able to obtain exact knowledge of their whereabouts at a distance of 150 miles from the coast. The beacon is an experiment and is likely to be the first of many others along the coast of India. Improved arrangements for broadcasting time signals, weather reports and navigational warnings from coast stations have also proved of value to ships at sea. An elaborate system of radio services in connection with civil aviation has been developed especially for the assistance of day and night aeroplanes along the airmail routes between Karachi and Lahore, Karachi and Rangoon and Karachi and Madras.

Broadcasting—For several years, limited broadcasting services were maintained by Radio Clubs in Calcutta, Bombay, Madras, Karachi and Rangoon, and although the transmitting sets employed by them were of very low power, the broadcasts were tuned in over practically the whole of India. The clubs were assisted financially by a Government contribution based upon the revenue from license fees, but this did not nearly suffice to cover the cost of the transmissions, and the greatest credit is due to the members of those clubs for the sport.

ing manner in which they provided additional funds and undertook the entire responsibility for the programmes. Credit is also due to the Indian States and Eastern Agency for the loan of transmitting apparatus, without which the broadcasts would have been impossible.

After negotiations extending over several years, an Indian Broadcasting Company was granted a license to establish broadcasting services upon lines similar to those of the British Broadcasting Corporation, and transmitting stations were erected in Bombay and Calcutta the services at the former being inaugurated by His Excellency the Viceroy in July 1927 and the latter by the Governor of Bengal a month later. These stations had each an aerial input of three kilowatts, the same as that of the 2LO stations in London, of which they are practically duplicates. The programmes were so arranged that both Indian and European music were broadcast daily and the news bulletins and market and weather reports were read in two languages.

Bombay broadcasts normally on a wavelength of 350.9 metres, and Calcutta on 370.4 and 49.10 metres. Reception in either of these cities and for a distance of twenty or thirty miles around, is possible on crystal sets, of which a very large number have been sold. Valve sets are necessary for those living further afield, but although there has been a considerable demand for these, the sales have not reached expectation. One of the greatest difficulties in India is the maintenance of batteries, which is no inconsiderable item when sets containing five or six valves are employed.

Indian State Broadcasting Service — The Indian Broadcasting Company was wound up in 1930 and its operations have since been conducted by the Government of India, in the Industries and Labour Department. Government for this purpose formed an Indian State Broadcasting Service and instituted a Central Broadcasting Advisory Committee, representative of the non-official public in association with the Departmental officials, to keep them in touch with public opinion. The Committee has as its chairman the Member of the Viceroy's Executive Council in charge of the subject (now the Hon. Sir Thomas Stewart).

Government availing themselves of an improvement in their financial condition, in 1934-35 decided upon a large development of their broadcasting service and allocated substantial funds for the purpose. A special inducement for the expansion of broadcasting was the constant growth of revenue from Customs duties on imports of wireless material. This showed on the one hand a widespread desire on the part of the public for further broadcasting services and on the other hand a prospect of substantial profits to Government through the increase of imports of wireless apparatus.

The first important development ordered by Government was the opening of a high power medium wave broadcasting station at Delhi. This station was actually opened on 1st January 1936. Its wave length is 340.136 metres (VUD, 882 kc/s). The length is somewhat

inconveniently close to that of Bombay, but at the time when the station was erected it was believed to be the best length of medium wave for transmissions in India. It was therefore appropriated for the first high power station to be built. Provision was made for its alteration if a change were later found to be desirable.

The Government of India decided to appoint a Controller of Broadcasting in India and in their search for the best person for this appointment secured from the British Broadcasting Corporation Mr. Lionel Fielden, who took up his duties in 1935 and was largely instrumental in the initial organization of the new Delhi station.

Government in announcing their determination to open a large broadcasting station in Delhi, intimated that they proposed to follow this by the installation of modern high power transmission equipments in place of the existing plants in Bombay and Calcutta and that a similar modern station would be opened in Madras. The thorough investigation of general broadcasting problems throughout India which followed the arrival of Mr. Fielden led to a revision of these plans. Mr. Fielden quickly became conscious of the need for highly expert technical advice and through his instrumentality the British Broadcasting Corporation lent India in the early months of 1936 the services of their Chief Technical Adviser, Mr. H. L. Kirk.

A valuable report was presented by this official, a plan for wide extension of broadcasting activities was elaborated. Government engaged Mr. C. W. Gwyder, one of the foremost wireless and particularly short wave, engineering experts in the world to be their principal engineer for construction and research work. Orders for extensive new equipment for implementing plans for expansion prepared by these experts were placed in December 1936. It includes new 10 k.w. short wave transmitters for Bombay and Calcutta and twin 10 k.w. short wave transmitters for broadcasting and experimental work in Delhi. It also includes a 10 k.w. short wave transmitter for Madras, for service throughout the Madras Presidency, and a 200 watt medium wave transmitter for Madras City. All this apparatus will be of the most modern type. This will make for economy in working and should give purity of rendering unexcelled in any other country. The short wave plant is considered of great importance as it will provide a measure of service for the whole of India. The medium wave transmitters are intended to give a first grade service on expensive receivers in the large towns but owing to atmospheric conditions in India during the greater part of the year cannot be expected to provide a first grade service at distances more than 30 to 50 miles from the special areas for which they are intended. The first station furnished with the new equipment is expected to be in operation by October 1937.

His Excellency the Marquess of Linlithgow, immediately after taking the oath of office as Viceroy in New Delhi on 18th April 1936, proceeded to deliver a broadcast address to the Princes and people of India. This remarkable

innovation in procedure is regarded as indicating His Excellency's enthusiasm for wireless and to portend that he will show considerable interest in its development

Licenses—Broadcast receiving licenses are issued at Head Post Offices at a fee of ten rupees per year, and cover the use of receiving sets throughout British India except Baluchistan and the North West Frontier Province. Licenses for fixed stations for transmitting and experimental purposes are much sought after, and despite a careful scrutiny of the applicants several hundred have been issued. The number of traders in wireless apparatus who are required to take out special import licenses has increased considerably during the past year. This improvement must be ascribed primarily to the commencement of broadcasting.

Radio Telephone Service—An event of considerable importance was the inauguration of the radio telephone service between India and England on May 1, 1933 when His Excellency Sir Frederick Sykes, the then Governor of Bombay, and Sir Samuel Hoare, the then Secretary of State for India exchanged messages as a preliminary to the opening of the service to the public.

The service is based upon the beam wireless system which has been operated successfully for several years by the Indian Radio and Cable Communications Company between India and the United Kingdom and India and Japan. Initially, the radio telephone service was limited to Bombay and Poona at the Indian end and to the United Kingdom at the other, but facilities for conversation with other places were speedily arranged, and within a month it was possible for people in Bombay to speak to the United States, Canada, Australia, South

Africa and many other parts of the world. Similarly, there is a gradual extension of the area covered in India, and when the improvement of the landlines has been completed, nearly every important city will be in direct telephonic communication with England and the rest of the world.

Many technical problems are involved in the perfection of the India-England wireless telephone, not the least of which is the ensuring of secrecy. When the service was first opened, reports from ordinary broadcast listeners in all parts of the country and as far afield as Ceylon indicated that conversations could be "tapped with the greatest ease, but later a 'secrecy gear' was installed.

Any private telephone owner can use the service for an overseas call. Before doing so, however, he has to place a deposit with the Telegraph Authorities.

As an experimental measure the basic charge for an effective conversation of three minutes or less for a call from India to any place in England, Scotland, Wales, the Isle of Man and Northern Ireland has been reduced from Rs 80 to Rs 60. For principal places in the Irish Free State the basic charge is reduced from Rs 84 to Rs 62. For each additional minute a conversation after the first three minutes a charge of Rs 20 or Rs 20 11 as the case may be is added to the basic charge. Liberal allowance is made at the discretion of the observing operator for periods during which speech is unsatisfactory owing to any defect in service, so that the time charged for is the period of effective speech only. (Allowance is made in charging for calls when atmospheric conditions prevent continuous effective conversation.)

PROVING OF WILLS

In British India if a person has been appointed executor of the will of a deceased person, it is always advisable to prove the will as early as possible. If the will is in a vernacular it has to be officially translated into English. A petition is then prepared praying for the grant of probate of the will. All the property left by the deceased has to be disclosed in a schedule to be annexed to the petition. The values of immovable properties are usually assessed at 16½ years purchase on the nett Municipal assessment. For estate under Rs 1,000 no probate duty is payable, up to Rs 9,000 in excess of first Rs 1,000 the duty is at 2%, between Rs 10,000 and Rs 50,000 the duty payable is at 3% and between Rs 50,000 and 1,00,000 the duty payable is at 4% and over Rs 1,00,000 the duty payable is at 5%. In determining the amount of the value of the estate for the purposes of probate duty the following items are allowed to be deducted:

- 1 Debts left by the deceased including mortgage encumbrances

- 2 The amount of funeral expenses

- 3 Property held by the deceased in trust and not beneficially or with general power to confer a beneficial interest

The particulars of all these items have to be stated in a separate schedule. It is the practice of the High Court to send a copy of these schedules to the Revenue authorities and if the properties particularly immovable properties have not been properly valued, the Revenue department require the petition to be amended accordingly. In certain cases the Court then requires citations to be published and served on such persons as the Court thinks are interested in the question of the grant of probate. If no objection is lodged by any person so interested within 14 days after the publication or service of citation and if the will is shown to have been properly executed and the petitioner entitled to probate, probate is ordered to be granted.

The Press.

The newspaper Press in India is an essentially English institution and was introduced soon after the task of organising the administration was seriously taken in hand by the English in Bengal. In 1773 was passed the Regulating Act creating the Governor Generalship and the Supreme Court in Bengal and within seven years at the end of the same decade, the first newspaper was started in Calcutta by an Englishman in January 1780. Exactly a century and a third has elapsed since, not a very long period certainly, a period almost measured by the life of a single news paper, *The Times*, which came into existence only five years later in 1785, but then the period of British supremacy is not much longer, having commenced at Plassey, only twenty-three years earlier. Bombay followed Calcutta closely, and Madras did not lag much behind. In 1789 the first Bombay newspaper appeared, *The Bombay Herald*, followed next year by *The Bombay Courier*, a paper now represented by *The Times of India* with which it was amalgamated in 1861. In Bombay the advent of the press may be said to have followed the British occupation of the island much later than was the case in Calcutta. In Calcutta the English were on sufferance before Plassey, but in Bombay they were absolute masters after 1665, and it is somewhat strange that no Englishman should have thought of starting a newspaper during all those hundred and twenty-five years before the actual advent of *The Herald*.

The first newspaper was called *The Bengal Gazette* which is better known from the name of its founder as *Hicky's Gazette* or *Journal*. Hicky like most pioneers had to suffer for his enterprising spirit, though the fault was entirely his own, as he made his paper a medium of publishing gross scandal, and he and his journal disappeared from public view in 1782. Several journals rapidly followed Hicky's, though they did not fortunately copy its bad example. *The Indian Gazette* had a career of over half a century, when in 1833 it was merged into the *Bengal Harkara*, which came into existence only a little later, and both are now represented by *The Indian Daily News* with which they were amalgamated in 1866. No fewer than five papers followed in its many years, the *Bengal Gazette* of 1780, and one of these, *The Calcutta Gazette* started in February 1784, under the avowed patronage of Government flourishes still as the official gazette of the Bengal Government.

In 1821 a syndicate of European merchants and officials commenced the publication of *John Bull in the East*, a daily paper which was intended to reflect Tory opinion in India and set an example to the Press generally in the matter of moderation and restraint. The name of this journal was altered to *The Englishman* by the famous Stocqueler in 1836.

From its commencement the press was jealously watched by the authorities who put serious restraints upon its independence and pursued a policy of discouragement and

rigorous control. Government objected to news of apparently the most trivial character affecting its servants. From 1791 to 1799 several editors were deported to Europe without trial and on short notice, whilst several more were censured and had to apologise. At the commencement of the rule of Wellesley Government promulgated stringent rules for the public press and instituted an official censor to whom everything was to be submitted before publication, the penalty for offending against these rules to be immediate deportation. These regulations continued in force till the time of the Marquis of Hastings who in 1818 abolished the censorship and substituted milder rules.

This change proved beneficial to the status of the press, for henceforward self-respecting and able men began slowly but steadily to join the ranks of journalism, which had till then been considered a low profession. Sir Buckingham, one of the ablest and best known of Anglo-Indian journalists of those days availed himself of this comparative freedom to criticise the authorities, and under the short administration of Adam, a civilian who temporarily occupied Hastings place, he was deported under rules specially passed. But Lord Amherst and still more Lord William Bentinck were persons of broad and liberal views, and under them the press was left practically free, though there existed certain regulations which were not enforced, though Lord Clare, who was Governor of Bombay from 1831 to 1835, once strongly but in vain urged the latter to enforce them. Metcalfe who succeeded for a brief period Bentinck, removed even these regulations, and brought about what is called the emancipation of the press in India in 1835, which was the beginning of a new era in the history of the Indian press. Among papers that came into being, was the *Bombay Times* which was started towards the close of 1838 by the leading merchants of Bombay, and which in 1861 changed its name to the *Times of India*. *The Bombay Gazette*, founded in 1791, ceased publication in 1914.

The liberal spirit in which Lord Hastings had begun to deal with the press led not only to the improvement in the tone and status of the Anglo-Indian press, but also to the rise of the Native or Indian Press. The first news paper in any Indian language was the *Samachar Durpan* started by the famous Serampore Missionaries Ward, Carey and Marshman in 1818 in Bengali, and it received encouragement from Hastings who allowed it to circulate through the post office at one-fourth the usual rates. This was followed in 1822 by a purely native paper in Bombay called the *Bombay Samachar* which still exists, and thus was laid the foundation of the Native Indian Press which at the present day is by far the largest part of the press in India, numbering over 650 papers.

From 1835 to the Mutiny the press spread to other cities like Delhi, Agra, Gwalior, and even Lahore, whereas formerly it was chiefly confined to the Presidency towns. During

the Mutiny its freedom had to be temporarily controlled by the Gagging Act which Canning passed in June 1857 on account of the license of a very few papers, and owing still more to the fears of its circulating intelligence which might be prejudicial to public interests. The Act was passed only for a year at the end of which the press was once more free.

On India passing to the Crown in 1858, an era of prosperity and progress opened for the whole country in which the press participated. There were 19 Anglo-Indian papers at the beginning of this period in 1858 and 25 Native papers and the circulation of all was very small. The number of the former did not show a great rise in the next generation but the rise in

influence and also circulation was satisfactory. Famous journalists like Robert Knight, James Maclean and Hurris Mookerji flourished in this generation. The *Civil and Military Gazette* was originally published in Simla as a weekly paper, the first issue being dated June 22nd, 1872. Prior to and in the days of the Mutiny the most famous paper in Northern India was the *Mofussilite*, originally published at Meerut, but afterwards at Agra and then at Ambala. After a lively existence for a few years in Simla the *Civil and Military Gazette* acquired and incorporated the *Mofussilite* and in 1876 the office of the paper was transferred from Simla to Lahore, and the *Gazette* began to be published daily.

INDIAN PRESS LAW

Before 1835 all printing of books and paper was subject to licence by the Governor-General in Council, and the licences were issued or refused at the discretion of Government. Act XI of 1835 repealed the old Regulations and merely required registration of the printer and made a few minor requirements. That Act was replaced in 1867 by the present Press and Registration of Books Act, and, except for an Act which was in force for one year during the Mutiny, there was no further legislation directly affecting the Press until 1878 when the Vernacular Press Act was passed. That Act was repealed during the Viceroyalty of Lord Ripon in 1882. From that date until 1907 Government made no attempt to interfere directly with the liberty of the Press, the growth of sedition being dealt with in other ways by the passing in 1898 of section 124A of the Penal Code in its present form, which had been originally enacted in 1870, and by the introduction into the Penal Code of section 153A and into the Criminal Procedure Code of section 108. There were a certain number of prosecutions under those sections up to 1907, but the dissemination of sedition through the Press continued. In 1908 the Newspaper (Incitement to Offences) Act was passed which dealt with papers inciting to murder or to acts of violence. This Act failed to have the desired effect.

The Indian Press Act, 1910 was a measure of wider scope, the main object of which was to ensure that the Indian press generally should be kept within the limits of legitimate discussion.

The Act deals, not only with incitements to murder and acts of violence, but also with other specified classes of published matter, including any words or signs tending to seduce soldiers or sailors from their allegiance or duty, to bring into hatred or contempt the British Government, any Native Prince, or any section of His Majesty's subjects in India, or to intimidate public servants or private individuals.

The different sections of the Act have in view (i) Control over presses and means of publication, (ii) control over publishers of newspapers, (iii) control over the importation into British India and the transmission by the post of objectionable matter, (iv) the suppression of seditious or objectionable newspapers, books, or other documents wherever found

Repeal of Press Legislation—By the autumn of 1917 the Government of India had begun to consider the desirability of modifying at least one section of the Press Act to which great exception had been taken on account of the wide powers that it gave. Finally, after more than once consulting Local Government, a Committee was appointed in February 1921 after a debate in the Legislative Assembly, to examine the Press and Registration of Books Act, 1867, and the Indian Press Act, 1910, and report what modifications were required in the existing law. That Committee made an unanimous report in July 1921, recommending —

(1) The Press Act should be repealed.
(2) The Newspapers Incitements to Offences Act should be repealed.

(3) The Press and Registration of Books Act and the Post Office Act should be amended where necessary to meet the conclusion noted below. (a) The name of the editor should be inscribed on every issue of a newspaper and the editor should be subject to the same liabilities as the printer and publisher, as regards criminal and civil responsibilities, (b) any person registering under the Press and Registration of Books Act should be a major as defined by the Indian Majority Act, (c) local Governments should retain the power of confiscating openly seditious leaflets, subject to the owner of the press or any other person aggrieved being able to protest before a court and challenge the seizure of such document in which case the local Government ordering the confiscation should be called upon to prove the seditious character of the documents. The powers conferred by Sections 13 to 15 of the Press Act should be retained. Customs and Postal officers being empowered to seize seditious literature within the meaning of Section 124A of the I.P.C. subject to review on the part of the local Government and challenge by any persons interested in the courts, (e) any person challenging the orders of Government should do so in the local High Court, (f) the term of imprisonment prescribed in Sections 12, 13, 14 and 15 of the Press and Registration of Books Act should be reduced to six months, (g) the provisions of Section 16 of the Press Act should be reproduced in the Press and Registration of Books Act.

Effect was given to these recommendations during the year 1922.

Press Association of India—At the end of 1915 this Association was formed in Bombay According to the articles of constitution "Its objects shall be to protect the press of the country by all lawful means from arbitrary laws and their administration, from all attempts of the Legislature to encroach on its liberty or of the executive authorities

to interfere with the free exercise of their calling by journalists and press proprietors, and for all other purposes of mutual help and protection which may be deemed advisable from time to time" Members pay a minimum subscription of Rs 10 annually The affairs of the Association are managed by a Council

Banking.

An event of great importance in the history of Indian banking was the formation on the 27th January 1921 of the Imperial Bank of India by amalgamation of the three Presidency Banks of Bengal, Bombay and Madras

The idea of a Central Banking establishment for British India was mooted as early as 1836, and was the subject of a minute by Mr James Wilson, when Finance Member, in 1859. Again, in 1867 Mr Dickson, the well known Secretary of the Bank of Bengal, submitted detailed proposals for an amalgamation of the three Presidency Banks. On various later occasions the matter was brought forward without result and it was discussed by the Chamberlain Commission on Indian Finance and Currency in 1913. The present scheme which has come to fruition was however the result of a *rapprochement* on the part of the Banks themselves as a result of the experience gained during the war and the realisation of the desirability of strengthening and extending the Banking system in India.

The Presidency Banks—The history of the Presidency Banks in their relationship with Government falls into three well defined stages. Prior to 1862 the Presidency Banks had the right of note issue, but were directly controlled by Government and the scope of their business was restricted by their charters. The second period was from 1862 to 1876. In 1862 the Banks were deprived of the right of note issue, though by their agreements of that year they were authorised to transact the paper currency business as agents of Government. As compensation for the loss of their right of issue, they were given the use of the Government balances and the management of the treasury work at the Presidency towns and at their branches. The old statutory limitations on their business were at the same time greatly relaxed, though the Government's power of control remained unchanged. In 1866 the agreements were revised and the paper currency business was removed from their control and placed under the direct management of Government. The third period dates from the Presidency Banks Act of 1876 by which nearly all the most important limitations of the earlier period were reimposed. But, very briefly, the principal restrictions imposed by this Act prohibited the Banks from conducting foreign exchange business, from borrowing or receiving deposits payable out of India, and from lending for a longer period than six months, or upon mortgage or on the security of immovable property or upon promissory notes bearing less than two independent names or upon goods, unless the goods of the title to them were deposited with the Bank as security. At the same time Government abandoned direct interference in the management, ceasing to appoint official directors and disposing of their shares in the Banks. The Banks no longer enjoyed the full use of the Government balances. Reserve Treasuries were constituted at the Presidency towns into which the surplus revenues were drawn and the balances left at the disposal of the Banks were strictly limited.

This system continued with only minor modifications until 1920. During the war, however the policy was deliberately adopted of reducing the amount of the balances held in the Reserve Treasuries and leaving much larger balances with the Headquarters of the Presidency Banks in order to assist the money market.

The Imperial Bank of India—Under the Imperial Bank of India Act of 1920 as amended by the Amendment Act of 1934 which comes into force at such date as the Governor General in Council may by notification in the Gazette of India appoint, the control of the Bank is entrusted to a Central Board of Directors with Local Boards at Calcutta, Bombay and Madras and such other places as the Central Board may determine. The Central Board of Directors shall consist of—

- (a) the presidents, vice presidents and the secretaries of the Local Boards,
- (b) one person elected from amongst the members by each Local Board,
- (c) a Managing Director and a Deputy Managing Director appointed by the Central Board,
- (d) not more than two non officials nominated by the Governor General in Council.

Representatives of any new Local Boards which may be constituted may be added at the discretion of the Central Board.

The Deputy Managing Director and the Secretaries of the Local Boards are entitled to attend the meetings of the Central Board but not entitled to vote. The Deputy Managing Director is entitled to vote in the absence of the Managing Director.

The Governor General in Council shall nominate an officer of Government to attend the meetings of the Central Board but he shall not be entitled to vote.

Under the Imperial Bank of India Act of 1920 provision was made for the increase of the capital of the bank. The capital of the three Presidency Banks consisted of 3½ crores of rupees in shares of Rs 500 each fully subscribed. The additional capital authorised was 7½ crores in shares of Rs 500 each, of which Rs 125 has been called up, making the present capital of the Bank Rs 11½ crores of which Rs 562,50,000 has been paid up. The Reserve Fund of the Bank is Rs 5,50,00,000 and the Balance Sheet of 31st December 1936 showed the deposits at Rs 78,79,50,117, and Cash Rs 8,66,41,082 with a percentage of cash to liabilities of 10.86.

Agreement with Reserve Bank of India—The Bank has entered into an agreement with the Reserve Bank of India which will remain in force for 15 years and thereafter until terminated after five years' notice on either side. Provisions contained in the agreement between the Imperial Bank of India and the Reserve Bank of India are:—

The Imperial Bank of India shall be the sole agent of the Reserve Bank of India at all places in British India where there is a branch of the Imperial Bank of India which was in existence at the commencement of the Reserve Bank of India Act 1934, and there is no branch of the Banking Department of the Reserve Bank of India

In consideration of the performance of the Agency duties, the Reserve Bank of India shall pay to the Imperial Bank of India as remuneration a sum which shall be for the first ten years during which this agreement is in force a commission calculated at 1/16 per cent on the first 250 crores and 1/32 per cent on the remainder of the total of the receipts and disbursements dealt with annually on account of Government As for the remaining five years the remuneration

to be paid to the Imperial Bank shall be determined on the basis of the actual cost to the Imperial Bank of India, as ascertained by expert accounting investigation

In consideration of the maintenance by the Imperial Bank of India of branches not less in number than those existing at the commencement of the Reserve Bank of India Act, the Reserve Bank of India shall, until the expiry of 15 years, make to the Imperial Bank the following payments —

- (a) during the first five years of this agreement Rs 9 lacs per annum,
- (b) during the next five years of the agreement Rs 6 lacs per annum, and
- (c) during the next five years of the agreement Rs 4 lacs per annum

In Schedule 1, Part 1, of the Imperial Bank of India Act of 1920 as amended by the amendment Act of 1934, the various descriptions of business which the Bank may transact are laid down, and in Part 2 it is expressly provided that the Bank shall not transact any kind of banking business other than that sanctioned in Part 1.

Briefly stated, the main classes of business sanctioned are —

- (1) Advancing money upon the security of —
 - (a) Stocks, etc., in which a trustee is authorised by act to invest trust moneys and shares of the Reserve Bank of India
 - (b) Securities issued by State aided Railways, notified by the Governor General in Council
 - (c) Debentures, or other securities issued under Act, by, or on behalf of, a district or municipal board or under the authority of any State in India
 - (d) Debentures of companies with limited liability registered in India or else where
 - (e) Goods, or documents of title thereto, deposited with, or assigned to the Bank
 - (f) Goods hypothecated to the Bank against advances
 - (g) Accepted Bills of Exchange or Promises
 - (h) Fully paid shares of Companies with limited liability or immovable property or documents of title relating thereto, as collateral security where the original security is one of those specified in 'a' to 'f' and, if authorised by the Central Board, in 'g'
- (2) With the sanction of the Local Government, advancing money to Courts of Wards upon security of estates in their charge for the period not exceeding nine months in the case of advances relating to the financing of seasonal agricultural operations or six months in other cases
- (3) Drawing, accepting, discounting, buying and selling of bills of exchange and other negotiable securities

(4) Investing the Banks funds in the securities referred to in (1) a, b c and d

(5) Making issuing and circulating of bank post bills and letters of credit to order or otherwise than to the bearer on demand

(6) Buying and selling gold and silver

(7) Receiving deposits

(8) Receiving securities for safe custody

(9) Selling and acquiring such properties as may come into the Banks possession in satisfaction of claims

(10) Transacting agency business on commission and the entering into of contracts of indemnity suretyship or guarantee

(11) Acting as Administrator, for winding up estates

(12) Drawing bills of exchange and granting letters of credit payable out of India

(13) Buying of bills of exchange payable out of India, at any usance not exceeding nine months in the case of bills relating to the financing of seasonal agricultural operations or six months in other cases

(14) Borrowing money upon security of assets of the Bank

(15) Subsidizing the pension funds of the Presidency Banks, and

(16) Generally, the doing of the various kinds of business including foreign exchange business

The principal restrictions placed on the business of the Bank in Part 2 are as follows —

(1) It shall not make any loan or advance —

(a) For a longer period than six months except as provided in clauses 2 and 13 above,

(b) upon the security of stock or shares of the Bank,

(c) save in the case of estates specified in Part 1 (Courts of Wards) upon mortgage or security of immovable property or documents of title thereof

(2) The amount which may be advanced to any individual or partnership is limited

(3) Discounts cannot be made on advances on personal security given, unless such discounts or advances carry with them the several responsibilities of at least two persons of firms connected with each other in general partnership

* Govt Deposits were taken over by Reserve Bank as from 1st April 1935

Reserve Bank—The Reserve Bank of India Act was passed by the Legislative Assembly and received the assent of the Governor General on 6th March 1934 and the Bank began to function from 1st April 1935. From this date, the Reserve Bank took over the management of the Currency Department of the Government of India by the creation of a special department known as the Issue Department. The assets of the Gold Standard Reserve were transferred to the Bank and were combined with the assets of the Currency Department. From July 1st the Banking Department was opened and the scheduled banks deposited the required percentage of their demand and time liabilities. The Clearing House was transferred from the Imperial Bank to the Reserve Bank as from this date.

The share capital of the Reserve Bank is 5 crores of Rupees in shares of Rs 100 each, fully paid up. The Reserve Fund of Rupees five crores is provided by Government to the Bank in the form of Government Rupee Securities.

The Bank maintains share registers at its offices at Bombay, Calcutta, Delhi, Madras and Rangoon.

Management—The general superintendence and direction of the affairs and business of the Bank is entrusted to a Central Board of Directors which exercises all powers and does all acts and things which may be exercised and done by the Bank. The Board is composed of—

(a) A Governor and two Deputy Governors appointed by the Governor-General in Council after consideration of the recommendations made by the Board.

Four Directors nominated by the Governor-General in Council.

(c) Eight Directors elected on behalf of the shareholders on the various registers.

(d) One Government official nominated by the Governor-General in Council.

The Governor and Deputy Governors are the executive heads, and hold office for such term not exceeding five years as the Governor-General in Council may fix when appointing them, and are eligible for reappointment. A Local Board is constituted for each of the five areas.

Business which the Bank may transact—The Bank is authorised to carry on and transact the following commercial business, viz.—The accepting of money on deposit with out interest, the purchase, sale and rediscount of bills of exchange and promissory notes with certain restrictions, the making of loans and advances, repayable on demand but not exceeding 90 days, against the security of stocks, funds and securities (other than immovable property) against gold coin or bullion or documents of title to the same and such bills of exchange and

promissory notes as are eligible for purchase or rediscount by the Bank, the purchase from and sale to scheduled Banks of sterling in amounts of not less than the equivalent of Rs 1 lac, the making of advances to the Governor-General in Council and to Local Governments repayable in each case not later than three months from the date of making the advance, the purchase and sale of Government securities of the United Kingdom maturing within ten years from the date of purchase, the purchase and sale of securities of the Government of India or of a Local Government of any maturity or of a local authority in British India or of certain States in India which may be specified.

The Bank is authorised to act as Agent for the Secretary of State in Council, the Governor-General in Council or any Local Government of State in India for the purchase and sale of gold and silver, for the purchase, sale, transfer and custody of bills of exchange, securities or shares, for the collection of the proceeds, whether principal, interest or dividends, of any securities or shares, for the remittance of such proceeds by bill of exchange payable either in India or elsewhere, and for the management of public debt.

Right to issue Bank Notes—The sole right to issue bank notes in British India is vested in the Reserve Bank and at the commencement the Bank shall issue currency notes of the Government of India supplied to it by the Governor-General in Council and on and from the date of such transfer the Governor-General in Council shall not issue any currency notes. The issue of bank notes shall be conducted by the Bank in an Issue Department which shall be separated and kept wholly distinct from the Banking Department.

Obligation to Sell or Buy Sterling—The Bank shall sell to or buy from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon, sterling for immediate delivery in London at a rate not lower than 1sh 5 49 64d and not higher than 1sh 6 3 16d respectively provided that no person shall be entitled to demand to buy or sell an amount of sterling less than ten thousand pounds.

Publication of the Bank Rate—The Bank shall make public from time to time the standard rate at which it is prepared to buy or re discount bills of exchange or other commercial paper eligible for purchase under the Act.

The Bank will publish the accounts of both the Issue and Banking Departments weekly in the *Gazette of India*.

The Bank shall create an Agricultural Credit Department.

The full text of the Reserve Bank Act is reproduced elsewhere in the Year Book.

The Balance Sheet of the Bank as at 31st December 1936 was as follows —

THE EXCHANGE BANKS

The Banks carrying on Exchange business in India are merely branch agencies of Banks having their head offices in London, on the continent, or in the Far East and the United States. Originally their business was confined almost exclusively to the financing of the external trade of India, but in recent years most of them, while continuing to finance this part of India's trade, have also taken an active part in the financing of the internal portion also at the places where their branches are situated.

At one time the Banks carried on their operations in India almost entirely with money borrowed elsewhere, principally in London—the home offices of the Banks attracting deposits for use in India by offering rates of interest much higher than the English Banks were able to quote. Within recent years however it has been discovered that it is possible to attract deposits in India on quite as favourable terms as can be done in London and a very large proportion of the financing done by the Exchange Banks is now carried through by means of money actually borrowed in India. No information is available as to how far each Bank has secured deposits in India but the following statement published by the Director General of Statistics in India shows how rapidly such deposits have grown in the aggregate within recent years.

TOTAL DEPOSITS OF ALL EXCHANGE BANKS SECURED IN INDIA In Lakhs of Rupees

1900	1050
1905	1704
1910	2479
1915	3354
1916	3801
1917	5337
1918	6185
1919	7432
1920	7480
1921	7719
1922	7338
1923	6811
1924	7063
1925	7054
1926	7154
1927	6886
1928	7113
1929	6665
1930	6811
1931	6747
1932	7306
1933	7073
1934	7139

Exchange Banks Investments

Turning now to the question of the investment of the Banks' resources, so far as it concerns India, this to a great extent consists of the purchase of bills drawn against imports and exports to and from India.

The financing of the import trade originated and is carried through however for the most part by Branches outside India, the Indian Branches share in the business consisting, principally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the drawers of the bills, and it is as regards the export business that the Indian Branches are more immediately concerned. The Exchange Banks have practically a monopoly of the export finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able, however, by a system of rediscount in London to limit the employment of their own resources to a comparatively small figure in relation to the business they actually put through. No definite information can be secured as to the extent to which rediscounting in London is carried on but the following figures appearing in the balance sheets latest available of the unliquidated Banks will give some idea of this—

LIABILITY OF BANKS OF EXCHANGE IN DISCOUNTED AND STILL CURRENT

Chartered Bank of India, Australia and China	£ 4,568,000
Eastern Bank, Ltd	462,000
Hongkong and Shanghai Banking Corporation	2,615,000
Mercantile Bank of India Ltd	2,744,000
National Bank of India Ltd	3,713,000
P & O Banking Corporation Ltd	1,119,000
	14,221,000

The above figures do not of course relate to rediscounts of Indian bills alone, as the Banks operate in other parts of the world also, but it may safely be inferred that bills drawn in India form a very large proportion of the whole.

The bills against exports are largely drawn at three months sight and may either be "clean" or be accompanied by the documents relating to the goods in respect of which they are drawn. Most of them are drawn on well-known firms at home or against credits opened by Banks or financial houses in England and bearing as they do an Exchange Bank endorsement they are readily taken up by the discount houses and Banks in London. Any bills purchased in India are sent home by the first possible mail so that presuming they are rediscounted as soon as they reach London the Exchange Banks are able to secure the return of their money in about 16 or 17 days instead of having to wait for three months which would be the case if they were unable to rediscount. It must not be assumed however that all bills are rediscounted as soon as they reach London as at times it suits the Banks to hold up the bills in anticipation of a fall in the London

discount rate while on occasions also the Banks prefer to hold the bills on their own account as an investment until maturity.

The Banks place themselves in funds in India for the purpose of purchasing export bills in a variety of ways of which the following are the principal —

- (1) Proceeds of import bills as they mature
- (2) Sale of drafts and telegraphic transfers payable in London and elsewhere out of India
- (3) Purchase of Council Bills and Telegraphic Transfers payable in India from the Secretary of State
- (4) Imports of bar gold and silver bullion
- (5) Imports of sovereigns from London, Egypt or Australia

The remaining business transacted by the Banks in India is of the usual nature and need not be given in detail.

The following is a statement of the position of the various Exchange Banks carrying on business in India as it appears from the latest available Balance sheets —

JOINT STOCK BANKS

Previous to 1906 there were few Banks of this description operating in India, and such as were then in existence were of comparatively small importance and had their business confined to a very restricted area. The rapid development of this class of Bank, which has been so marked a feature in Banking within recent years, really had its origin in Bombay and set in with the establishment of the Bank of India and the Indian Specie Bank in 1906. After that time there was a perfect stream of new flotations, and although many of the new Companies confined themselves to legitimate banking business, on the other hand a very large number engaged in other businesses in addition, and can hardly be properly classed as Banks.

These Banks made very great strides during the first few years of their existence, but it was generally suspected in well informed circles that the business of many of the Banks was of a very speculative and unsafe character and it was a matter of no great surprise to many people when it became known that some of the Banks were in difficulties.

The first important failure to take place was that of the People's Bank of India and the loss of confidence caused by the failure of that Bank resulted in a very large number of other failures, the principal being that of the Indian Specie Bank.

Since those events confidence has been largely restored. But in April 1923 the Alliance Bank of Simla failed. The effect of the failure of this old established Bank might have been disastrous but for the prompt action of the Imperial Bank which dealt with the situation in close association with the Government of India. The Imperial Bank undertook to pay the depositors of the Alliance Bank 50 per cent of the amounts due to them. A panic was averted and a critical period was passed through with little difficulty.

During 1923 the Fata Industrial Bank, which was established in 1918, was merged in the Central Bank of India.

The following shows the position of the better known existing Banks as it appears in the latest available Balance Sheets —

In Lakhs of Rupees

INDIAN PRIVATE BANKERS AND SHROFFS

Indian private Bankers and Shroffs flourished in India long before Joint Stock Banks were ever thought of, and it seems likely that they will continue to thrive for some very considerable time to come. The use of the word "Shroff" is usually associated with a person who charges usurious rates of interest to impecunious people, but this is hardly fair to the people known as 'shroffs' in banking circles, as there is no doubt that the latter are of very real service to the business community and of very great assistance to Banks in India. Under present conditions the Banks in India can never hope to be able to get into sufficiently close touch with the affairs of the vast trading community in India to enable them to grant accommodation to more than a few of these traders direct and it is in his capacity as middleman that the shroff proves of such great service. In this capacity also he brings a very considerable volume of business within the scope of the Presidency Banks Act and enables the Presidency Banks to give accommodation which without his assistance, the Banks would not be permitted to give. The shroff's position as an intermediary between the trading community and the Banks usually arises in something after the following manner. A shopkeeper in the bazaar, with limited means of his own, finds that, after using all his own money, he still requires say Rs. 25,000 to stock his shop suitably. He thereupon approaches the shroff, and the latter after very careful inquiries as to the shopkeeper's position grants the accommodation, if he is satisfied that the business is safe. The business, as a rule, is arranged through a hoondee broker, and in the case referred to the latter may probably approach about ten shroffs and secure accommodation from them to the extent of Rs. 2,500 each. A hoondee is usually drawn at a currency of about 2 months is almost invariably taken by the shroffs in respect of such advances.

A stage is reached however when the demands on the shroffs are greater than they are able to meet out of their own money, and it is at this

point that the assistance of the Banks is called into requisition. The shroffs do this by taking a number of the bills they already hold to the Banks for discount under their endorsement, and the Banks accept such bills freely to an extent determined in each case by the standing of the shroff and the strength of the drawers. The extent to which any one shroff may grant accommodation in the bazaar is therefore dependent on two factors, viz, (1) the limit which he himself may think it advisable to place on his transactions, and (2) the extent to which the Banks are prepared to discount bills bearing his endorsement. The shroffs keep in very close touch with all the traders to whom they grant accommodation, and past experience has shewn that the class of business above referred to is one of the safest the Banks can engage in.

The rates charged by the shroffs are usually based on the rates at which they in turn can discount the bills with the Banks and necessarily vary according to the standing of the borrower and with the season of the year. Generally speaking, however, a charge of two annas per cent per mensem above the Bank's rate of discount, or 14% is a fair average rate charged in Bombay to a first class borrower. Rates in Calcutta and Madras are on a slightly higher scale due in a great measure to the fact that the competition among the shroffs for business is not so keen in these places as it is in Bombay.

The shroffs who engage in the class of business above described are principally Marwaries and Multanis having their Head Offices for the most part in Bikaner and Shikarpur, respectively, the business elsewhere than at the Head Offices being carried on by "Moonims" who have very wide powers.

It is not known to what extent native bankers and shroffs receive deposits and engage in exchange business throughout India, but there is no doubt that this is done to a very considerable extent.

THE BANK RATE

Formerly each Presidency Bank fixed its own Bank Rate, and the rates were not uniform. After the amalgamation of the Presidency Banks the Imperial Bank fixed the rate for the whole of India until the 4th of July 1935 when the right to fix the official Bank rate was exercised by the Reserve Bank. The rate fixed represents the rate charged by the Banks on demand loans against Government securities only

and advances on other securities or discounts are granted as a rule at a slightly higher rate. Ordinarily such advances or discounts are granted at from one half to one per cent over the official rate, but this does not always apply and in the monsoon months, when the Bank rate is some times nominal, it often happens that such accommodation is granted at the official rate or even less.

The following statement shows the average Bank Rates during the last 10 years —

Year	1st Half-year	2nd Half year	Yearly average
1927	6 508	4 956	5 732
1928	6 945	5 450	6 2
1929	6 878	5 788	6 333
1930	6 508	5 277	5 892
1931	6 735	7 353	7 044
1932	6 022	4 033	5 027
1933	3 627	3 5	3 563
1934	3 5	3 5	3 5
1935	3 5	3 41	3 45
1936	3	3	3

BANKERS' CLEARING HOUSES

The principal Clearing Houses in India are those of Calcutta, Bombay, Madras, Rangoon, Colombo and Karachi, and of these the first two are by far the most important. The members at these places consist of the Imperial Bank, Reserve Bank, most of the Exchange Banks and English Banking Agency firms, and a few of the better known of the local Joint Stock Banks. No Bank is entitled to claim to be a member as of right and any application for admission to a Clearing must be proposed and seconded by two members and be subject thereafter to ballot by the existing members.

The duties of settling Bank are undertaken by the Reserve Bank at Calcutta, Bombay, Madras and Rangoon and by the Imperial Bank at Colombo and Karachi and a representative of each member attends at the office of that Bank on each business day at the time fixed to deliver

all cheques he may have negotiated on other members and to receive in exchange all cheques drawn on him negotiated by the latter. After all the cheques have been received and delivered the representative of each Bank advises the settling Bank of the difference between his total receipts and deliveries and the settling Bank thereafter strikes a final balance to satisfy itself that the totals of the debtor balances agrees with the total of the creditor balances. The debtor Banks thereafter arrange to pay the amounts due by them to the settling Bank during the course of the day and the latter in turn arranges to pay on receipt of those amounts the balances due to the creditor Banks. In practice however all the members keep Bank accounts with the settling Bank so that the final balances are settled by cheques and book entries thus doing away with the necessity for cash in any form.

The figures for the Clearing Houses in India above referred to are given below —

Total amount of Cheques Cleared Annually
In lakhs of Rupees

The Railways.

The history of Indian Railways very closely reflects the financial vicissitudes of the country. Not for some time after the establishment of Railways in England was their construction in India contemplated, and then to test their applicability to Eastern conditions three experimental lines were sanctioned in 1845. These were from Calcutta to Raniganj (120 miles), the East Indian Railway, Bombay to Kalyan (33 miles), Great Indian Peninsula Railway, and Madras to Arkonam (39 miles), Madras Railway. Indian Railway building on a serious scale dates from Lord Dalhousie's great minute of 1853, wherein after dwelling upon the great social, political and commercial advantages of connecting the chief cities by rail, he suggested a great scheme of trunk lines linking the Presidencies with each other and the inland regions with the principal ports. This reasoning commended itself to the Directors of the East India Company, and it was powerfully reinforced when, during the Mutiny, the barriers imposed on free communication were severely felt. As there was no private capital in India available for railway construction, English Companies, the interest on whose capital was guaranteed by the State, were formed for the purpose. By the end of 1859 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of £52 millions. These companies were (1) the East Indian, (2) the Great Indian Peninsula, (3) the Madras, (4) the Bombay, Baroda and Central India, (5) the Eastern Bengal, (6) the Indian Branch, later the Oudh and Rohilkhand State Railway and now part of the East Indian Railway, (7) the Sind, Punjab and Delhi now merged in the North Western State Railway, (8) the Great Southern of India now the South Indian Railway. The scheme laid the foundations of the Indian Railway system as it exists to-day.

Early Disappointments

The main principle in the formation of these companies was a Government guarantee on their capital, for this was the only condition on which investors would come forward. This guarantee was five per cent coupled with the free grant of all the land required. In return the companies were required to share the surplus profits with the Government, after the guaranteed interest had been met, the interest charges were calculated at 22½ to the rupee, the Railways were to be sold to Government on fixed terms at the close of twenty-five years and the Government were to exercise close control over expenditure and working. The early results were disappointing. Whilst the Railways greatly increased the efficiency of the administration, the mobility of the troops, the trade of the country and the movement of the population, they failed to make profits sufficient to meet the guaranteed interest. Some critics attributed this to the unnecessarily high standard of construction adopted, and to the engineers' ignorance of local conditions, the result was that by 1869 the deficit on the Railway budget was Rs 166½

lakhs. Seeking for some more economical method of construction the Government secured sanction to the building of lines by direct State Agency, and funds were allotted for the purpose, the metre-gauge being adopted for cheapness. Funds soon lapsed and the money available had to be diverted to converting the Sind and Punjab lines from metre to broad gauge for strategic reasons. Government had therefore again to resort to the system of guarantee, and the Indian Midland (1882-85), since absorbed by the Great Indian Peninsula, the Bengal Nagpur (1883-87), the Southern Mahratta (1882), and the Assam Bengal (1891) were constructed under guarantees but on easier terms than the first companies. Their total length was over 4,000 miles.

Famine and Frontiers

In 1879, embarrassed by famine and by the fall of the exchange value of the rupee, Government again endeavoured to enlist unaided private enterprise. Four companies were promoted—the Nilgiri, the Delhi Umballa, Kalka, the Bengal Central, and the Bengal North Western. The first became bankrupt, the second and third received guarantees, and the Tirhut Railway had to be leased to the fourth. A step of even greater importance was taken when Native States were invited to undertake construction in their own territories, and the Nizam's Government guaranteed the interest on 330 miles of line in the State of Hyderabad. This was the first of the large system of Native State Railways. In the first period up to 1870, 4,255 miles were opened, of which all save 4½ were on the broad gauge; during the next ten years there were opened 4,239, making the total 8,494 (on the broad gauge 6,562, the metre 1,865, and narrow 67). Then ensued a period of financial ease. It was broken by the fall in exchange and the costly lines built on the frontier. The Penjdeh incident, which brought Great Britain and Russia to the verge of war, necessitated the connection of our outposts at Quetta and Chaman with the main trunk lines. The sections through the desolate Harnai and Bolan Passes were enormously costly, it is said that they might have been ballasted with rupees, the long tunnel under the Khojak Pass added largely to this necessity, but unprofitable, outlay.

Rebate Terms Established

This induced the fourth period—the system of rebates. Instead of a gold subsidy, companies were offered a rebate on the gross earnings of the traffic interchanged with the main line so that the dividend might rise to four per cent but the rebate was limited to 20 per cent of the gross earnings. Under these conditions, there were promoted the Ahmedabad Prantje, the South Behar, and the Southern Punjab, although only in the case of the first were the terms strictly adhered to. The Barsi Light Railway, on the two feet six inches gauge, entered the field without any guarantee, and with rolling stock designed to illustrate the carrying power of this gauge. The rebates

terms being found unattractive in view of the competition of 4 per cent trustee stocks, they were revised in 1896 to provide for an absolute guarantee of 3 per cent with a share of surplus profits, or rebate up to the full extent of the main line's net earnings in supplement of their own net earnings, the total being limited to 3½ per cent on the capital outlay. Under these terms, a considerable number of feeder line companies was promoted, though in none were the conditions arbitrarily exacted. As these terms did not at first attain their purpose, they were further revised, and in lieu was substituted an increase in the rate of guarantee from 3 to 3½ per cent and of rebate from 3½ to 5 per cent with equal division of surplus profits over 5 per cent in both cases. At last, the requirements of the market were met, and there was for a time a mild boom in feeder railway construction and the stock of all the sound companies promoted stood at a substantial premium. Conditions changed after the war and the Acworth Committee so far from approving of this system, considered that the aim of the Government should be to reduce by amalgamation the number of existing companies and that it should only be in cases where the State cannot or will not provide adequate funds that private enterprise in this direction should be encouraged.

The existing Branch Line Companies have ceased for some time to raise additional capital for capital requirements. They have either obtained overdrafts from various Banks for this purpose at heavy rates of interest or issued debentures at special rates of interest (usually about 7 per cent) or in several cases asked for money to be advanced to them by the Railway Board. So far, therefore, from reducing the amount that the Government of India have to raise in the open market they were increasing the amount. For the above reasons, the Government of India have abolished this system and are now prepared themselves to find the capital required for the construction of extensions or branches to existing main line systems. They have also announced their readiness to consider the question of constructing branch or feeder lines which were not expected to be remunerative from the point of view of railway earnings upon a guarantee against loss from a Local Government or local authority which might desire to have such lines constructed for purely local reasons or on account of administrative advantages likely to accrue in particular areas. This proposal was put forward as affording a suitable method of reconciling the interests of the Central and the Local Governments and of providing for local bodies and for Local Governments a method of securing the construction of railways which may be required for purely local reasons and which, while not likely to prove remunerative on purely railway earnings, are likely to give such benefits to Local Governments and local bodies as will more than repay the amounts paid under the guarantee. Some such arrangements have already been made with Local Governments in Madras, Punjab, Burma and Bombay.

Railway Profits begin

Meantime a much more important change was in progress. The gradual economic de-

velopment of the country vastly increased the traffic, both passenger and goods. The falling in of the original contracts allowed Government to renew them on more favourable terms. The development of irrigation in the Punjab and Sind transformed the North Western State Railway. Owing to the burden of maintaining the unprofitable Frontier lines, this was the Cinderella Railway in India—the scapegoat of the critics who protested against the unwisdom of constructing railways from borrowed capital. But with the completion of the Chenab and Jhelum Canals, the North Western became one of the great grain lines of the world, choked with traffic at certain seasons of the year and making a large profit for the State. In 1900 the railways for the first time showed a small gain to the State. In succeeding years the net receipts grew rapidly. In the four years ended 1907-08 they averaged close upon £2 millions a year. In the following year there was a relapse. Bad harvests in India, accompanied by the monetary panic caused by the American financial crisis led to a great falling off in receipts just when working expenses were rising, owing to the general increase in prices. Instead of a profit there was a deficit of £1,240,000 in the railway accounts for 1908-09. But in the following year there was a reversion to a profit, and the net Railway gain has steadily increased. For the year ended March 1919 this gain amounted to £10,573,000. Although in a country like India, where the finances are mainly dependent upon the character of the monsoon, the railway revenue must fluctuate, there was no reason to anticipate a further deficit but the net railway gain decreased to £3,767,000 in 1920-21 and there was an actual loss of £6,182,000 in 1921-22. As a result of the steps taken by the Railway Board, however, on the report of the Acworth Committee in 1921, this loss was changed into a gain of £813,000 in 1922-23.

The results in succeeding years will be seen from the following statements—

	Contribution to General Revenues	Railway Reserve Fund	Total Gain
	£	£	£
1923-24			4,437,712
1924-25	4,941,387	4,635,985	9,577,372
1925-26	4,135,644	2,854,936	6,990,580
1926-27	4,486,045	1,108,433	5,594,478
1927-28	4,707,239	3,460,000	8,167,239
1928-29	3,933,834	1,937,895	5,871,729
1929-30	4,588,950	1,561,650	6,027,300
1930-31	4,301,775	8,192,625	3,890,850
1931-32	4,020,150		6,900,000
1932-33	*		
1933-34	—	—	—
1934-35	—	—	—
1935-36	—	—	—

* The contribution to General Revenues due for the year 1932-33 amounts to Rs 523 lakhs or 13 lakhs less than in 1931-32. The payment of the contribution has been held in abeyance until the return of prosperous years.

Rupees have been converted into £ at the average rate of exchange for the year

1933-34 is the first year to show some signs of recovery since the depression. The earnings of the State owned lines increased from Rs 84 crores in 1932-33 to Rs 86 crores in 1933-34 and to Rs 90 crores in 1934-35, but the net result of the years working showed a loss of about Rs 5 crores. No contribution was therefore made to the general revenues.

Contracts Revised

One factor which helped to improve the financial position was the revision of the original contracts under which the guaranteed lines were constructed. The five per cent dividend guaranteed at 22d per rupee, and the half-yearly settlements made these companies a drain on the State at a time when their stock was at a high premium. The first contract to fall in was the East Indian, the great line connecting Calcutta with Delhi and the Northern provinces. When the contract lapsed, the Government exercised their right of purchasing the line, paying the purchase money in the form of terminable annuities, derived from revenue carrying with them a sinking fund for the redemption of capital. The railway thus became a State line, but it was released to the Company which actually works it. Under these new conditions the East Indian Company brought to the State in the two years ended 1909 after meeting all charges, including the payments on account of the terminable annuity by means of which the purchase of the line was made, and interest of all capital outlay subsequent to the date on purchase, a clear profit of nearly ten millions. At the end of seventy-four years from 1880, when the annuity expires, the Government will come into receipt of a clear yearly income of upwards of £2,700,000, equivalent to the creation of a capital of sixty to seventy millions sterling. No other railway shows results quite equal to the East Indian because, in addition to serving a rich country by an easy line, it possesses its own collieries and enjoys cheap coal. But with allowance for these factors, all the other guaranteed companies which have been acquired under similar conditions as their contracts expired, have proportionately swelled the revenue and assets of the State. It is difficult to estimate the amount which must be added to the capital debt of the Indian railways in order to counterbalance the loss during the period when the revenue did not meet the interest charges. According to one estimate it should be £50 millions. But even if that figure be taken, Government have a magnificent asset in their railway property.

Improving Open Lines

These changes induced a corresponding change in Indian Railway policy. Up to 1900 the great work had been the provision of trunk lines. But with the completion of the Nagda-Muttra line, providing an alternative broad-gauge route from Bombay to Delhi through Eastern Rajputana, the trunk system was virtually complete. A direct broad-gauge route from Bombay to Sind is needed, but the poor commercial prospects of the line and the opposition of the Rao of Cutch

to any through line in his territories, has for some time kept this scheme in the background. The possibilities however of this construction being undertaken have improved considerably recently and a detailed survey is being carried out. There does not exist any through rail connection between India and Burma, although several routes have been surveyed, the mountainous character of the region to be traversed, and the easy means of communication with Burma by sea, rob this scheme of any living importance. Further survey work was undertaken between 1914 and 1920, the three routes to be surveyed being the coast route, the Manipur route, and the Hukong valley route. The metre gauge systems of Northern and Southern India will also probably one day be connected and Karachi given direct broad gauge connection with Delhi, a project that has been investigated more than once but cannot at present be financially justified. These works are, however, subordinate to the necessity for bringing the open lines up to their traffic requirements and providing them with feeders. The sudden increase in the trade of India found the main lines totally unprepared. Costly works were necessary to double lines, improve the equipment, provide new and better yards and terminal facilities and to increase the rolling stock. Consequently the demands on the open lines altogether overshadowed the provision of new lines. Even then the railway budget was found totally inadequate for the purpose and a small Committee sat in London under the chairmanship of Lord Inchcape to consider ways and means. This Committee found that the amount which could be remuneratively spent on railway construction in India was limited only by the capacity of the money market. They fixed the annual allotment at £12,000,000 a year. Even this reduced sum could not always be provided.

During 1934-35 the principal open line improvements were renewals of permanent way, remodelling of workshops at Jamalpur and Jhansi, remodelling of Delhi yard and the conversion of the Shoranur-Cochin railway into broad gauge.

Government Control and Reorganisation of Railway Board

As the original contracts carried a definite Government guarantee of interest, it was necessary for Government to exercise strong supervision and control over the expenditure during construction, and over management and expenditure after the lines were open for traffic. For these purposes a staff of Consulting Engineers was formed, and a whole system of checks and counterchecks established, leading up to the Railway Branch of the Public Works Department of the Government of India. As traffic developed, the Indian Railways outgrew this dry nursing, and when the original contracts expired, and the interests of Government and the Companies synchronised, it became not only vexatious but unnecessary. Accordingly in 1901-02 Mr Thomas Robertson was deputed by the Secretary of State to examine the whole question of the organization and working of the

Indian Railways, and he recommended that the existing system should be replaced by a Railway Board, consisting of a Chairman and two members with a Secretary. The Board was formally constituted in March 1905. The Board was made subordinate to the Government of India in which it was represented by the Department of Commerce and Industry. It prepared the railway programme of expenditure and considered the greater questions of policy and economy affecting all the lines. Its administrative duties included the construction of new lines by State agency, the carrying out of new works on open lines, the improvement of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement of disputes between lines, the control and promotion of the staff on State lines, and the general supervision over the working and expenditure of the Company's lines. Certain minor changes have taken place from time to time since the constitution of the Railway Board. In 1908, to meet the complaint that the Board was subjected to excessive control by the Department of Commerce and Industry, the powers of the Chairman were increased and he was given the status of a Secretary to Government with the right of independent access to the Viceroy, he usually sat in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of complaints of the excessive interference of the Board with the Companies an informal mission was undertaken by Lord Inchausti to reconcile differences. Various changes were introduced during the years 1912-1920 such as the modification of the rule that the President and members of the Railway Board should all be men of large experience in the working of railways due to the importance of financial and commercial considerations in connection with the control of Indian Railway policy. This decision was however, revised in 1920 and an additional appointment of Financial Adviser to the Railway Board created instead. The question of the most suitable organization was further fully examined by the Acworth Committee in 1921 and a revised organization which is described later was introduced from 1st April 1924.

Some of the difficulties involved in the constitution of a controlling authority for the railways of India may be realized from a study of the "Notes on the Relation of the Government to Railways in India" printed as an appendix to Volume I of the Annual Report by the Railway Board on Indian Railways. These notes bring out the great diversity of conditions prevailing which involve the Railway Department in the exercise of the functions of—

(a) the directly controlling authority of the State-worked systems aggregating 18,499 miles in on the 31st March 1929,

(b) the representative of the predominant owning partner in systems aggregating 29,451 miles,

(c) the guarantor of many of the smaller companies, and

(d) the statutory authority over all railways in India

Moreover in all questions relating to railways or extra municipal tramways in which Provincial Governments are concerned, the Railway Department is called upon to watch the interests of the Central Government and is frequently asked to advise the Local Governments. Its duties do not end there. The future development of railways depends largely on the Government of India and the Railway Department is therefore called upon to plan out schemes of development, to investigate and survey new lines and to arrange for financing their construction. The evolution of a satisfactory authority for the administration of these varied functions has proved extremely difficult and the question was one of those referred to the Railway Committee (1920-21) presided over by Sir William Acworth who recommended the early appointment of a Chief Commissioner of Railways whose first duty should be to prepare a definite scheme for the reorganization of the Railway Department and Mr C D M Hindley, formerly Agent of the Fast Indian Railway and Chairman of the Calcutta Port Trust, was appointed Chief Commissioner on November 1st, 1922.

The principal constitutional change involved in this appointment is that the Chief Commissioner who takes the place of the President of the Railway Board is solely responsible—under the Government of India—for arriving at decisions on technical matters and for advising the Government of India on matters of railway policy and is not, as was the President, subject to be out voted and over ruled by his colleagues on the Board. The detailed reorganization of the Railway Board in accordance with the Chief Commissioner's proposals required careful consideration but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of particular urgency and the Secretary of State's sanction was therefore obtained to the appointment with effect from 1st April 1923. While in the person of the Chief Engineer the Railway Board has always had available the technical advice of a senior Civil Engineer in Mechanical Engineering questions it has had to depend on outside assistance. The disadvantages of this arrangement have become increasingly evident and it was therefore decided with effect from November 1st 1922 to create the new appointment of Chief Mechanical Engineer with the Railway Board.

The reorganization carried out in 1924 had for one of its principal objects the relief to the Chief Commissioner and the Members from all but important work so as to enable them to devote their attention to larger questions of railway policy and to enable them to keep in touch with Local Governments, railway administrations and public bodies by touring to a greater extent than they had been able to do in the past.

This object was effected by the following new posts which in some cases supplemented the existing ones and in other cases replaced them. Directors of Civil Engineering, Mechanical Engineering, Traffic, Establishment and Finance and seven Deputy Directors working under them.

The necessity of some central organisation to co-ordinate the publicity central carried out on railways and to undertake work on the many forms of railways publicity which can be best organised by one central body led to the inauguration of the Central Publicity Bureau under a Chief Publicity Officer in 1927. The success which has attended the work of this Bureau led to its being made permanent from January 1st 1929. The work undertaken is described later.

The growing importance of Labour questions necessitated the organisation of a new branch in the Railway Board's office and to the appointment in 1929 of a third member whose main duties are connected with the satisfactory solution of labour problems and the improvement of the conditions of service of the staff generally and of the lower paid employees in particular.

Under the Railway Board's policy of progressive standardisation, a Central Standardisation Office was established under a Chief Controller of Standardisation to provide the means whereby such standardisation would be progressively effected in accordance with changing conditions and as the result of practical experience. The Technical Officer under the Railway Board was transferred to this office as a Deputy Controller.

The present superior staff under the Railway Board, therefore consisted of 5 Directors, 5 Deputy Directors, a Secretary and an Assistant Secretary in addition to the Controller of Railway Accounts and his officers, the Central Publicity Officer and his assistant and the Chief Controller and the officials in the Central Standardisation Office.

The question of transferring the supervision of railway accounts of State Railways from the Finance Department to the Railway Board was under consideration for some time and in accordance with a resolution adopted by the Legislative Assembly in September 1925, a start was made with the transfer of the supervision of railway accounts on the East Indian Railway. At the same time a separate Audit Staff was appointed reporting directly to the Auditor General. As it was found that the separation of Audit from Accounts led to greater efficiency, a similar organisation was introduced on other State managed railways during 1929. The supervision of Accounts Offices was placed under a Controller of Railway Accounts reporting to the Financial Commissioner of Railways and that of Audit Officers under a Director of Railway Audit reporting to the Auditor General. These two duties were previously combined under the Accountant General Railways reporting to the Auditor General. The Chief Accounts Officers on railways are now under the Agent but have certain powers of direct reference to the Financial Commissioner of Railways.

Management

The Railways managed by Companies have Boards of Directors in London and are represented in India by an Agent. Some of the Company managed railways are still on a

departmental basis with a Traffic Manager, Chief Engineer, Locomotive and Carriage and Wagon Superintendent, Controller of Stores and Chief Auditor, while others have separated the transportation and commercial duties of the Traffic Manager and combined the supervision of locomotive running with transportation. State managed lines have generally adopted the divisional organisation.

Clearing Accounts Office

A Clearing Accounts Office, with a Statutory Audit Office attached thereto, was opened in December 1926 to take over work relating to the check and apportionment of traffic interchanged between State managed Railways. The work of the different railways was gradually transferred to this office, the North Western Railway being taken over first on the 1st January 1927, the East Indian Railway following on the 1st April, the Eastern Bengal Railway on the 1st January 1928, and the Great Indian Peninsula Railway later.

At the request of the Bombay Baroda and Central India Railway an exhaustive experiment was conducted to check the accuracy of the results obtained by the revised procedure, and as the experiment was completely successful, the Board of Directors of the Bombay Baroda & Central India Railway have also agreed to the transfer of the check and apportionment of their foreign traffic to the Clearing Accounts Office.

During 1927-28 demonstrations explaining the Clearing Accounts Office procedure were given to the representatives of the Press as well as to the representatives of the various railways who visited the office to study the new procedure. An important demonstration was given to the representatives of the Southern Railways at Madras who were so impressed with the superiority of the new procedure that they unanimously recommended to their Home Boards the transfer of the work of check and apportionment of earnings from interchanged traffic to the Clearing Accounts Office, and it was hoped to open a branch Clearing Accounts Office at Madras at an early date to deal with such traffic but owing to certain later developments in connection with experiments now in operation of through rate registers and of decentralisation of Traffic Accounts Work, no definite decision has yet been arrived at.

The Railway Conference

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted in 1876. This Conference was consolidated into a permanent body in 1903 under the title of the Indian Railway Conference Association. It is under the direct control of the railways. It elects a President from amongst the members, and has done much useful work.

The Indian Gauges

The standard gauge for India is five feet six inches. When construction was started the broad gauge school was strong, and it was thought advisable to have a broad-gauge in order to resist the influence of cyclones. But

In 1870, when the State system was adopted it was decided to find a more economical gauge, for the open lines had cost £17,000 a mile. After much deliberation, the metre-gauge of 3 feet 3½ inches was adopted, because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre-gauge lines provisional, they were to be converted into broad-gauge as soon as the traffic justified it, consequently they were built very light. But the traffic expanded with surprising rapidity, and it was found cheaper to improve the carrying power of the metre-gauge lines than to convert them to the broad gauge. So, except in the Indus Valley, where the strategic situation demanded an unbroken gauge, the metre gauge lines were improved and they became a permanent feature in the railway system. Now there is a great metre-gauge system north of the Ganges connected with the Rajputana lines and Kathiawar and another system in Southern India embracing the Southern Maratha and the South India Systems. These are not yet connected, but the necessary link from Khandwa by way of the Nizam's Hyderabad Godavari Railway, cannot be long delayed. All the Burma lines are on the metre gauge. Certain feeder and hill railways have been constructed on the 2' 6" and 2' 0" gauges and since the opening of the Barsi Light Railway which showed the possible capacity of the 2' 6" gauge there has been a tendency to construct feeder lines on this rather than on the metre gauge.

State versus Company Management —

The relative advantages and disadvantages of State and Company management of the railways owned by Government which comprise the great bulk of the railway mileage in India have been the subject of discussion in official circles and the public press for many years. In India the question is complicated by the fact that the more important companies have not in recent years been the owners of the railways which they manage and the headquarters of their Boards are in London. The subject was one, perhaps the most important, of the terms of reference of the Acworth Railway Committee. That Committee was unfortunately, unable to make a unanimous recommendation on this point, their members being equally divided in favour of State management and Company management. They were, however, unanimous in recommending that the present system of management by Boards of Directors in London should not be extended beyond the terms of the existing contracts and this recommendation has met with general public acceptance. During the year 1922-23 the question was again referred to certain Local Governments and public bodies and opinions collected and discussed. The approaching termination of the East Indian Railway contract on 31st December 1924 and of that of the Great Indian Peninsula Railway on 30th June 1925 rendered an early decision on this question imperative. When the question was debated in the Legislative Assembly in February 1923, the non-official Indian Members were almost unanimously in favour of State management and indeed were able to carry a resolution recommending the placing of the East Indian Railway and the Great Indian Peninsula Railway under

State management at the close of their present contracts. The Government of India, however, expressed themselves as being so convinced by the almost universal failure of this method in other countries that they proposed, while accepting the necessity for taking over the management of the East Indian Railway and the Great Indian Peninsula Railway to continue their efforts to devise a satisfactory form of Company management in India to take these railways over eventually on a basis of real Company management. There have been certain definite advantages during a transition period in having a central authority with necessary powers to co-ordinate the work on railways and that the results have been satisfactory are borne out by the fact that Indian railways have contributed 4½ million pounds to General Revenues during 1927-28 and nearly 4 million pounds during 1928-29 in addition to paying in 3½ million and 1½ million pounds respectively during these two years to the Railway Reserve Fund. The future organisation will, however, need careful organisation. Experience in other countries has shown that difficulties arise in a Government fully responsible to the Legislature or under any constitution which imposed on the Railway Department the necessary restrictions which must apply as between ordinary departments of the State. The solution found in other countries such as Germany, Canada, Belgium, Austria and elsewhere where State ownership has thrown on the State the obligation to manage its own railways has been to create by a statute an authority charged with the management of the State Railway property with statutory prescription of the objects to be aimed at in such management and statutory division of railway profits between the State and the Railway Authority. This authority may take the form of a company as in Canada and in Germany or follow the simpler lines of a statutory commission. On 1st January 1926 the East Indian Railway was amalgamated with the Oudh and Rohilkhand Railway and brought under direct State management while on 1st July 1925 the Great Indian Peninsula Railway followed suit. The Nuni Jubbulpore Section of the East Indian Railway was transferred to the Great Indian Peninsula Railway on 1st October 1925.

On January 1st, 1929 the contract with the Burma Railways Company was terminated and the management taken over by the State. The purchase of this railway has entailed the payment to the Burma Railways Company of the sum of three millions sterling being the share capital originally contributed by the Company. The financial effort of taking over the line is estimated to be an increase of about half a crore of rupees in the net annual revenue to Government.

The purchase of the Southern Punjab Railway of an aggregate length of about 927 miles worked by the North Western Railway was effected on the 1st January 1930. It is estimated that the financial result of the purchase which cost approximately Rs. 703 lakhs will be a gain to Government of about Rs. 47 lakhs a year.

At the end of 1929-30 the Nizam's Guaranteed State Railways system which was the property of the company, was acquired and its manage-

ment taken over by His Exalted Highness the Nizam's Government and is now known as His Exalted Highness the Nizam's State Railway

Separation of the Railway from the General Finances—The question of the separation of the railway from the general finances was under consideration for some time and as a result of the recommendations of the Acworth Committee in 1921, the question was further examined by the Railway Finance Committee and the Legislative Assembly but it was decided to postpone a definite decision for the present

The question was examined afresh in connection with the recommendation of the Retrenchment Committee in 1923, that the railways in India should be so worked as to yield an average return of at least 5½ per cent on the capital at charge and it was decided that a suitable time had arrived when this separation could be carried out. A resolution was accordingly introduced in the Assembly on the 3rd March 1924, recommending to the Governor General in Council—that in order to relieve the general budget from the violent fluctuations caused by the incorporation therein of the railway estimate, and to enable the railway to carry out a continuous railway policy based on the necessity of making a definite return over a period of years to the State on the Capital expended on railways—

(1) The railway finances shall be separated from the general finances of the country and the general revenues shall receive a definite annual contribution from railways which shall be the first charge on railway earnings

(2) The contribution shall be a sum equal to five sixths of 1 per cent on the capital at charge of the railways (excluding capital contributed by Companies and Indian States and Capital expenditure on strategic Railways) at the end of the penultimate financial year plus one fifth of any surplus profits remaining after payment of this fixed return, subject to the condition that if any year railway revenues are insufficient to provide the percentage of five-sixths of 1 per cent on the capital at charges surplus profits in the next or subsequent years, will not be deemed to have accrued for purposes of division until such deficiency has been made good. From the contribution so fixed will be deducted the loss in working, and the interest on capital expenditure on strategic lines

(3) Any surplus profits that exist after payment of these charges shall be available for the Railway administration to be utilised in—

(a) forming reserves for,

(i) equalising dividends, that is to say, of securing the payment of the percentage contribution to the general revenues in lean years,

(ii) depreciation,

(iii) writing down and writing off capital, (b) the improvement of services rendered to the public,

(c) the reduction of rates

(4) The railway administration shall be entitled, subject to such conditions as may be described by the Government of India, to bor-

row temporarily from capital or from the reserves for the purpose of meeting expenditure for which there is no provision or insufficient provision in the revenue budget subject to the obligation to make repayment of borrowings out of the revenue budgets of subsequent years

(5) In accordance with present practice the figures of gross receipts and expenditure of railways will be included in the Budget Statement. The proposed expenditure will as at present, be placed before the Legislative Assembly in the form of a demand for grants and on a separate day or days among the days allotted for the discussion of the demands for grants the Member in charge of the Railways will make a general statement on railway accounts and working. Any reductions in the demand for grants for railways resulting from the votes of the Legislative Assembly will not ensure to general revenues, i.e., will not have the effect of increasing the fixed contribution for the year

(6) The Railway Department will place the estimate of railway expenditure before the Central Advisory Council on some date prior to the date for the discussion of the demand for grants for railways "

This resolution was examined by the Standing Finance Committee in September and was introduced with certain modifications. The final resolution agreed to by the Assembly on September 20th, 1924, and accepted by Government differed from the original resolution in that the yearly contribution had been placed at 1 per cent instead of 5/6th per cent on the capital at charge and if the surplus remaining after this payment to General Revenues should exceed 3 crores, only 3rd of the excess over 3 crores were to be transferred to the Railway Reserve and the remaining 2rd was to accrue to General Revenues. At the same time a Standing Finance Committee for Railways was to be constituted to examine the estimate of railways expenditure and the demand for grants, the programme revenue expenditure being shown under a depreciation fund. This committee was to consist of one nominated official member of the Legislative Assembly as Chairman and 11 members elected by the Legislative Assembly from that body. This would be in addition to the Central Advisory Council which will include the Members of the Standing Finance Committee and certain other official and non-official members from the Legislative Assembly and Council of State. These arrangements were to be subject to periodic revision but to be provisionally tried for at least 3 years. They would, however only hold good as long as the E I Railway and the G I P Railway and existing State Managed Railways remain under State management and if any contract for the transfer of any of the above to Company management was concluded against the advice of the Assembly, the Assembly would be at liberty to terminate the arrangements in this resolution

The Assembly in an addendum recommended that the railway services and the Railway Board should be rapidly Indianised and that the stores for the State Managed Railways should be purchased through the organisation of the Indian Stores Department

The period has now arrived for this separation to be reconsidered and revised but due to the economic depression the matter has been held in abeyance

Re organisation problems—The growing complexity of railway administration in India and the evolution of new methods of controlling traffic have given a stimulus to the efforts of various railways to revise their organisations. The general direction in which this re-organisation is being considered is that of consolidation into one department of the operating or transportation work of the railway, including the provision of power. This system which is commonly known as the divisional system, was first adopted on the Great Indian Peninsula Railway during 1922-23

The Pope Committee

During 1932-33 a Committee under the Chairmanship of Mr Pope, General Executive Assistant to the President of the J. M. S. Railway was formed to investigate and inaugurate a detailed analysis of every important activity of railway operation. In addition to the specific recommendation that 'job analysis' should be initiated on all railways, the following recommendations were made—

- (i) The better use of Locomotives
- (ii) The better use of Railway land
- (iii) Additional research and experiments
- (iv) Improved Workshop practice
- (v) More careful listing of surplus track, equipment and accommodation
- (vi) Possibility of reducing hot axles

As a result of Mr Pope's report regarding the possibility of further economies on railways and in particular with reference to the report on job analysis. Small committees were formed on the leading railways to conduct detailed investigations. Reports show that the work is being continued vigorously and with an encouraging degree of success

Mr Pope returned to India in 1933-34 and prepared a second report based upon the progress of the work and on further possibilities of economy

The most important recommendations of Mr Pope's second report were—

- 1 Intensive use of locomotives
- 2 Intensive use of coaching stock
- 3 Intensive use of machinery and plant
- 4 Uneconomical wagons
- 5 Combining resources between railways
- 6 Handling and transport of small traffic and of traffic to be transhipped at break of gauge stations
- 7 Ticketless travel
- 8 Methods of increasing earnings

Job analysis was continued on most of the railways during the year which resulted in substantial economies. Apart from this, Railways continued to explore the possibilities of increasing earnings and reducing working expenses

Rates Advisory Committee

The Railway Rates Advisory Committee continued its functions as in the preceding years. During the period under review two

cases were referred to the committee for investigation, one in connection with a complaint from Messrs Martin & Co of Calcutta and nine other colliery owners regarding terminal charges and freight charges from some collieries. The other complaint concerned rates for myrabolans from Yubulpore to Cawnpore. Apart from this five cases which had been referred to the committee in previous years were reported upon

Railway Research.—Valuable work is being done for India's railways by a relatively new section called the Central Standards Office of the Railway Board. This office was established in 1930 on a temporary basis with the object of standardising material used by the railways. The highest degree of efficiency is aimed at, as well as uniformity by the adoption of the most suitable designs. The work done has proved so useful that the office has been put on a permanent basis. All kinds of railway activities have been put under the microscope by the engineers and many improved and standardised designs for all purposes produced.

For example, a standard metal bridge has been designed for spans varying from 10 to 100 feet, which is cheaper to produce and more efficient in use. This, it is expected, will result over a number of years in considerable savings.

Other improvements affect the permanent way. Experiments are proceeding with standardised and improved equipment for signalling station buildings, and many other railway requirements.

Inauguration of the Main Line Electric Service, G. I. P. Railway

The inauguration of the electrified main line section of the G. I. P. Railway from Kalyan to Poona took place on the 5th November 1929, and constituted the first entirely main line of track to be electrified in India. This scheme involved the elimination of the Bore Ghat Reversing Station.

With the opening of the electrified section between Kalyan and Igatpuri in October 1930, it is believed that the G. I. P. Railway has the greatest length of electrified main line in the British Empire and the entire scheme will be one of the most important main line electrifications in the world.

Publicity—The outstanding activity of the Central Publicity Bureau during the year 1935-36 has been the extension of contacts with other countries and in particular in the Far East. This has been to a very great extent one of the results of the Oriental Tourist Conference which was convened by the Japanese Government in Tokyo in May 1935.

An extension of activities in connection with Australia also featured in the work of the Bureau. It is felt that there are great potentialities from the point of view of tourist traffic to be worked up in connection with Australia. The advertising which was done in that country definitely produced results and created interest.

As regards the tourist traffic to India a serious factor unfortunately arose which prevented 1935-36 from being one of the best tourist seasons for many years. This was the outbreak of hostilities between Italy and Abyssinia.

The principal Travel Agents reported that by the end of November the falling off in tourist traffic was considerable. Yet it is satisfactory to note that in spite of such gloomy prospects, business revived by February and by March 31st all arrears had been made up and the final result was not only equal to, but actually surpassed, the results of the previous year. The figures provided by the Board of Trade in London of passengers sailing from British ports bear this out.

World cruises showed an important increase which amounts 29.33 per cent increase in the

number of passengers and 22.04 per cent in the earnings of the Indian Railways for this traffic alone.

Considering the political and financial troubles which reign on the Continent of Europe, it must be admitted that these results are a very pleasing feature as they tend to accentuate the fact that India is proving a very real attraction and that the conditions of travel in this country inspire confidence in spite of extraneous adverse conditions.

The tonnage of and earnings from the main commodities on Class I Railways during the last two years are shown in the table below —

Commodity	1934 35		1935 36		Increase + Decrease— in earnings Rs (in lakhs)
	No of tons originating (in millions)	Rs (in crores)	No of tons originating (in millions)	Rs (in crores)	
<i>Increases</i>

Total	80 65	62 40	82 74	62 79	+39

Open Mileage—The total route mileage on March 31st, 1936, was made up of—

Broad gauge	21,196 12 miles
Metre gauge	17 763 78 „
Narrow gauge	4,158 48 „

Under the classification adopted for statistical purposes, this mileage is divided between the three classes of railways as follows—

Class I	38,367 42 miles
Class II	3,548 24 „
Class III	1,202 72 „

During the year 1935-36 the mileage of new lines under construction was 63 44 miles

Class I Railways	Number of seats in passenger carriages			
	1st	2nd	Inter	3rd
36	23 447	44 327	61,817	646 846
37 31*	10,810	15,152	13,256	361,260

Financial Results of Working—The gross traffic receipts of the state owned railways amounted to Rs 90 65 crores in 1935-36 or an increase of Rs 45 lakhs over the previous year

(Based on actuals of 1935-36)

	(Figures in thousands)	
	Rs	Rs
1 1 per cent on capital of Rs 7,16,03,05 at charge—commercial lines		7,16,03
(i) Receipts (1935-36)—		
Gross traffic receipts—commercial lines	95,76 89	
Subsidized companies—share of surplus profits	22,95	
Interest on depreciation and reserve fund balances and dividends on investments in branch lines and miscellaneous receipts	70,71	
Total Receipts		96,70,55
(ii) Charges (1935-36)—		
Working expenses—commercial lines	64 71 38	
Payment to worked lines	2,84 67	
Indian States and railway companies share of surplus profits	50 95	
Land and subsidy	5,76	
Interest—

India ..		

Output of Railway owned Collieries—The output of railway owned collieries during 1930-31 was—

2,926,812 tons for a total of 6,629,014 tons
Consumed for 1931-32 the figures are
2,484,891 tons for a total of 5,759,398 tons
For 1933-34 the figures are
2,470,020 tons for a total of 5,987,826 tons

Number of Staff—The total number of employees on Indian Railways at the end of the year 1935-36 was 712,764 as compared with 705,636 at the end of 1934-35 as compared with 701,436 at the end of 1933-34. The following table shows the number of employees by communities on 31st March 1934, 1935 and 1936—

	Europeans	Statutory Indians					
		Hindus	Muham- madans	Anglo Indians	Sikhs	Indian Christians	Other Classes
31st March 1934	3,906	497,505	151,625	12,844	8,339	16,167	10,976
31st March 1935	3,521	499,968	152,276	13,486	8,739	16,754	10,391
31st March 1936	3,219	504,977	155,439	13,423	8,740	16,824	9,742

Indianisation—Superior services, following the recommendations of the Lee Commission that recruitment in India be advanced as soon as practicable up to 75 per cent of the total number of vacancies in the Superior Services of the Railways the various Railway Companies Managing State and other railway lines followed the government lead. Out of a total of 24 vacancies filled by direct recruitment 7.69 per cent were recruited from Europeans in 1935-36 and 02.31 per cent from Indians.

Three European officers who were recruited through the Secretary of State as a part of recruitment for the year 1935-36 joined about the end of March 1935 and six Indian officers who were recruited through the Public Service Commission as a part of recruitment for the year 1934-35 joined after 1st April 1935. Had the European officers referred to above joined after the 1st March 1935 and the Indian officers before 31st March 1935 the percentages would have been Europeans 21.8, Indians 78.2.

Accidents—The following table shows the number of railway servants and other persons killed and injured in accidents on Indian Railways, excluding casualties in railway work-hops during the year 1935-36 as compared with the previous year—

Cause	Killed		Injured	
	1934-35	1935-36	1934-35	1935-36
<i>A—Passengers</i>				
In accidents to trains, rolling stock, permanent way, etc.	15	5	74	87
In accidents caused by movements of trains and railway vehicles exclusive of train accidents	189	177	794	787
In accidents on railway premises in which the movement of trains, vehicles, etc., was not concerned	5	3	38	27
Total	209	185	906	901

Cause	Killed		Injured	
	1934-35	1935-36	1934-35	1935-36
<i>B—Railway servants</i>				
In accidents to trains, rolling stock, permanent way, etc	10	16	107	135

	217	202	8,447	9,059
<i>(—Other than passengers and railway servants)</i>				
In accidents to trains, rolling stock, permanent way, etc	32	98	42	139
In accidents caused by movements of trains and railway vehicles exclusive of train accidents	2,545	2,599	790	767
In accidents on railway premises in which the movements of trains, vehicles, etc, was not concerned	28	25	67	84
Total	2,605	2,722	899	990
Grand Total	3,031	3,109	10,252	10,950

Local Advisory Committees—In the Annual Reports by the Railway Board on the working of Indian Railways, references are made each year to the work that is being done by Local Advisory Committees on railways in bringing to the notice of their respective railways administrations matters affecting the general public in their capacity as users of the railway. These committees have been established and are functioning on all Class I Railways, except His Majesty's Highness the Nizam's State Railways and the Jodhpur Railway.

Damage by Earthquakes, Fire Floods and Cyclones—The most disastrous event of the year was the earthquake at Quetta on the 31st May which affected a large part of the Quetta Division. 974 railway employees and members of their families were killed, 813 were injured and very extensive damage was done to railway property. The decision by the Government that Quetta should be rebuilt, has made it necessary to restore all railway works to a more substantial design than previously existed owing to the danger of future shocks. The latest estimate for restoration of railway property on the Division stands at Rs 104.18 lakhs.

On the 24th July, there was a disastrous explosion in the Joktla coal pit of the Kharbaree colliery, East Indian Railway, due to a blown out shot igniting the coal dust which had been expelled into the air by shots previously fired. The accident resulted in the death of 62 persons and in injuries to 14 others.

Railways were also subjected during the year to the usual floods and cyclones but the actual resulting damage was on the whole

fortunately relatively small. The Assam Bengal Railway was visited by 5 cyclones during the year 4 of which were between the 10th April and 19th May but the damage was restricted mainly to roofs blown off and to a few of the quarters being blown down.

The damage to the South Indian Railway by a cyclone on the night of the 15th November 1935 was however more extensive as the storm travelled across the peninsula causing damage to about 6 sections of the railway and to the Nilgiri Mountain railway.

On the Bengal Nagpur Railway narrow gauge section 2 trains were capsized by severe gales. The resulting damage was estimated at a little over Rs 11,000.

Burma Railways—Breaches due to heavy rains occurred on 21 sections causing interruption to traffic for a total of 111 days as against 74 days in the previous year.

Amenities for Passengers—To the extent to which funds were available Railways continued their policy of extending facilities tending to make for the greater convenience and comfort of passengers. Improvements were made in existing stock and replacements affected with carriages of more modern pattern. Programmes drawn up for the provision of additional waiting rooms and halls, covered and raised platforms, separate refreshment rooms for Hindus and Mohammedans and vendors stalls were proceeded with. Other matters which received special attention were the arrangements for the supply of drinking water and the washing, cleaning and disinfection of carriages—in particular the latrines in third class carriages. Additional restaurant car services were also introduced.

THE CHIEF RAILWAYS IN INDIA

The Assam Bengal Railway, which is constructed on the metre-gauge, starts from Chittagong and runs through Surma Valley across the North Cachar Hills into Assam. It is worked under a limited guarantee by a company

Mileage open	Rs 1,308 41
Capital at charge	Rs 23,96,47,000
Net earnings	Rs 26,58,000
Earnings per cent	1 11%

Bengal and North Western

The Bengal and North-Western Railway was constructed on the metre gauge system by a company without any Government assistance other than free land and was opened to traffic in 1885. The system was begun in 1874 as the Tirhut State Railway. In 1890 this line was leased by Government to the Bengal and North Western Railway. Since then extensive additions have been made in both sections. It is connected with the Rajputana metre gauge system at Cawnpore and with the Eastern Bengal State Railway at Khatthar and the East Indian Railway at Benares and Mokameh Ghat.

Mileage open	21,10 27
--------------	----------

Bengal Nagpur

The Bengal-Nagpur Railway was commenced as a metre gauge from Nagpur to Chhatishgarh in the Central Provinces in 1887. A company was formed under a guarantee which took over the line, converted it to the broad gauge and extended it to Howrah, Cuttack and Katni. In 1901 a part of the East Coast State Railway from Cuttack to Vizagapatnam was transferred to it and in the same year sanction was given for an extension to the coal fields and for a connection with the Branch of the East Indian Railway at Barharpur.

Mileage open	Rs 3,392 28
Capital at charge	Rs 77 75 05,000

Earnings per cent	3 40%

Bombay Baroda

The Bombay, Baroda and Central India Railway is one of the original guaranteed railways. It was commenced from Surat via Baroda to Ahmedabad, but was subsequently extended to Bombay. The original contract was terminable in 1880, but the period was extended to 1905, and then renewed under revised conditions. In 1885 the Rajputana Malwa metre-gauge system of State railways was leased to the Company and has since been incorporated in it. On the opening of the Nagda-Muttra, giving broad gauge connection through Eastern Rajputana with Delhi the working was entrusted to this Company. On the acquisition of the Company in April 1907 the purchase price was fixed at £11,685,581.

Mileage open	Rs 3,691 30
Capital at charge	Rs 73,74 05,000

Earnings per cent	6 72%

Burma Railways

The Burma Railway is an isolated line, and although various routes have been surveyed there is little prospect of its being connected with the Railway system of India in the near

future. In reply to a question in the Imperial Legislative Council in 1919 Sir Arthur Anderson said:—"During 1914 15 extensive survey operations were carried out to ascertain the best alignment for a railway connection along the coast route between Chittagong and certain stations on the Burma Railways south of Mandalay. A rival route via the Hukong Valley between the northern section of the Assam Bengal Railway and the section of the Burma Railways north of Mandalay was to have been surveyed during the following year but was postponed because of the war. It is now proposed to commence the survey during the coming cold weather, and on its completion Government will have sufficient information to enable them to decide which route shall be adopted. Thus no arrangements for the construction of a line have yet been made nor has any concession been granted, but it is probable that the line selected will be built at the cost of Government and worked by one or other of the main lines which it will connect. It was commenced as a State Railway and transferred in 1896 to a Company under a guarantee. From January 1st, 1920, its working has been taken over by the State.

Net earnings	Rs 78 25,000
Earnings per cent	2 24%

Eastern Bengal

The Eastern Bengal State Railway was promoted under the original form of guarantee and was constructed on the broad-gauge. The first portion of the line running to Calcutta over the Ganges was opened in 1882. In 1874 sanction was granted for the construction on the metre-gauge of the Northern Bengal State Railway, which ran from the north bank of the Ganges to the foot of the Himalayas on the way to Darjeeling. These two portions of the line were amalgamated in 1884 into one State Railway.

Mileage open	2,009 55
Capital at charge	Rs 51,59,89,000
Net earnings	Rs 78,88,000
Earnings per cent	1 53%

East Indian

The East Indian Railway is one of the three railways sanctioned for construction as experimental lines under the old form of guarantee. The first section from Howrah to Pandua was opened in 1854 and at the time of the Mutiny ran as far as Raniganj. It gives the only direct access to the port of Calcutta from Northern India and is consequently fed by all the large railway systems connected with it. In 1880 the Government purchased the line, paying the shareholder by annuities, but leased it again to the company to work under a contract which was terminable in 1919.

The contract was not terminated until January 1st 1925, when the State took over the management. From July 1st, 1925 the Oudh & Rohilkhand railway was amalgamated with it.

Net earnings	Rs 6,97,95,000
Earnings per cent	4 74%

(Mileages are route mileages)

Great Indian Peninsula

The Great Indian Peninsula Railway is the earliest line undertaken in India. It was promoted by a Company under a guarantee of 5 per cent and the first section from Bombay to Thana was open for traffic in 1853. Sanction was given for the extension of this line via Poona to Raichur, where it connects with the Madras Railway, and to Jubbulpore where it meets the East Indian Railway. The feature of the line is the passage of the Western Ghats, these sections being 15½ miles on the Bhore Ghat and 9½ miles on the Thul Ghat which rise 1,151 and 972 feet. In 1900, the contract with the Government terminated and under an arrangement with the Indian Midland Railway that line was amalgamated and leased to a Company to work.

The contract was terminated on June 30th, 1925, when the State took over the management.

Madras and Southern Mahratta Railway

The Madras Railway was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north westerly direction in connection with the Great Indian Peninsula Railway and in a south westerly direction to Calcutta. On the expiry of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway Company, a system on the metre gauge built to meet the famine conditions in the Southern Mahratta Country and released to a large Company called the Madras and Southern Mahratta Railway Company.

Mileage open	3,228 53
Capital at charge	Rs 53,27,73,000
Net earnings	Rs 2,73,20,000
Earnings per cent	4 75%

The North Western

The North Western State Railway began its existence at the Sind Punjab Delhi Railway, which was promoted by a Company under the original form of guarantee and extended to Delhi, Multan and Lahore and from Karachi to Kotli. The interval between Kotli and Multan was unbridged and the railway traffic was exchanged by a ferry service. In 1871-72 sanction was given for the connection of this by the Indus Valley State Railways and at the same time the Punjab Northern State Railway from Lahore towards Peshawar was begun. In 1886 the Sind Punjab Delhi Railway was acquired by the State and amalgamated with these two railways under the name of the North Western State Railway. It is the longest railway in India under one administration.

Mileage open	6,944 90

Net earnings	Rs 4,78,15,000
Earnings per cent	4 23%

*(Commercial Section)

Oudh and Rohilkhand

Oudh and Rohilkhand Railway was another of the lines constructed under the original form of guarantee. It began from the north bank of the Ganges running through Rohilkhand as far as Saharanpur where it joins the North-Western State Railway. It was not until 1887 that the bridge over the Ganges was completed and connected with the East Indian Railway. To effect a connection between the metre gauge systems to the North and those to the South of the Ganges a third rail was laid between Bhurwal and Cawnpore. The Company's contract expired in 1889 when the Railway was purchased by the State and has since been worked as a State Railway.

The working of this railway was amalgamated with that of the East Indian Railway from 1st July 1925.

The South Indian

The South Indian Railway was one of the original guaranteed railways. It was begun by the Great Southern India Railway Company as a broad gauge line, but was converted after the seventies to the metre-gauge. This line has been extended and now serves the whole of the Southern India, south of the south west line of the Madras Railway. Between Puttur and Ceylon a ferry service was formerly maintained, but a new and more direct route to Ceylon via Rameshwaram was opened at the beginning of 1914. As the original contract ended in 1907, a new contract was entered upon with the Company on the 1st of January 1908.

The Indian States

The principal Indian State Railways are the Nizams, constructed by a company under a guarantee from the Hyderabad State, the Kathiawar system of railways, constructed by subscriptions, among the several Chiefs in Kathiawar the Jodhpur and Bikaner Railways, constructed by the Jodhpur and Bikaner Chiefs, the system of railways in the Punjab, constructed by the Patiala, Jind, Maler Kotla, and Kashmir Chiefs, and the railways in Mysore, constructed by the Mysore State.

At the end of the financial year 1929-30 a total of 123·57 miles of new lines was under construction, distributed as follows —

	Miles
5' 6" gauge	730 77
3' 3½" gauge	457 51
2' 6" gauge	69 29

During 1929-30 sanction was accorded to the construction of new lines totalling 227·77 miles.

	Miles
5' 6" gauge	93 00
3' 3½" gauge	115 17
2' 6" gauge	10 00

INDIA AND CEYLON.

The possibility of connecting India and Ceylon by a railway across the bank of sand extending the whole way from Rameswaram to Mannar has been reported on from time to time, and since 1895 various schemes having been suggested.

The South Indian Railway having been extended to Dhanushkodi, the southernmost point of Rameswaram Island, and the Ceylon Government Railway to Talaimannar, on Mannar Island, two points distant from each other about 21 miles across a narrow and shallow strait, the possibility of connecting these two terminal stations by a railway constructed on a solid embankment raised on the sand bank known as 'Adam's Bridge,' to supersede the ferry steamer service which has been established between these two points, is one of the schemes that has been investigated.

In 1913, a detailed survey was made by the South Indian Railway Company, and the project contemplates the construction of a causeway from Dhanushkodi Point on the Indian side to Talaimannar Point on the Ceylon side, a length of 20.05 miles of which 7.19 will be upon the dry land of the various islands, and 12.86 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and present no difficulty. The section through the sea will be carried on a causeway which it is proposed to construct in the following way. A double row of reinforced concrete piles, pitched at 10 feet centres and having their inner faces 14 feet apart, will first be driven into the sand. These piles will then be braced together longitudinally with light concrete arches and chains; and transversely with concrete ties, struts and chains. Behind the piles slabs of reinforced concrete will be slipped into position, the bottom slabs being sunk well into the sand of the sea bottom. Lastly, the space enclosed by the slabs will be filled in with sand.

The top of the concrete work will be carried to six feet above high water level, and the rails will be laid at that level. The sinking of the piles and slabs will be done by means of water jets. This causeway, it is expected, will cause the suspended sand brought up by the currents to settle on either side bringing about rapid accretion and eventually making one big island of Rameswaram Island and Mannar Island.

Indo-Burma Connection

The raids of the Emden in the Bay of Bengal in 1914, and the temporary interruption of communications between India and Burma, stimulated the demand for a direct railway connection between India and Burma. Government accepted the position and appointed Mr. Richards, M. Inst. C.E., to be the engineer in charge of the surveys to determine the best route for a railway from India to Burma. The

coast route appears to be the best one but at present would not be remunerative. This would start from Chittagong, which is the terminus and headquarters of the Assam-Bengal Railway and a seaport for the produce of Assam. The route runs southwards through the Chittagong district, a land of fertile rice fields intersected by big rivers and tidal creeks and it crosses the Indo Burma frontier, 94 miles from the town of Chittagong. For about 160 miles further it chiefly runs through the fertile rice lands of Arrakan and crosses all the big tidal rivers of the Akyab delta. These include the Kaladan river which drains 4,700 miles of country and even at a distance of about 30 miles from its mouth is more than half a mile wide. About 260 miles from Chittagong the railway would run into the region of mangrove swamps which fringe the seacoast north and south of the harbour of Kaungkphu stretching out into the mangrove swamps like ribs from the backbone. Innumerable spurs of the Arrakan Yoma have to be crossed. Yoma is a mountain ridge which extends from Cape Negrais northwards until it loses itself in a mass of tangled hills east of Akyab and Chittagong. At its southern end the height of the ridge is insignificant but it has peaks as high as 4,000 feet before it reaches the altitude of Sandway and further north it rises much higher. It is a formidable obstacle to railway communication between India and Burma. This route is estimated to cost about £7,000,000 and would have to be supplemented by branch lines to Akyab where there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to.

The other routes examined have been the Hukong Valley route and the Manipur route which were surveyed by the late Mr. R. A. Way many years ago. The Manipur route was estimated to cost about £5,000,000 as it has to cross three main ranges of hills with summit levels of 2,650, 3,600 and 8,900 feet long. Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 100 miles of expensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate rise and fall. The Hukong valley route is only about 284 miles long and it presents fewer engineering difficulties than either the Coast or the Manipur route. One hundred and fifty miles of this route lie in open country capable of cultivation though at present it is only very thinly populated. Only one range of hills has to be crossed and this can be negotiated with a summit tunnel 5,000 feet long at a height of 2,500 feet. There are less than fifty miles of very heavy work and only about 4,500 feet aggregate of rise and fall. The Hukong Valley route although cheaper than the Manipur route is not a practical financial proposition and both may be ruled out of consideration.

<i>Average</i>				

(a) Estimated

In 1931 1932 and 1933 there was a continuous decrease in production of coal from the peak figure of 23,803,048 tons in 1930. In 1934 the direction of change was reversed and production increased by 2 268,284 tons (or 11 4 per cent) from 19 789,163 tons in 1933 to 22 057 447 tons in 1934. In 1935 the increase continued but at a less rate, by 959 248 tons (or 4 3 per cent), to 23,016,695 tons. This increase was shared by all provinces except Biluchistan, Hyderabad and Rajputana which showed slight decreases. The most important increases were in Bengal, the Central Provinces and Bihar and Orissa. In Bengal, Bihar and Orissa, the Jharia, Karanpura, Raniganj and Takhir fields showed increases the rest decreases the largest advances being shown by Jharia and Raniganj of nearly three quarters of a million tons. In Central India Sohagpur showed an increase and Umaria a decrease in the Central Provinces Korla and Panch Valley showed increases and Ballarpur and Raigarh decreases. In Hyderabad State, the Singareni and Tindur fields showed decreases and Sisti an increase. In the Tertiary coal-fields of Assam Biluchistan, the Punjab and Rajputana increases were shown by all the Punjab fields and by Makum in Assam, the others showing decreases.

As usual the output of the Tertiary fields was but a trivial proportion of the whole, the proportions being 98.22 per cent from the Gondwana coalfields and 1.78 per cent from the Tertiary coalfields.

A feature of the last 11 years has been the very large expansion of the output from the Central Provinces from 679,081 tons in 1924 to 2,118,677 tons in 1935. This undoubtedly accentuated the fall in output of Bihar and Orissa from 14,105,529 tons in 1924 to 11,257,984

tons in 1933, with a partial recovery to 12,630,400 tons in 1934, and 12,747,340 tons in 1935.

In continuation of the trend of 1934 the export statistics for coal during 1935 show a further decrease amounting to about 112,000 tons. Ceylon retained her position as the leading importer of Indian coal, though she took 82,000 tons less than in 1934. The Straits Settlements showed a decrease of 18,000 tons, and Hongkong of 10,000 tons. The export of coke decreased by 737 tons.

IRON ORE

Bengal and Bihar and Orissa are the only provinces in India in which iron ore is mined for smelting by European methods. Iron smelting, however, was at one time a widespread industry in India and there is hardly a district away from the great alluvial tracts of the Indus, Ganges and Brahmaputra in which slag heaps are not found. The primitive iron smelter finds on difficulty in obtaining sufficient supplies of ore from deposit that no European ironmaster would regard as worth his serious consideration. Early attempts to introduce European processes for the manufacture of pig iron and steel were recorded in 1830 in the South Arcot District. Since that date various other attempts have been made but none proved a success before that now in operation near Barakar in Bengal. The site of the **Barakar Iron-Works** was originally chosen on account of the proximity of both coal and ore supplies. The outcrop of iron stone shales between the coal bearing Barakar and Raniganj stages stretches east and west from the works, and for many years the clay ironstone nodules obtainable from this formation formed the only supply of ore used in the blast furnaces. Recently magnetite and hematite have been obtained from the Manbhum and Singhbhum districts, and the production from the last named district has largely replaced the supplies of ore hitherto obtained near the iron works. The Bengal Iron and Steel Company, Limited have now given up the use of ores obtained from the neighbourhood of Barakar and Raniganj and are now obtaining most of their ores from the Kolhan Estate, Singhbhum. Some years ago the Bengal Iron and Steel Co., Ltd. secured two deposits of iron ore in Saranda (Singhbhum) forming parts of two large hill masses known as Notu Buru and Buda Buru respectively. Recent prospecting in this part of Singhbhum has led to the discovery of numerous additional deposits of iron ore, the extension of which has been traced into Keonjhar and Bonal States in Orissa, a total distance of some 40 miles in a S. S. W. direction. At Pansira Buru, a portion of Notu Buru, the deposit has been opened up, and now feeds the Barakar ironwork. Pansira Buru rises to over 2,500 feet above sea level the low ground on the west side being at about 1,100 feet above sea level. The uppermost 400 to 450 feet of this hill has now been opened up, and the workings indicate the existence of a deposit about a quarter of a mile long, perhaps 400 feet thick and proved on the dip for about 500 feet. The ore body appears to be interbedded with the Dharwad slates, from which it is separated by banded hematite jaspers. The ore itself is high grade micaceous hematite often lateritised at the outcrop. Cross cuts

into the interior of the deposit show that the hematite becomes very friable not far below the outcrop. In fact the characteristics of this ore, including the surface lateritisation, are almost exactly reproduced in the iron ore deposits of Goa and Ratnagiri. The Tata Iron and Steel Company at Sakchi possesses slightly richer and purer ore bodies in the Raipur district, supplies of ore are at present drawn from the deposits in Mayurbhanj. The ore deposits have all been found to take the form of roughly lenticular leads or bodies of hematite, with small proportions of magnetite, in close association with granite on the one hand and granitic rocks on the other.

The production of iron ore from 2,430,136 tons in 1929 the output of iron ore in India fell to 1,229,625 tons in 1933. In 1934, however, there was a turn of the tide and the production recovered sharply to 1,916,918 tons, and in 1935 rose still further to 2,364,297 tons. There were also substantial increases in the output of pig iron and steel.

The increase in the production of pig iron in India recorded above was accompanied by a moderate rise in the quantity exported from 398,054 tons in 1934 to 472,636 tons in 1935. Japan is the principal consumer of Indian pig iron, the proportion taken rose from 53.3 per cent in 1934 to 70.8 per cent in 1935, whilst the actual amount rose by 57.5 per cent. There were large decreases in exports to the United Kingdom, China and Germany, partly counterbalanced by increases to the United States and Hongkong. The export value per ton of pig iron rose from Rs. 22.2 (£1.69) in 1934 to Rs. 23 (£1.72) in 1935.

The Steel Industry (Production) Act 1924 (Act No. XIV of 1924)—authorised, to companies employing Indians bounties upon rails and shipplates wholly manufactured in British India from material wholly or mainly produced from Indian iron ore and complying with specifications approved by the Railway Board, and upon iron or steel railway wagons, a substantial portion of the component parts of which had been manufactured in British India. This Act was repealed by the Act No. III of 1927 and the payment of bounties consequently ceased on the 31st March, 1927, the industry is, however, protected to a certain extent by the varying tariffs on different classes of imported steel. As a result of a new Act, No. XXXI of 1934, provision has been made for an increase of tariffs by about half over the 1927 rates, or about Rs. 10 per ton *ad valorem* in most cases, or about Rs. 40 per ton in the case of articles not of British manufacture.

MANGANESE ORE

This industry was started some thirty years ago by quarrying the deposits of the Vizagapatam district, and from an output of 674 tons in 1892, the production rose rapidly to 92,008 tons in 1900 when the richer deposits in the Central Provinces were also attacked, and are now yielding a larger quantity of ore than the Vizagapatam mines. The most important deposits occur in the Central Provinces, Madras Central India, and Mysore—the largest supply coming from the Central Provinces. The uses to which the ore is put are somewhat varied. The peroxide is used by glass manufacturers to destroy the green colour in glass making, and it is also used in porcelain painting and glazing for the brown colour which it yields. The ore is now used in the manufacture of ferro manganese for use in steel manufacture. Since 1904, when the total output was 150,190 tons, the progress of the industry has been remarkable owing to the high prices prevailing.

The catastrophic fall in the production of manganese ore in India from the peak figures of 1927, namely 1,129,353 tons valued at £2,703,068 for 4 Indian ports to 212,604 tons with a value of £140,022 in 1932 has been recorded previously. In 1933 the output rose slightly to 218,307 tons but the value fell to £123,171. These are the smallest quantities and values reported since 1901 when the output was 120,891 tons valued at £122,831. In 1905 the output was 247,427 tons valued at £223,432, since when the smallest production was 450,416 tons in 1915 valued at £29,546, whilst the smallest value was in 1909 when a production of 644,660 tons was valued at £603,908. In 1934 there was however a partial recovery to 406,306 tons valued at £388,240, further increased in 1935 to 641,483 tons valued at £950,630. The full magnitude of this catastrophe to the Indian manganese industry is perhaps best realised from the fact that whilst the quantity of the production in 1933 was a little over one-fifth of that of the peak year of 1927, the value was less than one-twenty, and put of the value of the 1927 production. In fact in none of the major Indian mineral industries have the effects of the slump been so seriously felt as in the manganese industry, it is getting, therefore, that some measure of re-

covery can now be recorded, though the industry is still a long way from a full restoration of prosperity.

The substantial recovery in 1935 is due mainly to increases in the Bilghat (105,484 tons), Nagpur (68,775 tons) and Bhandara (24,891 tons) districts of the Central Provinces and to Sandur State (32,080 tons) and the resumption of work in Panch Mahals. The most pleasing feature of this improvement is the recovery of the Central Provinces' production from the trivial figure to which it had fallen in 1933 (28,789 tons) to 385,179 tons in 1935. During 1932 and 1933 the majority of mines in the Central Provinces had been closed, including several mines that had never been closed since the commencement of work in 1900 and 1901, there had been a total cessation of production in the Nagpur district and almost total cessation in Bhandara. The amount of ground still to be recovered can be judged from the fact that the production of the Central Provinces averaged 660,559 tons annually during the quinquennium 1924 to 1928.

The partial recovery of the Indian manganese industry during 1934 and 1935 was reflected in an increase of exports, including the quantities exported from Mormugao in Portuguese India from the mid of 375,904 tons in 1933 to 864,698 tons in 1935. The opening of the new port at Vizagapatam has been the brightest feature in the Indian manganese industry during the last three years on account of the reduced lead from the Central Provinces to the sea. The distribution of manganese ore exported from Panch Indian ports (excluding Mormugao) during 1934 and 1935 shows that the United Kingdom with an increase of some 21,000 tons retained her position as the chief importer of Indian manganese ore. The second place as importer was held by Japan with an increase of some 91,000 tons, with France third with an increase of some 44,000 tons. Belgium showed an increase of 53,500 tons. In 1932 the exports to the United States of America, one of India's principal markets for manganese ore, had ceased completely. In 1933 there was a trivial export to this destination but in 1935 the exports to the United States recovered to 77,760 tons.

GOLD

The greater part of the total output of gold in India is derived from the Kolar gold field in Mysore. During the last decade the production of this mine reached its highest point in 1906 when 616,758 ounces were raised. In 1906 the quantity won was 565,208 ounces and this figure fell to 535,085 ounces in 1907. The figures for the latter years reveal a small improvement. The Nilzams mine at Hutti in Hyderabad comes next, but at a respectable distance, to the Kolar gold field. This mine was opened in 1903. The only other mines from which gold was raised were those in the Dharwar district of Bombay and the Anantapur district of Madras. The Dharwar mines gave

an output of 2,993 ounces in 1911 but work there ceased in 1912. The Anantapur mines gave their first output of gold during the year 1910, the amount being 2,532 ounces, valued at Rs 1,51,800. Gold mining was carried on in the North Arcot district of Madras from 1893 till 1900, the highest yield (2,854 ounces) being obtained in the year 1898. The Kyaukpazat mine in Upper Burma was worked until 1903, when the pay chute was lost and the mine closed down. In 1902 dredging operations were started on the Irrawaddy river near Myitkyina, and 216 ounces of gold were obtained in 1904, the amount steadily increased from year to year and reached 8,445 ounces in 1909, but

fell in subsequent years until in 1922 it was no more than 24 oz. The small quantity of gold produced in the Punjab, the Central Provinces, and the United Provinces is obtained by washing. Gold washing is carried on in a great many districts in India, but there is no complete record of the amount obtained in this way.

In 1931 the gradual secular decline in the total Indian gold production was temporarily arrested with an output of 330,488 8 ozs valued at Rs 2,08,01,943 (£1,540,885), followed by a trivial fall again in 1932, when the output was 329,681 7 ozs valued at Rs 2,53,51,438

(£1,906,123). In 1933 there was an increase to 336,108 8 ozs valued at Rs 2,76,40,071 (£2,078,201). In 1934 the output fell to 322,142 9 ozs, but the value increased to Rs 2,92,71,130 (£2,200,836) being the highest in terms of sterling since 1920. It is interesting to note that the output of 1921, which was valued at £2,050,575 a figure very close to that of the 1933 production, was 432,722 6 ozs. In 1935 the output rose again to 327,652 5 ozs valued at Rs 3,04,01,775 (£2,285,848).

The average number of persons employed on the Kolar Gold Field during 1935 was 22,271, of whom 14,120 worked underground.

SALT *

There was a slight fall during 1935, in the total output of salt (accompanied by a trifling increase in value), due to a decrease of 39,000 tons in Madras, all the other provinces showing increases, the 1934 production was the highest on record. Imports of salt into India increased by nearly 2,000 tons, all the countries of origin showing decreases excepting Germany from which 30,000 tons were received above the imports of the previous year, and the United Kingdom, from which the imports are negligible.

Stock Exchanges.

There are about 475 Share and Stock Brokers in Bombay. They carry on business on the Brokers' Hall, bought in 1887 from the funds of the **Share and Stock Brokers' Association** formed to facilitate the negotiations and the sale and purchase of Joint Stock securities promoted throughout the Presidency of Bombay. Their powers are defined by rules and regulations framed by the Board of Directors and approved by the general body of Brokers. The Board has the power to stop business in times of emergencies. The official address of the Secretary is Dalal Street, Fort, Bombay.

At first the admittance fee for a broker was Rs 5 which was gradually raised to Rs 7,000. The fee for the Broker's card has increased. In 1921 a number of cards were sold at Rs 40,000 each and the proceeds were employed to purchase an adjoining building for the extension of the business. The present value of the card is about Rs 11,000.

In November 1917 a second Stock Exchange was opened in Bombay, with its headquarters in Apollo Street known as the **Bombay Stock Exchange, Ltd.** This separate Exchange no longer functions. It was revived in 1922. It has ceased to function again.

For many years the **Calcutta Share Market** met in the open air in business quarters and was under no control except that of market custom. In 1908 the **Calcutta Stock Exchange Association** was formed, a Representative Committee came into existence, and the existing customs were focussed into rules drawn up for the conduct of business. Public confidence grew rapidly and the rules regarding membership and business underwent drastic changes to suit advancing conditions. The Great War, having given an impetus to Indian industries, was responsible for an astoundingly large volume of business in the market which culminated in a boom.

In June, 1923, the Association was incorporated into a Limited Company under the Indian Companies' Acts 1913-1920 with an authorised capital of Rs 3 lakhs divided into 300 fully paid up shares of 1,000 each. Accounts are made up annually up to 30th September. At the present moment, the number of shares subscribed is 223, each firm owning, and being entitled to own, only one share.

The total number of members, including partners and assistants of member firms, is 608. The Committee has restricted the further sale of new shares until it deems it necessary to revise its decision, exception being made in the case of a partner disassociating from an existing firm. Anyone to become a member is required to

purchase a share from a member and seek election and on being elected the admission fee charged by the Association is Rs 5,000. The conduct of members and of business is controlled by bye laws, customs and usages being fully honoured. The market customs differ from those of most other Stock Exchanges, since there are no settlement days, delivery is due the second day after the contract is passed, and sales of securities are effected for most part under blank transfers. It has not got jobbers like the London Stock Exchange, but the brokers mostly combine the function of dealers. The principal business transacted is connected with the shares in Jute Mills, Coal Companies, Tea Companies registered in India, miscellaneous industrial concerns (such as paper, flour etc.) Railway Companies and Debentures, the latter representing those of industrial concerns and Trustees Investment Securities, namely, Municipal, Port Trust and Improvement Trust Debentures.

A general meeting of the shareholders annually elects a Committee which elects several Sub-Committees and Honorary Office Bearers—the President and two Joint Honorary Treasurers. The Committee is empowered to do all work on behalf of the Association, which in its turn delegates powers to the Sub-Committees and the Honorary Office Bearers. The Committee also adjudicates in disputes between members thus enabling the members to avoid Law Courts in most cases.

Committee for 1935—J. R. Coulthard, Esq., President, J. S. Haywood Esq., G. C. Montgomery, Esq., O. A. Cohen, Esq., Sarbotosh Sen Esq., Jitendra Mohan Dutt, Esq., M. S. Goralal Seal Esq., Shambhu Nath Dutt, Esq., Gobind Lal Bangur, Esq., Mahaliram Sonthalla, Esq., Basant Lal Chaturvedi, Esq., Jagannath Jhunjhunwala, Esq., Bishambhar Nath Chaturvedi, Esq., B. A. L. B., Mokandlal, Esq.

Joint Honorary Treasurers—Goralal Seal, Esq., Mahaliram Sonthalla, Esq.

Secretary—From April 1935, D. Chakravarty, M. A., B. L.

The Stock Exchange has its own building at 7, Lyons Range. This building—one of the finest specimen of its kind—was opened on 6th July 1928, by Sir Stanley Jackson, the Government Bengal. The ground floor is utilised for the Association Hall where members meet between 12 noon and 5 p.m. The Mezzanine floor contains the offices of the Association, a well equipped library and several retiring places for the benefit of the members. The upper three floors are tenanted by members' offices.

Chambers of Commerce.

Modern commerce in India was built up by merchants from the west and was for a long time entirely in their hands. Chambers of Commerce and numerous kindred Associations were formed by them for its protection and assistance. But Indians have in recent years taken a large and growing part in this commercial life. The extent of their participation varies greatly in different parts of India, according to the natural proclivities and genius of different races. Bombay, for instance, has led the way in the industrial and commercial regeneration of the new India, while Bengal, very active in other fields of activity, lags behind in this one. Arising from these circumstances we find Chambers of Commerce in Bombay, Karachi, Calcutta, Madras and other important centres, with a membership both European and Indian, but alongside these have sprung up in recent years certain Associations, such as the Bombay Indian Merchants' Chamber and Bureau, of which the membership is exclusively Indian. These different classes of bodies are in no sense hostile to one another and constantly work in association.

The London Chamber of Commerce in 1921 realizing the increasing attention demanded by the economic development of India, took steps to form an "East India Section" of their organization. The Indian Chambers work harmoniously with this body, but are in no sense affiliated to it, nor is there at present any inclination on their part to enter into such close relationship, because it is generally felt that the Indian Chambers can themselves achieve their objects better and more effectively than a London body could do for them, and on various occasions the London Chamber, or the East India Section of it have shown themselves out of touch with what seemed locally to be immediate requirements in particular matters.

A new movement was started in 1913 by the Hon. Sir Fazulbhoy Currimbhoy Ibrahim, a leading millowner and public citizen of Bombay, which aims at effecting great improvement in strengthening Indian commercial organization. Sir Fazulbhoy's original plan was for the formation of an Indian Commercial Congress. The proposal met with approval in all parts of India. The scheme was delayed by the outbreak of war but afterwards received an impetus from the same cause and the first Congress was held in the 1915 Christmas holiday season, in the Town Hall, Bombay. The list of members of the Reception Committee showed that all the important commercial associations of Bombay were prepared to cooperate actively.

The Congress was attended by several hundred delegates from all parts of India. The late Sir D. E. Wacha, the then President of the Bombay Indian Merchants' Chamber, presided as Chairman of the Reception Committee, at the opening of the proceedings and the first business was the election of Sir Fazulbhoy Currimbhoy as the first President. The Con-

gress resolved upon the establishment of an Associated Indian Chamber of Commerce, and elected a Provincial Committee empowered to take the necessary steps to get the Association registered and to enrol members and carry on work. The Congress also approved of the draft constitution.

The organization languished for lack of support for some years until a number of merchants specially interested in Currency and Exchange questions revived it in 1926 at Delhi and 1927 at Calcutta. The initiative in the new activities hailing, like the first movement, from Bombay. The Commercial Congress held in Calcutta on 31st December 1926 and 1st and 2nd January 1927, decided upon the formation of a "Federation of Indian Chambers of Commerce" and agreed to the registered office of this body being "at the place where the President for the year has his headquarters or where he directs it to be located." Among the objects for which the Federation is established are the following—

- (a) To promote Indian businesses in matters of inland and foreign trade, transport, industry and manufactures, finance and all other economic subjects.
- (b) To encourage friendly feeling and unanimity among business community and associations on all subjects connected with the common good of Indian business.
- (c) To enter into any arrangement with any Government or authority supreme municipal, local or otherwise that may seem conducive to the Federation's objects or any of them, and to obtain from any such Government or authority all rights, concessions, and privileges which the Federation may think it desirable to obtain and to carry out, exercise and comply with any such arrangements, rights, privileges and concessions.
- (d) To sell or dispose of the undertaking of the Federation or any part thereof for such consideration as the Federation may think fit and in particular for shares, debentures or securities of any other company having objects altogether or in part similar to those of this Federation.
- (e) To take or otherwise acquire and hold shares in any other company having objects altogether or in part similar to those of this Federation.
- (f) To undertake and execute any trusts the undertaking of which may seem to the Federation desirable either gratuitously or otherwise.
- (g) To draw, make, accept, discount, execute and issue bills of exchange promissory notes, bills of lading, warrants, debentures and other negotiable or transferable instruments or securities.

The Rules provide for two classes of members, viz. numbers consisting of Chambers of Commerce (Subscription Rs 300) and others consisting of Commercial Associations (Subscription Rs 150)

The following are the Committee of the Federation for 1936-37 —

President — Mr D P Khaitan

The Chamber maintains a Tribunal of Arbitration for the determination settlement and adjustment of disputes and differences relating to trade, business, manufactures, and to customs of trade, between parties all or any of whom reside or carry on business personally or by agent or otherwise in Calcutta, or else where in India or Burma, by whomsoever of such parties the said disputes and differences are submitted. The Secretary of the Chamber acts as the Registrar of the Tribunal, which

consists of such members or assistants to members as may, from time to time, annually or otherwise be selected by the Registrar and willing to serve on the Tribunal. The Registrar from time to time makes a list of such members and assistants.

The Chamber also maintains a Licensed Measures' Department controlled by a special committee. It includes a Superintendent (Mr R. Mills), Head Office Manager (Mr F W Kendall) and Assistant Superintendents (Messrs G C G Smyth, J B F Henfrey and B Perry), and the staff at the time of the last official returns consisted of 100 officers. The usual system of work for the benefit of the trade of the port is followed. The Department has its own provident fund and compassionate funds and Measurers Club. The Chamber does not assist in the preparation of official statistical returns. It publishes weekly the *Calcutta Prices Current*, and also publishes a large number of statistical circulars of various descriptions in addition to a monthly abstract of proceedings and many other circulars on matters under discussion.

BENGAL NATIONAL CHAMBER OF COMMERCE

The objects of the Chamber are to aid and stimulate the development of commercial, agricultural and industrial enterprises in Bengal and Assam and to protect the commercial interests of all persons trading therein to promote unanimity and uniformity of practice amongst the members of the commercial community, to represent their views and requirements to the Government, railway and port authorities to arrange for organised action on all matters involving the interests of members including conditions of employment of industrial labour, to arbitrate when occasion occurs between parties willing to submit their differences to the Association, and generally to do all such things as may be conducive to the interests of the commercial classes of Bengal and Assam.

BOMBAY

The object and duties of the Bombay Chamber as set forth in their Memorandum and Articles of Association, are to encourage a friendly feeling and unanimity among commercial men on all subjects involving their common good, to promote and protect the general mercantile interests of this Presidency, to collect and classify information on all matters of general commercial interest, to obtain the removal, as far as such a Society can, of all acknowledged grievances affecting merchants as a body, or mercantile interests in general to receive and decide references on matters of usage and custom in dispute, recording such decisions for future guidance, and by this and such other means, as the Committee for the time being may think fit, assisting to form a code of practice for simplifying and facilitating business, to communicate with the public authorities, with similar Associations in other places and with individuals, on all subjects of general mercantile interests, and to arbitrate between parties willing to refer to, and abide by, the judgment of the Chamber

The Bombay Chamber was established in 1836, under the auspices of Sir Robert Grant, who was then Governor of the Presidency, and the programme described above was embodied in their first set of rules. According to the latest returns the number of Chamber members is 192. Of these numbers 14 represent banking institutions, 16 shipping agencies and companies, 3 firms of solicitors, 3 railway companies, 13 insurance companies, 17 engineers and contractors, 126 firms engaged in general mercantile business.

All persons engaged or interested in mercantile pursuits desirous of joining the Chamber and disposed to aid in carrying its objects into effect are eligible for election to membership by ballot. The Chamber members' subscription is Rs 360. Gentlemen distinguished for public services, or eminent in commerce and manufactures may be elected honorary members and as such are exempt from paying subscriptions. Any stranger engaged or interested in mercantile pursuits and visiting the Presidency may be introduced as a visitor

by any Member of the Chamber inserting his name in a book to be kept for the purpose, but a residence of two months shall subject him to the rule for the admission of members.

Officers of the Year

The affairs and funds of the Chamber are managed by a committee of nine ordinary members, consisting of the President and Vice President and seven members. The committee must, as a rule, meet at least once a week and the minutes of its proceedings are open to inspection by all members of the Chamber subject to such regulations as the committee may make in regard to the matter. A general meeting of the Chamber must be held once a year and ten or more members may requisition, through the officers of the Chamber, a special meeting at any time, for specific purpose.

The Chamber elects representatives as follows to various public bodies —

The Council of State, one representative

Legislative Council of the Governor of Bombay, two representatives

Bombay Municipal Corporation, one member elected for three years

Board of Trustees of the Port of Bombay, five members, elected for two years

The following are the officers of the Chamber for the year 1937-38 and their representatives on the various public bodies —

President —G H Cooke, Esq

Vice President —A McIntosh, Esq

One of the most important functions performed by the Chamber is that of arbitration in commercial disputes. Rules for this have been in existence for many years and have worked most satisfactorily. The decisions are in all cases given by competent arbitrators appointed by the General Committee of the Chamber and the system avoids the great expense of resort to the Law Courts.

A special department of the Bombay Chamber is its Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. The department consists of fourteen Indian clerks who, by the authority of Government, work in the Customs House and have every facility placed at their disposal by the Customs authorities. They compile all the statistical information in connection with the trade of the port, in both export and import divisions, which it is desirable to record. No other Chamber in India does similar work to the same extent.

The Bombay Chamber publishes a Daily Arrival Return which shows the receipts into Bombay of cotton, wheat and seeds, and a Daily Trade Return, which deals with trade by sea and shows in great detail imports of various kinds of merchandise and of treasure while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export manifests, which give particulars of the cargo carried by each steamer to and from Bombay.

Four statements are issued once a month. One shows the quantity of exports of cotton seeds and wheat from the principal ports of the whole of India. The second gives in detail imports from Europe, more particularly in regard to grey cloths, bleached cloths, Turkey red and scarlet cloths, printed and dyed goods, fancy cloth of various descriptions, woollens, yarns, metals, kerosene oil, coal, aniline dyes, sugar, matches, wines and other sundry goods. The third shows, classified, the number of packages of piece goods and yarns imported by individual merchants. The fourth gives number of bales of cotton exported by each firm to each country during the month with a running total of the number of bales exported during the year.

Another "Monthly Return" issued by the Chamber shows clearances of a large number of important designations of merchandise. A return of "Current Quotations" is issued once a week, on the day of the departure of the English mail, and shows the rates of exchange for Bank and Mercantile Bills on England and Paris and a large quantity of general banking and trade information.

The Chamber has also a Measurement Department with a staff of 10, whose business is that of actual measurement of exports in the docks before loading in steamers. Certificates are issued by these officers with the authority of the Chamber to shippers and ship agents as to the measurement of cotton and other goods in bales or packages. From the measurements given in these certificates the freight payable by the shippers of goods is calculated. The measurers are in attendance on the quays whenever there are goods to be measured and during the busy season are now on duty early and late.

Associated Chamber of Commerce of India

HEAD OFFICE LOCATED IN CALCUTTA FOR 1937

President, J Reid Kay, Esq

Millowners' Association, Bombay

The Millowners Association, Bombay, was established in 1875 and its objects are as follows—

Vice Presidents — Mr M. L. Dhanukar, Mr D. R. Nuk and Mr G. L. Korgaonkar

Secretary — Mr D. V. Kelkar, M.A.

The offices of the Chamber are in the Phoenix Building, Graham Road, Ballard Estate, Bombay.

KARACHI

The objects and duties of the Karachi Chamber of Commerce are set forth in terms similar to those of Bombay. Qualifications for membership are also similar. Honorary Membership may be conferred by the Committee upon any gentlemen interested in the affairs and objects of the Chamber. All new members joining the Chamber pay Rs. 750 entrance fee and the monthly subscription is Rs. 18. The subscription to the Chamber's periodical returns is at present fixed at Rs. 80 per annum per set containing monthly Import and Export Statements and Export Manifests and Non Members Rs. 100 per set per annum. Rs. 10 per annum for the Weekly Price Current and Market Report. The affairs of the Chamber are managed by a committee of ten members consisting of a Chairman, Vice Chairman and eight members, elected at the annual general meeting of the Chamber as early in the year as possible. The Chamber elects a representative on the Sind Legislative Assembly, four representatives on the Karachi Port Trust, two on the Karachi Municipal Corporation and two on the North Western Railway Advisory Committee. Karachi there were 38 members of the Chamber in January 1937. The following are the officers for 1937 —

Chairman — Mr G. H. Raschen, (Forbes, Forbes, Campbell & Co., Ltd.)

Vice Chairman — Mr J. W. Anderson, (Grahams Trading Co. (India), Ltd.)

Members of Committee — Mr H. S. Bigg, Whither, OBE (Messrs. Burmah Shell Oil Storage & Distributing Co. of India, Ltd.)
 Mr R. B. Fairclough (Messrs. Anglo Siam Corporation, Ltd.), Mr J. J. Flockhart (Messrs. Mackinnon Mackenzie & Co.)
 Mr A. K. Homan (The North Western Railway)
 Mr G. N. R. Morgan, (Messrs. The Bombay

(Co. Ltd.), Mr A. J. Pons (Messrs. Ralli Brothers, Ltd.), Mr J. Richardson (The National Bank of India, Ltd.) and Mr C. Voegelé (Messrs. Volkart Brothers).

Acting Secretary — Mr H. M. Combs

Representative on the Sind Legislative Assembly — Mr G. H. Raschen

Representatives on the Karachi Port Trust — Messrs. H. S. Bigg, Whither, OBE, G. H. Raschen, J. W. Anderson and J. J. Flockhart

Representatives on the Karachi Municipality — Mr W. B. Hossick and Mr S. B. H. Katik

Representatives on the North Western Railway Local Advisory Committee, Karachi — Messrs. G. H. Raschen and C. W. Warrington

Ag. Public Measurer — Mr J. G. Smith

The following are the principal ways in which the Chamber gives special assistance to members — The Committee take into consideration and give an opinion upon questions submitted by members regarding the custom of the trade or of the Port of Karachi. The Committee undertake to nominate arbitrators and surveyors for the settlements of disputes. When two members of the Chamber or when one member and a party who is not a member have agreed to refer disputes to the arbitration of the Chamber or of an arbitrator or arbitrators nominated by the Chamber, the Committee will undertake to nominate an arbitrator or arbitrators under certain regulations. Similarly, the Chamber, under certain regulations, will undertake to appoint an arbitrator or arbitrators for the settlement of disputes in which neither of the parties are members of the Chamber. A public measurer is appointed under the authority of the Chamber to measure pressed bales of cotton, wool, hides and other merchandise arriving at or leaving the port.

MADRAS.

The Madras Chamber of Commerce was founded in 1836. All merchants and other persons engaged or interested in the general trade, commerce and manufactures of Madras are eligible for membership. Any assistant signing a firm or signing *per-pro* for a firm is eligible. Members who are absent from Madras but pay their subscriptions may be represented in the Chamber by their powers of attorney, as honorary members, subject to ballot. Honorary members thus elected are entitled to the full privilege of ordinary members. Election for membership is by ballot at a general meeting, a majority of two thirds of the recorded votes being necessary to secure election. Every member pays an entrance fee of Rs 100, provided that banks, corporate bodies and mercantile firms may be represented on the Chamber by one or more members and are liable for an entrance fee of Rs 100 once in ten years each. The subscriptions shall not exceed Rs 300 per annum, payable quarterly in advance, subject to reduction from time to time in accordance with the state of the Chambers finances. Absentees in Europe pay no subscription and members temporarily absent from Madras pay one rupee per month. Honorary members are admissible to the Chamber on the usual conditions. Members becoming insolvent cease to be members but are eligible for re-election without repayment of the entrance donation.

The Chamber undertakes arbitrations and surveys, the granting of certificates of origin and

the registration of trade marks. One of the rules for the last named is that no trade mark or ticket shall be registered on behalf of an Indian firm trading under a European name.

The following publications are issued by the Chamber—Madras Price Current and Market Report, Tonnage Schedule and Madras Landing Charges and Harbour Dues Schedule.

There are 57 members and 10 Honorary Members of the Chamber in the current year and the Officers and Committee for the year are as follows—

Chairman—Mr G A Bimbridge

Vice Chairman—Mr F Birkly

Committee—Messrs W M Blowning, H N (Colon), K M Fraser, D M Reid, OBE, MC, Sir William Wright, OBE.

Secretary—Mr G Gompertz, JP.

The following are bodies to which the Chamber is entitled to elect representatives and the representatives elected for the year—

Madras Legislative Council—Mr F Birkly

Madras Legislative Assembly—Sir William Wright and Mr W M Blowning.

Madras Port Trust—Messrs W M Blowning, R D Dunstan, D M Reid (One seat vacant).

Corporation of Madras—Mr C Mainpuri, G E Wilker, Bar at Law, (One seat vacant).

Federation of Chambers of Commerce of the British Empire—Mr R C M Strouts.

SOUTHERN INDIA

The Southern India Chamber of Commerce established in 1909 has its Registered Office in Madras. The objects of the Chamber are those usual for such bodies, concerning the promotion of trade, especially in the Madras Presidency, and the interests of members. Special objects are stated to be—

‘To maintain a Library of books and publications of commercial interest, so as to diffuse commercial information and knowledge amongst its members.’

‘To establish Museums of commercial products or organise exhibitions, either on behalf of the Chamber or in co-operation with others.’

There are two classes of members, permanent and honorary. The usual conditions as to eligibility for election prevail.

The Chamber is a member of the Federation of Indian Chambers of Commerce, the Indian Chamber of Commerce in Great Britain, and the Indian National Committee of the International Chamber of Commerce Paris.

The Chamber registers trade marks, holds survey and arbitration issues certificates of origin and certificates invoices.

The right of electing two representatives to the Madras Port Trust was accorded to the Chamber by the Madras Port Trust Amendment Act, 1915. Members of the Chamber hold seats in the Madras Legislative Council and the Chamber has also been accorded the right of electing a representative to that body conjointly with the Nattukottai Nagarathar

Association. The Chamber has the right of electing a representative to the Federal Assembly. Under the Madras City Municipal Amendment Act, 1926, the Chamber has the right of electing one Councillor to the Madras Corporation. Under the State Aid to Industries Act, 1923, the Chamber has the right to elect one member to the Board of Industries.

The Chamber also sends its representatives to the Board of Communications, the Provincial Cotton Committee, the Advisory Committees of the South Indian and Madras and Southern Mahratta Railways, the Madras University, the Social Hygiene Council (Madras Branch), the Annamalai University, State Technical Scholarship Board, Advisory Committees of the Government, Rayapuram and Ophthalmic Hospitals, Income Tax Board of Madras, the Madras Marketing Board, the Madras City Local Licensing Board, the Indian Tea Marketing Expansion Board, etc.

The Chamber has 400 members on the rolls and has its own building. Several Associations in the City of Madras and Chambers of Commerce in the upcountry have been affiliated to this Chamber.

UPPER INDIA

The Upper India Chamber of Commerce
is concerned with trade, commerce and manu
factures in the United Provinces and has its
registered office at Cawnpore. Members are
elected by the Committee, subject to confirma
tion by the next general meeting of the Chamber.
Gentlemen distinguished for public service, or
eminent in commerce or manufactures, may be
elected honorary members of the Chamber by
the members in a General Meeting and such shall
be exempted from paying any subscription to
the Chamber. There is no entrance fee for
membership, but subscriptions are payable
as follows—A firm, company or associa
tion having its place of business in Cawn
pore, Rs 300 a year, an individual member
resident or carrying on business in Cawnpore,
Rs 300, firms or individuals having their places
of business or residence outside Cawnpore pay
half the above rates, but the maintenance of a
branch office in Cawnpore necessitates payment
of full rates.

The affairs and funds of the Chamber are
managed by a Committee of ten members,
which has power to constitute Local Commit
tees of from four to seven members each
at trade centres where membership is
sufficiently numerous to justify the step. Such
Local Committees have power to communicate
only with the Central Committee.

The Chamber appoints arbitration Tribu
nals for the settlement and adjustment of dis
putes, when invited to do so, members of the
Tribunals being selected from a regular printed
list of arbitrators.

The Chamber has in the present year 62
members, two honorary members and seven
affiliated members.

The following are the officers—

President—Mr Harry Hoisman MC, (The
Swadeshi Cotton Mills Co, Ltd)

COCANADA.

The Cocanada Chamber of Commerce was established on 29th October 1868

The following are the members of the Chamber which has its headquarters at Cocanada, the chief port on the Coromandel Coast north of Madras —

Members — The Coromandel Co., Ltd., Ripley & Co, Gordon Woodroffe & Co (Madras), Ltd, Innes & Co, Wilson & Co, Northern

Circars Development Co, Burmah Shell Oil Storage and Distributing Co of India, Ltd., The Agent, Imperial Bank of India, Deccan Sugar and Abkhari Co., Ltd and Parry & Co., Ltd

MEMBERS OF THE COMMITTEE

Mr W A Hult (Chairman)
„ H F Ferguson
„ H Stocker
„ G M Lake (Secretary)

The rules of the Chamber provide that by the term 'member' be understood a mercantile firm or establishment, or the permanent Agency of a mercantile firm or establishment, or a society of merchants carrying on business in Cocanada or other place in the Districts of Kistna, Godavari, Vizagapatam, and Ganjam, and duly elected according to the Rules of the Chamber, and that all such be eligible but only members resident in Cocanada can hold office. Members are elected by ballot. The Committee, when called upon by disputing members or non-members of the Chamber, give their decision upon all questions of mercantile usage and arbitrate upon any commercial matter referred to them for final judgment. In either case a minimum fee of Rs 16 must accompany the reference with Rs 5 from a non member and Re 1 from a member as payment for the Chamber's Sealed Certificate.

The Committee consisting of 8 members including the Chairman, is elected by ballot at the general meeting in January in each year for a term of 12 months. The entrance fee for each member, whose place of business is in Cocanada, is Rs 100 and for each member whose place of business is elsewhere is Rs 50. The subscription for each member whose place of business is in Cocanada is Rs 120 per annum, payable quarterly, and for each member whose place of business is elsewhere is Rs 60 per annum, payable in advance. The Committee usually meet once a month on the penultimate Thursday and the general body meets on the last Thursday.

A Fortnightly Circular of current rates of produce, freights, and exchange is drawn up by the Committee.

DEPARTMENT OF COMMERCIAL INTELLIGENCE AND STATISTICS.

The Department of Statistics was reabsorbed into the Department of Commercial Intelligence with effect from the 1st December 1922. The joint department has its office at No 1, Council House Street, Calcutta. It embraces two distinct classes of work: (a) the collection and dissemination of information connected with overseas trade which may be of use to Indian firms and (b) the compilation and publication of All India statistics.

The Government of India felt the necessity for the creation of a Central Statistical Research Bureau for the continuous analysis and interpretation of economic and statistical facts and phenomena and they established in 1933 the nucleus of a Statistical Research Bureau under the Director General of Commercial Intelligence and Statistics at their headquarters. The Director General is now stationed at the headquarters of the Government of India with a Deputy Director of Commercial Intelligence and a Deputy Director of Statistics at Calcutta and a new Deputy Director of Statistical Research at the headquarters.

Among the important publications for which the Director General is responsible are the following annual volumes—Review of the Trade of India, Statement of the Foreign Seaborne Trade and Navigation of British India, Statistical Abstract for British India, Agricultural Statistics, Estimates of Area and Yield of Principal Crops, the Monthly Survey of Business Conditions in India and Indian Customs Tariff. The department also publishes a weekly journal—'The Indian Trade Journal'—the principal features of which are (a) information as to tariff changes in foreign countries which affect Indian interests, (b) notices of tenders called for and contracts placed by Government departments and public bodies, (c) crop reports and forecasts, (d) Government orders, communiques and other

notifications affecting trade (e) analysis of Indian trade statistics, (f) market reports, price and trade movements of the staple exports and imports, (g) trade enquiries for securing trade introductions and (h) quarterly and annual reports of the Indian Trade Commissioners abroad and summaries of the leading features of consular and other trade reports.

The Department also administers the COMMERCIAL LIBRARY AND READING ROOM located at No 1, Council House Street, Calcutta. This was at first a small departmental library used for the purpose of answering enquiries, but in 1919 the Government of India agreed to the formation of a combined technological library of reference in Calcutta in place of the separate libraries attached to the Departments of Commercial Intelligence, Statistics, and Patents and Designs, and the resultant Commercial Library and Reading Room was placed under the administrative control of the Director-General. It has now been expanded into a first-class technical library containing over 17,656 volumes on different subjects of commercial, economic and industrial interest as well as Indian and foreign statistical publications, and over 355 technical and commercial journals and market reports. Ordinarily books are consulted in the Library, but they are also available on loan upon deposit of value throughout India.

The Department works in close co-operation with Directors of Industries and other Government Departments in India, with the Indian Trade Commissioners in London, Hamburg and Milan, with His Majesty's Trade Commissioners in India and the Dominions, and with Consular Officers in various parts of the world. And the yearly increase in its correspondence shows that it is steadily being used more and more both by firms in India and by overseas firms interested in Indian exports.

THE BRITISH TRADE COMMISSIONER SERVICE IN INDIA.

The British Trade Commissioners in India are part of the world wide Commercial Intelligence Organisation of the Imperial Government. The Department of Overseas Trade, London, which is the headquarters of this organisation, is a joint department of the Board of Trade and the Foreign Office and was created in 1917 with the specific object of stimulating the overseas trade of the United Kingdom by securing commercial information from all parts of the world, by disseminating it to British manufacturers and exporters, by undertaking such special constructive activities as may be found possible, and by assisting traders in the removal of their difficulties. The Department has nothing to do with the regulation of trade. It passes no measures and makes no restrictive or regulative orders. Briefly, the policy on which it is based is the policy of assistance without interference.

The Department of Overseas Trade maintains a network of trained and experienced Commercial Intelligence Officers throughout the world, who forward a constant supply of commercial information to London and provide local assistance in the promotion of British economic interests. Those overseas officers who are stationed in the British Empire are members of the Trade Commissioner Service while Foreign countries are served by the Commercial Diplomatic Service forming part of the British Diplomatic Missions and by the Consular Service.

Function of Commissioner—The primary duty of the British Trade Commissioner comprises the collection of information in regard to opportunities that may arise within his territory for securing and developing trade by British manufacturers and merchants, both in the United Kingdom and other parts of the British Empire. He is, therefore, enjoined carefully to watch and report from time to time to the Board of Trade and the Governments of the Dominions concerned on all matters affecting the trade, industry and commerce of his area. His general functions are to maintain cordial relations with the governing authorities of his area, to enter into personal relations with the Chambers of Commerce, Trade Associations, and similar bodies, and with the principal representative importers and local manufacturers, to visit the principal commercial centres, to report upon foreign competition, on financial and trade conditions, and new legislation affecting trade, to make an annual general report on the conditions and prospects of trade in his area, and to furnish special reports and monographs on particular questions which are likely to be of interest to British manufacturers and exporters.

He is also expected to supply a regular flow of commercial information of all kinds to his department, to maintain an active correspondence with firms in the United Kingdom or the Dominions who wish to extend their trade with his area and to give all possible assistance to the representatives of British firms who may visit his territory.

Every effort is made by His Majesty's Trade Commissioners to keep in touch with British representatives and agents in India. The offices are equipped with a complete range of directories and reference books of all kinds and information is available with regard to such matters as tariff conditions, port dues and charges throughout the world, etc. A library consisting of over 1,000 catalogues of the leading British manufacturers is maintained in Calcutta and Bombay, and firms desiring information with regard to specific manufacturers of particular machinery or processes are invited either to call personally or to communicate their requirements in writing. It is hoped that local importers and buyers will co-operate by making a more extended use of the information available in the offices and by bringing to the attention of the British Trade Commissioners any cases where the interests of exporters from the United Kingdom or the Dominions may be adversely affected by foreign competition or otherwise.

H M'S TRADE COMMISSIONERS IN INDIA

Calcutta—

Colombo

THE INDIAN CENTRAL COTTON COMMITTEE

The Indian Cotton Committee of 1917-18, a full summary of whose report appears on pages 291-294 of the Indian Year Book of 1922, reviewed the position of cotton growing in India very thoroughly and made a series of recommendations for the improvement of cotton growing and marketing which have proved to be of the greatest value. One of their recommenda-

tions was that a permanent Indian Central Cotton Committee should be established to promote the welfare of the cotton growing industry generally, to advise the Government of India and Local Governments in regard to matters of cotton policy, especially with reference to legislation for the prevention of malpractices and similar matters.

The Indian Central Cotton Committee was appointed by resolution of the Government of India in April 1921, and worked as an advisory body until 1923. Another recommendation of the original Committee was that a cotton cess should be levied to provide funds for the work of the Central Cotton Committee and for agricultural and technological research on cotton. The Cotton Cess Act was passed in 1923 and at the same time the Central Cotton Committee was incorporated and its membership enlarged in order to make it fully representative of all sections of the industry. Its constitution and present membership is as follows —

INDIAN CENTRAL COTTON COMMITTEE MEMBERS

President — Sir Bryce C Butt Kt, CIE MBE IAS, Vice Chairman, Imperial Council of Agricultural Research, *ex officio*

(a) The Ex-*Officio* Adviser to the Imperial Council of Agricultural Research in Agricultural matters, *ex officio*.

REPRESENTATIVES OF AGRICULTURAL DEPARTMENTS

Madras — Mr R Ry Rao Bahadur D Ananda Rao IAS

Bombay — The Director of Agriculture

United Provinces — Mr J H Ritchie, IAS, Director of Agriculture

Punjab — The Director of Agriculture

Central Provinces — Mr J C McDougall, IAS Director of Agriculture

Burma — Mr F D Odell, CIE IAS Deputy Director of Agriculture, West Central Circle, Mawla

Director General of Commercial Intelligence and Statistics, *ex officio*

REPRESENTATIVES OF CHAMBERS OF COMMERCE AND ASSOCIATIONS

The East Indian Cotton Association, Sir Panchanand Thakurdas, Kt, CIE, MBE (*Vice President*)

The Bombay Millowners Association, Mr S D Saklatvala

The Bombay Chamber of Commerce, Mr M Duratti

The Indian Merchants Chamber, Mr Chunilal Mhta

The Karachi Chamber of Commerce, Mr G C R Coleridge

The Ahmedabad Millowners Association, Mr S Karalal Balabhai

The Tuticorin Chamber of Commerce, Mr J J Hurscher

The Upper India Chamber of Commerce, Mr I Tinker

The Empire Cotton Growing Corporation, Mr W Roberts, CIE

COMMERCIAL REPRESENTATIVES NOMINATED BY LOCAL GOVERNMENTS

Central Provinces — Mr Y G Deshpande, Mr D K Kane

Madras — Mr J Nuttall

Punjab — Khan Bahadur Sardar Habibullah, MLC

Bengal — Mr Akhil Bandhu Guha

CO-OPERATIVE BANKING REPRESENTATIVE

Sir Chunilal V Mhta, KCSI

REPRESENTATIVES OF COTTON GROWING INDUSTRY

Malas — Mr K S Ramaswami Gounder, Mr R Ry Rao Bahadur B P Seshi Reddi Garu

Bombay — Sardar Rao Bihadi Bhiabhi Ranchodji Naik, MLC, Rao Bahadur C S Shialatti

United Provinces — Khan Bahadur Shih Nizar Husain, MLC, Rai Bahadur Lala Anand Singh MLC

Punjab — Sardar Sahib Gurbachan Singh, MLC, Miran Nurullah, MLC

Central Provinces and Berar — Rao Bahadur M G Deshpande, OBL, Mr M P Kolhe MLC

REPRESENTATIVES OF INDIAN STATES

Hyderabad State — Mr Nizam ud Din Hyder, Director of Agriculture

Baroda State — Mr G Allan, CIE, Commissioner of Agriculture

Gwalior State — Mr H H Pindya, Director of Agriculture

Rajputana and Central India States — Mr T B Low, IAS, Director, Institute of Plant Industry, Indore

ADDITIONAL MEMBERS NOMINATED BY THE GOVERNOR GENERAL IN COUNCIL

Mr D N Mhta, Economic Botanist for Cotton, Central Provinces

Rao Bahadur S S Sulmath, Deputy Director of Agriculture, Southern Division, Dharwar

Mr R Ry V Ramnatha Iyer, Asst Cotton Specialist, Combarator

Murshidkhis Bahadur S V Kanungo, Finance Minister, Holkar State, Indore

Rai Sahib K I Khudini, Chief Agricultural Officer in Sind, Karachi

Seth Isakdas Varindmal, Representative of the Karachi Indian Merchants Association

Mr P B Richards, IAS, Entomologist to Government, United Provinces, Cawnpore

Syed Mnan Muhammad Shih, MLC

Khan Sahib Ibraukhibg Sadikahibg Muza, Nwabshah, Sind

Jah Shri Ram, Representative of the Cotton Millowner of Delhi

Dr V K Bidani, PhD, Deputy Director of Agriculture Department of Agriculture in Mysore State, Bangalore

Mr Chellaiam Shewuram, Representative of the Karachi Cotton Association, Ltd

Dewan Bahadur Sir F Vijayaraghavacharya, KBE

Secretary — Mr P H Rama Reddi, MA, BSc IAS

Assistant Secretary — Mr C J Bocairo, MA

Publicity Officer — Mr R D Mihra, MA, B Litt

Director, Technological Laboratory — Dr Nazir Ahmad, MSc, PhD

Office — Vulcan House, Nicol Road, Ballard Estate, Bombay

From the commencement the Central Cotton Committee took steps to deal with the various malpractices reported by the original Committee which by spoiling the reputation of the Indian cottons and rendering them less valuable for spinning purposes, were reducing the returns of the grower and causing great economic loss to the country at large.

The Cotton Transport Act passed in 1923 enables any Local Government with the consent of its Legislative Council to notify definite areas of cotton for protection and to prevent the importation of cotton from outside the area except under license. Prior to the passing of the Act inferior cottons were imported in large quantities into the staple cotton tracts for purposes of adulteration, and the reputation of several valuable cottons had been ruined by this abuse. The Act has now been applied to the most important staple cotton areas of the Bombay and Madras Presidencies and the Central Provinces and of the Baroda, Rajpipla, Chhota Udepur, Hyderabad, Indore, and Sangli States and with excellent results.

The Cotton Ginning and Pressing Factories Act (XII of 1925) subsequently passed provides for a certain measure of control of ginning and pressing factories and especially for the marking of all bales of cotton pressed with a press mark and serial number which enables them to be traced to their origin. This Act, with the minimum of official interference, places the cotton trade in a position itself to deal with abuses, and should lead to a very marked improvement in the quality of Indian cottons.

The Bombay and Central Provinces Governments have both passed amending Acts to the Cotton Ginning and Pressing Factories Act making it obligatory on all cotton ginning and pressing factories situated in the areas to which the Act may be applied to take out licenses and prohibiting the watering, mixing or admixture of cotton.

The Central Cotton Committee has also devoted considerable attention to constructive action for the improvement of the marketing of cottons and to bringing to the notice of the trade, both in India and abroad, those improved varieties which have now reached a commercial scale and has carried out some important enquiries into the financing of the cotton crop up country and primary cotton marketing, and the effect of "pools" of cotton ginning and pressing factories on the price paid to the growers for their produce. As an instance of the progress in cotton growing which has been made since 1917 it may be stated that since that date approximately half a million bales of cotton of medium staple have been added to the Indian crop by the work of the Agricultural Departments. In general it may be said that the Committee affords a common meeting ground for representatives of all sections of the Cotton trade and of the cotton growing industry, thus enabling a number of problems to be tackled from every point of view and definite progress made towards their solution.

Research Studentships.—The Committee has also instituted a scheme of research studentships to enable distinguished graduates of Indian Universities to undertake research on cotton problems under the direction of experienced research workers in India. Scholarships for training abroad are also sometimes granted.

Statistics.—By the efforts of the Committee great improvement has been effected in cotton statistics. The compilation of statistics relating to (1) Indian raw cotton consumed in spinning mills in India, (2) exports by sea and receipts at mills of Indian cotton classified by varieties, (3) stocks of cotton held on the last day of the season by the trade at important cotton centres in India, and by the mills, (4) the Indian cotton crop classified according to staple length, and (5) local cotton consumed in the spinning mills in British India and Indian States, the establishment of weekly statistical returns relating to the number of bales of raw cotton pressed in India, and the revival of rail borne trade statistics for cotton are some of the results already achieved by the Committee in this direction.

Research.—By means of the Cotton Cess the Committee is provided with funds for the promotion of research. It maintains in Bombay a fully equipped Technological Laboratory which includes a complete experimental spinning plant and a scientific laboratory for research on the cotton fibre. This laboratory provides Agricultural Departments with complete and authoritative reports on the spinning value of new cottons, thus providing a much needed facility. In addition it is now possible to undertake research work on a number of questions connected with the spinning qualities of cotton which have not been touched in the past. The Laboratory is unique in that it is probably the only institution of its kind which approaches the subject primarily from the standpoint of the grower.

The Committee contributes the greater part of the funds for the Indore Institute of Plant Industry which is a Central Agricultural Research Institute for cotton where many problems of fundamental importance are being studied.

In addition by means of grants in aid to Agricultural Departments it has provided for special investigations on problems of general applicability which would otherwise have been left untouched through lack of staff and funds. Such schemes are in operation in all major cotton growing provinces and now number twenty nine.

The Committee also assists by means of grants to Agricultural Departments in Provinces and States and to Co-operative Cotton Sale Societies in the wider distribution of seed of improved varieties of cotton. There are 17 such schemes in operation at present.

His Excellency the Viceroy (Lord Reading) when he visited Bombay in December 1924 and formally opened the Committee's Spinning Laboratory laid great stress on the importance and value of the Committee's work.

THE EAST INDIA COTTON ASSOCIATION, LIMITED

Bombay—The Association is the outcome of the findings of the Indian Cotton Committee which was appointed by the Governor General in Council under a resolution dated September 27th, 1917. Until the end of 1917 the Cotton Trade of Bombay was in the hands of seven distinct bodies, viz., The Bombay Cotton Trade Association, Ltd., The Bombay Cotton Exchange Ltd., The Bombay Millowners Association, The Bombay Cotton Brokers Association, Ltd., The Marwari Chamber of Commerce, The Bombay Cotton Merchants and Mucaddams' Association Ltd., and The Japanese Cotton Shippers' Association. None of these bodies were representative of the trade as a whole and their interests often came into conflict with each other. The necessity of a system of periodical settlements such as existed in Liverpool, was badly felt, especially when speculation was rife in futures which was so excessive in 1918 that the Trade had to invoke the aid of Government to prevent a financial crisis.

The Cotton Contracts Committee was created under the Defence of India Act in June 1918 as a temporary measure under the Chairmanship of Mr. G. Wiles, I.C.S. This body was replaced by the Cotton Contracts Board in 1919, which continued to function until May 1922 when the Act, under which the Board worked, was repealed and its functions were carried on by the East India Cotton Association under Bombay Act No. XIV of 1922.

The Association continued to function under the above Act until 31st October 1932. With effect from 1st November 1932 the Association has been regulating transactions in cotton under Bombay Act No. IV of 1932 under which it has been declared to be a recognised Cotton Association.

The present constitution of the Board is as follows—

Sir Purshotamdas Thakurdas Kt., C.I.E., M.B.E. (President), Hindus Madhvidas, Esq. (Vice President), Buyers' Panel, Ramnivas Ramnarain, Esq., Buyers' Panel, Ramdas Kirchand, Esq., Buyers' Panel, Chundrakant Muraj Khatu, Esq., Buyers' Panel, J. R. Kay, Esq., Buyers' Panel, Bhiwanji A. Khinji, Esq., Sellers' Panel, Lunnidas Ramdas, Esq., Sellers' Panel, Katchand, Jhunjhunwala, Esq., Sellers' Panel, B. K. Gupta, Esq., Brokers' Panel, Chundil B. Mehta, Esq., Brokers' Panel, Ramdeo Anandilal, Podar, Esq., Brokers' Panel, Pratapji M. Mehta, Esq., Brokers' Panel, Brijlal Ramji, Rungta, Esq., Brokers' Panel, Rutilal J. Thakkar, Esq., Brokers' Panel, Saidur Rao Bahadur Bhimbhai, Esq., M.L.C., nominated by the Indian Central Cotton Committee, Growers' Representative, M. P. Kolkar, Esq., M.L.C., nominated by the Indian Central Cotton Committee, Growers' Representative, Mani Narulal, Esq., M.L.C., nominated by the Indian Central Cotton Committee, Growers' Representative, Dr. Vishram Hari, Patil, Esq., nominated by the Government of Bombay, Growers' Representative, V. C. Guriyappa, Esq., B.A., LL.B., nominated by the Government of Bombay, Growers' Representative.

Officers

C. M. Patil, Esq., B.Com., Secretary, A. R. Menzies, Esq., Deputy Secretary and Manager (Clearing House), and S. A. P. Aiyar, Esq., Assistant Secretary.

Some of the objects for which the Association is established are—To provide and maintain suitable buildings or rooms for a Cotton Exchange in the City of Bombay and elsewhere in India and to regulate admission to and prohibition of the use thereof and the nature and times of such user whether in the case of the general body or particular classes or any individual or firm or company using the Exchange, to provide forms of contracts compulsory or permissive and regulate the making, carrying out and enforcement or cancellation of contracts to a just by arbitration or otherwise controversies between persons engaged in the Cotton Trade, to establish just and equitable principles in the said Trade to maintain uniformity of control of the said trade, to fix or adopt standards of classification of cotton, to acquire, preserve and disseminate useful information connected with the Cotton interest throughout all markets to decrease or insure the local risk attendant upon business, and generally to control, promote and regulate the Cotton Trade in the Presidency of Bombay and elsewhere in India, improve its stability and augment the facilities with which it may be conducted. To establish and maintain a Clearing House for the purpose of dealing with cotton transactions, and to regulate admission to and prohibition of the user thereof and the nature and times of such use whether in the case of the general body or particular classes or any individual or firm or company using the Clearing House. To regulate the handling and exportation of Cotton from India and the importation of Cotton into India in so far as it may be imported. To bring, prosecute, or defend, or aid in bringing prosecuting, or defending, any suits, actions, proceedings, applications or arbitrations on behalf of Members or Associate Members or Special Associate Members or otherwise as the Directors of the Association may think proper or conducive to the objects of the Association and to prescribe the principle of framing of contracts with a view to eliminate the temptation and possibility of speculative manipulation.

The Association has a fine Exchange Building at Seavi Cotton Depot, containing 121 Buyers' Rooms and 84 Sellers' Rooms and a large Trading Hall on the lines of Liverpool and New York Exchanges.

The inaugural ceremony of the opening of the Exchange Building was performed by His Excellency Sir Leslie Wilson, Governor of Bombay on the 1st December 1925 in the presence of a large gathering which included most of the prominent business men of the City and many leading citizens.

There is a membership of 398 members.

The Bombay Cotton Annual containing matters relating to every branch of the Trade is published annually in December and statistics are issued twice weekly.

The Textile Industry.

India has been the home of the cotton trade from the earliest times. Its cotton, known as white wool, was well known to the ancients and its cloth was familiar to the West in the days of the overland route. The name Calico comes from the fine woven goods of Calicut, and the products of the Dacca handlooms are still remarkable as the finest muslins human skill can produce.

Indian Cotton

The exports of Indian cotton began to assume importance with the opening of the sea route. They received an immense stimulus during the American Civil War, when the close blockade of the Confederate ports produced a cotton famine in Lancashire and threw the English spinners back on India for their supply of raw material. When the war broke out the shipments of Indian cotton were 528,000 bales but during the last year of the war they averaged 973,000 bales. Most of this cotton was sold at an enormously inflated price, and

induced a flow of wealth into Bombay, the great centre of the trade, for which there was no outlet. The consequence was an unprecedented outburst of speculation known as the

Share Mania, and when the surrender of Lee reopened the Southern Ports widespread ruin followed. It is estimated that the surplus wealth brought into the country by the American Civil War aggregated 192 millions. Since then the cultivation of Indian cotton, although interrupted by famine, has steadily increased. For the last season for which returns are available, 1935-36 the total area in all territories reported on was computed at 25,138,000 acres and the total estimated outturn was 5,728,000 bales of 400 lbs. as compared with 24,025,000 acres and 4,858,000 bales in 1934-35.

Bombay, Punjab, the Central Provinces and Hyderabad are the chief producing centres. The following table gives the rough distribution of the outturn. The figures are the estimated figures for the past season and are not exact but they indicate the distribution of the crop —

Provinces and States	1934-35 (Provisional Estimates)		1935-36 (Provisional Estimates)	
	Acres in Thousands	Bales of 400 lbs. (In thousands)	Acres in Thousands	Bales of 400 lbs. (In thousands)

Bombay is the great centre of the cotton trade. The principal varieties are Dholleras Broach, Oomras (from the Berars), Dharwar and Coomtas Broach is the best cotton grown in Western India. Hinganghat cotton, from the Central Provinces, has a good reputation. Bengala is the name given to the cotton of the Gangetic valley, and generally to the cottons of Northern India. The Madras cottons are known as Westerns, Coconadas, Colmbatores and Tinnevellys. The best of these is Tinnevelly. Cambodia cotton has been grown with success in Southern India, but it shows a tendency to revert. The high prices of cotton realised of recent years have given a great impetus to cultivation. Government have also been active in improving the class of cotton produced, by seed selection, hybridization, and the importation of exotic cottons. Although these measures have met with a considerable measure of success, they have not proceeded far enough to lighten the

whole outturn, which still consists for the most part of a short staple early maturing variety suitable to soils where the rainy season is brief.

Reference has been made to the popularity of the Indian handloom cloths in the earliest days of which we have record. This trade grew so large that it excited alarm in England, and it was killed by a series of enactments, commencing in 1701, prohibiting the use of sale of Indian calicoes in England. The invention of the spinning jenny and the power loom and their development in England converted India from an exporting into an importing country, and made her dependent on the United Kingdom for the bulk of her piece goods. The first attempt to establish a cotton mill in India was in 1838, but the foundations of the industry were really laid by the opening of the first mill in Bombay in 1856. Thereafter, with occasional set backs from famine, plague and other causes, its progress was rapid.

The following statement shows the quantity (in pounds) of yarn of all counts spun in all India for the twelve months April to March, in each of the past 4 years:—

	1932 33	1933 34	1934 35	1935 36
BRITISH INDIA				
Bombay Presidency	558,594,709	484,714,674	523,044,052	548,806,151

TOTAL	885,772,179	796,711,430	853,240,814	903,249,122
FOREIGN TERRITORY				
Indian States of Indore, Mysore, Baroda, Nandgaon, Bhavnagar, Hyderabad, Wadhwan, Gwallor (Ujjain), Kishan garh, Cambay, Kolhapur, Cochin, Rajkot, Ratlam, Travancore (a) and the French Settlements at Pondicherry	130,649,685	124,349,193	148,179,008	155,047,779
GRAND TOTAL	1,016,421,864	921,060,623	1,001,419,817	1,058,296,901

(a) Figures for Travancore are being reported from October 1934

The spinning of yarn is in a large degree centred in Bombay, the mills of that province producing nearly 52 per cent of the quantity produced in British India. The United Provinces of Agra and Oudh and Madras produced about 10 per cent and 11 per cent while Bengal and the Central Provinces produced 4.0 and 4.3 per cent. Elsewhere the production is as yet very limited.

BOMBAY ISLAND

Here is a detailed statement of the quantity (in pounds) and the counts, or numbers, of yarn spun in Bombay Island —

—	1930-31	1931-32	1932-33	1933-34	1934-35	1935-36

In the early days of the textile industry the energies of the millowners were largely concentrated on the production of yarn, both for the China market, and for the handlooms of India. The increasing competition of Japan in the China market, the growth of an indigenous industry in China and the uncertainties introduced by the fluctuations in the China exchanges consequent on variations in the price of silver compelled the millowners to cultivate the Home market. The general tendency of recent years has been to spin

higher counts of yarn, importing American cotton for this purpose to supplement the Indian supply, to erect more looms, and to produce more dyed and bleached goods. This practice has reached a higher development in Bombay than in other parts of India, and the Bombay Presidency produced in 1935-36 nearly 64·6 per cent of the cloth woven in India. The United Provinces produced 5·7 per cent, the Central Provinces 2·3 per cent and Madras 2·1 per cent. Grey and Bleached goods represent nearly 77·70 per cent of the whole production.

ANALYSIS OF WOVEN GOODS

The following brief extract is taken from the statement of the quantity (in pounds and their equivalent in yards) and description of woven goods produced in all India, including Native States —

	1931-32	1932-33	1933-34	1934-35	1935-36
Grey and Bleached piece goods—					
Pounds	520,016,204	531,791,528	495,794,791	570,651,236	587,786,728
Yards	2,311,104,465	2,422,997,054	2,264,994,899	2,641,305,306	2,772,980,036
Coloured piece-goods—					
Pounds	138,621,286	150,723,943	137,610,496	147,466,140	152,872,906
Yards	678,789,696	746,901,445	680,006,828	755,801,981	797,878,985
Grey and coloured goods other than piece goods—					
Pounds	3,237,696	3,542,246	3,391,982	3,703,737	5,117,609
Dozens	831,344	946,971	841,761	930,523	1,291,025
Hosiery—					
Pounds	1,974,144	2,544,339	2,340,336	4,718,415	5,304,435
Dozens	622,360	746,341	745,301	1,481,708	1,648,066
Miscellaneous—					
Pounds	5,362,410	4,291,948	4,864,133	6,208,320	5,673,448
Cotton goods mixed with silk or wool—					
Pounds	3,045,221	2,007,004	1,859,114	3,830,265	4,676,151
Total—					
Pounds	672,256,961	694,901,056	645,800,855	736,578,133	761,431,277

BOMBAY PRESIDENCY WOVEN GOODS

The output of woven goods during the five years in the Bombay Presidency was as follows —

The weight (in pounds represents the weight of all woven goods, the measure in yards represents the equivalent of the weight of the grey and coloured piece goods)

	1931-32	1932-33	1933-34	1934-35	1935-36
Pounds	459,247,935	462,222,027	415,072,223	456,680,747	471,240,473
Yards	2,188,300,219	2,265,897,230	2,024,583,240	2,233,338,713	2,407,031,553
Dozens	656,462	608,700	506,611	688,352	961,388

The grand totals for all India are as follows —

	1931-32	1932-33	1933-34	1934-35	1935-36
Pounds	672,256,961	694,901,056	645,800,856	736,578,133	761,431,277
Yards	2,989,891,101	3,169,898,499	2,945,051,727	3,397,107,287	3,570,859,011
Dozens	1,453,704	1,693,312	1,587,231	2,412,321	2,939,091

Progress of the Mill Industry

The following statement shows the progress of the Mill Industry in the whole of India

Years ending 30th June	Number of Mills	Number of Spindles	Number of Looms	Average No. of Hands Employed Daily	Approximate Quantity of Cotton Consumed	
					Cwts	Bales of 392 lbs
1880	56	14,61,590	13,562	41,410	10,76,708	3,07,631

* Year ending 31st August

Considering its present dimensions, the jute industry of Bengal is of very recent origin. The first jute mill in Bengal was started at Rishra in 1855, and the first power loom was introduced in 1859. The original output was 8 tons per day. In 1909 it had grown to 2,500 tons per day, it is now 4,000 tons per day, and it shows every indication of growing and expanding year by year. Another interesting thing about the jute industry of Bengal is that, although it is practically a monopoly of Scotsmen from Dundee, the industry itself owes its inception to an Englishman. The founder of the industry was George Acland, an Englishman, who began life as a midshipman in the navy, and was for some years in the East India Marine Service. He quitted this service while still a young man, and engaged in commercial pursuits in Ceylon, where he was successful. Later on he turned his attention to Bengal, and arriving in Calcutta about 1853 he got into touch with the management of the paper works, then at Serampore, where experiments were being tried with country grasses and fibre plants to improve the quality or cheapen the manufacture of paper. This seems to have suggested to Acland the manufacture of rees, and in 1854 he proceeded to England, with a view to obtaining machinery and capital in order to manufacture goods from that material. During this trip he visited Dundee, and while there Mr John Kerr, of Douglas Foundry, suggested to him the importing of machinery into Bengal 'where the jute comes from and spin it there.' This suggestion bore fruit, for shortly afterwards Acland placed orders with Kerr for a few systems of preparing and spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in erecting and operating the first jute mill in Bengal. This, as has been stated, was at Rishra, the site of the present Welling-ton mills near Serampore, and here, in 1855, the first machine spun jute yarns were made. As not infrequently happens the pioneer got very little out of his venture. After several ups and downs the Acland interest in the Rishra mill ceased in 1867, and the company which Acland had formed in 1864 was wound up in 1868.

Power looms.—The pioneer's example was followed by Mr George Henderson of that silk firm, and in 1859 the Borneo Jute Co was launched under his auspices. To this company is due the credit of introducing the power-loom for jute cloth. Unhindered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co made rapid progress, doubling their works in 1864, and clearing their capital twice over. In 1872 the mills were turned into a limited liability company, the present "Barnagore Jute Factory Co., Ltd." Four other mills followed in succession—Gouripore, Serajgunge, and India Jute Mills.

"From 1868 to 1873" writes Mr David Wallace in "The Romance of Jute" "the five mills excepting the Rishra mill simply combed money and brought the total of their looms up to 1,250." To illustrate the prosperity of the industry at this period we may take the dividends paid by the Barnagore

Company. On the working of their first half year, a 15 per cent interim dividend was declared, which seemed to justify the enormous capital at which the company was taken over from the Borneo Company, and shares touched 68 per cent premium. The dividend for the first year, ending August 1873, was 25 per cent, for 1874, 20 per cent, and for 1875, 10 per cent. Then came a change. The investing public had forgotten the effect of the Port Canning bubble, and the condition of the jute industry in 1872-73 seeming to offer a better return than coal or tea, both of which had just enjoyed a boom, it was only necessary to issue a prospectus of a jute mill to have all the shares snapped up in the course of an afternoon.

In 1872-73 three new companies were floated locally—the Port Gloster, Budge and Sibpore, and two Home companies, the Champdany and Samnuggul, all of which commenced operations in 1874. In 1874-5 eight other mills were launched—the Howrah, Oriental (now Union), Asiatic (now Soorah), Clive, Bengal Pressing and Manufacturing Co (now the Bellaghatha Barnagore branch mill), Rustumjee (now the Central), Ganges (registered in England), and Hastings, owned by Messrs Birkmyre Bros., of Greenock fame—in all thirteen new companies, coming on all of a heap and swelling the total looms from 1,250 up to 3,500. This was too much of a strain for the new industry, and for the next ten years all the mills had a severe struggle. The older ones all survived the ordeal, but four of the new concerns—the Oriental, the Asiatic, the Bengal Pressing and Manufacturing Co and the Rustumjee—became moribund, to appear again later on under new names and management. Fort Gloster also suffered badly.

Between 1875 and 1882 only one new mill was put up. This was Kamarhaty, promoted by Messrs Jardine, Skinner & Co. which came into being in 1877, as the result of Dr Barry's visit to Calcutta in 1876, when he transferred the agency of the Gouripore Co from Messrs Jardine, Skinner & Co to his own firm. This mill, together with additions made by some of the other mills, brought the total looms up to 5,150 in 1882. By the end of 1885 the total was further augmented by the Hooghly, Ittaghur, Victoria and Kanknarrah mills, bringing the number of looms at work up to 6,700. From this period on to 1894 no new mills came into existence except the Calcutta Twist Mill, with 2,480 spindles, since merged into the Wellington branch of the Champdany Co. Between 1896 and 1900 the following new mills were started—The Gordon Twist Mill with 1,800 spindles (now acquired by Anglo India), Khardah, Gondipara (French owned), Alliance, Arathoon, Anglo India, Standard, National, Delta (which absorbed the Serajgunge), and the Kinnison. A lull of four years witnessed large extensions to the existing mills, after which came the following series of new mills, besides further heavy extensions—Dalhousie, Alexandra Nalhati, Lawrence, Reliance, Belvedere, Auckland Kelvin and Northbrook. The last decade has seen the construction of Hukumchand, Birla, Shree Hanuman, Gagabhai, Premchand and Agarpara Mills, which—with the exception of the last named—are under Indian ownership.

Progress of the Industry

THE record of the jute industry may well be said to be one of uninterrupted progress. The following statement shows **quinquennial averages** from the earliest year for which complete information is available with actuals for each year from 1917-18 up to 1931-32 and the figures in brackets represent the variations for each period, taking the average of the quinquennium from 1879-80 to 1883-84 as 100 —

	Number of mills at work	Authorized Capital (in lakhs of Rs.)	Number (in thousands) of			
			Persons employed daily (average)	Rooms	Splindles	
Average—						
1880-90 to 1893-94	26 (124)	402.6 (149)	64.3 (186)	8.3 (151)	172.6 (196)	
1894-95 to 1898-99	31 (148)	522.1 (193)	86.7 (223)	11.7 (213)	244.8 (273)	
1899-1900 to 1903-04	36 (171)	680 (251)	114.2 (294)	16.2 (295)	334.6 (380)	
1904-05 to 1908-09	46 (219)	960 (355)	165 (425)	24.8 (451)	510.5 (580)	
1909-10 to 1913-14	60 (286)	1,209 (443)	208.4 (537)	33.5 (609)	691.8 (786)	
1914-15 to 1918-19	73 (348)	1,403.6 (519)	259.8 (668)	39.7 (722)	821.2 (933)	
1917-18	76 (362)	1,428.5 (528)	266 (686)	40.6 (738)	834 (946)

* Revised

The production of the mills has increased to a still greater extent. The following figures show the exports of jute manufactures and the declared values for the same periods. The value of jute manufactures exported by sea in 1924-25 was over thirty-three times as great as the average value of the export in the period 1879-80 to 1883-84 —

	Jute manufactures		Value in lakhs of Rs.
	Gunny bags in millions of number	Gunny cloths in millions of yards	
1880-90 to 1893-94	111.5 (203)	41 (932)	289.3 (232)
1894-95 to 1898-99	171.2 (312)	182 (4,136)	518 (415)
1899-1900 to 1903-04	206.5 (376)	427.2 (9,709)	826.5 (662)
1904-05 to 1908-09	257.8 (469)	698 (15,864)	1,442.7 (1,154)
1909-10 to 1913-14	339.1 (618)	970 (22,045)	2,024.8 (1,621)
1914-15 to 1918-19	667.6 (1,216)	1,156 (26,273)	4,019.3 (3,218)
1919-20	342.7 (624)	1,275.1 (28,990)	5,001.5 (4,004)
1920-21	533.9 (987)	1,352.7 (30,800)	5,299.4 (4,273)
1921-22	886.7 (715)	1,120.5 (28,000)	2,999.5 (2,419)
1922-23	344.2 (637)	1,254.3 (31,350)	4,049.4 (3,265)
1923-24	418.7 (752)	1,348.7 (30,652)	4,228.3 (3,382)
1924-25	425.1 (774)	1,456.2 (33,095)	5,148.8 (4,122)
1925-26	425.0 (774)	1,461.3 (33,211)	5,752.1 (4,605)
1926-27	449.0 (818)	1,503.1 (34,161)	5,284.3 (4,222)
1927-28	463.1 (843)	1,552.7 (35,289)	5,321.8 (4,260)
1928-29	497.6 (906)	1,568.2 (35,640)	5,656.4 (4,528)
1929-30	522.3 (951)	1,650.5 (37,511)	5,158.7 (4,130)
1930-31	434.0 (790)	1,270.9 (28,884)	3,148.8 (2,521)
1931-32	398.5 (707)	1,021.0 (23,204)	2,138.6 (1,712)
1932-33	415.0 (756)	1,011.7 (22,993)	2,139.7 (1,713)
1933-34	401.6 (732)	1,052.5 (23,920)	2,110.5 (1,690)
1934-35	422.9 (770)	1,068.4 (24,168)	2,124.5 (1,700)

Until the outbreak of war the exports by sea of raw jute were marked by increases from year to year although the increase was very much less than that in the case of manufactures. During the war years exports declined very considerably. The cessation of the war stimulated the export trade and in 1919-20 the export showed an increase, as compared with the average of the war quinquennium (1914-15 to 18-19). In the following two years, the export recorded a decrease and in 1922-23 they again made a recovery and amounted to 578 000 tons

Jute, raw, ton

The total quantity of jute manufacture exported by sea from Calcutta during the year 1922-23 was 668,000 tons as against 689,000 tons in the preceding year and 603,500 tons in the pre war year 1913-14. The values of these exports amounted to Rs 40.28 lakhs, or an increase of Rs 10.36 lakhs over the preceding year and Rs 12.08 lakhs over the pre war year. The shipments of gunny bags were valued at Rs 15.82 lakhs and of gunny cloth Rs 24.24 lakhs as against Rs 13.86 and Rs 15.92 lakhs respectively in the preceding year and Rs 12.48 and Rs 15.58 lakhs in the pre war year.

The price of raw jute reached a very high point in 1906-07, the rate being Rs 65 per bale. In 1907-08 it dropped to Rs 42 per bale, and the fall was accentuated in 1908-09 and 1909-10, the price having declined to 36 4 and Rs 31. In 1917-18 it dropped to Rs 38 8-0 but rose again in 1919-20 up to Rs 77 8-0. In 1920-21 it dropped to Rs 65 but rose again to Rs 86. It again declined to Rs 66. In 1921-22 the price rose to Rs 73 at the end of September, but

fell back again to Rs 50 at the end of November and recovered at Rs 64 at the close of the year.

Total	2,180,900	2,545,600

† Including Nepal

The Indian Jute Mills Association now one of the most important, if not the most important, of the bodies affiliated to the Bengal Chamber of Commerce, was started under the following circumstance. — In 1886 the existing mills, finding that, in spite of the constant opening up of new marks working results were not favourable, came to an agreement, with the late S E J Clarke, Secretary to the Chamber of Commerce, as trustee, to work short time. The only mills which stood out of this arrangement were the Hooghly and Serajgunge. The first agreement, for six months dating from 15th February 1886, was subsequently renewed at intervals without a break for five years up to February 15, 1891. The state of the market at the time of the renewals dictated the extent of the short time, which varied throughout the five years between 4 days a week 9 days a fortnight and 5 days a week. Besides short time, 10 per cent of the sacking looms were shut down for a short period in 1290. An important feature of this agreement was a mutual undertaking by the parties not to increase their spinning power during the currency of the agreement, only a few exceptions being made in the case of a few incomplete new mills.

The present officials of the Association are —
Chairman — Mr H H Burn
Members of Committee —

Mr Sheokissen Bhattar, Mr J H Burder,
 Mr G M Garrie Mr M P Thomas,
 Mr C G Cooper, Mr D Willson

Working days — With the introduction of the electric light into the mills in 1896, the working day was increased to 15 hours, Saturdays included, which involved an additional

amount of cleaning and repairing work on Sundays. In order to minimise this Sunday work and give them a free Sunday, an agitation was got up in 1897 by the Mill European assistants to have the engines stopped at 2 or 3 p.m. on Saturdays. The local Government took the matter up, but their action went no further than applying moral suasion backed by a somewhat halfhearted threat. The Mill Association held meetings to consider the question and the members were practically agreed as to the utility of early closing on Saturdays, but, *more suo*, could not trust themselves to carry it out without legislation. Unfortunately the Government of India refused to sanction the passing of a Resolution by the provincial Government under the Factory Act and the matter was dropped. Only a year or two ago the Jute Mills Association in despair brought out an American business expert Mr J H Parks, to advise them on the possibility of forming a jute trust with a view to exercising some control over the production and price of jute. Mr Parks came, and wrote a report which the Association promptly pigeon holed because the slump was over and the demand was so prodigious that there was no need to worry about the price of jute.

The working agreements referred to above have been followed by others, differing in points of detail, but with the same object in view namely the restriction of production. During the past 10 years a policy of curtailment of output has been continuously in force. By an agreement operating from October 1931 the mills in the membership of the Association comprising some 95 per cent of the trade, worked during 1932, 1933 and the greater part of 1934 for 40 hours per week, with 15 per cent of the

total complement of looms sealed, and the agreement incorporated a clause which provided that the mills should not instal any extra productive machinery or relative buildings during the currency of the agreement. The agreement also provided machinery whereby production could be gradually increased by reducing the percentage of looms required to be kept sealed. The process of increasing production in this way was begun on 1st November 1934, when 2½ per cent of the total complement of looms were unsealed, and was continued throughout 1935, a further 2½ per cent of looms being unsealed on 1st May 1935, 2½ per cent on 5th August and 2½ per cent on 11th November. The remaining 7½ per cent of looms were unsealed on the 17th February 1936. Throughout this time the mills, with five exceptions, continued to restrict their working hours to 40 per week. The five exceptions, namely, Prenchand, Craig, Wavetley, Mena and Nudda had, by the terms of the agreement, been granted the privilege of working 54 hours per week with a full complement of machinery and all five worked in accordance with the special terms allowed to them. This working agreement between the Association mills, however, in accordance with the requisite notice given in December 1935, terminated on the 31st March 1936 and was superseded by an agreement, operating from the 1st April 1936, under which the mills were permitted to work up to but not exceeding 54 hours per week on single shift, with no night work. As in the old agreement, this new agreement incorporated a clause which restricted the mills from installing any extra productive machinery or relative buildings during the currency of the agreement.

Under this agreement the mills' working hours were increased by successive stages until with effect from the beginning of August 1936 all mills in the membership of the Association were working 54 hours per week on single shift. With effect from the 1st March 1937, however, the agreement was suspended indefinitely and the position now is that the mills are at liberty to work whatever hours and to instal whatever extra productive machinery they desire.

In addition to the above working agreements which applied only to the mills in the membership of the Association, an agreement was entered into, with effect from 1st August 1932, with the five principal mills outside the Association, namely, Adumjee, Agarpara, Gagalbhai, Judlow and Shree Hanuman, whereby these mills undertook to restrict their working hours to 54 per week up to 30 June 1933. With certain modifications this agreement was extended and became a continuing agreement subject to six months' notice of termination being given by either party, which notice of termination could not be given before 1st July 1934. On the 30th September 1935 the Association gave the required notice and the agreement terminated on the 31st March 1936. No new agreement with these mills has yet been entered into.

An Association, styled the **Calcutta Jute Dealers Association**, has been formed in Calcutta to promote and to guard the common interests of its members as dealers in jute for local consumption. The members are balers and brokers of jute for sale to the jute mills in and around Calcutta. The present Committee

is—Mr H A Luko, *Chairman*, Members—Mr J L Ruthven, Mr B B Simpson, Mr B Meyer, Mr C H Thomas and Mr C S Taylor.

Effects of the War—The official review of the Trade of India in 1916-17 says—The value of the exports of raw jute increased in 1916-17 by nearly Rs 65 lakhs to Rs 1,629 lakhs. The quantity exported, however, was less than in the preceding year. The estimated yield of the crop was 12 per cent above that of the previous year, viz., 1,490,000 tons or 8,340,000 bales. Owing to the lack of tonnage and other abnormal circumstances brought about by the war, the quantity exported was 10 per cent below that of the previous year. Of the consumers the United Kingdom and Italy took less, while the United States, France (mainly via Dunkirk), Russia (via Vladivostok) and Brazil took greater quantities. There were, of course, no exports to enemy countries which took more than 27 per cent in the five years ending 1913-14, the pre-war year. The increase in the value accompanied by a decrease in the volume of exports was due to the very high range of prices during the months of September, October, November and December. Towards the close of the year under review prices steadily declined, and have since gone still lower.

Jute Manufactures—The value of the exports now approximates to Rs 42 crores. In spite of the war with its attendant difficulties of freight and finance, the exports of gunny cloth showed an increase of Rs 241 lakhs of which Rs 163 lakhs were due to higher prices and Rs 78 lakhs to an increase in the volume of exports. There were also an increase of Rs 118 lakhs in the value of gunny bags exported. The number of bags shipped increased while the weight decreased and bags for war purposes being lighter than the ordinary bags for transporting grain. Exports to Australia in 1916-17 were a record. The United Kingdom with Australia took more than half of the number of bags exported while the United States took more than half of the quantity of cloth exported.

There were 103 mills at work throughout the year 1931-32 with 81,426 looms and 1,220,586 spindles. The number of persons employed was 263,442. There were no difficulties as regards the supply of labour.

The number of gunny bags shipped from Calcutta during 1934-35 was 423 million bags but the value decreased from Rs 15,82 lakhs to Rs 10,25 lakhs. Shipments of gunny cloth decreased from 12,51 million yards to 10,63 million yards but valued Rs 24,24 lakhs and Rs 10,99 lakhs respectively.

Indian Central Jute Committee—A Central Jute Committee has been constituted by the Government of India with 24 members. Representation has been found in the Committee for trade and agricultural interests and for the Provincial Governments most concerned, namely, Bengal, Bihar and Assam.

The functions of the Committee include agricultural, technological and medical research, the improvement of crop forecasting, of production, of testing, and of distribution of improved seed, enquiries and recommendations

relating to banking and transport facilities and transport routes, and improvement of marketing in the interests of the jute industry

The Committee will also advise the Local Governments concerned on any points within its prescribed functions which may be referred to it

The Government of India have decided to finance the Committee for the time being by grants from Central revenues. The grants will not exceed Rs. 5 lakhs in any year, and the position will be reviewed after five years or earlier if necessary.

The formation of the Committee is the result of a recommendation made by the Royal Commission on Agriculture which suggested that there should be a committee on the lines of the Indian Central Cotton Committee to watch over the interests of all branches of the jute trade from the field to the factory.

Hemp and Jute Substitutes

Experiments have been made during the last few years by the Agricultural Department of the Government of India with the Deccan hemp plant (*Hibiscus cannabinus*), which yields a fibre very similar to jute. As a result, a new variety of the plant, known as Type 3, has been obtained, which it is now proposed to introduce into several parts of India, and, as a beginning, the variety is to be grown on a number of estates in Bihar. A sample of the fibre prepared from this variety by the usual methods of retting was 10 ft to 12 ft long, of an exceptionally light colour, well cleaned, and of good strength.

It was valued at £18 per ton with Bimlipatam jute at £12 10s, and Bengal flat mark jute at £17 per ton. Deccan hemp has been grown fairly extensively in Bombay, the Central Provinces, and Madras, where it is used for ropes and cordage and also for the manufacture of a coarse sackcloth. A valuable feature of the plant is its suitability for cultivation in such parts of India as are not suitable for jute.

Prior to the war, the United Kingdom's requirements of hemp were mainly supplied by the following countries in order of importance—the Philippine Islands, New Zealand, India, Russia, Italy and Germany. The opinion appears to be held that the effect of the war will be to cause very considerable changes in the character of the fibre market. There will probably be labour difficulties, it is thought, in the preparation of the hemp crops of Russia and Hungary and it is not unlikely that the world will look to countries such as India for the supply of fibres which may be used as substitutes for the European varieties of hemp. There can be no doubt that one of the early effects of the war was to firm up hemp prices. As far as Indian hemp is concerned, values were persistently depreciated during the first six months of 1914 owing to large stocks held, but the closure of the Russian hemp market on the outbreak of war resulted in a marked improvement in values, and there was a keen demand and a considerable rise in price. Exports from Calcutta during 1922/23 made a great recovery from the previous year. The quantity advanced by 37 per cent from 197,412 cwts to 269,487 cwts and the value from Rs. 26.93 lakhs to Rs. 36.68 lakhs.

THE WOOL INDUSTRY

Wool exported from India consists not only of wool grown in India itself, but of imports from foreign sources, these latter coming into India both by land and by sea. Imports by sea come chiefly from the Commonwealth of Australia but a certain quantity from Persia also comes by land, while the main imports are from Afghanistan, Central Asia, Tibet and Nepal. Quetta, Shikarpur, Amritsar and Multan are the main collecting centres for wool received by land from Afghanistan and Persia, whence it is almost invariably sailed to Karachi for subsequent export overseas.

Imports and Exports.—A considerable amount of wool is imported annually from Tibet, and in normal years, from Afghanistan. Imports of raw wool in 1935/37 decreased from 7.5 million lbs. valued at Rs. 44 lakhs to 6.8 million lbs. valued at Rs. 39 lakhs. Australia with her contribution of 3.8 million lbs. valued at Rs. 30 lakhs still remained the largest supplier although the quantity was less by 0.7 million lbs. as compared with imports from that country in 1935/36.

Production in India.—No definite information is available regarding production of wool. The population of sheep in India is estimated at about 43 million. A reference in this connection is also invited to the estimate made in Appendix IV (pages 112-113) of the Report of the Indian Tariff Board on the Woollen Textile Industry.

All Indian wools are classed in the grade of carpet wools, and it is correct to say of perhaps half the breeds of sheep found on the plains of India that they yield a kind of hair rather than of wool. They are reared chiefly on account of the mutton, and the fleece has been generally regarded as of subsidiary interest. In many respects, in actual fact, the Indian plains sheep approximate more nearly to the accepted type of the goat rather than of the sheep. Short remarks in his manual on Indian cattle and sheep, particularly with respect to the Madras type, that they "resemble a greyhound with tucked up belly, having some coarseness of form, the feet light, the limbs bony, sides flat and the tail short".

Mill manufacture.—The number of mills in British India in 1933, the latest year for which details are available, was 17 of which four were in the United Provinces. The paid up capital of these mills was Rs. 66,96,986 and the number of looms and spindles was 1,134 and 54,643, respectively. The average number of persons employed daily in these mills was 5,631. There are no complete figures of production, the last year for which they are available being 1921 when the quantity of woollen goods produced was 3,820,879 lbs. valued at Rs. 1,179,896. As regards Indian States there were five woollen mills of which four were in Mysore and one in Baroda. The paid up capital of these

mills was Rs 40,32,707 and the number of looms and spindles was 239 and 9,744 respectively. These mills produced woollen goods of 2,338 806 lbs in weight in 1936, the value being Rs 23,51,175. The bulk of the wool used by the Indian mills is Indian wool, although it is supplemented to some extent by the importation of merinos and cross breeds from Australia for the manufacture of the finer classes of goods. Their market for manufactured goods is almost entirely in India itself. Imports of woollen and worsted piecegoods in 1936-37 increased by 0.2 million yards to 5.4 million yards as compared with the preceding year. Imports came chiefly from Japan, the United Kingdom and Germany. There was a slight decrease in the number of woollen shawls and bolis in 1936-37, Japan and Germany being the largest sources of supply. Imports of

carpets and floor rugs rose to 213 000 lbs in 1936-37 from 202 000 lbs in 1935-36. Iran and China increased their shares in this trade while imports from the United Kingdom declined.

Blanket weaving and carpet manufacture are carried on in various parts of the country notably in the Punjab and the United Provinces. Woollen pile carpets are made in many of the jails. Amritsar had a considerable trade at one time in weaving shawls from *pashm*, the fine under fleeces of the Tibetan goat, but its place has been taken to some degree by the manufacture of shawls from imported worsted yarns, but more generally by the manufacture of carpets of a fine quality which find a ready sale in the world market. This work is done entirely on hand looms and the carpets fetch a high price.

Silk.

In the early days of the East India Company the Indian Silk trade prospered greatly, and various sub-tropical races of the silkworm were introduced. But the trade gradually declined for the following reasons—

In the seventeenth and eighteenth centuries India's chief competitor in the silk trade was the Levant Company. Successful efforts, however, were made to acclimatise in Europe one or two races of a temperate worm, procured from China and Japan. When sericulture became part of the agriculture of France and Italy, a quality of silk was produced entirely different from that of India and Turkey, and its appearance created a new demand and organized new markets.

All subsequent experience seems to have established the belief that the plains of India, or at all events of Bengal, are never likely to produce silk that could compete with this new industry. On the lower hills of Northern India, on the other hand, a fair amount of success has been attained with this (to India) new worm, as, for example, in Dehra Dun and Kashmir. In Manipur, it would appear probable that *Bombyx mori*, possibly obtained from China,

has been reared for centuries. The caprice of fashion has, from time to time, powerfully modified the Indian silk trade. The special properties of the *kora* silk were formerly much appreciated but the demand for them has now declined. This circumstance, together with defective systems of rearing and of hand-reeling and weaving, accounts largely for the present depression in the mulberry silk trade of India.

India has three well known purely indigenous silkworms, the *tasar*, the *muga* and the *eri*. The first is widely distributed on the lower hills, more especially those of the great central table land, and feeds on several jungle trees. The second is confined to Assam and Eastern Bengal, and feeds on the laurel. The third exists in a state of semi-domestication, being reared on the castor-oil plant. From an art point of view the *muga* silk is the most interesting and attractive, and the cocoon can be reeled readily. The *eri* Silk, on the other hand, is so extremely difficult to reel that it is nearly always carded and spun—an art which was practised in the Khasi Hills of Assam long before it was thought of in Europe.

Indigo.

Indigo dyes are obtained from the *Indigofera*, a genus of Leguminosae which comprises some 300 species, distributed throughout the tropical and warm temperate regions of the globe, India having about 40. Western India may be described as the headquarters of the species, so far as India is concerned, 25 being peculiar to that Presidency. On the eastern side of India, in Bihar, Bengal, Assam and Burma, there is a marked decrease in the number of species but a visible increase in the prevalence of those that are met with.

There is evidence that when Europeans first began to export the dye from India, it was procured from the Western Presidency and

shipped from Surat. It was carried by the Portuguese to Lisbon and sold by them to the dyers of Holland, and it was the desire to obtain a more ample supply of dye stuff that led to the formation of the Dutch East India Company and so to the overthrow of the Portuguese supremacy in the East. Opposition to indigo in 17th century Europe was keen owing to its interference with the wood industry, but it was competition to obtain indigo from other sources than India that led on the first decline of the Indian indigo industry. In the middle of the eighteenth century, when the cultivation of indigo in the West Indies had been given up—partly on account of the high

duties imposed upon it and partly because sugar and coffee were found to be more profitable—the industry was revived in India, and, as one of the many surprises of the industry, the province of Bengal was selected for this revival. It had no sooner been organised, however, than troubles next arose in Bengal itself through misunderstandings between the planters, their cultivators and the Government, which may be said to have culminated in Lord Macaulay's famous *Memorandum* of 1837. This led to another migration of the industry from Lower and Eastern Bengal to Tirhut and the United Provinces. Here the troubles of the industry did not end, for the researches of the chemical laboratories of Germany threatened the very existence of any natural vegetable dye. They first killed the madder dye of Europe, then the safflower, the lac and the *al* dyes of India, and are now advancing rapidly with synthetic indigo, intent on the complete annihilation of the natural dye. Opinions differ on many aspects of the present vicissitude, meantime the exports from India have seriously declined, and salvation admittedly lies in the path of cheaper production both in cultivation and manufacture. These issues are being vigor-

ously faced and some progress has been accomplished, but the future of the industry can scarcely help being described as of great uncertainty. The issue is not the advantage of new regulations of land tenure, but one exclusively of natural *versus* synthetic indigo.

According to him, the future of natural indigo is by no means a hopeless one provided steps are taken to realise such improvements as are clearly possible. Indigo soils have deteriorated due to lack of proper manuring. Continual cropping has resulted in phosphate starvation. This can be checked by proper manuring with superphosphates. Improvements by botanical selection and better business organisation and methods of marketing the product will also aid in hastening recovery.

Decline of the Industry—Since synthetic indigo was put upon the market, in 1897, the natural indigo industry of India has declined very rapidly, apart from slight recoveries in 1906-07 and 1911-12, the decline continued without a break until the revival due to the impossibility of obtaining artificial dyes in sufficient quantities during the war.

OILS AND OIL CAKES

A pamphlet on the subject published by the Commercial Intelligence Department points out that it is both economically and industrially unsound for India to export her oil seeds instead of manufacturing the oils and oil cakes in India. It allows other countries to reap the manufacturers' profits and at the same time deprives Indian agriculture of the great potential wealth, as cattle food and manure, contained in the oil cakes. An immense quantity of oil is, as a matter of fact, already manufactured in this country by more or less crude processes. Village oil mills worked by bullocks and presses worked by hand exist in all parts of the country and supply most of the local demand for oil. There has also been a great increase in recent years in the number of oil mills worked by steam or other mechanical power. These crush all the commoner oil seeds and development has been especially marked in the case of mustard oil, castor oil and groundnut oil. In spite of all this there has been a perceptible diminution in the export of oil from India, particularly of coconut oil and linseed oil, and an increase in the export of oil seeds, which is particularly marked in the case of copra and groundnuts. The situation created by the War has naturally led to too much discussion of the possibility of developing on a large scale the existing oil milling industry in India.

There are three difficulties with which any proposal to develop in India an oil milling industry on a great scale is faced. In the first place, there exist high protective tariffs in European countries which encourage the export

from India of the raw material rather than the manufactured product. Secondly, there is a better market for the oil cake in Europe than in India and the freight on oil seeds is less than the freight on cake. Thirdly, it is much easier and less expensive to transport oil seeds by sea than it is to transport oil. While this has been the position in the European markets, Indian made oils, other than coconut oil, have made enough headway in Eastern markets to suggest the possibility of a development of those markets.

The problem of finding a market for oil cakes is equally important. The value of oil cakes is much better appreciated in Europe than in India. The Indian cultivator is prejudiced against the use of machine made cake as a cattle food or as manure because he considers that it contains less oil and therefore less nourishment than the village-made cake. He is therefore unwilling to buy it except at a reduced price. His prejudices on this point have no justification in fact since experts are agreed that mill cake is a better food for cattle than village-made cake. Even when the mill cake contains less oil than the village cake, there is still more oil in the cake than cattle can digest. The excess of oil in the village cake where it exists, is a drawback and not an advantage to the use of the cake as food. A considerable amount of demonstration work has been done by the Agricultural Departments of Government in order to remove the cultivator's prejudices and there is said now to be an increasing demand for most classes of mill cake.

Tea.

Among plantation crops in India tea is the most important. The indigenous tea plant, growing in a wild condition, was first discovered in Assam about 1820. It soon drew the attention of the East India Company, which after some enquiries started an experimental garden in 1835. After working for five years, the plantations of the Government were sold in 1840 to the Assam Company, the first tea concern, and to this day the largest company in India. It was anything but prosperous during the first ten years of its existence. But about 1852, its condition began to improve and its success made the prospects of the industry appear so promis-

ing and attractive that speculators eagerly rushed into it. The discovery of the indigenous tea in Sylhet and Cachas gave the impetus for an expansion of the industry into the Surma valley, and in a few years thereafter the whole of the upper portions of the province of Assam (both Brahmaputra and Surma valley) was converted into a huge tea plantation. Thus the foundations of the present tea industry were laid during the fifties of the last century. Since that period the growth of the industry has been phenomenal and in less than a hundred years the British Empire has become the tea garden and tea shop of the world.

The following table shows the growth of the industry since 1875 —

Progress of the Industry

Year	Area under tea in '000 acres	Production in '000,000 lbs	Year	Area under tea in '000 acres	Production in '000,000 lbs
1875-79 (average)	173	34	1927	690	361
1880-84 "	241	57	1928	702	372
1885-89 "	307	90	1929	712	401
1900-1904 "	500	195	1930	802	391
1910	533	249	1931	807	394
1915	594	352	1932	809	433
1920	654	822	1933	816	383
1925	672	335	1934	821	400
1926	679	364	1935	826	306

It will be seen from the above table that during the last sixty years, while the area under tea has risen by over 400 per cent., the production has increased more than ten times.

Assam and Bengal are the two most important centres of the tea industry in India. Assam alone accounting for more than half the total production.

The following table shows the relative importance of the various provinces from the point of view of the tea industry —

Province	Area under crop '000 acres	Production '000 lbs	Average daily working strength (permanent and temporary)
Assam	432	232,835	540,413
Bengal	200	98,402	194,757
Madras	75	29,342	69,679
Coorg	*	199	370
Punjab	10	2,340	10,728
United Provinces	6	1,786	3,746
Bihar and Orissa	4	1,033	2,721
Total British India	727	365,737	822,404
Indian States	94	34,858	83,151
Total India	821	400,095	905,555

* Less than 500 acres

Although India produces such large quantities of tea its consumption of tea is comparatively very little, about 70 million lbs as compared with 421 million lbs in the United Kingdom and the consumption per head is only 0.20 lb as compared with 9.20 lbs in the United Kingdom. The low domestic consumption, however, enables India to export large quantities to other countries the principal among which is the United Kingdom. It is estimated that India supplies about 40 per cent of the world demand of this commodity. In 1934-35, 81 per cent of the total quantity of tea produced in India was exported abroad.

The year 1932-33 was one of the worst for the tea industry. In addition to the world wide depression, there was considerable over production with the result that producers of tea all over the world were faced with declining prices and accumulation of stocks. The preference granted to Empire teas did not prove sufficiently effective to check the consumption of cheap Java teas. Besides this there was only a small difference in the price of medium and common teas and there was thus no inducement to grow the former.

To check over production a scheme was there fore introduced to restrict production and to

limit exports. A Bill giving legislative effect to the scheme was passed at the autumn session of the Legislative Assembly in 1933. During the first year of its operation the hopes engendered by the regulation scheme were, to a considerable extent, justified, and the industry was enabled to meet what were undoubtedly very disturbing conditions. During the year 1934-35 which was the second year of the working of the scheme, the results were however, not so satisfactory. In common with other commodities tea seems to have suffered from the diminished purchasing power of consumers and the restriction on international trade. A feature of the year was the shifting of demand from the higher to the lower and medium grades of tea.

The export quota for 1935-36. The third year of the working of the tea restriction scheme was reduced from 87½ per cent in previous year to 82½ per cent of the standard exports and the year saw a steady recovery from the depressed conditions that characterised the trade in 1934-35. There was a marked improvement in the stock situation, while prices made a moderate recovery. Good quality was in great demand and a wide difference in price was recorded between good and common tea than was the case in the preceding year.

The following table explains briefly the position as regards the export of tea from India —

Year	Amount exported (million of lbs.)	Value in lakhs of rupees
1	2	3
1926-27	349	29.04
1927-28	362	32.48
1928-29	360	26.60
1929-30	377	26.01
1930-31	356	23.56
1931-32	341	19.44
1932-33	379	17.15
1933-34	318	19.85
1934-35	325	20.13
1935-36	313	19.82

The following figures show the proportion of exports of tea from India by sea sent to different parts of the world to the total exports —

	1928-29 per cent	1935-36 per cent
To United Kingdom	83.0	88.5
To Rest of Europe	2.0	
To Asia	5.8	2.2
To America	5.7	6.5
To Australia	1.6	0.6
To Africa	1.9	2.2
	100	100

A considerable quantity of Indian tea imported into the United Kingdom is normally re-exported to other foreign countries.

From 1923 to 1927 the prices obtained for tea were good, but in 1928 a decline set in, and in 1929 and 1930 prices fell further still. The price of Indian common tea particularly fell more than that of others. While as compared at 1923, 'all tea' fluctuated in the London market within a range of 25 per cent, Indian common tea fell by about 50 per cent.

In 1932-33 the fall in tea prices was almost catastrophic. The average price of tea per lb realised at the Calcutta auction sales during 1932-33 was 5 as 2 p as against 6 as 5 p in 1931-32 and 9 as 4 p in 1930-31. The position, however, improved considerably during 1933-34, when the prices realized averaged 8 as 1 p.

The following table shows the variations in the average prices of Indian tea sold at auction sales in Calcutta and the index numbers of these prices with base 1901-02 to 1910-11=100 —

	Average price at auction sales	
	Price per lb As p	Index Number
1901-02 to 1910-11	6 0	100
1927-28	14 10	247
1928-29	11 4	189
1929-30	9 11	165
1932-33	5 2	86
1933-34	9 7(a)	160(a)
1934-35	5 2(b)	86(b)

(a) For teas sold with export rights
(b) „ „ for internal consumption

The fall in tea prices greatly affected the profits of tea companies. The following table which shows the profit per acre of 65 tea companies gives an idea of the effect on profits of the fall, in prices —

Profit per Acre of 65 Indian Tea Companies

	1913	1924	1928	1929
Average profit per mature acre	£ 6-10-7	£ 15-2-0	£ 10-0-0	£ 6-9-0
Average profit in pence per lb	2 6	6 4	3 84	2 26
Average crop per mature acre	599 lbs	560 lbs	625 lbs	684 lbs

It is quite clear from the above table that although the yield per acre has considerably increased, the profits per acre are actually lower than in 1913.

The main reasons of the slump in the tea industry are over-production and intense competition, particularly from Java and Sumatra. In order to counteract the adverse influence of the former, an agreement to restrict output, was reached early in 1930 by associations of tea growers. For India and Ceylon the degree of restriction to be undertaken varied according to the quality of the tea produced, being greater on the lower qualities than for the finer

According to the latest agreement between the Indian, Ceylon and Netherlands East Indies produces, for five years from 1933 onwards exports are to be restricted and extension of cultivation not to be permitted beyond $\frac{1}{4}$ per cent of the present planted area.

During the year 1933-34 there was a further fall in the wages of workers on tea plantations. The average wages of men, women and children in the Assam Valley were Rs 9 9 7, 7 4 6 and 5 7 1, respectively, as compared with Rs 10 10 4, 7 14 6 and 5 11 6 respectively in 1932-33.

Coffee.

Such historical evidence as is available on the subject shows that coffee was first introduced into India from Mecca as early as the 16th century. The first coffee garden was planted by a European about 1840 but the industry thus started did not flourish till 1880.

The production of coffee in India is mostly confined to the South. The area under coffee in 1934-35 (including plantations of less than 10 acres) was nearly 185,000 acres, an increase of 25 per cent over the figures for 1925-26.

The total exports of coffee increased from 1,50,000 cwt in 1926-27 to 2,77,000 cwt in 1927-28. In 1928-29 and 1929-30 the shipments declined and amounted to 1,98,000 cwt and 1,84,000 cwt respectively, but exports again rose in 1930-31 and amounted to 2,93,000 cwt. In 1931-32 the shipments declined to 1,56,000 cwt but in 1932-33 exports again rose and amounted to 1,73,000 cwt. There was a further rise during 1933-34, the total exports amounting to 1,86,000 cwt. In 1934-35 the exports again declined to 1,41,000 cwt but

in 1935-36 there was a pronounced rise in the quantity exported and it amounted to 2,16,000 cwt. The principal markets for Indian coffee are usual were the United Kingdom and France. During 1935-36, the share of the United Kingdom in the trade rose from 36,000 cwt to 73,090 cwt and that of France from 53,000 cwt to 83,000 cwt. Germany and Italy took 10,000 cwt and 6,500 cwt as against 7,000 cwt and 6,000 cwt respectively in the preceding year. Australian demand declined from 6,000 cwt to 5,900 cwt while shipments to Norway, Belgium, and the Netherlands rose from 15,400, 8,100 and 1,400 cwt in 1934-35 to 16,700, 12,700 and 1,500 cwt respectively in 1935-36.

Not only does India export coffee in large quantities but it also imports it chiefly from Java, Ceylon and the Straits Settlements which it re-exports to Mascot Territory, Iraq and the Bahrain Islands. During 1934-35, however, there were no imports of Coffee into India.

The following table gives the figures of the production and exports of Indian coffee —
Production and Export of Indian Coffee in thousands cwt

12 Months ending June 30th	Production	Export	Surplus available for Home consumption
1925	272 1	251 9	20 2
1928	317 5	260 9	56 5
1929	247 8	142 6	105 2
1930	352 0	243 0	109 0
1931	294 4	208 4	86 0
1932	300 1	162 0	138 1
1933	289 4	168 7	120 7
1934	308 8		
1935	293 4		

Making allowance for the re-exports from India of imported coffee, the consumption of Coffee in India in 1933 was approaching six times the amount consumed in 1925

The total production of cured coffee in India during the season 1934-35 was 32.7 million lbs as compared with 84.6 million lbs during the previous season. The Indian Coffee industry like many other industries, has been hit in recent years and has begun to feel the necessity for propaganda, improvement of marketing and agricultural and technological researches with these objects in view the planting interests in South India have recommended the passing of a Coffee Cess Act on the lines of the Indian Cotton Cess Act

The daily average number of persons employed in the plantations during 1934-35 was returned at 101,004 of whom 65,092 were permanently employed (namely, garden labour 45,232 and outside labour 19,860) and 35,912 temporarily employed (outside labour), as compared with

100,909 persons (43,548 garden and 19,447 outside labour permanently employed and 37,914 temporary outside labour) in 1933-34

The general trade depression did not fail to affect the coffee industry but in addition to the general slump in trade there was an additional factor which depressed coffee prices and this was the exceptionally heavy crops of Brazilian coffee. Since the year 1925 there has been a general downward trend in coffee prices. Until the end of 1929 the fall was comparatively slow, but since then it has been very rapid. This will be clearly seen from the fact that while the average wholesale price of Indian coffee in London was 140s in 1923 and 127s in 1929 it fell to 86s in 1930

The declared value per cwt of coffee was Rs 60 11-9 in 1931-32 as against Rs 65 8-1 in 1930-31. It rose to Rs 63-6 7 in 1932-33 but fell to Rs 55 1 4 in 1933-34 and further declined to Rs 51 9 3 in 1934-35 and to Rs 47 5 2 in 1935-36

Sugar.

Sheltered behind an adequate tariff wall, the Indian sugar industry has made phenomenal progress in spite of the economic depression. Besides the duty, various other special advantages—consequences of the depression—have helped the rapid growth of the industry. Low prices of land and material, as also of machinery—all these factors have contributed to the remarkable development of the industry. As a result, India is now the largest sugar producing country in the world. And, the capital invested in the industry is variously estimated at between Rs 25 and Rs 30 crores

An important landmark in the history of the sugar industry was the year 1930-31, when the question of protection was referred to the Tariff Board by Government. Pending consideration of the Tariff Board's report, the revenue duty was enhanced to Rs 7 4 per cwt in March, 1931. In addition, a revenue surcharge of 25 per cent (amounting to Re 1-13 per cwt) was imposed in September, 1931. In accordance with the Tariff Board's recommendations, Government issued a *communiqué* on January

30, 1932, fixing the protective duty at the rate of Rs 7 4 per cwt on all classes of sugar until March 31, 1933. A further enquiry before the end of that period into the question of continuing protection to the industry was also provided for. It is expected that the Tariff Board will commence its enquiry, by the middle of 1937. At present, therefore, the total import duty on foreign sugar amounts to Rs 9 1 per cwt

With a view to check a too rapid growth of the industry under artificial stimuli and in order to replace losses of revenue from this source, an excise duty of Re 1 5 per cwt on factory produced sugar was imposed during the financial year 1934-35. Besides, it was proposed to set aside from the proceeds of the excise duty an amount equivalent to one anna per cwt to be distributed among the provinces 'for the purpose of assisting the organisation and operation of co-operative societies among the cane growers so as to help them in securing 'fair' prices.' Allowing for the excise duty, the industry now enjoys a protection of Rs 7 12 per cwt

Statistics given below, show the progress of the industry in recent years —

Year	No. of Factories	Quantity of sugar manu- factured from cane Tons	Quantity of sugar refined from gur Tons	Quantity of Khandasari production Tons (Est.)	Total quantity of sugar Tons
1929 30	27	89,768	21,150	200,000	310,918
1930 31	29	119,589	31,791	200,000	351,650
1931 32	32	158,581	69,539	250,000	478,119
1932 33	57	290,177	80,106	275,000	645,283
1933 34	112	453,965	61,094	200,000	715,059
1934 35	130	578,115	30,103	150,000	757,218
1935 36	137	912,000	54,600	125,000	1,091,600
1936 37 (Estimates)	150	975,000	50,000	125,000	1,150,600

Area under sugar cane increased to 4,232,000 acres in 1936 37

The area under cultivation of sugar cane has kept pace with increased production, from 2,677 000 acres in 1929 30, it has increased to 4,232,000 acres in 1936-37. Prior to 1932 33, there were only 31 cane factories, 25 new factories were added in 1932 33 alone while another 65 new factories were started in the following year—an increase of 400 per cent in two years. Since 1933 34, about 30 new factories of large cane crushing capacity have been established, and in 1935 36 no less than 137 factories were working. Production of sugar in India may be classified under three main heads—by modern factories working with cane, by modern refineries working with raw sugar (gur) and by indigenous open pan concerns. Sugar production in India a few years ago amounted approximately to half the estimated total consumption within the country. Since 1931 32, the volume of factory produced sugar has increased by approximately 600 per cent. During 1936 37 it is expected that India will produce over 1,150,000 tons of sugar, i.e., slightly more than her estimated consumption of about 1,050,000 tons in 1935 36.

Along with a rapid increase in internal production, there has been a sharp decline in imports. For instance, from an average of approximately one million tons in the years up till 1930 31, im-

ports fell by about 45 per cent in the following year and dropped to about 250,000 tons in 1933 34 and decreased further to 2,21,000 tons in 1934 35. During 1935 36, imports fell further to 193 888 tons, and in 1936 37, the estimated import is only 28 000 tons. As a result of dwindling imports Government are losing revenue from this source. Despite, or may be because of, the heavy duty, the yield from this source diminished from over Rs 10 crores in 1930 31, to about Rs 3 81 crores for the financial year ended March 31, 1935, and 3 23 crores for the year ended March 31st, 1936. During 1936 37, the Government are likely to realise a revenue of about Rs 65 00,000 only from import of sugar. The imposition of the excise duty at the rate of Rs 1 5 0 per cent on factory sugar and Rs 0 10 0 on khandasari sugar, from April 1st, 1934, has yielded a revenue to the Government of Rs 97,22,000 in 1934 35 and Rs 1,58,52 000 in 1935 36, and is expected to yield Rs 2,25,00 000 in 1936-37.

Since the imposition of the excise duty it is noteworthy, that the Khandasari production has gone down considerably.

In view of the astounding growth of the industry within such a short time, the following table of forecast of annual consumption and imports of sugar into India up to 1937 38 is of interest —

	1932 33 (Actual) Tons	1933 34 (Est.) Tons	1934 35 (Est.) Tons	1935 36 (Est.) Tons	1936-37 (Est.) Tons	1937 38 (Est.) Tons
Indian sugar production of the preceding cane-crushing season	478,120	645,283	715,059	757,218	1,091,600	1,150,000
Consumption of sugar in India during the official year	895,280	880,757	932,000	1,015,000	1,059,000	1,100,000
Difference between production and consumption, representing margin for imported sugar entering into consumption during the official year	417,160	238,474	216,941	257,782	—32,600	—50,000

It is also of interest to note that the production of *gur* for direct consumption is increasing since 1931-32

	<i>gur</i> (Tons)
1931-32	27,72,000
1932-33	32 45,000
1933-34	34,77,000
1934-35	36 92,000
1935-36	41,05,000

It may be noted also as a matter of interest that India is the largest producer of sugar among all the countries in the world, the total yield of raw sugar (*gur*) being 7,000,000 tons (*Vide* the Indian Sugar Industry—1936 and 1937 Annual by Mr M P Gandhi)

The Indian Sugar Industry is now the second largest industry, next in importance to only the Cotton Textile Industry, giving employment to over 100,000 workers

INDIAN TOBACCO

The tobacco plant was introduced into India by the Portuguese about the year 1605. As in other parts of the world, it passed through a period of persecution, but its ultimate distribution over India is one of the numerous examples of the avidity with which advantageous new crops or appliances are adopted by the Indian agriculturist. Five or six species of *Nicotiana* are cultivated, but only two are found in India, namely, *N. Tabacum* and *N. rustica*. The former is a native of South or Central America, and is the common tobacco of India. About the year 1829 experiments were conducted by the East India Company towards improving the quality of leaf and perfecting the native methods of curing and manufacturing tobacco. These were often repeated, and gradually the industry became identified with three great centres—namely, (1) Eastern and Northern Bengal more especially the District of Rangpur, (2) Madras, Trichinopoly, Dindigul, Coconada and Calicut in Southern India, and (3) Rangoon and Moulmein in Burma. Bengal is the chief tobacco growing Province, but little or no tobacco is manufactured there. The chief factories are near Dindigul in the Madras Presidency, though, owing to the imposition of heavy import duties on the foreign leaf used as a cigar wrapper, some cigar factories have been moved to the French territory of Pondicherry.

The question of improving the quality of Indian tobaccos has received the attention of the Botanical section of the Agricultural Research Institute, Pusa, and three Memoirs have been published recording the results of investigations in that direction. The immediate problem at Pusa is the production of a good cigarette tobacco. Many attempts have been made in the past to introduce into India the best varieties of cigarette tobacco from America, but the results have been disappointing. It is now hoped to build up by hybridiza-

tion new kinds of tobacco, suited to Indian conditions of growth, which possess in addition the qualities necessary to obtain a better price.

Area under Cultivation—The cultivation of tobacco is very widespread in Burma. The two main varieties are called "Burmese tobacco" and "Havana tobacco." Of the Burmese tobacco there are two main varieties "Seywet gyi," the large leaved variety and "Seywet gyun," a smaller-leaved variety with pointed leaves. The former yields a heavier crop, but the latter gives better quality. There is always a great demand on the market for both the Havana and the Burma tobacco. The smooth leaves of the Havana plant are used for the wrappers and the coarser Burmese leaf for the filling.

The most important tobacco tracts in British India are—(i) the Coimbatore and Dindigul tract of Madras, where the *Usa Kappal* and *Wara Kappal* varieties are largely grown, the former supply the Trichinopoly cigar; (ii) the Godavari Delta of Madras, (iii) the Rangpur tract of Bengal, (iv) the Districts of Bihar and Orissa, (v) Guzerat in Bombay and (vi) the delta tract of Burma.

The season for harvesting varies in different localities ranging from December to June but the bulk of the crop is harvested during the months of February, March and April. The leaves when quite dry, are assorted and placed in heaps in stacks to ferment. They are then tied into bundles of 25 or 30, a useless leaf being employed for tying each bundle. The leaves are laid perfectly flat, the bundles being fan shaped. In this condition they are baled, the broom like ends projecting outwards. By varying the degree of fermentation of the leaves, different qualities of tobacco are obtained. A black variety is used in India for cake tobacco and this is the most common product but a certain amount of yellow leaf is grown for cigar making.

THE LAC INDUSTRY

Lac is a resinous substance secreted by an insect which lives in the twigs of certain trees. The insects are extensively cultivated, especially in Northern India. Lac is an important constituent in numerous industrial processes.

In 1935 the total lac production in British India, though much below producing capacity, was about 40,250 tons, and the value of the lac exported Rs 1,58,46,355. The home consumption, however, was only about 857 tons, or barely 2 per cent of the total production.

The chief use of lac in India is in polishing furniture. But this can obviously absorb only a limited quantity of the produce. Another use is in "hot" lacquering of wooden toys, pen holders, etc., but here again the consumption,

though increasing, is still very small. *Rufus lac* is sometimes used in the manufacture of bangles and for filling hollow gold and silver articles. But all the above uses together probably do not account for 1 per cent of the total lac produce.

Shellac moulding appears to be confined in India only to the manufacture of gramophone records and this manufacture, partly for climatic reasons, is not extensive. Shellac was only one of many other materials for the moulding trade till the rise of the gramophone industry gave shellac the unique place which it now occupies, no synthetic resin having yet been able to replace it. Among high class gramophone records, those with a shellac base are undoubtedly the best.

The steady improvement in the lac industry since 1900 has been largely due to the growth of the gramophone industry. At present 40 to 50 per cent. of the total world output of lac is consumed in the manufacture of gramophone records. There is yet a large potential market for gramophones in the East.

With improvements in heat resistance and mechanical strength, a wide field of application

which the synthetic resins have opened up can still be exploited by shellac, either alone or in combination with other resinous materials. The Indian Lac Research Institute at Nankum in Bihar and its fellow research organizations in London and New York are engaged in investigating these openings, together with the possibilities of improvements in cultivation, pest control &c., which will lead to the production of a better grade of raw material.

The Cocaine Traffic.

The form of cocaine chiefly used in India is Cocaine Hydrochloride. This salt forms light shining crystals, with a bitterish taste, and is soluble in half its weight of water. The alkaloid cocaine—of which this is a salt—is obtained from the dried leaves of the Erythroxylon Cocaine which grows in Bolivia, Peru, Java, Brazil and other parts of South America. The leaves are most active when freshly dried and are much used by the Natives as a stimulant. Tea made from them has a taste similar to green tea and is said to be very effectual in keeping people awake. In India the Coca plant seems never to have been cultivated on a commercial scale. It has been grown experimentally in the tea districts of Ceylon, Bengal and Southern India and has been found to produce a good quality and quantity of cocaine. As the plant has not been seriously cultivated and as there is no possibility for the present of the drug being manufactured in India, no restrictions have as yet been placed on its cultivation.

Spread of the habit.—The cocaine traffic in India which seems to be teaching in alarming proportion in spite of legislation and strict preventive measures is of comparatively recent growth, though it is impossible to estimate how widespread it was in 1903 when the Bombay High Court for the first time decided that cocaine was a drug included within the definition of an intoxicating drug in the Bombay Abkari Act. Since that date the illegal sale of cocaine in India has largely increased and the various provincial Excise Reports bear witness to the spread of the "Cocaine habit." The consumers of the drug, which is notoriously harmful, are to be found in all classes of society and in Burma even school children are reported to be its victims, but in India as in Paris the drug is mostly used by prostitutes or by men as an aphrodisiac. The habit has spread chiefly to those classes which are prohibited by religion or caste rules from partaking of liquor and the well-known Indian intoxicating drugs.

Smuggling.—So far as the cases already detected show, the persons who smuggle the drug by sea from Europe and places outside India, into India, are chiefly sailors, stewards, firemen and sometimes engineers and officers of foreign ships. The ports through which cocaine enters India are Bombay, Karachi, Calcutta, Madras, Marmagao and Pondicherry. The main inland distributing centres are Delhi, Lucknow, Meerut, Lahore, Mooltan, Surat and Ahmedabad. Delhi especially is notorious for the cocaine trade. Great ingenuity is employed in smuggling cocaine through the Custom houses. It is packed in parcels of

newspapers, books, toys and piece goods and in trunks which have secret compartments. The retail trade in the towns is very cunningly organized and controlled. In addition to the actual retailers, there is a whole army of watchmen and patrols whose duty is to shadow the Excise and Police officials and give the alarm when a raid is contemplated. During the War several cases of importation of Japanese cocaine were detected, the importers being Japanese and Chinese sailors. The original marks on the packets and phials are usually destroyed so that the name of the manufacturing firm may not be found out.

The Review of the Customs Administration in India for 1930-31 states that during the year a total of 17,345 grains of cocaine were seized by the Customs authorities, of which 1,792 ounces were valued at approximately Rs 1,80,000.

The amount seized is either given to Hospitals in India or destroyed. It is no longer possible to buy cocaine from any betelnut seller as it was ten years ago, but scores of cases in the Police Courts show that the retail trade thrives, though to a diminished extent, in Bombay. High profits ensure the continuance of the trade.

The Law in regard to Cocaine.—This varies in different provinces. A summary of the law in Bombay is as follows. No cocaine can be imported except by a licensed dealer and importation by means of the post is entirely prohibited. The sale, possession, transport and export of cocaine are prohibited except under a license or permit from the Collector of the District. A duly qualified and licensed Medical practitioner is allowed to transport, or remove 20 grains in the exercise of his profession, and as far as 6 grains may be possessed by any person if covered by a *bona fide* prescription from a duly qualified Medical practitioner. The maximum punishment for illegal sale, possession, transport, etc., under Act V of 1878 as amended by Act XII of 1912 is as follows: Imprisonment for a term which may extend to one year or fine which may extend to Rs 2,000 or both and on any subsequent conviction imprisonment for a term which may extend to 2 years or fine which may extend to Rs 4,000 or both. The law in Bombay has been further amended so as to enable security to be taken from persons who have been convicted of cocaine offences. The new Act also contains a section for the punishment of homeowners who let their houses to habitual cocaine sellers.

The Opium Trade.

Mention opium and half the Western world directs its thought to India, as though India were the most unscrupulous producer of the most noxious drug on earth. Refer to the League of Nations proceedings in regard to opium and again, mainly under the leadership of American representatives, one finds India and the Government of India held up to humanity as traffickers in opium and as thereby obstacles to making the world a better place to live in. In fact, neither India nor the Government of India has anything to be ashamed of in its opium history. Whatever may be the case in other countries, centuries of inherited experience have taught the people of India discretion in the use of the drug and its misuse is a negligible feature in Indian life. Abuse of its properties is rarer in India than the abuse of alcohol in Western countries. So much for the internal position.

The record as regards exports is equally clean. India has never driven hard bargains to secure the sale of the product overseas. Where it has been bought the reason is its superiority over other supplies, because of the stringent regulations by which its manufacture has always, under the British authorities, been regulated in India, in order to secure the purity and cleanliness of the finished product. Directly any importing country has expressed a desire to have the trade reduced, the Government of India have responded by stiffening their restrictions on export. There have, in recent years, mainly at the instance of America, been numerous International conferences with a view to making opium and drugs derived from it more difficult to obtain and in every case it has been found that India had already given the lead in the special regulations which it was proposed to lay down.

The China Trade—The classic case of Indian restriction of her export opium trade is provided by China. There is a long history of Indo-Chinese negotiations on the subject, but it is unnecessary to go further back into these than 1911. On 8th May of that year, there was drawn up between India and China an agreement under which the Government of India assented to (1) the payment of an import duty three times the existing amount in return for the promised abolition of provincial taxes, (2) the partial closure of China to Indian opium by provinces, including not only stoppage of transit passes, but also treaty port closure, Shanghai and Canton excepted, (3) the total extinction of trade before 1917 on proof of total cessation of opium production in China, and (4) revision of the agreement on due notice by either party. This agreement, as its terms indicate, was on the side of China the outcome of a professed desire to stamp out the opium trade and opium consumption in her midst. And on her side China, in the agreement, undertook, among other things, to reduce production in China *part passu* with the reduction of exports from India.

In addition to the limit to the China trade imposed by the agreement, the Government of India undertook in order to lessen the danger of smuggling into China, and as an earnest of their desire to assist that country, strictly to confine the remainder of Indian opium export to the legitimate demands of the non-China markets. A figure was elaborately calculated for these markets and India drastically cut her non-China exports down to it in 1911. In subsequent years, she progressively reduced the permissible export limit and in 1913 she stopped exports to China altogether.

The financial sacrifice thereby undertaken by India in order to help the Chinese in their professed desire for reform amounted to many millions sterling a year. China never carried out her side of the bargain. She is still demonstrably the greatest opium producing country in the world and the only effect of the reduction, and eventual abolition, of imports from India is better trade for Chinese opium producers and merchants and largely increased imports of opium into China from Persia and Turkey.

Agreements observed by India—The Government of India have carried out to the letter their side of the 1911 agreement. They have gone further. Not only were exports to China stopped and exports to non-China countries in the East limited in accordance with the agreement with China, but exports to non-China countries have, on the voluntary initiative of India, been subjected to successive restraining agreements with the countries concerned. The Government of India introduced, with effect from 1st January 1923, a certificate system recommended by the League of Nations, whereby all exports of opium must be covered by certificates from the Government of the importing country that its consignment is approved and is required for legitimate purposes. The pressure exerted by the League of Nations in this regard was not pressure upon the Government of India but upon the Governments of the importing countries and, so far as India was concerned, the new system was welcomed because it removed from the shoulders of the Government of India all responsibility in regard to opium consumption in the importing countries and laid it upon their own respective Governments. In 1926 in order to fulfil the spirit of her international agreements India decided, though she was in no way bound by their letter to do so, to reduce her exports to Far Eastern countries for other than medical and scientific purposes by 10 per cent yearly, so as to extinguish them altogether by December 1935, and effect has been given to that policy at considerable financial sacrifice. India is the only country that has made any considerable sacrifices of the kind.

Indian Uses of Opium—There is a fundamental difference between the problem in India and that in foreign countries, particularly in America and Europe. America and Europe

are principally concerned with the problem of the vicious consumption of cocaine and morphia and it is on the experience of the abuse of these drugs in those countries that much of the condemnation of Indian policy is based. It is accepted that the consumption of opium in America and Europe is in effect hardly less disastrous than that of morphia and cocaine. And the reason is that to Americans and Europeans opium is an uncustomed drug. The habit of its use being both new and strange to them, it is never used to moderation but always abused, and the results have no relation to the result of moderate opium eating in India. The fact appears to be that peoples acquire a tolerance to drugs to the use of which they are long habituated. Opium has been used in India since the 16th century at least. The method of use is eating and in India, generally speaking, eating seems to do little, if any, harm. Smoking, which is the habit of the Far Eastern races, rather than of the Indian races, seems to do much more harm in India than eating, while on the other hand where smoking is in ordinary use competent authorities (e.g., the Royal Commission on opium in Malaya) think eating to be more harmful than smoking.

The Government of India have fully participated in the different International Conferences on the drug question and responded to the obligations which her assent to their conclusions has placed upon her in regard to home consumption. But the principal effect upon India to these International discussions has been to draw the fresh attention of her Government and people to the opium situation in her midst, to cause consultations on the subject between the Government of India and the Indian Legislature and to produce what may be described as considerable intelligent progress in the development of those regulations upon the use of opium which are time honoured.

Present Policy—The current attitude and policy of the Government of India were lately explained in their behalf to the League of Nations at Geneva. Their representative declared that any genuine measure of reform initiated by a Provincial Minister in connection with it would receive encouragement and support from the Central Government and showed that the policy of that Government is, and has been, one of non-interference with the moderate use of raw opium, whether the object of the consumer be some real or supposed physical benefit or merely the indulgence of the almost universal desire of human beings particularly those whose occupations involve exposure or severe bodily exertion, for a stimulant or narcotic. Excessive indulgence it is and always has been the desire of Government to express

Opium is under the current Indian constitution a Provincial Transferred Subject. Nevertheless, owing to the jealous watching and criticism by observers in every continent, the Government of India called an official All India Conference, which was opened at Simla by Lord Irwin, on 5th May 1930, to consider the question of certain areas where opium consumption was alleged to be unduly high. This followed on the prosecution of special provincial

inquiries by committees set up by the Local Governments at the special instance of His Majesty's Government. The Conference, after an exhaustive discussion of the phenomena presented by the various areas selected for investigation, and in the light of the personal knowledge of the representatives of the different Provinces and of the reports of the local committees, concluded that it appeared that certain parts of Assam and Calcutta might correctly be regarded as having excessive consumption and that Orissa and the Ferozepore District of the Punjab might be held to provide cases for further inquiry. In other cases the Conference considered that there was no evidence of prevalent excess. But they gave a series of examples to show that there were simple explanations showing harmless causes for what appeared to be excessive consumption in many places.

Opium policy has on several occasions during the past few years come under discussion in the Central Indian Legislature and in regard to it the Government of India and the non-official members of the Legislature have been in accord. Cultivation of the poppy in British India is confined, except for a few wild and inaccessible regions, to the area that supplies the Government of India Factory at Ghazipur in the United Provinces where it can only be cultivated under license. Importation into British India from the Indian States is controlled by prohibition of imports except on Government account and by agreement with the States concerned that they will not allow exports to British India except by arrangement. Cultivation in British India is progressively and rapidly being reduced. The sown area in British India which produced the crop of 1931-32 was 37,012 acres, i.e., 26.3 per cent of the area in 1922-23, and 20 per cent of that in 1912-13. The process of reduction was stayed in 1931-1932 because it was found that the rate before 1931 had been too rapid so that stocks were brought to a dangerously low level. Progressive and rapid reduction was resumed in 1933.

The population of British India according to the 1931 Census is 271,526,992, and the consumption per head in British India, excluding Aden, inclusive of the opium used for veterinary purposes but excluding that consumed for medicinal purposes was 11.04 grs per head of the population. The population of Aden in 1931 was 50,809 and the opium consumption per head was 12.3 grs. Since 1931 the consumption rate has further diminished.

Close supervision is maintained over the licensed vendors in all parts of British India, the conditions of their licenses require that the shops shall always be open to inspection, that no opium shall be sold to children or bad characters, that sales shall only be made on the licensed premises and during the prescribed hours, that only unadulterated Government opium shall be sold, that credit shall not be allowed, that no consumption shall be permitted on the premises, that full accounts shall be maintained and that the names and addresses of purchasers of more than one or two tolas shall be recorded. These conditions are effectively enforced by the excise departments of the various provinces.

GLASS AND GLASSWARE

Glass was manufactured in India centuries before Christ. Pliny mentions Indian glass as being of superior quality.

As a result of recent archaeological excavations, a number of small crude glass vessels, indicative of the very primitive stage of the industry at the time, have been discovered.

The first Indian references to glass are in the Mahavamsa, the Chronicles of the Sinhalese Kings (306 B C) when glass mirrors were carried in processions.

It is certain, according to Sir Alfred Chatterton, that by the sixteenth century, glass was an established industry in India, producing mainly bangles and small bottles. The quality of the materials was bad and the articles turned out were rough.

Manufacture of glass in India on modern European lines dates from the nineties of the last century, when some pioneer efforts were made in this direction. Since then, a number of concerns have started. Some of them have failed. They devote themselves mainly to the manufacture of bangles and lampware side by side with bottlemaking on a small scale.

In its present stage, the industry takes two well-defined forms—(1) Indigenous Cottage Industry and (2) the modern Factory Industry.

The Indigenous Cottage Industry, which is represented in all parts of the country, has its chief centres in the Ferozabad District of the United Provinces and Belgaum District in the South. It is mainly concerned with the manufacture of cheap bangles made from glass cakes or blocks, made in larger factories. The industry at present is in a flourishing state and supplies nearly one third of the Indian demand for bangles. However, it is now faced with Japanese competition, and already the Japanese silky bangles are ousting the old type Indian products.

The modern Factory Industry in glass is still in its infancy in India. The existing factories mostly stop at producing glass cake for bangles as in Ferozabad or a simple kind of lampware

and bottles. There is one factory in the United Provinces, which since 1929 has been manufacturing sheet glass. The Indian glass industry has not advanced to the stage of manufacturing artistic glassware.

Records of the earlier ventures have shown that failure in some cases was due in part at least to preventable causes. Foremost among these, were lack of enlightened management, lack of expert attention and in many cases small attention to choice of site. Specialisation, too, has been lacking, some factories in their initial stages trying to manufacture three or four different kinds of glassware simultaneously, like lampware, bottles and bangles. Paucity of sufficient fixed capital for initial expenses has also been another contributory factor in bringing such ventures to grief.

In October 1931, the inquiry into the glass industry was referred by the Government of India to the Indian Tariff Board. The Board submitted its report in March 1932. It recommended the grant of protection for ten years and outlined proposals for protective duties on the following basis—(1) Sheet and Plate Glass including figured and ribbed glass—Rs 4 per 100 sq. feet or 25 per cent, *ad valorem*, which ever is higher, bangles, beads and false pearls—50 per cent, *ad valorem*, glass and glassware of certain specified types, like tumblers, tiles, shades, chandeliers—30 per cent, *ad valorem*.

These findings however were not acceptable to the Government of India, who considered that the absence of indigenous supplies of raw materials constituted a disadvantage to the industry, which could not possibly be balanced by any advantages which it might possess in other respects. This, however, does not imply rejection of the recommendation, because Government have decided to postpone their final decision in the matter. In the course of the next two years, Government will come to a final decision as to whether the industry is deserving of protection. For the present, Government have decided to afford the glass manufacturing industry a certain measure of relief by way of a rebate of duty on imported soda ash.

HIDES, SKINS AND LEATHER

India's local manufactures of skins and leather have steadily increased in recent years. The trade and the craft in leather manufacture are in the hands either of Mahomedans or of low caste Hindus, and are on that account participated in by a comparatively small community. The traffic is subject to considerable fluctuations concomitant with the vicissitudes of the seasons. In famine years for instance the exports of untanned hides rise to an abnormal figure. The traffic is also peculiarly affected by the difficulty of obtaining capital and by

the religious objection which assigns it to a position of degradation and neglect. It has thus become a monopoly within a restricted community and suffers from the loss of competition and popular interest and favour.

Uses of Indian Hides.—The fifteenth report of the Imperial Economic Committee states that Indian hides, both raw and partially tanned, are largely used for the upper leather of boots, partially tanned skins are used for fancy leather articles, bookbinding and for covering the small rollers used in cotton mills for drawing

the thread. Raw sheepskins are used for similar articles and also for gloves. They are exported mostly to Germany, France and Italy. Raw goatskins are used almost entirely in the manufacture of glace kid, of which commodity the United States is the chief producer.

The chief markets for Indian raw hides are in Central and Southern Europe, Hamburg being an important distributing centre. Directly after the war an effort was made to direct more of this trade to the United Kingdom, but it has drifted back to Germany. The assortment and grading of raw hides exported from Calcutta before the war, largely the result of the work of German firms established there, had reached a high standard. After the war the trade became somewhat disorganised from a variety of causes, among which may be cited fiscal changes, the entry into the trade of new and at first inexperienced firms, the increased cost of arranging for supervision at up country points. It has, however, been recovering its reputation.

Protecting the Industry.—The report of the Industrial Commission pointed out that the principal difficulty at present in the hides and leather industry was the lack of organisation and expert skill. Government action to foster the industry was first taken in September 1919, when a Bill was introduced in the Imperial Legislative Council further to amend the Indian Tariff Act, 1894. The effect of this Bill was officially described as follows: "It is to impose an export duty of 15 per cent on hides and skins with a rebate of 10 per cent on hides and skins exported to other parts of the Empire, and there tanned. Its object is to ensure that our hides and skins shall be converted into fully tanned leather or articles of leather so far as possible in India and falling this in other parts of the Empire, instead of being exported in a raw state for manufacture in foreign countries." Sir George Barnes who was in charge of the Bill and described the tanning industry as one of the most promising Indian industries ex-

plained that "the present position is that we have in India at the present time some hundreds of tanneries for the tanning of hides, a large number of which have come into existence in order to satisfy military requirements during the war. We have, in fact, the foundations of a flourishing tanning industry but there is reason to fear that it may tend to dwindle and disappear with the diminution of military requirements, if some other support is not given. We want to keep this industry alive, and we believe that in this case protection in the shape of a 15 per cent export duty is justifiable and ought to be effective. It is clearly just also that the same measure of protection should be extended to the tanners of skins whose business, as I have already stated, was injured by the necessities of the war. Though Indian tanneries have enormously increased in number during the past three years, they can only deal with a comparatively small proportion of the raw hides and skins which India produces, and it is to the advantage of India and the security of the Empire generally that this large surplus should, so far as possible, be tanned within the Empire, and with this end in view the Bill proposes a 10 per cent rebate in respect of hides and skins exported to any place within the Empire. I should add that it is proposed to limit by notification the benefit of this rebate to hides and skins actually tanned within the Empire, and Indian hides and skins re-exported from an Empire port for the purpose of being tanned abroad will not be entitled to any rebate. The export duty on raw skins was abolished by the budget for 1935-36.

Indigenous methods.—India possesses a large selection of excellent tanning materials such as *Acacia* pods and bark, Indian *sumach*, the *Tanner's cassia*, *Mangroves*, and *Myrobolams*. By these and such like materials and by various methods and contrivances, hides and skins are extensively cured and tanned and the leather worked up in response to an immense, though purely local, demand.

COIR

Coir is the trade name given to the fibre obtained from the husk of the coconut fruit. India and Ceylon have a virtual monopoly in the production of this by product of the coconut industry and its development in these countries has been rendered possible by the fact that there coconuts are usually harvested when the husk of the fruit is still green, though the coconut within is ripe. Good quality coir can only be produced from the fresh green husk of the ripe fruit. If the nut is not fully ripe the fibre in the husk has not developed its full strength, and if the fruit has dried out the fibre is weak, dark coloured and difficult to extract.

In Ceylon, the extraction is done by mechanical means on a factory scale after the husks have been retted in water for two or three weeks and under such methods it is not possible to obtain either the colour or cleanliness of the fully retted Indian coir. The process consists of holding

the husk against a revolving spiked drum which combs and extracts the fibre. The shorter fibres collect in the drum and after cleaning are classed as mattress fibre. The longer fibres are retained in the hand of the operator and are classed as 'bristle fibre' which is exported and used in the manufacture of brushes, etc. About 75 per cent of the Ceylon produce is exported as raw fibre, and only 25 per cent as yarn or manufactured coir.

The Indian industry, as far as the export trade is concerned is confined to the backwater regions of the Malabar coast, Cochin, Travancore, and to the Laccadive and Diu Islands, which are administered by the Madras Government. The extraction of the fibre and the manufacture of coir yarn forms a well organised cottage industry. The freshly harvested nuts are purchased by merchants who convey them down the backwaters to suitable places for a retting

Such places are situated along the tidal reaches of the backwaters, and sites for retting are selected in places where the ground contains a considerable admixture of sand. Here, pits are dug, either in the backwater itself or on the banks and after lining these with palm leaves they are filled with the husks. When filled they are covered with platted coconut leaves and weighed down with soil or mud. The husks are left to ret in these pits for a period of about eight months, the tidal rise and fall of the water and the porous nature of the ground ensuring constant water movement through the mass of retting husks and thus supplying aeration for the necessary bacterial action. At the end of this period, the husks are removed from the retting pit, washed in clean water and distributed among the local people who extract the fibre. This is usually spare time work done by the women of the house. Firstly, the outer skin of the husk is removed and the husk is then beaten with a wooden mallet on a block of wood or stone. This separates the fibre from the decaying pithy matter in which it is embedded in the husk. The fibre thus extracted is dried in the shade and then beaten or willowed with thin bamboo canes. The fibre is then returned to the merchant who further cleans this in a revolving drum furnished with projecting cane spikes. The fibre is sorted out into colour grades and distributed among the local people who spin this into yarn. The fibre is first made into slivers and is then either spun by hand or on a wheel. This is again returned to the merchant who again grades this for colour and splices the short lengths into a continuous length of 450 yards. It is then tied into bundles and is disposed of to the factories where it is either baled up for export or is manufactured into matting, door mats, braid, ship's fenders, rope, etc.

The yarn is very carefully graded both for manufacture and for export, according to its

colour, which is, in reality, a gauge of proper retting. The best quality of coir is a golden yellow colour and the lowest grade is a grey colour which shows that the husks have either been over retted or that the condition for retting have not been satisfactory.

Properly retted coir is of the highest quality. It is much more easily spun than machine made coir, because the fibres are clean and free from adhering pith and a much more even yarn is obtained. It is much stronger than machine made coir because none of the longer or brittle fibres have been removed in the process of extraction. The colour is not only attractive, but is in addition that retting has been carried through to the correct stage.

Coir fibre, when made into ropes, is extremely elastic and thus yields to heavy strains, and it therefore has special uses. It does not rot easily when exposed to atmospheric conditions, or to salt or fresh water, and in manufacture it is found to take dyes readily.

The value of the Indian trade is considerable. The imports into Great Britain alone, which represent less than 20 per cent of the Indian exports, are shown in the Board of Trade returns to amount in value to more than one million pounds per annum. It is an industry which provides a profitable occupation to the densely populated back water tracts of Western India, and it provides the raw material in the shape of yarn and fibre for a considerable industry in Europe. More than 80 per cent of the manufactured coir products imported into the United Kingdom are produced in India and more than 90 per cent of the coir yarn. The imports of coir fibre from India are inconsiderable and amount to only 25 per cent of the quantity imported. The export of coir fibre from India represents in value only 0.35 per cent of that of the total Indian exports of coir and coir products.

INDIAN INVENTIONS AND DESIGNS

While India will have to depend for some time to come on foreign manufacturers for her supply of textile machinery, power plants and other industrial requirements, Indian engineers and chemical experts will have ample opportunity to exercise their inventive skill in various other directions. These may include agricultural implements, domestic appliances, drying and moistening apparatus, labour saving devices, small manufactures in hardware, pumps, water lifts, furniture and metal wares, construction of roads and permanent ways, railway signalling and controlling, railway vehicles, buildings and structures, valves and cocks, latrines, closets and sanitary appliances. There will also be new chemical processes and apparatus including the manufacture of vegetable products, foodstuffs, treatment of oil seeds, the use of by-products and waste materials, use of starchy raw materials for the sizing of yarn and cloth, tallow substitutes, manufacture of caustic soda, soda ash, bleaching powder and chlorine and other chemical products for use in the various industries which the country will be engaged in developing in the near future.

A hand book to the **Patent Office** in India which is published by the Government Press, Delhi, gives the various Acts, rules and instructions bearing on the subject together with hints for the preparation of specifications and drawings, hints for searchers and other valuable information that has not hitherto been readily accessible to the general public in so convenient a form. In the preface the Controller of Patents and Designs explains the scope of the Patent laws in India and indicates wherein they differ from English law and procedure.

The existing **Indian Patent Law** is contained in the Indian Patents and Designs Act, 1911, as amended in 1930 and the Rules of 1933. The Patent Office does not deal with trade marks or with copyright generally in books, pictures, music and other matters which fall under the Indian Copyright Act III of 1914. There is, in fact, no provision of law in British India for the registration of Trade Marks which are protected under the Merchandise Marks Act, (IV of 1889) which forms Chapter XVIII of the Indian Penal Code.

On the whole, Indian law and procedure closely follow that in the United Kingdom for the protection of inventions and the registration of designs, as they always have done in matter of major interest. One main difference exists however, as owing to the absence of provision of law for the registration of Trade Marks India cannot become a party to the International Convention under which certain rights of priority are obtainable in other countries.

The first Indian Act for granting exclusive privileges to inventors was passed in 1856, after an agitation that had been carried on fitfully for some twenty years. Difficulties arising from an uncertainty as to the effect of the Royal Prerogative prevented earlier action, and, owing to some informalities, the Act itself was repealed in the following year. In 1859 it was re-enacted with modifications, and in 1872 the Patterns and Designs Protection Act was passed. The protection of Inventions Act of 1883, dealing with exhibitions, followed, and then the Inventions and Designs Act of 1888. All these are now replaced by the present Act of 1911.

The existing Acts extend to the whole of British India, including British Baluchistan and the Santhal Parganas. This of course includes Burma, but it does not embrace the Native States. Of the latter Hyderabad (Deccan), Mysore, Gwalior, Baroda, Travancore, Marwar, Cochin, Kashmir and Jamu have ordinances of their own, for which particulars must be obtained from the Government of the States in question as they are not administered by the Indian Patent Office in Calcutta. A patent granted in British India does not extend to the United Kingdom or to any other British Possession, but under the reciprocal arrangement an applicant for an Indian patent has 12 months priority in the United Kingdom, Australia, Canada, New Zealand, the Irish Free State, the Union of South Africa and Ceylon and *vice versa*. The object of the Act of 1911 was to provide a simpler, more direct, and more effective procedure in regard both to the grant of patent rights and to their subsequent existence and operation. The changes made in the law need not here be referred to in detail.

New Legislation —Part I (Patents) of the Act of 1911 has been further amended by Act VII of 1930 and includes the following —

If an Application comprises more than one invention the additional inventions may be made the subject matter of additional applications bearing the same date as the original application.

The term of the Patent will be 16 years instead of 14 years.

Patent of Addition will be granted on the original patent without the payment of additional renewal fees but the additional patent will expire with the date of the original patent.

Fresh provisions are made for the use of an invention by Government.

Government will grant licences to the public on application if the Patentee refuses to do so on reasonable terms.

Several other facilities are given under the Indian Amended Act of 1930 on the lines of the present British Patent Act.

What constitutes patentable invention —
The term invention means any manner of new manufacture and includes an improvement, while manufacture includes any art, process or manner of producing, preparing or making an article and also the article prepared or produced by manufacture.

Thus a bare discovery or a new principle cannot be patented, the invention or improvement must include some form or manner of manufacture and may consist of a machine or apparatus or a composition or compound or a process of manufacture. It must be in the form of a method or means or production of a vendible article.

A game of skill or chance without the means of playing it or a method of calculation or writing music, medical prescriptions, vegetable or natural substances suitable for food, an ornamental design for a piece of furniture or for a *sari* or other textile fabric do not constitute patentable inventions.

Patents will however, be granted for new and useful inventions or improvements relating to any art or process or a machine or article of manufacture or a composition of matter. Thus a machine or appliance will constitute a mechanical patent, a new method of manufacturing an article which reduces a number of steps to a single operation will form a process patent while metal alloys, chemicals, paints, soaps, varnishes and dyes will be included in compound or composition patents.

A patent may be obtained for a new method of applying a known article or a new contrivance applied to a new object or purpose and which yields a new result. A new contrivance or device applied to old objects for producing a new and useful result is also patentable. An old substance produced by a new process is a new manufacture, so also a novel and ingenious combination of old parts yielding useful results.

The mixture of two or more substances in certain definite proportions forming a compound substance of advantage and utility for its useful properties will be subject matter for a patent, as also a chemical process with or without the mechanical devices necessary for it.

In the case of chemical inventions the chemical and physical properties of bodies and their constitutions cannot form subject matter for a patent, but they may be utilised for manufacturing foodstuffs, dyes, beverages and other useful and vendible compounds or compositions which can be covered by a patent. It should also be noted that in chemical processes the article or substance if produced may be old, but if the mode of producing the known substance is new the process will be patentable.

ABSORPTION OF GOLD (both coin and bullion) IN INDIA

(In lakhs of Rupees)

	AVERAGE OF 5 YEARS ENDING

Insurance in India.

721

According to the report by Mr N Mukarji, Actuary to the Government of India (who has since died), contained in the Indian Insurance Year Book, 1935, the number of companies subject to the provisions of the Indian Life Assurance Companies Act of 1912 and the Indian Insurance Companies Act of 1928 is 366 of which 217 companies are constituted in India and 149 companies are constituted outside India. Of the 217 Indian companies, 61 are established in the Bombay Presidency, 41 in Bengal, 37 in the Madras Presidency, 29 in the Punjab, 14 in Sind, 10 each in Delhi and the United Provinces, 4 in Bihar, 5 in the Central Provinces, 3 in Ajmer Merwara and 1 each in Burma, Assam and N W F P. Of the 149 non Indian companies, 69 are constituted in the United Kingdom, 30 in the British Dominions and Colonies, 20 in the Continent of Europe, 18 in the United States of America, 9 in Japan and 5 in Java.

Most of the Indian companies carry on life assurance business only. They are 165 in number and of the remaining 52 Indian companies, 36 carry on life business along with other insurance business and 16 carry on insurance business other than life.

Besides the Indian life offices, there are some pension funds mostly connected with Government offices, which are exempt from the operation of the Act and the Indian Post Office Insurance Fund is also exempt. As regards non Indian companies, most of them carry on insurance business other than life. Out of the total number of 149 non Indian companies, 125 carry on insurance business other than life, 11 carry on life business only and 13 carry on life business along with other insurance business. Of the latter 24 companies, 16 are constituted in the United Kingdom, 6 in the British Dominions and Colonies and 1 each in Germany and Switzerland.

The total new life assurance business effected in India during 1934 amounted to 215,000 policies assuring a sum of 38 crores and yielding a premium income of 2 crores, of which the new business done by Indian companies amounted to 183,000 policies assuring a sum of 28 crores and having a premium income of about 1½ crore. The share of the British companies in respect of new sums assured is 4 crores, of the Dominion and Colonial companies about 5½ crores and of the single German company ½ crore.

The average sum assured under the new policies issued by Indian companies is Rs 1,528 and under those issued by non Indian companies Rs 3,213.

The total life assurance business effected in India and remaining in force at the end of 1934

amounted to 987,000 policies assuring a total sum of 215 crores including reversionary bonus additions and having a premium income of very nearly 10½ crores. Of this the share of Indian companies is represented by 742,000 policies assuring a sum of 132 crores and having a premium income of 6 crores.

Most of the Indian companies now transact life assurance business on the scientific principle but there are still some which carry on business on the dividing plan under which the sum assured is not fixed but depends on the division of a portion of each year's premium income amongst the claims arising in that year. The Government of India Actuary says in his latest annual report that the main defect of dividing insurance business is that policy holders in each class are charged the same rate of premium of subscription irrespective of their age on admission ranging even in some cases from 18 to 60 years. Business of this nature is not only unsound but is apt to lend itself to the practice of fraud on the part of policy holders and agents and later on by the company. It has been declared to be the curse of insurance enterprise in India. Before the Act of 1912 was passed there were numerous companies which transacted life assurance business on the dividing plan. Most of the companies which transacted divided insurance business realised that they could not long continue it and the Government Actuary in his latest report (1935) observes "It is accordingly highly essential that those companies which still contract this class of business should stop it forthwith."

Some Indian life offices have extended their operations outside India, mostly in British East Africa, Ceylon and Straits Settlements. The total new sums assured by these offices outside India in 1934 amounted to 94 lakhs yielding a premium income of 6 lakhs and the total sum assured including reversionary bonus additions in force at the end of 1934 amounted to 5 crores, having a premium income of 25 lakhs.

The total new annuity business effected during 1934 was for the amount of about 2½ lakhs per annum, of which the share of Indian companies was Rs 10,000 per annum. The total annuity business remaining in force at the end of the year was for the amount of 6½ lakhs per annum, of which the amount payable by Indian companies was a little over one lakh per annum.

The total new sums assured by Indian Life Offices in 1934 amounted to nearly 29 crores and exceeded the preceding year's figure by over 4 crores. The following table shows the new business effected since 1925 in each year and the total business remaining in force at the end of the year.

Year	New business written during the year	Total business remaining in force at the end of the year
1925	8.15 lakhs	47 crores
1926	10.35 "	53 "
1927	12.77 "	60 "
1928	15.41 "	71 "
1929	17.29 "	82 "
1930	16.50 "	89 "
1931	17.76 "	98 "
1932	19.66 "	106 "
1933	24.83 "	119 "
1934	28.92 "	137 "

The life assurance funds increased by over 3 crores during 1934 and amounted to nearly 32 crores at the end of that year. The average rate of interest earned on the life funds during the year was 5 per cent.

The **Post Office Insurance Fund** was instituted by the Government of India in 1883 for the

benefit of the postal employees but gradually admission to it has been thrown open to almost all classes of Government servants who are employed on civil duties. The following are some of the important particulars relating to the business of the Fund during the three years 1933-35 —

Year ending 31st March	New business effected during the year		Total business remaining in force at the end of the year		Total income	Life Assurance fund at the end of the year
	Number of policies	Total sums assured	Number of policies	Total sums assured and bonuses		
1933	4,215	81,17,000	81,728	16,24,39,000	84,24,000	5,39,00,000
1934	5,292	1,05,90,000	87,494	17,36,47,000	88,43,000	5,93,78,000
1935	4,835	1,03,65,000	89,522	17,88,56,000	92,83,000	6,40,92,000

Fire, Marine and Miscellaneous Insurance Business—The net Indian premium income of all companies under insurance business other than life assurance during 1934 was 2½ crores of which the Indian companies share was 54 lakhs and that of the non Indian companies 193 lakhs. The total amount is composed of—

135 lakhs from fire

44 lakhs from marine, and

68 lakhs from miscellaneous insurance business

The Indian companies received—

29 ½ lakhs from fire,

7 ½ lakhs from marine, and

17 lakhs from miscellaneous insurance business. This sum does not include the premium income under business analogous to life business carried on by Indian companies on the dividing principle.

The total assets of Indian companies amount to 40½ crores of which stock exchange securities form the bulk. These securities are shown in the account at a net value of 27½ crores. Mortgage, loans on policies and on stocks and shares are shown at 5½ crores, land and house property are valued at 21½ crore deposits, cash and stamps, are shown at 1½ crore agents balances and other outstanding items at 2 crores, and loans on personal security and other miscellaneous assets at 11½ crore.

The huge growth of Indian Insurance business during recent years and various shortcomings which Indian insurance law is found to have in its provision for insurance business regulation have been recognised by the Government of India and by public opinion to require further legislation. Thus the Government of India have undertaken a Bill for the revision and amplification of the existing law has been drafted fully discussed with non official business opinion and passed through its initial stages in the Indian Legislature and is expected to come on for final discussion and passage there in September 1937.

Finance.

The gradual evolution of the present financial organisation of India is in many respects a reflection of her constitutional development. Those who take a broad view of the history of Federal States—and by whatever name it may be called India must in its political structure be a Federal State—nothing is more impressive than the ebb and flow in what may be called the adjustment of Federal and State rights. There is a constant mutation in the powers of the central government and the federal components, though in India we use the terms "Government of India" and "Provincial Governments" to describe them. In the earliest days of British rule, the Provinces, and especially the older Presidencies, were for all practical purposes independent of the central government and responsible only to the authority sitting in London. After the middle of the nineteenth century the process was reversed, and the Government of India was all powerful, controlling the Provinces down to the smallest items of their expenditure. This centralisation reached its highest point during the long Viceroyalty of Lord Curzon, who was so jealous of his supreme authority that he sought to deprive the Presidency Governors of their right to correspond direct with the Secretary of State for India. This system was found too heavy in the days of his successors and a continuous process of devolution set in. In the matter of finance the measures took the form of long term contracts with the Provincial Governments, and later in the assignment of definite heads of revenue to the Provincial Governments, thus removing the dual authority and responsibility which had clogged progress. A much clearer cut was made when the great reform scheme embodied in the Government of India Act of 1919 was passed. Here, for all practical reasons, Provincial finance was entirely separated from the finances of the Government of India, and with one reservation the Local Governments were made masters in their own financial houses. The reservation arose from the circumstance that the funds of the Government of India did not then permit them to do entirely without contributions from the Provinces. These contributions were fixed in the shape of definite sums, which the Provincial Governments had to find from their own resources and pay to the Government of India in cash. They varied between Province and Province, on a scale which at first sight seemed inequitable, but which had a definite logical basis. The total of these contributions was a little less than ten crores of rupees. This was admittedly a temporary expedient to last only so long as was necessary for the Government of India to reduce its post-war expenditure and develop its revenues to the point when they would balance without drawing from the Provinces. They were an open sore, each Province claiming that it paid an undue proportion of the total contribution, and that it was starved in consequence. There was no possibility of adjusting these differences, so the contributions were reduced as fast as the finances of the Government of India permitted. They finally disappeared from the Budget in 1923-29.

But this did not end the discussion. Indeed it was only the first phase. A large issue remains, and despite the extinction of the Provincial contributions the finances of some of the Provinces are in an unsatisfactory state. Broadly the issue may be put in this way. The Government of India has taken the growing heads of revenue those which issue from taxes on income and customs. The Provinces are left with resources which are either almost static, like land revenue, or which are actually declining, as with excise where steps are being taken to reduce the consumption of alcoholic liquor in response to the strong Indian sentiment towards prohibition. At the same time the Provinces are confronted with the great growing sources of expenditure, like those on education and sanitation which bulk largely in Provincial budgets.

A Review

The financial organisation was, of course reviewed as part of the work of the Round Table Conference. A sub-committee of the Federal Structure Committee was appointed under the chairmanship of Lord Peel to examine the question of federal finance and the principles embodied in the sub-committee's report were endorsed by the parent Committee as a suitable basis. A Federal Finance Committee with Lord Eustace Percy as Chairman was appointed at the end of 1931 to subject to the test of figures, the suggested classification of revenues by the Peel Committee and to estimate the probable financial position of the Federal and of the Provincial Governments under the proposed scheme. In the course of their report the Federal Finance Committee said that the transfer to the Provinces of taxes on income though defensible in principle would leave the Centre in deficit. Therefore the Peel Committee suggested a method of transferring to each Province a percentage of the share of income tax estimated to be attributable to it. But in view of the incomplete data on which the estimates were made a special review is said to be necessary at the time federation is established in order to fix the initial percentages. A strict allocation on a percentage basis would still leave some Provinces in deficit and so as to right their finances the committee suggested spreading the charge over the other Provinces by giving them back less income tax than they were entitled to.

Regarding possible new sources of revenue, Federal or Provincial, the Federal Finance Committee reported as follows —

Federal

Excise on Tobacco.—The present position in regard to this tax appears to be that a substantial revenue may be expected from a system of vend licenses and fees, but that an excise duty imposed in the near future could not be relied on to yield a substantial revenue. There is general agreement that such a duty could not be imposed on the cultivator, and it is doubtful whether a duty on the manufactured product could be successful while manufacture continues to be so largely carried on in small

establishments and even as a domestic industry. Vend licenses and fees can obviously be imposed only by the Governments of the Units, and their imposition by the Provincial Governments is now being encouraged by the Government of India. The difficulties in the way of a federal excise may be overcome in course of time, but it would be unsafe for us to rely on this in the near future.

Excise on Matches—The imposition of an excise duty on matches is already under active consideration, and we feel justified in contemplating the existence of such a duty from the outset of federation. We are advised that the probable net yield of the tax for all India at a reasonable rate, with due allowance for reduced consumption, would be about 3 crores, of which at least 2.50 crores would be raised in British India.

Other Excises—It is possible that other excise duties may occupy an important place in the fiscal Policy of India in the future, but we do not feel warranted in relying upon the introduction of such measures in the early years of federation.

Monopolies—We have examined the suggestion made at the Round Table Conference that federal revenues should be augmented by a few selected monopolies. From the fiscal point of view it is only in very special circumstances that a monopoly, whether of production, manufacture or sale, is to be preferred to an excise duty as a means of raising revenue. Except in so far as the proposals already noticed in regard to tobacco may be regarded as a monopoly, we can suggest no new commodity to which the monopoly method could be applied with advantage. The manufacture of arms and explosives which has been suggested as a possible monopoly is already subject to licence. Public utility monopolies stand on rather a different footing but the only new federal monopoly of this kind that has been suggested to us is broadcasting, the revenue from which must be entirely problematical.

Commercial Stamps—In the Peel Report it was observed that "There is much to be said for federalising Commercial Stamps on the lines of various proposals made in the past, but no definite recommendation was made. We have examined this suggestion, but on the whole we cannot recommend it, at least as an immediate measure."

In proposing that the proceeds of commercial stamps should be assigned to the Units, we have to some extent been influenced by a doubt whether the problems arising from the imposition of federal stamp duties in the States might not be disproportionate to the revenue involved. We do not, however, wish to prejudice the possibility that, as part of the general federation settlement with the States, it might be found desirable to include these duties among the sources of federal revenue. This consideration might well outweigh the reasons which have led us to recommend that commercial stamps should not be made a source of federal revenue.

Corporation Tax—From the financial point of view, it seems clear that, if a corporation tax were imposed on companies registered in

the States on the same basis as the present super tax on companies in British India the yield at present would be negligible.

Provincial

Taxation of Tobacco—We have already dealt briefly with this question and have suggested that the taxation of tobacco, otherwise than by excise on production or manufacture, should rest with the Units, but that the Federal Government should be given the right to impose a general federal excise. This distinction is, we think, justified by the fact that *ex hypothesi* the introduction of excise duties on manufacture will be difficult if not impossible, until manufacture becomes more highly industrialised, and as that development takes place an excise levied at the factory by one Unit of the Federation would be a tax on consumers in other Units. It will be seen from our later proposals in regard to powers of taxation that the federalisation of tobacco excise would not preclude the Federal Government from assigning the proceeds to the Units, if it so desired.

There is, unfortunately, no material which would enable us to estimate the yield of any of these forms of taxation. The provincial taxes will take some time to mature, but eventually they may be expected to form at least a very useful additional source of provincial revenue.

Succession Duties—Bombay is, we believe, the only Provincial Government which has attempted legislation for the imposition of succession duties and the attempt was unsuccessful. We understand that even that Government would have preferred that legislation should have been undertaken by the Government of India. We propose elsewhere that succession duties should be classed among taxes leviable by the Federal Government for the benefit of the Units but clearly the States would not justify reliance on them as a source of revenue in the near future.

Terminal Taxes—We have been asked to weigh the issues which arise from the proposal to introduce terminal taxes generally as an additional source of revenue for the Provinces. We are not prepared to regard terminal taxes as a normal source of revenue.

Taxation of Agricultural Incomes—We have not considered the broad issues of policy involved in the taxation of agricultural incomes but we have considered, as we were commissioned to do the more limited question of "the possibility of empowering individual Provinces, if they so desire, to raise, or appropriate the proceeds of a tax on agricultural incomes." In view of the close connection between this subject and land revenue, we agree that the right to impose such taxation should rest with the Provinces. For the same reason, we think that this right should be restricted to the taxation of income originating in the Province concerned. There will presumably be no difficulty in drafting into the constitution a definition of agricultural income which has so long been recognised in Indian income tax law and practice.

We are not prepared to express a final opinion as to whether agricultural and non agricultural income should be aggregated for the purpose of determining the right of the assessee to exemption

and the rate of taxation to which he is liable on either section of his income, and we doubt whether any provision need be inserted in the constitution on this point since we are advised that, in practice, it would scarcely be possible for either the Federal or a Provincial Government to take into consideration income not liable to taxation by it, except with the consent and co-operation of the other Government.

We are aware of no reliable data for estimating the yield of such taxation.

Niemeyer Report

A necessary prelude to the introduction of the Constitutional Reforms was an investigation of their safety in the light of the financial situation and prospects of India. The investigation was carried out by Sir Otto Niemeyer whose report was published in April 1936. The Report proposed immediate financial assistance from the beginning of provincial autonomy to certain provinces partly in the form of cash subventions and partly in the form of cancellation of the net debt incurred previous to April 1, 1936, and partly in the form of distribution to the jute growing provinces of a further 12½ per cent of the jute tax.

Annual cash subventions are as follows: To the U P Rs 25 lakhs for 5 years only, to Assam Rs 30 lakhs, to Orissa Rs 40 lakhs, to the N W F Province Rs 100 lakhs (subject to reconsideration after 5 years), and to Sind Rs 105 lakhs to be reduced by stages after 10 years.

The total approximate annual relief in lakhs aimed at by Sir Otto Niemeyer is as follows:—Bengal Rs 75, Bihar Rs 25, C P Rs 15, Assam Rs 45, N W F Province Rs 110, Orissa Rs 50, Sind Rs 105, and U P Rs 25, extra recurrent cost to the centre Rs 192 lakhs.

Orissa is to get a further non recurrent grant of Rs 19 lakhs and Sind of Rs 5 lakhs by six equal steps beginning from the sixth year from the introduction of provincial autonomy, but subject to the proviso to section 138 (2) of the Act. The centre is to distribute the income tax to the provinces so that finally 50 per cent of the distributable total has been relinquished in the intermediate five years, so long as the portion of the distributable sum remaining with the centre, together with any contribution from the Railways, aggregates 13 crores.

As regards the provincial share of the proceeds from income tax, Sir Otto Niemeyer recommended that half of the proceeds should remain with the Centre, while the other half should be distributed among the provinces on the following percentage division:—Madras 15, Bombay 20, Bengal 20, U P 15, Punjab 3, Bihar 10, C P 5, Assam 2, N W F Province 1, Orissa 2 and Sind 2.

Sir Otto Niemeyer suggested that the Centre would not be in a position to distribute any part of income tax proceeds for the first five years from beginning of provincial autonomy but that it might be in a position to distribute some of the proceeds, though not necessarily the percentage allocated, within the first ten years of provincial autonomy. But this, he

said, largely depended on the financial condition of the railways and their ability once again to contribute to general revenues. His remarks on this point are—

“The position of the railways is frankly disquieting. It is not enough to contemplate that in five years time the railways may merely cease to be in deficit. Such a result would also tend to prejudice or delay the relief which the provinces are entitled to expect.”

“I believe that both the early establishment of effective co-ordination between the various modes of transport and the thorough going overhaul of railway expenditure in itself are vital elements in the whole provincial problem.”

Railway Finance—The year 1924-25 was marked by a step of great importance in the better organisation of Indian finance. As is explained in detail under the section Railways (*q v*) the Government of India is a great railway owner. It owns and operates itself a very large proportion of the railway system through what are called State Railways. It is the principal shareholder in other lines which are leased to Companies which operate them. Prior to the year in question, the railway finances were incorporated in the general finances of the country. The effects of this were unfortunate. As the finances of a State are not managed on commercial lines, the railways were not conducted on commercial principles. Then the annual allotments to railway expenditure were not determined by the needs of the railways themselves, but by the amount at the disposal of the Government of India. The evil effects of this policy were forcibly exposed in the report of a strong committee of investigation, usually called after the name of its chairman, the Acworth Committee, which recommended the entire separation of the Railway Budget from the general finances. Some delay incurred in giving effect to this recommendation, but it was carried out in the year 1924-25. The bases of the settlement were complete separation of finance, a definite annual contribution from the railway revenues to the general revenues, and the creation of a Standing Finance Committee of the Legislative Assembly to review estimates of railway expenditure before they are placed before the Assembly. The railway contribution was settled on the basis of one per cent on the capital at charge, plus one fifth of the surplus profits further, if after the payment of the contributions so fixed the amount available for transfer to Railway Reserves exceeds the sum of Rs 8 crores, one third of the excess should be paid to the General Revenues. The effects of this change are expected to yield to the General Revenues a fixed contribution from the railway property instead of a varying figure destructive of accurate budgeting, and to give to the railways the usufruct of their operation and secure management and development on commercial principles.

In the past few years, owing to the economic depression, the railways have been unable to make the contribution to general revenues.

In the Railway Budget of 1937-38 it was proposed that Rs 31 crores borrowed from the depreciation fund should be wiped out and that the accumulated liability of Rs 31 crores to general revenues should be excused.

I RECENT INDIAN FINANCE

The year 1924 marked a distinct and very important stage in the finances of India. Those who have studied the history of Indian finance will remember the general trend of the country's balance sheet. Up to the outbreak of the war it was a record of very careful finance, with a general surplus of revenue over expenditure, all such surpluses, save when they were in the nature of 'windfalls' going to the avoidance of debt. Throughout the war the finances were carefully handled and with certain moderate increases in taxation the accounts were made to balance. But commencing in 1919 a lamentable change came over the situation. The wanton invasion of India by Afghanistan meant a war which cost the exchequer directly some 34 crores of rupees. Nor was this all. Whilst the military resistance of Afghanistan to the Indian forces was contemptible, and Kabul lay open to easy seizure if it had been thought worth while to occupy it, the effect of this attack was to set a large part of the North-West Frontier ablaze and to thrust on the Government of India a series of costly expeditions. When these were completed, there remained the necessity of establishing a new Frontier system to take the place of that which collapsed in 1919. This especially in the notoriously troublesome country of Waziristan, (*q v* Frontier) involved the occupation of certain dominating posts and of connecting them with each other and with the advanced military stations of India by a series of very expensive roads. This abnormal expenditure dislocated the financial equilibrium of the whole country. Nor is it possible to acquit the Finance Department of the Government of India in the difficult post-war period of a relaxation of that close control of expenditure which in previous years had balanced the accounts, even in the years of famine and plague. The result was that the accumulated deficits of the Government of India reached the very high figure of Rs 100 crores. This led to two results.

Retrenchment and Taxation—Owing to the insistent demand for retrenchment the Government of India appointed in 1922 a retrenchment committee, on the model of the

Geddes Committee which overhauled the extravagant post-war expenditure of the British Government. This committee is generally called after its chairman, the Inchcape Committee. It sat in 1923, and presented a report which recommended reductions in expenditure which amounted in the aggregate to Rs 18 crores.

Financial equilibrium was established and surplus realised in the Budget of 1923-24.

Statement comparing the actual Revenue and Expenditure of the Central Government since 1921-22

Year	In lakhs of Rupees		
	Revenue	Expenditure	Surplus(+) Deficit(—)
1921-22	78.43	1,06.08	—27.65
1922-23	85.74	1,00.76	—15.02
1923-24	97.11	94.72	+2.39
1924-25	96.38	90.70	+5.68
1925-26	93.39	90.08	+3.31

(Revised)			
1937-38	77.97	77.90	+7
(Budget)			

(a) Excludes share of additional revenue from import and excise duties on motor spirit payable to Road Development Fund

(b) A surplus of 2.96 was transferred to Revenue Reserve Fund

(c) A deficit of 2.22 was met by transfer from Revenue Reserve Fund

(d) A deficit of 1.06 was met to the extent of 74 by transfer from Revenue Reserve Fund

(e) A surplus of 1.84 transferred to Revenue Reserve Fund

II. THE PRESENT FINANCIAL POSITION

India, in common with other countries of the world, felt the full force of the economic blizzard which began in 1930 and attained its maximum the following year. The net result from the Government of India's point of view was the introduction during 1931 of two Budgets, the ordinary Budget in the spring of the year and a supplementary Budget containing fresh taxation proposals in September. When Sir George Schuster faced the Legislative Assembly at the end of February, he had a sorry tale to tell. Trade depression, coupled with civil disobedience movement, had completely vitiated the estimates made for 1930-31. These estimates showed a surplus of Rs 86 lakhs, the revised estimates worked up to a deficit of Rs 13.56 crores, which the Finance Member said would remain uncovered and would be added to the unproductive debt.

Turning to the estimates for 1931-32, the Finance Member said they must face a fall in tax revenue, as compared with the current Budget estimates, of no less than Rs 13.16 crores, including a drop of Rs 8 crores in Customs and 4½ crores in income tax. The total deterioration under Finance headings was Rs 376 lakhs and on commercial departments Rs 118 lakhs. This meant a total deterioration of Rs 18.10 crores as compared with the Budget estimates for the current year, and as those provided for a surplus of Rs 86 lakhs the net deficit would be Rs 17.24 crores. To meet this deficit the Finance Member announced a cut of Rs 175 lakhs in army expenditure and retrenchment to the extent of Rs 93 lakhs in civil expenditure, making a total saving of Rs 278 lakhs. The estimated deficit was reduced thereby to Rs 14.51 crores, which he proposed to cover by fresh taxation.

WAYS AND MEANS

The following is a summary of the estimates of ways and means in India during 1936-37 and 1937-38 —

(In crores of rupees)

	Budget, 1936-37	Revised, 1936-37	Budget, 1937-38
RECEIPTS			
Excess of Revenue of the Central Government over			
Expenditure charged to Revenue	31 38	29 16	30 59
Treasury Bills issued (net)	11 00	— 2 44	4 00
Unfunded Debt incurred—			
(a) Post Office Cash Certificates (net)	— 50	— 75	— 1 50
(b) Post Office Savings Bank deposits (net)	8 25	7 50	8 00
(c) Other Savings Bank deposits (net)	6 65	6 16	4 21
Appropriation for reduction or avoidance of debt	3 00	3 00	3 00
Railway Depreciation Fund	2 84	5 80	6 59
Posts and Telegraphs Renewals Reserve Fund	14	— 03	05
Discount Sinking Fund	67	67	70
Defence Reserve Fund	— 82	01	— 1 42
Revenue Reserve Fund			— 1 84
Miscellaneous Deposits and Remittances (net)	49	2 50	1 64
TOTAL RECEIPTS	63 10	61 58	54 02
DISBURSEMENTS			
Capital Expenditure not charged to Revenue—			
(a) State Railways	1 53	— 50	90
(b) Posts and Telegraphs	42	45	63
(c) Other items	73	67	57
			11
Permanent Debt discharged	20	31	34
Civil Aviation	48	30	
Economic development and improvement of rural areas	95	95	80
Broadcasting		— 17	18
Development in tribal areas on the North West Frontier		— 02	05
Sind and Orissa Buildings		43	
Fund for reconstruction of earthquake damage (Bihar)	70	1 00	
Post Office Cash Certificate Bonus Fund	1 00	95	1 51
Payment to Reserve Bank for surplus silver			5 00
Loans by the Central Government—			
(a) To Provincial Loans Fund or Provincial Governments	3 98	2 22	— 1 60
(b) Other Loans	50	— 66	— 1 10
Remittances between England and India—	— 03	58	— 3 25
Transfers through the Reserve Bank (net)	54 64	54 9	47 45
Balance of Provincial Governments	— 1 98	65	10 60

NET DISBURSEMENTS	02	10 37	8 17
New Loan		12 01	
Reduction (+) or increase (—) of cash balance	+ 02	— 1 64	+ 8 17
Opening Balance	12 51	14 62	16 16
Closing Balance	12 49	16 16	7 99

Supplementary Budget—It soon became evident that the worsening of the trade depression had seriously vitiated the revenue estimates in the February budget, and in September Sir George Schuster came before the Legislative Assembly with a Supplementary Finance Bill. He proposed to deal with the situation on three distinct lines, firstly, to reduce expenditure, secondly, to impose an emergency cut in salaries, and thirdly, to impose fresh taxation.

The 1932-33 Budget—Presenting the 1932-33 budget on March 7th, 1932, the Finance Member explained that the circumstances were somewhat unusual. The supplementary budget had been introduced only six months earlier. He did not, therefore, propose to ask the House at the present stage to approve any extensions or modifications of the plan for raising revenue put forward in September 1931.

The 1933-34 Budget—In introducing the budget, the Finance Member summarised the results for the two previous years. He estimated the general position for 1933-34 to be the same as for the current year, neither better nor worse, and in particular that India would be able to maintain the same purchasing power for commodities imported from abroad.

The 1934-35 Budget—In order to provide an even balance for 1934-35 it was necessary to find means of improving the position to the extent of Rs 153 lakhs.

Changes in Duties—The Finance Member announced the imposition of an excise duty on sugar.

Silver—A reduction in the silver import by 2½ annas to 5 annas per ounce.

Export Duty on Hides—The export duty on raw hides was abolished by the 1934-35 budget.

Excise on Matches—Announcing that the Government intended to hand over half the jute export duty to the jute producing Provinces, the Finance Member said that the Government of India would recoup their losses by imposing a levy on matches at the rate of Rs 2.40 per gross of boxes on matches made in British India.

Posts and Telegraphs—Favourable changes in postal and telegraph charges were announced.

The 1935-36 Budget—This Budget was expected to show a surplus of Rs 150 lakhs available for tax reduction.

Silver—The silver duty was reduced to 2 annas an ounce.

Export Duty on Skins—The export duty on raw skins was abolished.

Reduction of Taxes on Income—"We still have," said the Finance Member, "Rs 1.42 lakhs left to dispose of and I propose to do this in accordance with the pledge of my predecessor in which he said 'Relief must come first in restoring the emergency cuts in pay and secondly in taking off the surcharge on the income tax now to be imposed'."

"Although the tax on smaller incomes was not strictly a surcharge, it does, I think, come within the spirit of the pledge and I propose to deal with it and the surcharges on income tax and super tax together. The removal of the surchar-

ges altogether would cost Rs 3.34 lakhs a year while the removal of the tax on incomes between Rs 1,000 and Rs 2,000 would cost a further Rs 75 lakhs. Clearly with a surplus of Rs 1.42 lakhs only we cannot remove the whole of the two surcharges and the quasi surcharge but what we can do is to reduce them by one third and this is what I in fact propose. The cost will be Rs 1.36 lakhs leaving us with a purely nominal surplus of Rs 6 lakhs."

Treatment of 1934-35 Surplus—The surplus for 1934-35 turned out to be much larger than originally budgeted, totalling Rs 389 lakhs.

"After out of this sum," the Finance Member said, "these special grants have been made there should remain a balance of Rs 2.04 lakhs. A large part of this sum I propose to put aside for two schemes which it was provisionally decided to finance from capital. These are the civil aviation programme, which is expected to cost Rs 93 lakhs, and the transfer of the Pusa Institute to Delhi which will cost about Rs 36 lakhs. The remainder of the surplus amounting to Rs 75 lakhs will now go as an additional allotment for the reduction of debt and thus concludes the disposal of the sums which we expect to have in hand on the 31st March next."

Revenue in 1935-36—Concerning the revenue for 1935-36 the Finance Member said:

The total revenue, excluding Railways, may be at Rs 90.19 lakhs or Rs 81 lakhs less than the revised estimate for the current year."

Customs, etc.—"Here I estimate for Rs 51.92 lakhs altogether or an increase of Rs 75 lakhs over the revised figures for the current year. The main variations are a decline of Rs 2 crores on the import duty on sugar combined with increases of Rs 35 lakhs on the sugar excise of Rs 65 lakhs on the match excise and of Rs 43 lakhs on kerosene and Petrol."

1935-36 Expenditure—"Expenditure as a whole, again excluding Railways, stands at Rs 88.69 lakhs showing an increase of Rs 96 lakhs which is of course almost entirely due to the restoration of the pay cut."

Defence—"The Defence Budget shows an increase leaving out of account the pay cut, of Rs 7 lakhs over the original estimate for this year but the partial restoration by His Majesty's Government of the pay cuts of British soldiers which has necessarily to be applied to British soldiers on the Indian establishment, accounts for Rs 5 lakhs of this. The purely nominal increase of Rs 2 lakhs which remains conceals however a considerably increased provision for necessary services and re-equipment which had to be postponed during the financial emergency."

Reduction of Debt—"There is only one other item which I wish specifically to mention at this stage and that is the provision for the reduction and avoidance of debt. As Hon. Members are aware, our revised estimates for 1933-34 and those for the current financial year included only Rs 3 crores for this purpose. It is of course a matter of common knowledge that 60 per cent. of the Government of India debt is attributable to the Railways and it seems to me that it would be imposing too heavy a burden on the general Budget to revert to

the Sinking Fund arrangements in force prior to 1934-35 before the Railways have resumed the practice of making a contribution to the General Revenues I therefore accept as reasonable for the time being the provision of Rs 3 crores now prevailing but I should like to make it clear that, in my view, an increased provision for debt reduction ought to be a first charge on any contribution from the Railways in the future

Decision—The Finance Bill was subjected to a protracted debate in the Legislative Assembly

On April 5, His Excellency the Viceroy returned the Finance Bill to the Assembly with the recommendation that it should be passed in the original form. This the Assembly declined to do by rejecting the Finance Member's motion for the restoration of the salt duty to Rs 1 4, by 64 votes to 41.

The Finance Bill was thereupon certified by the President and sent to the Council of State in its original form.

The 1936-37 Budget—In opening the 1936-37 budget the Finance Member announced that the final accounts for 1934-35 had exceeded the anticipated surplus of Rs 327 lakhs and had actually provided a surplus of Rs 4.95 lakhs. The revised forecast for 1935-36 also anticipated a surplus of Rs 242 lakhs. For 1936-37 the revenue expected was Rs 87.3 lakhs.

Customs, etc.—Here the receipts are estimated at Rs 54.82 lakhs. This figure presumes a deterioration of Rs 1.60 lakhs under the import duty on sugar and an all round improvement of Rs 1.71 lakhs under other heads.

Expenditure—The total figure for expenditure exclusive of Railways is Rs 85.30 lakhs showing an increase of Rs 1.20 lakhs over the current year's revised estimate.

Defence—The Defence Budget stands at the figure of Rs 45.45 lakhs. Of this, however, Rs 60 lakhs is a special provision for the reconstruction of Quetta and the replacement of military stores consumed in connection with the earthquake. The ordinary Budget is therefore Rs 44.85 lakhs of which Rs 18 lakhs is for new measures. The total figure for the present year is Rs 44.98 lakhs but this includes Rs 34 lakhs for Indian Military Service Family Pensions which, as I explained in dealing with the interest heads, is omitted from the Defence budget of next year. The comparable figures for the two years are therefore Rs 44.64 lakhs and Rs 44.85 lakhs. The real increase is thus Rs 21 lakhs and this is more than accounted for by two items. Rs 5 lakhs represents the restoration of the remaining half of the cut in pay of British soldiers which was not budgeted for in 1935-36 and Rs 20 lakhs on increased provision for ordnance stores.

In regard to the latter I must reiterate the warnings which have been given in this connection in recent years that the present budget figures do not represent a new permanent low level of Defence expenditure. The surplus stocks of ordnance stores the existence of which in the past has tended to keep down the budget are approaching exhaustion and the time has now come at which expenditure under this head must inevitably rise.

Revenue.—The estimated revenue for 1936-37 was given in the budget speech as Rs 87.35 lakhs.

The Finance Member then announced that the remaining sum of Rs 1.97 lakhs from 1935-36 would be transferred to a revenue reserve fund to help out the finances of the first year of Provincial Autonomy. Of the surplus for 1936-37 he said:

The most insistent demand with which I am confronted is the claim for the abolition of the emergency taxes upon income, and the House knows there exist certain pledges upon this subject given by my predecessor. The complete removal of the present surcharge of one sixth on income tax and supertax would cost Rs 2.76 lakhs per annum, while the abolition of the tax on incomes between Rs 1,000 and Rs 2,000, which, as I said last year, must also be included in the emergency class, would cost Rs 47 lakhs. It is obvious that, if we are limited to surrendering no more than Rs 2 crores yearly we cannot meet the demand for the abolition in full. But we can go a good way towards it, and we propose to abolish the tax on lower incomes and to halve the present surcharge, leaving it in future at one twelfth. In other words, we shall, in the last two years, have removed surcharges on income tax and supertax by two thirds. The cost of the proposed reduction is Rs 1.85 lakhs and the surplus for 1936-37 is reduced to Rs 20 lakhs accordingly.

With no more than Rs 20 lakhs left in hand, we can clearly make no further substantial cut in taxation, and we propose therefore, to make a postal concession which though inexpensive, will, we believe, be generally welcomed, if not gratefully received. This is the increase in weight of the one anna letter from half to one tola and the adoption of a scale of an additional half anna for every additional tola. It will cost Rs 13 lakhs yearly and it will absorb all but Rs 2 lakhs of the expected surplus on the Post and Telegraphs budget.

The 1937-38 Budget—Shortly the story of the 1937-38 Budget speech was that for the year about to close an anticipated surplus of Rs 6 lakhs had turned into a deficit of Rs 197 lakhs. This disappointment was largely due to smaller receipts from customs and income tax. For the year about to open it was shown that it was necessary to fill up a gap of Rs 158 lakhs, which would have been Rs 342 lakhs except for an amount available in the revenue reserve fund.

Customs—The budget estimate is Rs 44.66 lakhs against the current year's revised of Rs 46.73 lakhs, in other words, a decrease of Rs 2.07 lakhs. If, however, the loss of Rs 4.26 lakhs due to the separation of Burma, is excluded the estimate for next year provides for an improvement over the current year's revised forecast of Rs 2.19 lakhs, which is distributed over a large number of items.

Expenditure—The total figure for expenditure, excluding Railways, is Rs 83.41 lakhs or Rs 8 lakhs more than the revised estimate for the current year. But as the two constitutional changes are expected to produce an increase of Rs 42 lakhs there is really a net reduction of Rs 34 lakhs over the remainder of the field.

Interest.—Interest payments show a net reduction of about Rs 87 lakhs, largely due to a considerable diminution in "Bonus on Post Office Cash Certificates". There is also a saving due to the repayment of the 5½ per cent sterling loan, but the main benefit of this accrues to the Railways and other borrowers. The separation of Aden will produce a saving of Rs 20 lakhs a year which accrues to the Defence Budget.

Defence.—The Defence Estimates total Rs 44.62 lakhs. Of this Rs 43.87 lakhs relates to ordinary expenditure and Rs 75 lakhs to expenditure on the rebuilding of Quetta.

Changes.—The changes proposed by the Budget are as shown in the Finance Bill. The object of this Bill is to continue for a further period of one year certain duties and taxes imposed under the Indian Finance Act of 1936, which would otherwise cease to have effect from April 1, 1937, and to increase import and excise duties on silver and sugar.

Clause 2 provides for the continuance for a further period of one year of the existing provisions regarding salt duty. The duty of Rs 1 4 per maund of salt remains liable to an additional duty imposed under section 5 of the Indian Finance (Supplementary and Extending) Act of 1931.

Clause 3 provides for an increase in the excise duty on *khandasari* sugar from ten annas

per cwt to Rs 1 5 per cwt, and on sugar other than *khandasari* or palmyra from Rs 1-5 per cwt to Rs 2 per cwt.

Clause 4 provides for an increase in the import duty (1) on sugar from Rs 9 10 per cwt to the rate at which the excise duty is for the time being leviable on sugar other than *khandasari* or palmyra plus Rs 7 4 per cwt and (2) on silver from two annas an ounce to three annas an ounce.

Clause 5 provides for an increase in the excise duty on silver corresponding to the increase in import duty.

Clause 6 provides for the continuance for a further period of one year of the present inland postage rates with the following alterations:

(1) Book pattern and sample packets.—The present rate is nine ples for the first five tolas and six ples for every additional five tolas. It is proposed to reduce the rate to six ples for the first 2½ tolas and three ples for every additional 2½ tolas.

(2) Parcels.—It is proposed to eliminate the rate of two annas for parcels weighing 20 tolas so that all parcels weighing 40 tolas or less will be charged four annas.

Clause 7 provides for the continuance for a further period of one year of the existing rates of income tax and super tax.

General Statement of the Revenue and Expenditure

	Revised Estimate, 1936-37	Budget Estimate, 1937-38
	Rs	Rs
REVENUE—		
Customs and Excise	51,22,50,000	49,76,50,000
Taxes on Income	15,30,00,000	14,30,00,000
Salt	8,85,00,000	8,25,00,000
Opium	47,31,000	49,52,000
Other Heads	96,85,000	94,04,000
TOTAL—PRINCIPAL HEADS	76,81,46,000	73,75,06,000
Railways Net Receipts (as per Railway Budget)	31,06,55,000	30,13,74,000

SURPLUS		7,17,000
TOTAL	1,20,90,28,000	1,19,41,88,000

THE LAND REVENUE.

The principle underlying the Land Revenue system in India has operated from time immemorial. It may be roughly formulated thus—the Government is the supreme landlord and the revenue derived from the land is equivalent to rent. On strict theoretical grounds, exception may be taken to this statement of the case. It serves, however, as a substantially correct description of the relation between the Government and the cultivator. The former gives protection and legal security. The latter pays for it according to the value of his holding. The official term for the method by which the Land Revenue is determined is "Settlement." There are two kinds of settlements in India—Permanent and Temporary. Under the former the amount of revenue has been fixed in perpetuity, and is payable by the landlord as distinguished from the actual cultivator. The Permanent Settlement was introduced into India by Lord Cornwallis at the close of the eighteenth century. It had the effect intended of converting a number of large revenue farmers in Bengal into landlords occupying a similar status to that of landowners in Europe. The actual cultivators became the tenants of the landlords. While the latter became solely responsible for the payment of the revenue, the former lost the advantage of holding from the State. This system has prevailed in Bengal since 1795 and in the greater part of Oudh since 1859. It also obtains in certain districts of Madras.

Elsewhere the system of Temporary Settlements is in operation. At intervals of thirty years, more or less the land in a given district is subjected to a thorough economic survey, on the basis of the trigonometrical and topographic surveys carried out by the Survey Department of the Government of India. Each village area, wherever the Temporary Settlement is in vogue, has been carefully mapped, property-boundaries accurately delineated, and records of rights made and preserved. Under the Permanent Settlement in Bengal the occupant does not enjoy these advantages. The duty of assessing the revenue of a district is entrusted to Settlement Officers, members of the Indian Civil Service specially delegated for this work. The duties of a Settlement Officer are thus described in Strachey's *India* (revised edition, 1911):—"He has to determine the amount of the Government demand and to make a record of all existing rights and responsibilities in the land. He has a staff of experienced subordinates, almost all of whom are natives of the country, and the settlement of the district assigned to him is a work which formerly required several years of constant work. The establishment of agricultural departments and other reforms have however led to much simplification of the Settlement Officer's Proceedings, and to much greater rapidity in the completion of the Settlements. All the work of the Settlement Officer is liable to the supervision of superior officers, the

assessments proposed by him require the sanction of the Government before they become final in binding and his judicial decisions may be reviewed by the Civil Courts. It is the duty of the Settlement Officer to make a record of every right which may form the subject of future dispute, whether affecting the interests of the State or of the people. The intention is to alter nothing, but to maintain and place on record that which exists.

The Two Tenures

Under the Temporary Settlement land tenures fall into two classes—peasant holdings and landlord holdings, or *Ryotwari* and *Zemindari* tenures. Broadly speaking, the difference between the two in a fiscal sense is that in *Ryotwari* tracts the *ryot* or cultivator pays the revenue direct. In *Zemindari* tracts the land lord pays on a rental assessment. In the case of the former, however, there are two kinds of *Ryotwari* holdings—those in which each individual occupant holds directly from Government, and those in which the land is held by village communities, the heads of the village being responsible for the payment of revenue on the whole village area. This latter system prevails in the North. In Madras, Bombay, Burma and Assam, *ryotwari* tenure is on an individual basis, and the Government enters into a separate agreement with very single occupant. The basis of assessment on all classes of holdings is now more favourable to the cultivator than it used to be. Formerly what was believed to be a fair average sum was levied on the anticipated yield of the land during the ensuing period of settlement. Now the actual yield at the time of assessment alone is considered, so that the cultivator gets the whole of the benefit of improvements in his holding subsequently brought about either by his own enterprise or by unearned increment. The Government, however, may at a new settlement reclassify a holding so as to secure for itself a fair share in an increment that may have resulted from public works in the vicinity, such as canals and railways, or from a general enhancement of values. But the principle that improvements effected by private enterprise shall be exempt from assessment is now accepted by the Government and provided for in definite rules.

Incidence of the Revenue

The incidence of the revenue charges varies according to the nature of the settlement, the class of tenure, and the character and circumstances of the holding. Under the Permanent Settlement in Bengal Government derive rather less than £3,000,000 from a total rental estimated at £12,000,000. Under Temporary Settlements, 50 per cent of the rental in the case of *Zemindari* land may be regarded as virtually a maximum demand. In some parts the impost falls as low as 35 and even 25 per cent and only rarely is the proportion of one-half the rental exceeded. In regard to *Ryotwari* tracts it is impossible to give any figure that would be generally representative of the Government's share. But one-fifth of the gross produce is the extreme limit, below which the incidence of the revenue charge

varies greatly. About sixteen years ago the Government of India were invited in an influential signed memorial to fix one-fifth of the gross produce as the maximum Government demand. In reply to this memorial and other representations the Government of India (Lord Curzon being Viceroy) issued a Resolution in defence of their Land Revenue Policy. In it was stated that 'under the existing practice the Government is already taking much less in revenue than it is now invited to exact' and 'the average rate is everywhere on the down grade.' This Resolution, together with the statements of Provincial Governments on which it was based, was published as a volume, it is still the authoritative exposition of the principles controlling the Land Revenue Policy of the Government of India. In a series of propositions claimed to be established by this Resolution the following points are noted—(1) In *Zemindari* tracts progressive moderation is the keynote of the Government's policy, and the standard of 50 per cent of the assets is more often departed from on the side of deficiency than excess. (2) In the same areas the State does not hesitate to interfere by legislation to protect the interests of the tenants against oppression at the hands of the landlords, (3) In *Ryotwari* tracts the policy of long term settlements is being extended, and the proceedings in connection with new settlements simplified and cheapened, (4) local taxation (of land) as a whole is neither immoderate nor burdensome, (5) over-assessment is not, as alleged, a general or widespread source of poverty, and it cannot fairly be regarded as a contributory cause of famine. At the same time the Government laid down as principles for future guidance—(a) large enhancements of revenue when they occur, to be imposed progressively and gradually, and not *per saltum*, (b) greater elasticity in revenue collection, suspensions and remissions being allowed according to seasonal variations and the circumstances of the people, (c) a more general resort to reduction of assessments in cases of local deterioration.

Protection of the Tenants

In regard to the second of the five propositions noted above, various Acts have been passed from time to time to protect the interests of tenants against landlords, and also to give greater security to the latter in possession of their holdings. The Oudh Tenancy Act of 1886 placed important checks on enhancement of rent and eviction, and in 1900 an Act was passed enabling a landowner to entail the whole or a portion of his estate, and to place it beyond the danger of alienation by his heirs. The Punjab Land Alienation Act, passed at the instance of Lord Curzon, embodied the principle that it is the duty of a Government which derives such considerable proportion of its revenue from the land, to interfere in the interests of the cultivating classes. This Act greatly restricted the credit of the cultivator by prohibiting the alienation of his land in payment of debt. It had the effect of arresting the process by which the Punjab peasantry were becoming the economic serfs of money-lenders. A good deal of legis-

lation affecting land tenure has been passed from time to time in other provinces, and it has been called for more than once in Bengal where under the Permanent Settlement (in the words of the Resolution quoted above) "so far from being generously treated by the Zemindars, the Bengal cultivator was racked rented impoverished, and oppressed."

Government and Cultivator

While the Government thus interferes between landlord and tenant in the interests of the latter, its own attitude towards the cultivator is one of generosity. Mention has already been made of the great advantage to the agricultural classes generally of the elaborate systems of Land Survey and Records of Rights carried out and maintained by Government. In the Administration Report of Bombay for 1911-12, it is stated—"The Survey Department has cost the State from first to last many lakhs of rupees. But the outlay has been repaid over and over again. The extensions of cultivation which have occurred (by allowing cultivators to abandon unprofitable lands) have thus been profitable to the State no less than to the individual whereas under a *Zemindari* or kindred system the State would have gained nothing, however

much cultivation had extended throughout the whole of 30 years' leases." On the other hand, the system is of advantage to the *ryots* in reducing settlement operations to a minimum of time and procedure. In the collection of revenue the Government constantly pursues a generous policy. In times of distress, suspensions and remissions are freely granted after proper inquiry.

Land revenue is now a provincial head of revenue and is not shown in the All-India accounts. It may be taken roughly at £28 million, as compared with £84 million said to have been raised annually by Aurungzebe from a much smaller Empire.

The literature on the subject is considerable. The following should be consulted by readers who require fuller information—"Land Revenue Policy of the Indian Government," 1902 (Superintendent of Government Printing), Baden Powell's "Land Systems of British India," Sir John Strachey's "India, its Administration and Progress, 1911," (Macmillan & Co.), M. Joseph Chaillev's "Administrative Problems of British India" (Macmillan & Co 1910), and the Annual Administration Reports of the respective Provincial Governments.

EXCISE

The Excise revenue in British India is derived from the manufacture and sale of intoxicating liquors, hemp drugs, toddy and opium. It is a common place amongst certain sections of temperance reformers to represent the traffic in intoxicating liquors as one result of British rule. There is, however, abundant evidence to show that in pre-British days the drinking of spirituous liquors was commonly practised and was a source of revenue.

The forms of intoxicating liquor chiefly consumed are country spirit, fermented palm juice, beer made from grain, country brands of rum, brandy, etc., locally manufactured malt beer and imported wine, beer and spirits. Country spirit is the main source of revenue, except in the Madras Presidency, and yields about two thirds of the total receipts from liquors. It is usually prepared by distillation from the *Mhowra* flower, molasses and other forms of unrefined sugar, fermented palm juice and rice. In Madras a very large revenue is derived from fresh toddy. The British inherited from the Native Administration either an uncontrolled Out Still System or in some cases a crude Farming System and the first steps to bring these systems under control were the limitation of the number of shops in the area farmed and the establishment of an Improved Out Still System under which the combined right of manufacture and sale at a special shop was annually granted. This of course was a kind of control, but it only enabled Government to impose haphazard taxation on the liquor traffic as a whole by means of vend fees. It did not enable Government to graduate the taxation accurately on the still head duty principle nor to insist upon a standard of purity or a fixed strength of liquor. Moreover for political and other reasons the extent of control could not at first be complete.

There were tribes of aborigines who regarded the privilege of making their own liquor in their private homes as a long established right and who believed that liquor poured as libations to their god should be such as had been made by their own hands. The introduction of any system amongst those peoples had to be worked very cautiously. Gradually as the Administration began to be consolidated the numerous native pot stills scattered all over the country under the crude arrangements then in force began to be collected into Central Government enclosures called Distilleries, thus enabling Government to perfect its control by narrowing the limits of supervision, and to regularize its taxation by imposing a direct still head duty on every gallon issued from the Distillery. Under Distillery arrangements it has also been possible to regulate and supervise thoroughly the manufacture of its liquor and its disposal subsequent to leaving the Distillery by means of a system of transport passes, establishment supervision, improved distribution and vend arrangements.

Various Systems

The Out Still System may be taken to include all systems prior in order of development to the imposition of Still head duty. Briefly stated the stages of development have been—First farms of large tracts, Second farms of smaller areas, Third farms of the combined right to manufacture and sell at particular places without any exclusive privilege over a definite area, Fourth farms of similar right subject to control of means and times for distilling and the like. The Provincial Governments have had to deal with the subject in different ways suited to local conditions, and so the order of development from the lower forms of systems to the higher has not been

always everywhere identical in details. Yet in its essence and main features the Excise Administration in most provinces of British India has progressed on uniform lines the key note lying in attempts, where it has not been possible to work with the fixed duty system in its simplest forms, to combine the farming and fixed duty systems with the object of securing that every gallon of spirit should bear a certain amount of taxation. The Out-Still System has in its turn been superseded by either the Free-supply system or the District Monopoly system. The Free-supply system is one of free competition among the licensed distillers in respect of manufacture. The right of vend is separately disposed of. The District monopoly system on the other hand is one in which the combined monopoly of manufacture and sale in a district is leased to a farmer subject to a certain amount of minimum still head duty revenue in the monopoly area being guaranteed to the State during the term of the lease.

Reforms

The recommendations of the Indian Excise Committee of 1905-06 resulted in numerous reforms in British India, one of them being that the various systems have been or are gradually being superseded by the Contract Distillery System under which the manufacture of spirit for supply to a district is disposed of by tender, the rate of still head duty and the supply price to be charged are fixed in the contract and the right of vend is separately disposed of. This is the system that now prevails over the greater portion of British India. The other significant reforms have been the revision of the Provincial Excise Laws and Regulations, and the conditions of manufacture, vend, storage and transport, an improvement in the quality of the spirit, an improved system of disposal of vend licenses, reductions and re-distributions of shops under the guidance and control of Local Advisory Committees and gradual enhancement of taxation with a view to checking consumption.

Excise has now been made over entirely to the Provincial Governments, and the duties vary from province to province. The governing principle in fixing these rates is the highest duty compatible with the prevention of illicit distillation. In the Bombay Presidency the issue of spirit to all country spirit shops has been rationed on the basis of consumption for the year 1920-21. From that consumption reduced to proof gallons 10 per cent is deducted in the case of shops in Bombay City and 5 per cent elsewhere and the ration is then fixed for each shop according to the issues in the corresponding month of 1920-21. This is the most important step taken by the new Government to reduce consumption. Two large distilleries in the Presidency have been placed entirely under Government management, thus partially superseding the Contract Distilling system.

Sap of the date, palmyra, and cocoanut palms called toddy, is used as a drink either fresh or after fermentation. In Madras and Bombay the revenue is obtained from a fixed fee on every tree from which it is intended to draw the liquor and from shop license fees. In Bengal and Burma the sale of shop licenses is the sole form of taxation. Country brands of rum, and so called

brandies and whiskies, are distilled from grape juice, etc. The manufacture is carried out in private distilleries in various parts of India. A number of breweries has been established, mostly in the hills, for the manufacture of a light beer for European and Eurasian consumption.

Foreign liquor is subject to an import duty at the tariff rates, which are set out in the Customs Tariff (*q v*). It can only be sold under a license.

Since the war Brandy and Whisky have been manufactured in considerable quantities at Baroda.

The base used is the Mhowra flower. It is drunk in big towns as a substitute for German spirit, and is excised at tariff rates.

Drugs—The narcotic products of the hemp plant consumed in India fall under three main categories, namely, ganja or the dry flowering tops of the cultivated female hemp plant charas, or the resinous matter which forms an active drug when collected separately, and bhang, or the dried leaves of the hemp plant whether male or female cultivated or uncultivated. The main features of the existing system are restricted cultivation under supervision, storage in Bonded Warehouses, payment of a quantitative duty before issue, retail sale under licenses and restriction on private possession. Licenses to retail all forms of hemp drugs are usually sold by auction. The sale of charas has been prohibited in the Bombay Presidency except Sindh from the 1st April 1922.

Opium—Opium is consumed in all provinces in India. The drug is commonly taken in the form of pills, but in some places, chiefly on social and ceremonial occasions, it is drunk dissolved in water. Opium smoking also prevails in the City of Bombay and other large towns. The general practice is to sell opium from the Government Treasury, or a Central Warehouse, to licensed vendors. The right of retail to the public is sold by annual auction to one or several sanctioned shops. Further legislation against opium smoking in clubs and dens is now under contemplation.

The revenue from opium is derived mainly from exports of what is called provision opium to foreign countries and from the sale to Provincial Governments of excise opium for internal consumption in India. The entire quantity is now exported under the system of direct sales to Foreign and Colonial governments, the system of auction sales in Calcutta to traders for export to foreign countries having been stopped with effect from 7th April 1926. In no case are exports permitted without an import certificate by the Government of the country of import as prescribed by the League of Nations.

It has been decided to reduce the total of the opium exported since the calendar year 1926 by 10 per cent annually in each subsequent year until exports were totally extinguished at the end of 1935.

Excise opium is sold to Provincial Governments for internal consumption in India at a fixed price based on the cost of production. This opium is retailed to licensed vendors at rates fixed by the Provincial Governments and varying from Province to Province.

SALT.

The salt revenue was inherited by the British Government from Native rule, together with a miscellaneous transit dues. These transit dues were abolished and the salt duty consolidated and raised. There are four great sources of supply, rock salt from the Salt range and Kohat Mines in the Punjab, brine salt from the Sambhar Lake in Rajputana, salt brine condensed on the borders of the lesser Rann of Cutch, and sea salt factories in Bombay, Madras and at the mouth of the Indus.

The Salt Range mines contains an inexhaustible supply. They are worked in chambers excavated in salt strata, some of which are 250 feet long, 45 feet wide and 200 feet high. The Rajputana supply chiefly comes from the Sambhar Lake where brine is extracted and evaporated by solar heat. In the Rann of Cutch the brine is also evaporated by solar heat and the product is known as Baragara salt. Important works for the manufacture of that salt were opened in Dhrangadhra State in 1923. In Bombay and Madras sea water is let into shallow pans on the sea coast and evaporated by solar heat and the product sold throughout India. In Bengal the damp climate together with the large volume of fresh water from the Ganges and the Brahmaputra into the Bay of Bengal render the manufacture of sea salt difficult and the bulk of the supply, both for Bengal and Burma, is imported from Liverpool, Germany, Aden, Bombay and Madras.

Broadly, one half of the indigenous salt is manufactured by Government Agency, and the

remainder under license and excise systems in the Punjab and Rajputana the salt manufacturing are under the control of the Northern India Salt Department, a branch of the Commerce and Industry Department. In Madras and Bombay the manufacturing are under the supervision of Local Governments. Special treaties with Native States permit of the free movement of salt throughout India, except from the Portuguese territories of Goa and Damaon on the frontiers of which patrol lines are established to prevent the smuggling of salt into British India.

From 1888-1903 the duty on salt was Rs 2-8 per maund of 82 lbs. In 1903, it was reduced to Rs 2, in 1905 to Rs 1 8 0, in 1907 to Rs 1 and in 1916 it was raised to Rs 1 4 0. The successive reductions in duty have led to a largely increased consumption, the figures rising by 25 per cent, between 1903-1908. In 1923 the duty was doubled bringing it again to Rs 2 8. In 1924 it was reduced to Rs 1 4 0. The duty remained at Rs 1 4 0 from March 1924 to 29th September 1931. It was raised to Rs 1 9 0 with effect from 30th September 1931. Prior to 17th March 1931, the excise duty and import duty on salt were always kept similar, but by the Indian Salt (Additional Import Duty) Act XIV of 1931, a temporary additional customs duty of 4½ annas per maund was imposed on foreign salt. In March 1933 the customs duty was reduced by 2 annas. In April 1936 the import duty was reduced to 1½ annas per maund, while the excise duty remained the same.

CUSTOMS.

The import duties have varied from time to time according to the financial condition of the country. Before the Mutiny they were five per cent, in the days of financial stringency which followed they were raised to 10 and in some cases 20 per cent. In 1875 they were reduced to five per cent, but the opinions of Free Traders, and the agitation of Lancashire manufacturers who felt the competition of the Indian Mills, induced a movement which led to the abolition of all customs duties in 1882. The continued fall in exchange compelled the Government of India to look for fresh sources of revenue and in 1894 five per cent duties were reimposed.

The Customs Schedule was completely recast in the Budget of 1916-17 in order to provide additional revenue to meet the financial disturbance set up by the war.

The Customs Tariff was further raised in the Budget of 1921-22 in order to provide for the big deficit which had then to be faced.

The Senior Collectors were Covenanted Civilians specially chosen for this duty, before the introduction of the Imperial Customs Service in 1906. Since that date, of the five Collectorship at the principal ports (Calcutta, Bombay, Madras, Rangoon, and Karachi) three are ordinarily reserved for Members of the I.C.S. (i.e. "Covenanted Civilians"). The other two are reserved for members of the Imperial Customs Service.

Assistant Collectors in the Imperial Customs Service are recruited in two ways (a) from members of the Indian Civil Service—3 vacancies, and (b) by the Secretary of State—19 vacancies. There are in addition a few Gaietted Officers in what is known as the Provincial Customs Service. These posts are in the gift of the Government of India, and are usually filled by promotion from the subordinate (in the Government sense of the word) service. The "subordinate" staff is recruited entirely in India.

INCOME TAX

The income tax was first imposed in India in 1880, in order to meet the financial dislocation caused by the Mutiny. It was levied at the rate of four per cent or a little more than 9½d in the pound on all incomes of five hundred rupees and upwards. Many changes have from time to time been made in

the system, and the present schedule was consolidated in the Act of 1886. This imposed a tax on all incomes derived from sources other than agriculture which were exempted. On incomes of 2,000 rupees and upwards it fell at the rate of five pias in the rupee, or about 6½d in the pound, on incomes between 500 and

2,000 rupees at the rate of four pies in the rupee or about 5d in the pound. In March 1903 the minimum taxable income was raised from 500 to 1,000 rupees. The income tax schedule was completely revised, raised, and graduated in the Budget of 1916-17 in the general scale of increased taxation imposed to meet the deficit

arising out of war conditions

Since then the process has been almost continuous and in every financial difficulty the authorities turn to the Income Tax as a means of raising fresh revenue. The last revision was in the Supplementary Finance Bill of 1931, when the scale was fixed as follows —

(RATES OF INCOME TAX)

A In the case of every individual, Hindu undivided family, unregistered firm and other association of individuals not being a registered firm or company —

	RATE (Vide Footnote)
(1) When the total income is less than Rs 2,000	Six pies in the rupee
(2) When the total income is Rs 2,000 or upwards, but is less than Rs 5,000	
(3) When the total income is Rs 5,000 or upwards, but is less than Rs 10,000	Nine pies in the rupee
(4) When the total income is Rs 10,000 or upwards, but is less than Rs 15,000	One anna in the rupee
(5) When the total income is Rs 15,000 or upwards, but is less than Rs 20,000	One anna and four pies in the rupee
(6) When the total income is Rs 20,000 or upwards, but is less than Rs 30,000	One anna and seven pies in the rupee
(7) When the total income is Rs 30,000 or upwards, but is less than Rs 40,000	One anna and eleven pies in the rupee
(8) When the total income is Rs 40,000 or upwards, but is less than Rs 100,000	Two annas and one pie in the rupee
(9) When the total income is Rs 100,000 or upwards	Two annas and two pies in the rupee

B In the case of every company and registered firm whatever its total income

N.B. — Additional tax (Sur charge) for the financial year—
1931-32 at 12½ per cent
and
1932-33 at 25 per cent

over the rates prescribed by the Indian Finance Act, 1931, except in cases of income between Rs 1000 to Rs 1,999

Tax at 2 pies on incomes between Rs 1,000 to Rs 1,999 for the year 1931-32 and

Tax at 4 pies for the year 1932-33 on the same income

The surcharge was continued in the budget of 1933-34, as resolved by the assembly the rate or in come between Rs 1,000 and Rs 1,500 was reduced from 4 pies to 2 pies. The surcharge continued in 1934-35

By the 1935-36 budget the surcharge and the rate on incomes between Rs 1,000 and Rs 2,000 was reduced by one third. By the 1936-37 budget the surcharge was reduced by a further third and the tax on incomes below Rs 2,000 abolished

RATES OF SUPER-TAX

In respect of the excess over thirty thousand of total income —

	RATE
(1) in the case of every company—	
(a) in respect of the first twenty thousand rupees of such excess	Nil
(b) for every rupee of the remainder of such excess —	One anna in the rupee
(2) (a) in the case of every Hindu undivided family —	
(i) in respect of the first forty five thousand rupees of such excess	One anna and three pies in the rupee
(ii) for every rupee of the next twenty five thousand rupees of such excess	Nil
(b) in the case of every individual, unregistered firm and other association of individuals not being a registered firm or a company —	
(i) for every rupee of the first twenty thousand rupees of such excess	Nine pies in the rupee
(ii) for every rupee of the next fifty thousand rupees of such excess	One anna and three pies in the rupee
(c) in the case of every individual, Hindu undivided family, unregistered firm and other association of individuals not being a registered firm or a company	
(i) for every rupee of the next fifty thousand rupees of such excess	One anna and nine pies in the rupee
(ii) for every rupee of the next fifty thousand rupees of such excess	Two annas and three pies in the rupee

RATES OF SUPER TAX—*contd*

(iii)	for every rupee of the rupees of such excess	next fifty thousand	Two annas and nine pies in the rupee
(iv)	for every rupee of the rupees of such excess	next fifty thousand	Three annas and three pies in the rupee

RATES OF SUPER TAX

RATES

			<i>Nil</i>
(vii)	for every rupee of the rupees of such excess	next fifty thousand	Four annas and three pies in the rupee
(viii)	for every rupee of the rupees of such excess	next fifty thousand	Five annas and three pies in the rupee
(ix)	for every rupee of the rupees of such excess	next fifty thousand	Five annas and nine pies in the rupee
(x)	for every rupee of the remainder of such excess		Six annas and three pies in the rupee

The head of the Income Tax Department of a province is the Commissioner of Income-tax, who is appointed by the Governor General in Council. The rest of the income tax staff in a province are subordinate to him and they are appointed and dismissed by him. His power of appointment and dismissal is, under section 5 (4), 'subject to the control of the Governor General in Council,' but the Governor-General in Council exercises this control through the local Government.

The estimated yield of Income tax in 1936-37 is Rs 17,60 lakhs.

INCOME TAX REPORT

Important recommendations are made in the Report that was published late in 1936 of the investigation ordered in October 1935 of the Indian Income tax system.

The investigation was made by Khan Bahadur J. B. Vachha, C.I.E., Commissioner of Income Tax in Bombay, and Messrs C. W. Auer and S. P. Chambers, of the British Inland Revenue Department.

The investigators had to report upon the system in all its aspects, the incidence of the tax and the efficiency of its administration. They made an extensive tour throughout British India, and received written representations from numerous public bodies.

The Report covers a wide field and makes numerous recommendations. Among the most important is that the post of a Chief Commissioner of Income Tax should be created for the co-ordination of administration of income tax throughout British India. Other important recommendations are that all assessments should be subject to appeal, that Assistant Commissioners with appellate juris-

diction should be relieved of all administrative duties, and that for second appeals an All India tribunal consisting of six persons, with a jurisdiction replacing that of the High Courts, should be up.

Income tax officers are criticised for not showing enough consideration for the convenience of taxpayers, but on the other hand taxpayers themselves are found to be unpunctual and negligent. There are criticisms of administrative methods, but it is emphasised, on the other hand, that evasion of tax is all too common. In this connection it is recommended that a statutory obligation should be placed upon every person in receipt of an income of taxable amount to make a return. Important recommendations are also made in connection with foreign incomes, agricultural income, leave salaries, the adoption of the slab system instead of the step system, partnerships, Hindu undivided families, computation of income, the income of wives, allowances for machinery depreciation, carry-forward of business losses, legal avoidance of tax, and double taxation relief.

HISTORY OF THE COINAGE

The Indian mints were closed to the un restricted coinage of silver for the public from the 26th June 1893, and Act VIII of 1893, passed on that date, repealed Sections 19 to 26 of the Indian Coinage Act of 1870, which provided for the coinage at the mints for the public of gold and silver coins of the Government of India. After 1893 no Government rupees were coined until 1897, when, under arrangements made with the Native States of Bhopal and Kashmir, the currency of those States was replaced by Government rupees. The re-coinage of these rupees proceeded through the two years 1897 and 1898. In 1899 there was no coinage of rupees, but in the following year it seemed that coinage was necessary, and it was begun in February 1900, the Government purchasing the silver required, and paying for it mainly with

the gold accumulated in the Paper Currency Reserve. In that and the following month a crore of rupees was coined and over 17 crores of rupees in the year ending the 31st March 1910 including the rupees issued in connection with the conversion of the currencies of Native States. From the profit accruing to Government on the coinage it was decided to constitute a separate fund called the Gold Reserve Fund as the most effective guarantee against temporary fluctuations of exchange. The whole profit was invested in sterling securities, the interest from which was added to the fund. In 1906 exchange had been practically stable for eight years, and it was decided that of the coinage profits devoted to this fund, six crores should be kept in rupees in India, instead of being invested in gold securities. The Gold

Reserve Fund was then named the Gold Standard Reserve. It was ordered in 1907 that only one-half of the coinage profits should be paid into the reserve, the remainder being used for capital expenditure on railways.

Gold

Since 1870 there had been no coinage of double mohurs in India and the last coinage of single mohurs before 1918 in which year coinage was resumed, was in the year 1891-92.

A Royal proclamation was issued in 1918 establishing a branch of the **Royal Mint at Bombay**. It stated—Subject to the provision of this proclamation the Bombay Branch Mint shall for the purpose of the coinage of gold coins be deemed to be part of the Mint, and accordingly, (a) the Deputy Master of the Bombay Branch Mint shall comply with all directions he may receive from the Master of the Mint whether as regards the expenditure to be incurred or the returns to be made or the transmission of specimen coins to England or otherwise and (b) the said specimen coins shall be subject to the trial of the pyx under section 12 of the Coinage Act, 1870, so that they shall be examined separately from the coins coined in England or at any other branch of the Mint, and (c) the Deputy Master of the Bombay Branch Mint and other officers and persons employed for the purpose of carrying on the business of the Branch Mint may be appointed, promoted, suspended and removed and their duties assigned and salaries awarded and in accordance with the provisions of section 15 of the Coinage Act, 1870. Pending the completion of the arrangements at the Branch, Royal Mint, power was taken by legislation to coin in India gold mohurs of the same weight and fineness as the sovereign. Altogether 2,109,703 pieces of these new coins of the nominal value of Rs 3,16,45,545, were struck at the Bombay Mint. The actual coinage of sovereigns was begun in August, 1918, and 1,295,372 sovereigns were coined during the year. This branch of the Royal Mint was closed in April, 1919, owing to difficulties in supplying the necessary staff.

The Indian Currency Act of 1927 established a new ratio of the rupee to gold. It established this ratio at one shilling and six pence by enacting that Government would purchase gold at a price of twenty-one rupees three annas ten pence per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or, at the option of Government, sterling, for immediate delivery in London at the same price after allowing for the normal cost of transport from Bombay to London. A rate of one shilling and five pence forty-nine sixths was notified as Government's selling rate for sterling to meet these obligations. Great Britain and India left the gold standard in September 1931 but the buying and selling rates for sterling are still maintained.

With the receipt of large consignments of gold, the Bombay Mint made special arrangements for the refining of gold by the chlorine process and at the end of the year 1919-20 the Refinery Department was capable of refining a daily amount of 6,000 ounces of raw gold.

Silver

The weight and fineness of the silver coin are—

	FINE SILVER grains	ALLOY grains	TOTAL grains
Rupee	165	15	180
Half rupee	82½	7½	90
Quarter rupee or 4 anna piece	41½	3½	45
Eighth of a rupee or 2 anna piece	20¾	1¾	22½

One rupee = 165 grains of fine silver
One shilling = 80½ grains of fine silver
One rupee = shillings 2 0439

Copper and Bronze

Copper coinage was introduced into the Bengal Presidency by Act XVII of 1835 and into the Madras and Bombay Presidencies by Act XXII of 1844.

The weight of the copper coins struck under Act XXIII of 1870 remained the same as it was in 1835. It was as follows—

	Grains	troy
Double pice or half anna	200	
Pice or quarter anna	100	
Half-pice or one eighth of an anna	50	
Pice being one third of a pice or one twelfth of an anna	33½	

The weight and dimensions of bronze coins are as follows—

	Standard weight in grains troy	Diameter in millimetres
Pice	75	25.4
Half pice	37½	21.15
Pie	25	17.45

Nickel

The Act of 1906 also provides for the coinage of a nickel coin. It was directed that the nickel one-anna piece should thenceforth be coined at the Mint and issued. The notification also prescribed the design of the coin, which has a waved edge with twelve scallops, the greatest diameter of the coin being 21 millimetres and its least diameter 19.8 millimetres. The desirability of issuing a half-anna nickel coin was considered by the Government of India in 1909 but after consultation with Local Governments it was decided not to take action in this direction until the people had become thoroughly familiar with the present one-anna coin. The two-anna nickel coin was introduced in 1917-18, and the four-anna and eight-anna nickel coins in 1919. The eight-anna nickel is now being withdrawn from circulation.

The Currency System.

I. THE SILVER STANDARD.

Prior to 1893 the Indian currency system was a mono metallic system, with silver as the standard of value and a circulation of silver rupees and notes based thereon. But with the opening of new and very productive silver mines in the United States of America the supply of silver exceeded the demand and it steadily receded in value. The result was that the gold value of the rupee, which was nominally two shillings, fell continuously until it reached the neighbourhood of a shilling. These disturbances were prejudicial to trade, but they were still more prejudicial to the finances of the Government. The Government of India has to meet every year in London a substantial sum in the form of payment of interest on the debt, the salaries of officials on leave, the pensions of retired officials, as well as large payment for stores required for State enterprises. As the rupee fell in its gold value the number of rupees required to satisfy these payments rose. The total reached a pitch which seriously alarmed the Government, which felt that it might be called upon to raise a sum in rupees which would necessitate a considerable increase in taxation, which should be avoided if possible. It was therefore decided to take measures to raise and fix the gold value of the rupee for the purposes of exchange.

Closing the Mints—The whole question was examined by a strong committee under the presidency of Lord Herschell, whose report if commonly called the Herschell Report. It was decided in 1893 to close the mints to the unrestricted coinage of silver. This step led, as was intended, to a gradual divergence between the exchange value of the rupee and the gold value of its silver content. Government ceased to add rupees to the circulation. Rupees remained unlimited legal tender and formed the standard of value for all internal transactions. Since Government refused and no one else had the power to coin rupees, as soon as circumstances led to an increased demand for rupees, the exchange value of the rupee began to rise. By 1898 it had approached the figure of one shilling and four pence. Meantime, in response to the undertaking of Government to give notes or rupees for gold at the rate of fifteen rupees to the pound sterling, gold began to accumulate in the Paper Currency Reserve. These purposes having been attained a second committee was appointed under the chairmanship of Sir Henry Fowler to consider what further steps should be adopted in the light of these conditions. The report of the Fowler Committee as it was called, marked the second stage in Indian currency policy.

II THE NEW STANDARD.

The Fowler Committee rejected the proposal to re-open the Mints to the free coinage of silver. They proposed that the exchange value of the rupee should be fixed at one shilling and four pence, or fifteen rupees to the sovereign. They further suggested that the British sovereign should be made a legal tender and a current coin in India, that the Indian mints should be thrown open to the unrestricted coinage of gold, so that the rupee and the sovereign should freely circulate side by side in India. The goal which the Committee had in view was a gold standard supported by a gold currency. Now under the condition which compelled the Government of India to give either rupees or rupee notes for gold tendered in India, at the rate of fifteen rupees to the sovereign, it was impossible for the rate of exchange to rise above one shilling and four pence, save by the fraction which covered the cost of shipping gold to India. But if the balance of trade turned against India, it was still possible for the rate of exchange to fall. To meet this the Fowler Committee recommended that the profits on coining rupees should not be absorbed in the general revenues, but should be set aside in a special reserve, to be called the Gold Standard Reserve. Inasmuch as the cost of coining rupees was approximately eleven pence halfpenny, and they were sold to the public at one and four pence, the profits were considerable, they were to have been kept in gold, so as to be freely available when required for the support of exchange.

A 16 pence Rupee—The Government of India professed to accept all the recommendations of the Fowler Committee, actually only a portion of them was put in practice. The official rate of exchange was fixed at one and fourpence. The sovereign and the half sovereign were declared unlimited legal tender in India. But after a first attempt when sovereigns soon came back to the treasuries, no effort was made to support the gold standard by an active gold currency. The gold mint was not set up. The Gold Standard Reserve was established but, instead of holding the Reserve in gold, it was invested in British securities. These practices gave rise to conditions which were never contemplated by the Fowler Committee. Reference has been made to the Home Charges of the Government of India which at the time amounted to about seventeen millions sterling a year. These are met by the sale of what are called Council Bills. That is to say, the Secretary of State acting on behalf of the Government of India sold Bills against gold deposited in the Bank of England in London. These Bills when presented in India were cashed at the Government Treasuries. Now if the Secretary of State sold Council Bills only to meet his actual requirements, it follows that the balance of trade in favour of India over and above this figure would be liquidated, as it is in other countries, by the importation of bullion or by the creation of credits. It is a fact that owing to the failure of the policy of encouraging an active gold

circulation to support the gold standard, gold tended to accumulate in India in embarrassing quantities. In 1904 therefore the Secretary of State declared his intention of selling Council Bills on India without limit at the price of one shilling fourpence one eighth—that is to say gold import point. The effect of this policy was to limit the import of gold to India, for it was generally more convenient to deposit the gold in London and to obtain Council Bills against it, than to ship the gold to India. Nevertheless as the Egyptian cotton crop was very largely financed in sovereigns it was sometimes cheaper and more convenient to ship sovereigns from Egypt, or even from Australia, than to buy Council Bills. Considerable quantities of sovereigns found their way into India and circulated freely, particularly in the Bombay Presidency, the Punjab and parts of the Central Provinces.

Sterling Remittance—This system worked until 1907-08. A partial failure of the rains in India in 1907, and the general financial stringency all over the world which followed the American financial crisis in the autumn, caused the Indian exchange to become weak in November. This was one of the occasions contemplated, in a different form by the Fowler Committee when it proposed the formation of the Gold Standard Reserve. There had been very heavy coining of rupees in India and the amount in the Reserve was ample. But the Reserve was in securities not in gold and was therefore not in a liquid form, nor was the time an opportune one for the realisation of securities. Moreover the authorities did not realise that a reserve is for use in times of emergency. It had been assumed that in times of weakness it would be sufficient

for the Secretary of State to stop selling Council Bills, and it would firm up, meantime he would finance himself by drawing on the funds in the Gold Standard Reserve. But it was apparent that the stoppage of the sales of Councils was not enough, there was an insistent demand for the export of gold, or the equivalent of gold. The Government of India refused and exchange fell to one and threepence twenty-three thirtyseconds. Ultimately the authorities had to give way. It was decided to sell in India a certain quantity of sterling bills on London at one and threepence twenty-nine thirtyseconds, representing gold export point and the equivalent of the export of gold. These were met in London from the funds in the Gold Standard Reserve. Bills to the extent of between eight and nine millions sterling were sold, which regularised the position and the Indian export trade recovered. Thus were gradually evolved the main principles of the Indian currency system. It consisted of silver rupees and rupee notes in India, with the sovereign and half sovereign unlimited legal tender at the rate of fifteen rupees to the sovereign, or one and fourpence. The rate of exchange was prevented from rising above gold import point by the unlimited sale of Council Bills at gold point in London, it was prevented from falling below gold point by the sale of Sterling Bills (commonly called Reverse Councils) at gold export point in India. But it was not the system proposed by the Fowler Committee, for there was no gold mint and only a limited gold circulation, some people invented for it the novel term of the gold exchange standard, a term unknown to the law of India. It was described by one of the most active workers in it as a 'limping standard

III THE CHAMBERLAIN COMMITTEE

This brings us to the year 1913. There were many critics of the system. Some hankered for a return to the open mints, others objected to the practice of unlimited sales of Council Bills as forcing rupees into circulation in excess of the requirements of the country. But the general advantages of a fixed exchange were so great as to smother the voices of the critics, and the trade and commerce of the country adjusted itself to the one and fourpenny rupee. But there gradually grew up a formidable body of criticism directed against the administrative measures taken by the India Office. These criticisms were chiefly directed at the investment of the Gold Standard Reserve in securities instead of keeping it in gold in India, at a raid on that reserve in order temporarily to relieve the Government of the difficulty of financing its railway expenditure, at the transfer of a solid block of the Paper Currency Reserve from India to London, at the holding of a portion of the Gold Standard Reserve in silver in order to facilitate the coining of rupees, and at the unlimited sales of Council Bills at rates which prevented the free flow of gold to India, thus forcing token rupees into circulation in quantities in excess of the requirements of the country. The cumulative effect of this policy was to transfer from India to London an immense block of India's resources, aggregating over seventy millions, where they were

lent out at low rates of interest to the London bankers, whilst India was starved of money until at one point money was not available for loans even against Government securities and the bank rate was artificially high. All these things were done, it was contended, on the *obiter dicta* of a small Finance Committee of the India Office, from which all Indian influence was excluded, and on which London banking influence was supreme. The India Office for long ignored this criticism, until it was summarised in a series of articles in *The Times*, and public opinion was focussed on the discussion through the action of the India Office in purchasing a big block of silver for coining purposes from Messrs. Montagu & Co. instead of through their recognised and constituted agents, the Bank of England. The Government could no longer afford to stand aloof and yet another Currency Committee was appointed under the chairmanship of Mr. Austen Chamberlain. This is known as the Chamberlain Committee.

New Measures—The conclusions of this Commission were that it was unnecessary to support the Gold Standard by a gold currency, that it was not to the advantage of India to encourage the internal use of gold as currency, that the internal currency should be supported by a thoroughly adequate reserve of gold and sterling, that no limit should be fixed to the

amount of the Gold Standard Reserve, one half of which should be held in gold that the silver branch of the Gold Standard Reserve should be abolished, that Reverse Councils should be sold on demand, that the Paper Currency should be made more elastic, and that there should be two Indian representatives out of three on the Finance Committee of the India Office. The Committee dealt in conclusively with the accumulation of excessive balances in London, the general tenor of their recommendations being not guilty, but do not do it again. They gave a

passing commendation to the idea of a State Bank. Sir James Begbie, the only Indian banker on the Committee, appended a vigorous minute of dissent, in which he urged that the true line of advance was to discourage the extension of the token currency by providing further facilities for the distribution of gold when increases to the currency became necessary, including the issue of an Indian gold coin of a more convenient denomination than the sovereign or the half sovereign.

IV CURRENCY AND THE WAR

The report was in the hands of the Government of India shortly before the outbreak of the war. Some immediate steps were taken, like the abolition of the silver branch of the Gold Standard Reserve, but before the Government could deal entirely with the temporising recommendations of the Commission, the war broke out. The early effects of the war were precisely those anticipated. There was a demand for sterling remittance which was met by the sale of Reverse Councils, 68,707,000, being sold up to the end of January 1915. There were withdrawals from the Post Office Savings Banks, and a net sum of Rs 8 crores was taken away. There was some lack of confidence in the Note issue, and a demand for gold. Notes to the extent of Rs 10 crores were presented for encashment and the Government were obliged to suspend the issue of gold. But these were transient features and did not demand a moratorium, confidence was soon revived and Exchange and the Note issue continued strong. The difficulties which afterwards arose were from causes completely unanticipated by all students of the Indian currency. They arose from an immense balance of trade in favour of India, caused by the demand for Indian produce for the United Kingdom and the Allies and the decline in the export trade from these countries, a heavy expenditure in India on behalf of the British Government and a phenomenal rise in the price of silver. If we take the three years 1916-17 to 1918-19 the balance of trade in favour of India was £8 millions a year above the corresponding years of the previous quinquennium. The disbursements in India on behalf of the Government of the United Kingdom and the Allies were by December 1919 £240,000,000. This balance of trade and expenditure for Imperial purposes could not be financed either by the import of the precious metals, owing to the universal embargo on the movement of gold and silver nor by credits in India. It could be financed only by the expansion of the Note issue, against sterling securities in the United Kingdom chiefly Treasury Bills, and the issue of coined

rupees. But simultaneously there was a reduction in the output of the silver mines of the world coinciding with an increased demand for the metal. The price of silver in 1915 was 27½ pence per standard ounce. In May 1919 it was 58 pence, on the 17th December of that year it was 78 pence. The main difficulties in India were not therefore the prevention of the rupee from falling below the ratio of 15 to one, but to keep it within any limits and to provide a sufficiency to meet the demand.

Rise in Exchange—The measures adopted by the Government of India in these emergencies were to bring exchange under rigid control confining remittance to the finance of articles of national importance. The next step was to raise the rate for the sale of Council Bills so that silver might be purchased at a price which would allow rupees to be coined without loss. The following table shows how rates were raised from one shilling fourpence to two shillings fourpence—

Date of Introduction	Minimum Rate for Immediate Telegraphic Transfers
3rd January 1917	1 4½
28th August 1917	1 5
12th April 1918	1 6
13th May 1919	1 8
12th August 1919	1 10
15th September 1919	2 0
22nd November 1919	2 2
12th December 1919	2 4

V. THE 1919 COMMITTEE.

The effect of these measures however was to justify the currency policy pursued from 1893 to 1915, the main object of which was to stabilise the rupee at one and fourpence. The war being over, a Committee was appointed to advise in regard to the future of Indian exchange and

currency. It sat in 1919 and reported towards the end of the year. Its main recommendations are summarised below.

(1) It is desirable to restore stability to the rupee and to re-establish the automatic working of the Indian currency system.

(14) The reduction of the fineness or weight of the rupee, the issue of 2 or 3 rupee coins of lower proportional silver content than the present rupee, or the issue of a nickel rupee, are expedients that cannot be recommended.

(15) The maintenance of the convertibility of the note issue is essential, and proposals that do not adequately protect the Indian paper currency from the risk of becoming inconvertible cannot be entertained.

(16) The rise in exchange, in so far as it has checked and mitigated the rise in Indian prices, has been to the advantage of the country as a whole, and it is desirable to secure the continuance of this benefit.

(17) Indian trade is not likely to suffer any permanent injury from the fixing of exchange at a high level.

If, contrary to expectation, a great and rapid fall in world prices were to take place, and if the costs of production in India fail to adjust themselves with equal rapidity to the lower level of prices, then it might be necessary to consider the problem afresh.

(18) The development of Indian industry would not be seriously hampered by a high rate of exchange.

(19) The gain to India of a high rate of exchange for meeting the Home charges is an incidental advantage that must be taken into consideration.

(20) To postpone fixing a stable rate of exchange would be open to serious criticism and entail prolongation of Government control.

(21) The balance of advantage is decidedly on the side of fixing the exchange value of the rupee in terms of gold rather than in terms of sterling.

(22) The stable relation to be established between the rupee and gold should be at the rate of Rs 10 to one sovereign, or, in other words at the rate of one rupee for 11 30,016 grains of fine gold, both for foreign exchange and for internal circulation.

(23) If silver rises for more than a brief period above the parity of 2s (gold), the situation should be met by all other available means rather than by impairing the convertibility of the note issue. Such measures might be (a) reduction of sale of Council Bills, (b) abstention from purchase of silver, (c) use of gold to meet demands for metallic currency. If it should be absolutely necessary to purchase silver, the Government should be prepared to purchase even at a price such that rupees would be coined at a loss.

(24) Council Drafts are primarily sold not for the convenience of trade but to provide for the Home charges in the wider sense of the term. There is no obligation to sell drafts to meet all trade demands, but, if without inconvenience or with advantage the Secretary of State is in a position to sell drafts in excess of his immediate needs, when a trade demand for them exists, there is no objection to his doing so, subject to due regard being paid to the principles governing the location of the reserve.

Council Drafts should be sold as now by open tender at competitive rates, a minimum rate being fixed from time to time on the basis of the sterling cost of shipping gold to India. At present this rate will vary but when sterling is again equivalent to gold, it will remain uniform.

The Government of India should be authorised to announce, without previous reference to the Secretary of State on each occasion, their readiness to sell weekly a stated amount of Reverse Councils (including telegraphic transfers) during periods of exchange weakness at a price based on the cost of shipping gold from India to the United Kingdom.

(25) The import and export of gold to and from India should be free from Government control.

(26) The statutory minimum for the metallic portion of the Paper Currency Reserve should be 40 per cent of the gross circulation.

As regards the fiduciary portion of the reserve, the holding of securities issued by the Government of India should be limited to 20 crores. The balance should be held in securities of other Governments comprised within the British Empire, and of the amount so held not more than 10 crores should have more than one year's maturity and all should be redeemable at a fixed date. The balance of the invested portion above these 30 crores should be held in short dated securities, with not more than one year's maturity, issued by Government within the British Empire.

The sterling investments and gold in the Paper Currency Reserve should be revalued at 2s to the rupee. The depreciation which will result from this revaluation, cannot be made good at once, but any savings resulting from the rise in exchange will afford a suitable means of discharging this liability in a limited number of years.

(27) With a view to meeting the seasonal demand for additional currency, provision should be made for the issue of notes up to five crores over and above the normal fiduciary issue as loans to the Presidency Banks on the security of export bills of exchange.

Minority Report.—The main object of the Committee, it will be seen, was to secure a stable rate of exchange, without impairing the convertibility of the Note issue, and without debasing the standard silver rupee in India, or substituting another coin of inferior metallic content, which would be debasement in another form. In order to attain these ends it was imperative to fix a ratio for the rupee in relation to gold which would ensure that the Government was able to purchase silver for coining purposes without more than temporary loss. For reasons given in the report they fixed this point at two shillings gold all other recommendations are subsidiary thereto. But in this they were not unanimous. An important member of the Committee, Mr. Dadabhai Dalal, of Bombay, appended a minority report in which he urged the adoption of the following course:—

(a) The money standard in India should remain unaltered, that is, the standard of the sovereign and gold mohur with rupees related thereto at the ratio of 15 to 1.

(b) Free and unfettered imports and exports by the public of gold bullion and gold coins.

(c) Free and unfettered imports and exports by the public of silver bullion and silver coins.

(d) The existing silver rupees of 165 grains of fine silver at present in circulation to continue full legal tender.

(e) As long as the price of silver in New York is over 92 cents, Government should not manufacture silver rupees containing 165 grains fine silver

(f) As long as the price of silver is over 92 cents Government should coin 2 rupee silver coins of reduced fineness compared with that of the present silver rupee and the same to be unlimited legal tender

(g) Government to sell Council Bills by competitive tenders for the amount defined in the Budget as required to be remitted to the Secre-

tary of State. The Budget estimate to show under separate headings the amount of Council Bills drawn for Home Charges, for Capital Outlay and Discharge of Debt. Council Bills to be sold for Government requirements only and not for trade purposes, except for the purpose mentioned in the next succeeding recommendation

(h) "Reverse" drafts on London to be sold only at 1s 32d-33d. The proceeds of 'Reverse' drafts to be kept apart from all other Government funds and not to be utilised for any purpose except to meet drafts drawn by the Secretary of State at a rate not below 1s 43d-32d per rupee

VI. THE TWO SHILLING RUPEE

The fundamental recommendation of the Committee was that the rupee should be linked to gold and not to sterling, in view of the decline in the value of sterling, that it should be linked at the rate of two shillings instead of the standard value, one and fourpence. All other recommendations were ancillary to this. But it is very important to bear in mind the twofold problem which confronted the Committee. It would be quite easy to fix any low ratio provided the paper currency were made inconvertible, or the rupee debased to such a point that the Government in providing rupee currency, were independent of the price of silver. But if the convertibility of the rupee were to be maintained, and if the rupee were not to be debased, it was essential that the new ratio should be one at which the Government could reasonably rely on purchasing without loss the silver necessary to meet the heavy demands for rupees in India. For reasons set out in the Report, the Committee came to the conclusion that the Government could reckon on purchasing silver for coining at a little under two shillings gold, and that powerfully influenced them in fixing the new ratio at two shillings gold.

The Report Adopted—The Currency Committee's Report was signed in December 1919, but it was not until February 1920 that action was taken thereon. In the first week of that month a Notification was issued in India accepting the principal recommendations in the Report and notifying that the necessary official action would be taken thereon. This action covered a wide field, but for the sake of clarity in this narrative we shall concentrate on the main issue, the changing of the official monetary standard from fifteen rupees to the sovereign to ten rupees to the sovereign and its effect on Indian currency and trade. That may be summarised in a sentence. A policy which was avowedly adopted to secure fixity of exchange produced the greatest fluctuations in the exchanges of any solvent country and widespread disturbance of trade, heavy losses to Government, and brought hundreds of big traders to the verge of bankruptcy.

Financial Confusion—This result was produced by many causes. It has been explained above that the essential features of the Indian currency system are the free sales of Council Bills at gold export point in London to prevent exchange from rising above the official standard and the sale of Reverse Councils in India at gold export point to prevent exchange from falling below the official standard. Now when the

Currency Report was signed the Indian exchanges were practically at two shillings gold. But between the signing of the Report and the taking of official action, there was a sensational fall in the sterling exchange, as measured in dollars, the dollar-sterling rate, inasmuch as America was the only free gold market, being the dominating factor in the situation. Consequently the Indian exchanges were considerably below the two shillings gold rate when the Notification accepting the Currency Committee's Report was issued. The Indian exchanges were two shillings and fourpence, and weak at that, the gold rate was about two shillings ninepence. There was an immediate and prodigious demand for Reverse Councils, to take advantage of this high rate of exchange, the market rate jumped up to two shillings eight pence.

Effect of the Rise—The effect of a rise in exchange has been well described in the words of the Currency Committee's Report, it is that a rising exchange stimulates imports and impedes exports, the effect of a falling exchange is the reverse.

Now when the official notification of the two shilling rupee was made the Indian export trade was weak. The great consuming markets of Great Britain and America were glutted with Indian produce. The continent of Europe, which was starved of Indian produce and in urgent need of it, had not the wherewithal to pay for it nor the means of commanding credit. The only Indian staples which were in demand were foodstuffs, and as the rains of 1920 failed over a wide area, the Government were not able to lift the embargo on the export for foodstuffs, save to a limited extent in the case of wheat. On the other hand, the import trade was strong. Orders had been placed for machinery and other manufactured goods during the war and after the Armistice for delivery at the discretion of manufacturers. These began to come forward.

Difficulties Accentuated—In accordance with the principles laid down by the Currency Committee these difficulties were accentuated by the action of Government in raising exchange by an administrative act. The weak export trade was almost killed. At the same time the temptation of a high exchange gave powerful stimulus to the import trade and orders were placed for immense quantities of manufactured goods in which textiles filled a important place. Afterwards other forces intervened which accentuated the difficulties of the situation. There was a severe commercial crisis in Japan and this

checked the export of Indian cotton. Japan is the largest buyer of Indian cotton, and when her merchants not only stopped buying but began to re-sell in the Indian markets, the trade was severely shaken and stocks accumulated at a great rate. Even before the 1920 crop came into the market the stocks in Bombay were double those in the corresponding period of the previous year. The expectations of a revival in the buying power of the Continent which were held in many quarters were disappointed and throughout the year there was a heavy balance of trade against India, which made the stabilisation of exchange at the high ratio attempted a hopeless proposition.

Confession of Failure—Government struggled long against these conditions in the desperate hope that a revival of the export trade would come to their assistance, but they were further handicapped by the variations of the sterling-dollar exchange, which at one time took the rate for Reverse Councils to two shillings tenpence halfpenny. They sold two millions of Reverse Councils a week, then five millions, then dropped down to a steady million. But their policy only aggravated the situation. In addition to arresting the export trade and stimulating the import trade at a time when the precise converse was demanded, their action created an artificial movement for the transfer of capital from India to England. Large war profits accumulated in India since 1914 were hurriedly liquidated and transferred to England. Then the difference between the Reverse Council rate and the market rate, which on some occasions was several pence, induced gigantic speculations. The Exchange Banks set aside all their available resources for the purpose of bidding for Bills, and at once sold their allotments at substantial profits. Considerable groups of speculators pooled their resources and followed the same course. In this way the weekly biddings for the million of Reverse Councils varied from a hundred and 20 millions to a hundred and thirty millions and the money market was completely disorganised. The biddings assumed such proportions that it was necessary to put up fifty lakhs of rupees to obtain the smallest allotment made, five thousand pounds, and Reverse Councils and the large profits thereon came under the entire control of the Banks and the wealthy speculators. Various expedients were tried to remedy the situation but without the slightest effect.

Sterling for Gold—The first definite break from the recommendations of the Currency Committee came at the end of June, when the Government announced that instead of trying to stabilise the rupee at two shillings gold they would aim at stabilising it at two shillings sterling, leaving the gap between sterling and gold to be closed when the dollar-sterling rate became par. The effect of this was to alter the rate at which Reverse Councils were sold from the fluctuating rate involved in the fluctuations of dollar-sterling exchange to a fixed sterling rate, namely, one shilling elevenpence nineteen-thirty seconds. But this had little practical effect. The biddings for Reverse Councils continued on a very big scale, and the market rate for exchange was always two pence or three pence below the Reverse Council rate. This practice continued until the end of September, when it was officially declared

that Reverse Councils would be stopped altogether. Exchange immediately slumped to between one and sixpence and one and sevenpence, and it continued to range between these narrow points until the end of the year. The market made its own rate, it made a more stable rate than the efforts of Government to attain an administrative stability.

Other Measures—Apart from the effort to stabilise exchange, which had such unfortunate results, the policy of Government had certain other effects. During the year all restrictions on the movement of the precious metals were removed, in accordance with the recommendations of the Currency Committee. This included the abandonment of the import duty on silver, always a sore point with Indian bullionists. Legislative action was taken to alter the official ratio of the sovereign from fifteen to one to ten to one, due notice of this intention was given to holders of sovereigns and of the gold mohurs which were coined as an emergency measure in 1918, and they were given the option of tendering them at fifteen rupees. As the gold value of these coins was above fifteen rupees only a limited number was tendered, although there was extensive smuggling of sovereigns into India to take advantage of the premium. Then measures were adopted to give greater elasticity to the Note issue. Under the old law the invested portion of the Note issue was fixed by statute and it could be altered only by altering the law or by Ordinance. An Act was passed fixing the metallic portion of the Paper Currency Reserve at fifty per cent. of the Note issue, the invested portion being limited to Rs. 20 crores in Indian securities and the balance in British securities of not more than twelve months' currency. The invested portion of the Paper Currency Reserve was revalued at the new rate of exchange, and an undertaking was given that the profits on the Note issue would be devoted to writing off the depreciation, as also would be the interest on the Gold Standard Reserve when the total had reached £40 millions. Further, in order to give greater elasticity to the Note issue, power was taken to issue Rs. 5 crores of emergency currency in the busy season against commercial bills. These measures, save the alteration of the ratio, were generally approved by the commercial public.

Results—It remains to sum up the results of these measures. In a pregnant sentence in their report the Currency Committee say that whilst a fixed rate of exchange exercises little influence on the course of trade, a rising exchange impedes exports and stimulates imports, a falling exchange exercises a reverse influence. Here we have the key to the failure of the currency policy attempted. At the moment when it was sought suddenly and violently to raise the rate of exchange by the introduction of the new ratio of two shillings gold, the export trade was weak and the import trade in obedience to the delivery of long deferred orders was strong. The very principle enunciated by the Currency Committee wrecked the policy which they recommended. The rising rate of exchange scotched the weak export trade and gave a great stimulus to imports. Unexpected forces, such as the financial crisis in Japan, the lack of buying power on the Continent, and the movement for the transfer of capital from India to England at the

artificially high rate of exchange stimulated these forces, but they had their origin in the attempt by administrative action artificially and violently to raise the rate of exchange. If let alone, the natural fall in exchange would have tended to correct the adverse balance of trade, the official policy exaggerated and intensified it. The effects on Indian business were severe. Exporters found themselves loaded with produce for which there was no foreign demand, importers found themselves loaded up with imported goods, bought in the expectation of the continuance of a high rate of exchange, delivered when it had fallen one and fourpence from the highest point reached. Immense losses were incurred by all importers. The Government sold £55 millions of Reserve Councils before abandoning

their effort to stabilise exchange at the new ratio, the loss on these—that is the difference between the cost of putting the funds down in London and in bringing them back to India—was Rs 35 crores of rupees. Government sold £53 millions of gold, without breaking or seriously affecting the premium on gold. The Secretary of State, in the absence of any demand for Council Bills, was able to finance his expenditure in England only through the lucky chance of heavy expenditure on behalf of the Imperial Government for the forces in Mesopotamia—this expenditure being made in India and set off by payments in London. The only advantages were a considerable contraction of the Note issue and the silver token currency.

VII COMMISSION OF 1925-26

These unfortunate experiments induced a period of great caution in dealing with Indian currency. The currency quacks having had their way, and proved their ignorance, went out of the field, and the wholesome policy of leaving Exchange alone, to find its natural level, followed. Left alone Exchange established itself round about the old ratio of fifteen to one, that is one shilling and fourpence to the rupee. Meantime great improvements were made in the organisation of Indian credit. The three Presidency Banks were merged in the Imperial Bank of India, a State Bank in all but name, and the Bank entered into a contract with Government to open a hundred new branches in the first five years of its existence. The Bank mobilised and strengthened and widened Indian credit. The metallic backing of the Paper Currency was strengthened and the fiduciary portion of the Reserve brought within negligible proportions. Greater elasticity was established in the currency by the power to issue emergency currency up to Rs 12 crores against commercial paper endorsed by the Imperial Bank when there is a tightness of money, and the practice of also issuing emergency currency against sterling in England. The Government of India now purchases sterling in India to meet its Home Charges when the conditions are favourable, instead of relying entirely on the sales of Council Bills in London. A notable feature in Exchange history was the rise of Exchange, of its own strength, above the one and fourpenny figure. Towards the close of 1924 it gradually rose to one shilling and sixpence and stayed there.

At this figure Exchange was maintained by Government though the state of trade might have led to a higher figure. But as the wholly artificial ratio of the two shilling rupee remained on the statute book the demand for an authoritative inquiry to fix the ratio of the rupee to gold or sterling was insistent, and a Committee was appointed in the autumn of 1925. Of this Committee Hilton Young was chairman, with Sir Henry Strakosch as the chief gold expert. The personnel of the Committee was strongly criticised in India, on the ground that the Indian membership was inadequate, and that the individuals selected were not authoritative, a resolution was passed in the

Assembly hostile to the whole body. Nevertheless the Committee arrived in India in November 1925 and took evidence in Delhi, Bombay and Calcutta. It sailed for England in February 1926, and resumed its hearings in London, and reported on July 1st, 1926.

The main recommendations of this Commission are summarised in the actual report in the following terms, and they are textually reproduced in order that they may be above question—

(i) The ordinary medium of circulation should remain the currency note and the silver rupee, and the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold, but gold should not circulate as money.

(ii) The necessity of unity of policy in the control of currency and credit for the achievement of monetary stability involves the establishment of a Central Banking system.

(iii) The Central Banking functions should be entrusted to a new organisation, referred to as the Reserve Bank.

(iv) Detailed recommendations are made as to the constitution and functions and capacities of the Bank.

(v) The outlines of a proposed charter are recommended to give effect to the recommendations which concern the Reserve Bank.

(vi) Subject to the payment of limited dividends and the building up of suitable reserve funds the balance of the profits of the Reserve Bank should be paid over to the Government.

(vii) The Bank should be given the sole right of note issue for a period of (say) 25 years. Not later than five years from the date of the charter becoming operative Government notes should cease to be legal tender except at Government Treasuries.

(viii) The notes of the Bank should be full legal tender, and should be guaranteed by Government. The form and material of the note should be subject to the approval of the Governor General in Council. A suggestion is made as to the form of the note.

(xx) An obligation should be imposed by statute on the Bank to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required

(x) The conditions which are to govern the sale of gold by the Bank should be so framed as to free it in normal circumstances from the task of supplying gold for non monetary purposes. The method by which this may be secured is suggested

(xi) The legal tender quality of the sovereign and the half sovereign should be removed

(xii) Government should offer "on tap" savings certificates redeemable in 3 or 5 years in legal tender money or gold at the option of the holder

(xiii) The paper currency should cease to be convertible by law into silver coin. It should however, be the duty of the Bank to maintain the free interchangeability of the different forms of legal tender currency, and of the Government to supply coin to the Bank on demand

(xiv) One rupee notes should be re introduced and should be full legal tender

(xv) Notes other than the one rupee note should be legally convertible into legal tender money, i.e., into notes of smaller denomination or silver rupees at the option of the currency authority

(xvi) No change should be made in the legal tender character of the silver rupee

(xvii) The Paper Currency and Gold Standard Reserve should be amalgamated and the proportions and composition of the combined Reserve should be fixed by statute

(xviii) The proportional reserve system should be adopted. Gold and gold securities should form not less than 40 per cent of the Reserve, subject to a possible temporary reduction, with the consent of Government, on payment of a tax. The currency authority should strive to work to a reserve ratio of 50 to 60 per cent. The gold holding should be raised to 20 per cent of the Reserve as soon as possible and to 25 per cent within ten years. During this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape. Of the gold holding at least one half should be held in India

(xix) The silver holding in the Reserve should be very substantially reduced during a transitional period of ten years

(xx) The balance of the Reserve should be held in self liquidating trade bills and Government of India securities. The "created" securities should be replaced by marketable securities within ten years

(xxi) A figure of Rs 50 crores has been fixed as the liability in respect of the contractibility of the rupee circulation. Recommendations are made to secure that an amount equal to one-fifth of the face value of any increase or decrease in the number of silver rupees in

issue shall be added to or subtracted from this liability, and the balance of profit or loss shall accrue to or be borne by the Government revenues

(xxii) The Issue Department of the Reserve Bank should be kept wholly distinct from its Banking Department

(xxiii) The Reserve Bank should be entrusted with all the remittance operations of the Government. The Secretary of State should furnish in advance periodical information as to his requirements. The Bank should be left free, at its discretion, to employ such method or methods of remittance as it may find conducive to smooth working

(xxiv) During the transition period the Government should publish a weekly return of remittances made. A trial should be made of the system of purchase by public tender in India

(xxv) The cash balances of the Government (including any balances of the Government of India and of the Secretary of State outside India), as well as the banking reserves in India of all banks operating in India, should be centralised in the hands of the Reserve Bank. Section 23 of the Government of India Act should be amended accordingly

(xxvi) The transfer of Reserve assets should take place not later than 1st January 1929 and the Bank's obligation to buy and sell gold should come into operation not later than 1st January 1931

(xxvii) During the transition period the currency authority (i.e., the Government until the transfer of Reserve assets and the Bank thereafter) should be under an obligation to buy gold and to sell gold or gold exchange at its option at the gold points of the exchange. This obligation should be embodied in statutory form, of which the outline is suggested

(xxviii) Stabilisation of the rupee should be effected forthwith at a rate corresponding to an exchange rate of 1s 6d

(xxix) The stamp duty on bills of exchange and cheques should be abolished. Bill forms in the English language and the vernacular in parallel, should be on sale at post offices

(xxx) Measures should be taken to promote the development of banking in India

(xxxi) Every effort should be made to remedy the deficiencies in the existing body of statistical data

A Minute of Dissent—Whilst all the members of the Commission signed the report, one of their number, Sir Purshotamdas Thakurdas, did so subject to a minute of dissent. In the first part of this Minute Sir Purshotamdas subjected the long correspondence between the Government of India and the India Office on currency policy to a detailed analysis. The conclusions to which he came were that throughout the Government of India had striven for a system following the Fowler Report—a gold standard based on a gold currency, and that their efforts were emasculated by successive Secretaries of State, who had in view some which was often called the Gold

Exchange Standard, but which was in effect no standard at all. On the question of the Gold Standard, he stressed the importance of the free movement of gold in India, but subject to this condition accepted the Gold Bullion Standard recommended by his colleagues. As for the proposed Reserve Bank, Sir Purshotamdas, whilst recognising that the scheme proposed might be the ideal to be attained in process of time, thought that the best immediate course was to develop the Imperial Bank into a central bank for India. The chief point of difference with his colleagues was however the ratio.

Dealing with the ratio of the rupee to gold Sir Purshotamdas said that in September 1924 the rate was approximately one and fourpence gold. At that time the Government was pressed to stabilise at the then ratio and thus legally to restore the long current legal standard of money payments. This it declined to do, and by limiting the supply of currency the ratio was raised to one and sixpence gold by April 1925. He declined therefore to attach any importance to a ratio reached by such measures. Proceeding to analyse the course of prices and wages, he combated the conclusion of his colleagues that prices had adjusted themselves in a preponderant degree to one shilling and sixpence. For these reasons he recommended that the rupee should be stabilised at the rate which was current for nearly twenty years, namely one and fourpence. His conclusions were summarised in the following terms —

‘I look upon the question of the ratio in this Report as being no less important than the question of the standard to be adopted for the Indian Currency System. I am convinced that it is the absolute necessity of the free inflow of gold which I have emphasised, is recognised, and steps taken to ensure it, the gold bullion standard proposed will be the correct one, and the likelihood of its breaking down under the strain of any convulsions in the future will be as remote as it can reasonably be. But I have very grave apprehensions that if the recommendation of my colleagues to stabilise the rupee at 1s 6d is accepted and acted upon India will be faced during the next few years with a disturbance in her economic organisation, the magnitude of which is difficult to estimate, but the consequences of which may not only hamper her economic development but may even prove disastrous. Such a disturbance and its consequences my colleagues do not foresee to-day. But the possibility of their occurring cannot be ignored. Until adjustment is complete agriculture threatens to become unattractive and less remunerative than it is to-day, and industries will have to undergo a painful process of adjustment unnatural, unwarranted and avoidable—an adjustment which will be much to their cost, and affect not only their stability and their progress but in certain cases their very existence. And should Nature have in store for India a couple of lean years after the four good harvests that we have had, during the period of forced adjustment to a rate of 1s 6d, the steps that the Currency Authority will have to take to maintain exchange at this rate may deplete

the gold resources of the country to an extent that may seriously shake the confidence of the people in the currency system recommended.”

A Survey—The official summary of the Report, and the summary of the minute of dissent given above, do not however convey an idea of the far-reaching proposals embodied therein. These can be appreciated only if they are examined in close relation to the currency system of India in its various phases since 1899. This was done in an article contributed to *The Bankers' Magazine* by Sir Stanley Reed, which was recognised to be a fair presentation of the position. The main features thereof are reproduced below. There is here some re-treading of the path laid out in the introductory section, but this is unavoidable, if the full bearing of the measures proposed by the Commission are to be appreciated. After describing the standard in force Sir Stanley Reed asked —

“What was the standard thus established? It is generally described in London as the Gold Exchange Standard. That status was never claimed for it by its principal protagonist, the late Sir Lionel Abrahams who described it as a limping standard. The Royal Commission declares that ‘in truth in so far as it amounted to a definite standard at all it was a standard of sterling exchange. Later they show that ‘the automatic working of the exchange standard is thus not adequately provided for in India and never has been. The fundamental basis of such a standard is provision for the expansion and contraction of the volume of currency. Under the Indian system contraction is not and never has been automatic.

“However the standard limped along until the third year of the war. The exchange value of the rupee was stable, prices adjusted themselves to the ratio, Indian trade and industry developed. From the narrow standpoint of profit and loss, the investment of the reserves instead of keeping them in gold, resulted in a considerable gain to the finances estimated in 1921 at £17,962,466. But it had three great disadvantages. It did not inspire public confidence. It placed the Indian currency at the mercy of the silver market which was on occasion deliberately cornered against it, and it left the control of currency by the Government divorced from the control of credit by the Presidency Banks afterwards amalgamated in the Imperial Bank of India. On this the Commission make a very suggestive comment when allowance has been made for all misunderstandings and misapprehensions the fact remains that a large measure of distrust in the present system is justified by its imperfections.

‘There is, I think, an inadequate appreciation of the influence on the Indian currency and exchange of the war, and the action taken thereafter. The first break in the permanent ratio of one shilling and fourpence did not occur until 1917, when the full effect of dependence on the silver market was revealed. Faced by the unprecedented rise in the price of silver the Government of India had either to raise the price of Council Drafts or else abandon the

convertibility of the Note Issue. Wisely, it took the former alternative, the price of Council Drafts followed the price of silver. The effect of this would have been transitory, but for the attempt in 1920, on the advice of the Barington Smith Committee, to stabilise the rupee at a new ratio of two shillings gold when all gold prices were crashing. It is easy to be wise after the event but if the Government had followed silver down, as it followed silver up, there is no room to doubt that the rupee would have returned to its 'permanent' ratio with no more disturbance than was inevitable under war conditions. However, this was not done. The vain effort to stabilise the new ratio was abandoned in September, 1920 and the two shilling rupee has since been a legal fiction. Left free from administrative action, the rupee fell below one shilling and threepence sterling and, one shilling gold in 1921. Since under the influence of good harvests, it has climbed upwards and has been in the neighbourhood of one shilling and sixpence gold for the past twelve months. But it is not always realised in London that under these vicissitudes the Indian standard has legally perished. In the words of the report, "The stability of the gold value of the rupee is thus based upon nothing more substantial than a policy of the Government and at present that policy can be found defined in no notification or undertaking by the Government. It has to be implied from the acts of the Government in relation to the currency, and those acts are subject to no statutory regulation or control."

The responsibility remitted to the Commission was not therefore the mere stabilisation of the rupee, but the establishment of a standard which would command reasoned confidence in India to link the rupee to that standard, and to provide for its statutory control, automatic working and stability, to bring the control of currency and of credit under a single authority and to free the Indian currency and exchange system from the dominance of the silver market. In short, it was to establish the rule of law in place of the practice of administrative discretion.

Scheme for Gold Currency—In the course of their inquiries in India the Commission had placed before them a scheme for the immediate establishment of a gold bullion standard, and its early conversion into the gold standard supported by the gold currency which a large body of Indian opinion has insistently demanded. The scheme was presented by the officials of the Finance Department, but it is known to be the work of the Finance Member Sir Basil Blackett, whose work in India is of the greatest value.

The essential features of this Scheme were the undertaking of a statutory obligation by Government to buy and sell gold bullion in 400 oz bars, as soon as sufficient gold was available to put a gold coin in circulation, after a period tentatively fixed at five years to undertake to give gold coin in exchange for notes and rupees, and after a further period, also tentatively fixed at five years, make the silver rupee legal tender only for sums up to a small fixed amount. The scheme involved the

disposal of 200 crores of silver rupees, or 887 million fine ounces, in ten years, the acquisition in all of £103 millions of gold, and the establishment of credits in London or New York. The cost was estimated at one and two thirds crores of rupees per annum during the first five years, and thereafter from two thirds of a crore to 1 1/2 crore.

This scheme is subjected by the Commission to a detailed examination, and rejected on grounds which are convincing. The main grounds for this decision are that the estimates of the amount and time of the gold demand are uncertain, and the absorption by India of this £103 millions of gold, in addition to the normal absorption for the arts, hoards, etc., would powerfully react on the supplies of credit, the rates of interest, and gold prices throughout the world. The reaction on the silver market from the detritement of the rupee and realisation of this large quantity of silver bullion would be even more marked, with severely prejudicial effects on the silver hoards of the people of India and the exchanges with China, where India still does a large business. Moreover, the capacity to raise the required credits is doubtful and the cost is placed by the India Office at Rs 3 crores a year.

The evidence of the highest financial authorities in London and New York established beyond doubt that it is not in the interests of India to precipitate any currency reform that would violently disturb the gold and silver markets, however desirable that reform might be in itself. Also, that whilst London, working in close harmony with New York, would strain every nerve to supply India with the funds she might require for her own development, it could hardly be expected to provide credits for a scheme which would upset the gold and silver markets. But whilst on these grounds the Commission were not able to endorse Sir Basil Blackett's scheme, there is no doubt that they were profoundly influenced by it in their own recommendations. The ultimate evolution of a policy which promises a cure for India's currency ills is therefore in large measure due to the courage and resolution with which the Finance Authorities in that country faced them.

A Gold Bullion Standard—The currency system recommended by the Commission is a gold bullion standard. They propose that an obligation shall be imposed by statute on the currency authority to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required. The essence of this proposal is "that the ordinary medium of circulation in India should remain as at present the currency note and the silver rupee, and that the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold for all purposes, but that gold should not circulate as money. It must not circulate at first, and it need not circulate ever. In breaking adrift from any idea of a sterling exchange, or gold exchange standard, the Commission were powerfully influenced by two factors—the necessity of safeguarding the

Indian system from the price of silver rising above the melting point of the rupee and the desirability of establishing confidence by giving the country not only a real, but conspicuously visible link between the currency and gold.

This reasoning is eminently sound, and the scheme in its broad outlines should command the unhesitating support not only of India, but of all interested in Indian trade. India will have nothing to do with any exchange standard, its experience has been too painful. Proposals to that end would be rejected by the legislature and prolong the currency controversies. It is desired to close the gold bullion standard satisfies all the country's real needs. True, it will not give it the gold mint and the gold currency which have long been demanded; it involves the demonetization of the sovereign to which a sentimental influence attaches. But whilst it does not do these things it keeps the door open. No one contends that a gold standard and a gold currency are immediately practicable. The most rapid progress thereto is embodied in Sir Basil Blackett's scheme which is full of uncertainties and risks. But when the gold reserves are strengthened to the requisite point the proposals leave India perfectly free to decide, through her legislature, where a gold currency is worth the expense.

We must, however, face the obligation which a gold bullion standard imposes on the currency authority in India: indeed the Commission do not attempt to burke it. "The obligation is to convert the currency, not merely into foreign exchange, but into metallic gold, and it is an obligation that is not, as formerly conditional and circumscribed, but absolute and unlimited. Nevertheless it has been undertaken by every other country that has adopted an effective gold standard and we have satisfied ourselves that the present resources in the form of reserves at the disposal of the Government of India are adequate to enable the currency authority safely to undertake the obligation with the measures of fortification, and at the time, which we specify." It is important therefore to examine the reserves and the procedure thereat.

The reserves held for the purpose of maintaining the value of the token currency are two-fold—the Paper Currency Reserve and the Gold Standard Reserve. Their constitution on April 30, 1926 (the date taken by the Commission), was as follows—

Paper Currency Reserve

	Rs	Crores
Silver coin	77	0
Silver bullion	7	7
Gold coin and bullion	22	3
Rupee securities	57	1
Sterling securities	21	0
	185	1

(The gold coin and bullion and the sterling securities are converted at the legal fiction ratio of two shillings per rupee.)

The Gold Standard Reserve amounts at present to £40 000 000 invested in Gold and in British Treasury Bills and other sterling securities.

In theory the two reserves fulfil entirely different functions. The Paper Currency Reserve is the backing for the Note Issue. The Gold Standard Reserve accumulated from the profits on coining, is designed to maintain the external value of the rupee. In practice their action is closely interlocked, and the first line of defence in the event of a demand for remittance from India is the gold in the paper currency reserve. This invisible line of demarcation will disappear if the Commission's proposals are adopted. The Commission are justified in recommending that the two shall be amalgamated. Their further proposals are that the proportions and composition of the combined Reserve should be fixed by statute, that gold and gold securities should form not less than 40 per cent of the whole, with 50 to 60 per cent as the ideal, and that the holding of gold which now stands at about 12.8 per cent should be raised to 20 per cent as soon as possible, and to 25 per cent in ten years. Generally they are of opinion that during this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape.

The proposal to bring the combined Reserve under statutory control is wise, an arguable case could be made out for the thesis that the currency difficulties of India have arisen in the main from the decision of Lord Curzon's Government not to invest the official acceptance of the Fowler Report with legislative authority. The strengthening of the gold reserves is in entire accord with Indian needs.

The Ratio—The majority of the Commission, Sir Purshotamdas Thakorda is being the only dissentient recommend that the rupee be stabilised in relation to gold at a rate corresponding to an exchange rate of one shilling and sixpence to the rupee. Round this point controversy in India will be concentrated. It is worth while to refresh our memories of the history of the ratio. The Fowler Committee recommended that the rupee should be permanently stabilised at one shilling and fourpence. The Secretary of State for India accepted their recommendations without qualification. The rupee was substantially steady at this point until August 1917.

One principle advanced in Sir Dadiba Dalal's prophetic minority report in 1919, that the legal standard of money payments should be and usually is, regarded as less open to repeal or modification than any other legislative Act, will command general acceptance. But when Sir Dadiba went on to suggest that the Government of India might have avoided this measure by larger borrowings in India and encouraging investment abroad he was on ground where no one in touch with Indian conditions can follow him. In the circumstances of the day the Government had no alternative to raising the rate of exchange save in declaring the rupee inconvertible which during the war would have been disastrous. I must reiterate the belief that the real mischief was done not when the rate of exchange was raised to meet the rise in silver, but when it was not lowered as silver fell the attempt to stabilise the rupee.

at the two shilling rate caused the Government of India large losses, and inflicted a terrible blow on trade after it was abandoned in September, 1920, the rupee fell below one shilling and threepence sterling and one shilling gold. Thereafter, under the influence of a succession of abundant harvests it recovered. In 1923, it was one shilling and fourpence sterling, in October, 1924 one and sixpence sterling and one and four gold. With the rise in the pound to gold parity the rupee reached one and sixpence gold in June, 1925, and has remained there.

It is not, I think, open to doubt that if the vain attempt to stabilise the rupee at two shillings had not been made in 1920, or if advantage had been taken of its return to one and four the permanent standard might have been re-established without undue disturbance. Sir Purshotamdas Thakordas asserts in his minute of dissent that "the Executive had made up their minds to work up to a one shilling and sixpence ratio long before this Commission was appointed to examine the question. Indeed, they have presented to us the issue in this regard as a *fait accompli*, achieved by them, not having hesitated by manipulation to keep up the rate even while we were in session. I cannot conceive of any parallel to such a procedure in any country."

It is to my mind a great misfortune that the opportunity of restoring the permanent ratio of one and four was not seized when it offered. Not because there is any special sanctity in a ratio as such but because there is a sanctity in the legal standard of money payments. If this had been done the Commission's scheme would have received practically unanimous support in India, as it is a violent controversy will rage round this secondary issue, obscuring the great merit of the Commission's basic recommendation a true gold standard, statutory in its composition and automatic in action, with the coalescence of the currency and credit authorities. However, we have to deal with facts as we find them. The majority of the commission base their recommendation on the "conviction, which has been formed and cumulatively reinforced during the progress of our inquiry, that at the present exchange rate of about one shilling and sixpence, prices in India have already attained a substantial measure of adjustment with those in the world at large and as a corollary, that any change in the rate would mean a difficult period of readjustment, involving widespread economic disturbance, which it is most desirable in the interests of the people to avoid, and which would in the end be followed by no countervailing advantage." Sir Purshotamdas Thakordas, in a closely reasoned minute of dissent, supported by a wealth of figures, avers—and to my mind with conclusive force that the adjustments are far from complete, and cannot be completed in regard to wages without disastrous labour disputes. Both sides admit that their conclusions are weakened by the unreliability of the Indian Index figures.

The truth, I suggest, lies between these two contentions. There have been very substantial adjustments to one shilling and sixpence no ratio could be operative for over a year without inducing this result. But it is clear that the adjustments, especially in regard to wages in

Western India, are not complete. In the matter of the indebtedness of the agricultural classes of India—seventy per cent of the whole population there has been no adjustment, not in relation to the land revenue they pay to Government. The ratio therefore cannot be determined as a question of academic principle, but is a matter of expediency.

Here, it seems to me, the decisive factor is the economic consequence of a return to one shilling and fourpence. There is no half way house, the rate must be either the *de facto* one of one and sixpence, or the old permanent ratio of one and fourpence. The change would be immediate not a matter of weeks or months but of hours or minutes. There would be an immediate rise in prices of twelve and a half per cent, with a consequent reduction of real wages by that proportion, there would be convulsive disturbance of the foreign trade, there would be violent speculation. I omit all calculation of the effect of the lower rate on the finances of the Government of India, because this is an influence which has been over valued in the past. It is infinitesimal in comparison with the industrial and commercial interests involved. No one who realises the sensitiveness of the Indian market, and the proneness to speculation can contemplate these violent disturbances without a feeling akin to dismay. The balance of advantage lies with stabilisation at one and six, the controversy which must ensue is part of the price to be paid for the neglect to re-establish the permanent ratio when it was practicable.

The Note Issue—Before the war there was a considerable and growing circulation of sovereigns. On the outbreak of hostilities these disappeared as currency the actual currency of India is a token, the silver rupee and another token, the note convertible into rupees. Ever since the breakaway from the accepted gold standard this obligation has imposed serious difficulties on the currency. It drove it into the very heavy coming which followed recovery from the famine of 1899-1900, it compelled heavy purchases of silver which invariably rose in prices as the Government came into the market and it placed the Indian currency system, as occurred during the war, at the mercy of the silver market. The maintenance of the convertibility of the note into silver rupees of the present fineness is only possible so long as silver does not rise above 4sd an ounce. The removal of this anomalous provision, the Commission say, is an essential step in Indian currency reform which must be taken sooner or later. "No opportunity for the termination of this obligatory convertibility is likely to be so favourable at the present when, by making the notes convertible into gold bars for all purposes, a more solid right of convertibility is attached to them than they have ever had since silver ceased to be a reliable standard of value." Both proposition can be accepted in their entirety.

The rise in the volume of the paper currency is one of the most remarkable features in Indian financial history. It developed from no change in the status of the note itself, it was always convertible on demand, but from increased facilities for the encashment of notes, beginning with the introduction of universal notes of small de-

nomination and steadily progressing as experience was gained. We can therefore endorse the conclusion of the Commission that the best way to foster the use of currency notes is to establish confidence in their practical convertibility, and this confidence has been secured not so much by a legal obligation to encash them at currency offices as by making rupees readily available to the public at centres where there is a demand for them." There has been another factor in popularising the note which commands less attention. The rise in prices made the rupee an unsuitable medium for large commercial transactions, from the bulk and weight of the amount of currency required.

The Commission therefore propose that whilst the legal obligation to convert into rupees all the notes in circulation shall remain, this obligation should not attach to the new notes to be issued by the Central Bank, and coincidentally the one rupee note, which had acquired great popularity before it was discontinued on the ground of economy, shall be reissued. The legal obligation on the Central Bank will be to give legal tender money, either notes of smaller denominations or silver rupees, at its option, but it will be the duty of the Bank to supply rupees freely in such quantities as may be required for circulation, and of the Government to furnish the Bank with such coin. The currency position is such that the change in the legal status of the note will be unfelt. India is suffering from a surfeit of rupees, the total volume of which is estimated at approximately Rs 400 crores. There are Rs 85 crores of silver coin and bullion in reserve. The whole tendency will be in the direction of a return of rupees to the reserve rather than to an appetite therefor. Not only will there exist the fullest capacity to supply rupees on demand, but there will be a positive inducement to the currency authority to encourage a demand for rupees in order to get rid of its redundant stock. It is clear that the present opportunity of freeing the currency authority from the dependence on the silver market which has hampered India for so many years is exceptionally favourable, and should be seized without hesitation.

The reception of the Report followed very closely the lines indicated as probable in the article in *The Bankers' Magazine* which we have quoted extensively above. There was a considerable protest, strongest in Western India but shared in other parts of the country, against the proposal to stabilise the rupee at one shilling and sixpence and a demand for a reversion to one and fourpence. There was, particularly in Bombay, a reluctance to agree to the establishment of the Reserve Bank, coupled with the desire that the Imperial Bank of India should be re-moulded in order to make it the Central Bank, with the functions proposed to be remitted to the Reserve Bank. These voices were so loud that they overbore the consideration of the basic recommendations of the Report, a true gold standard and the establishment of an organisation which would link currency with credit. In Bombay there was started a Currency League

with branches in other parts of India, whose main efforts were directed to the ratio, and to the idea that the legal ratio should be one and four, not one and six.

In August 1926 the Government published the text of a Bill designed to fix the ratio at one and six, and to support it by the sale of bullion on the lines laid down in the Report. At the request of a large body of opinion in the Legislative Assembly, which urged that there had not been time to study the Report and that the papers were not available, the discussion of this measure was postponed until the 1927 session. On November 18th the Government of India issued a notification to the following effect—

"After considering the report of the Royal Commission on Indian Currency and Finance the Secretary of State for India in Council in agreement with the Government of India, is prepared to accept as a whole the recommendations of the Commission, subject to such further consideration of details as may prove to be necessary. The necessary legislation to give effect to these recommendations will be introduced in the Indian Legislature during the forthcoming session."

The new Ratio—So far from closing the discussion, this notification intensified it. Feeling ran high on the subject of the ratio, considerable interests in the country being convinced that one shilling and sixpence was a higher rate than the manufacturing and agricultural industries could bear without prolonged and disastrous readjustment. These found strong expression when the Bill to give effect to the new rate was brought before the Legislative Assembly in February March 1927. The Indian Currency Bill was however accepted by the Assembly by a small majority, and adopted by the Council of State. It established the ratio of one shilling and sixpence by enacting that the Government would purchase gold at a price of twenty-one rupees three annas ten pence per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or, at the option of Government, sterling for immediate delivery in London at the same price after allowing for the normal cost or transport from Bombay to London. A rate of one shilling fivepence forty-nine sixty-fourths was notified as Government's selling rate for sterling to meet these obligations.

Exchange has since remained stable at the one and sixpenny rate. World trade depression in the last few years made it increasingly difficult for the Government of India to maintain the statutory ratio but their difficulties were solved when Great Britain went off the Gold standard in September 1931, and the rupee was linked to sterling. By the end of the year exports of commercial gold from India had begun to show their effects, and on December 30 the T. T. rate had risen to 1/6, compared with 1/5½ on September 18.

The characters of the **Reserves** which are the backbone of the Indian currency system are shown below.

THE RESERVE BANK

The following Act of the Indian Legislature received the assent of the Governor General on March 6, 1934, and is known as the Reserve Bank of India Act, 1934 —

Whereas it is expedient to constitute a Reserve Bank for India to regulate the issue of bank notes and the keeping of reserves with a view to securing monetary stability in British India and generally to operate the currency and credit system of the country to its advantage,

And whereas in the present disorganisation of the monetary systems of the world it is not possible to determine what will be suitable as a permanent basis for the Indian monetary system

But whereas it is expedient to make temporary provision on the basis of the existing monetary system, and to leave the question of the monetary standard best suited to India to be considered when the international monetary position has become sufficiently clear and stable to make it possible to frame permanent measures,

It is hereby enacted as follows —

(1) A Bank to be called the Reserve Bank of India shall be constituted for the purposes of taking over the management of the currency from the Governor General in Council and of carrying on the business of banking in accordance with the provisions of this Act

(2) The Bank shall be a body corporate by the name of the Reserve Bank of India, having perpetual succession and a common seal, and shall by the said name sue and be sued

Share Capital —(1) The original share capital of the Bank shall be five crores of rupees divided into shares of one hundred rupees each, which shall be fully paid up

(2) Separate registers of shareholders shall be maintained at Bombay, Calcutta, Delhi, Madras and Rangoon, and a separate issue of shares shall be made in each of the areas served by those registers, as defined in the First Schedule, and shares shall be transferable from one register to another

(3) A shareholder shall be qualified to be registered as such in any area in which he is ordinarily resident or has his principal place of business in India, but no person shall be registered as a shareholder in more than one register, and no person who is not—

(a) domiciled in India and either an Indian subject of His Majesty, or a subject of a State in India, or

(b) a British subject ordinarily resident in India and domiciled in the United Kingdom or in any part of His Majesty's Dominions the government of which does not discriminate in any way against Indian subjects of His Majesty or

(c) a company registered under the Indian Companies Act, 1913, or a society registered under the Co-operative Societies Act, 1912, or any other law for the time being in force in British India relating to co-operative societies

or a scheduled bank, or a corporation or company incorporated by or under an Act of Parliament or any law for the time being in force in any part of His Majesty's Dominions the government of which does not discriminate in any way against Indian subjects of His Majesty, and having a branch in British India, shall be registered as a shareholder or be entitled to payment of any dividend on any share, and no person, who, having been duly registered as a shareholder, ceases to be qualified to be so registered, shall be able to exercise any of the rights of a shareholder otherwise than for the purpose of the sale of his shares

(4) The Governor General in Council shall, by notification in the Gazette of India, specify the parts of His Majesty's Dominions which shall be deemed for the purposes of clauses (b) and (c) of sub section (3) to be the parts of His Majesty's Dominions in which no discrimination against Indian subjects of His Majesty exists

(5) The nominal value of the shares originally assigned to the various registers shall be as follows, namely —

(a) to the Bombay register—one hundred and forty lakhs of rupees

(b) to the Calcutta register—one hundred and forty five lakhs of rupees

(c) to the Delhi register—one hundred and fifteen lakhs of rupees

(d) to the Madras register—seventy lakhs of rupees

(e) to the Rangoon register—thirty lakhs of rupees

Provided that if at the first allotment the total nominal value of the shares on the Delhi register for which applications are received is less than one hundred and fifteen lakhs of rupees, the Central Board shall before proceeding to any allotment, transfer any shares not applied for up to a maximum nominal value of thirty five lakhs of rupees from that register in two equal portions to the Bombay and the Calcutta register

A Committee consisting of two elected members of the Assembly and one elected member of the Council of State to be elected by non-official members of the respective Houses shall be associated with the Central Board for the purpose of making public issue of shares and looking after the first allotment of shares

(6) In allotting the shares assigned to a register, the Central Board shall, in the first instance allot five shares to each qualified applicant who has applied for five or more shares, and if the number of such applicants is greater than one fifth of the total number of shares assigned to the register, shall determine by lot the applicants to whom the shares shall be allotted

(7) If the number of such applicants is less than one fifth of the number of shares assigned to the register, the Central Board shall allot the remaining shares firstly, up to the limit of one

half of such remaining shares to those applicants who have applied for less than five shares, and thereafter as to the balance to the various applicants in such manner as it may deem fair and equitable, having regard to the desirability of distributing the shares and the voting rights attached to them as widely as possible

(6) Notwithstanding anything contained in sub sections (6) and (7), the Central Board shall reserve for and allot to Government shares of the nominal value of two lakhs and twenty thousand rupees to be held by Government for disposal at par to Directors seeking to obtain the minimum share qualification required under sub section (2) of section 11

(9) If, after all applications have been met in accordance with the provisions of sub sections (6) (7) and (8), any shares remain unallotted, they shall, notwithstanding anything contained in this section, be allotted to and taken up by Government, and shall be sold by the Governor General in Council as soon as may be, at not less than par, to residents of the areas served by the register concerned

(10) The Governor General in Council shall have no right to exercise any vote under this Act by reason of any shares allotted to him under sub section (8) or under sub-section (9)

(11) A Director shall not dispose of any shares obtained from Government under the provisions of sub section (8) otherwise than by re sale to Government at par, and Government shall be entitled to repurchase at par all such shares held by any Director on his ceasing from any cause to hold office as Director

Increase and reduction of share capital

—(1) The share capital of the Bank may be increased or reduced on the recommendation of the Central Board, with the previous sanction of the Governor General in Council and with the approval of the Central Legislature to such extent and in such manner as may be determined by the Bank in General meeting

(2) The additional shares so created shall be of the nominal value of one hundred rupees each and shall be assigned to the various registers in the same proportions as the shares constituting the original share capital

(3) Such additional shares shall be fully paid up, and the price at which they may be issued shall be fixed by the Central Board with the previous sanction of the Governor General in Council

(4) The provisions of section 4 relating to the manner of allotment of the shares constituting the original share capital shall apply to the allotment of such additional shares, and existing shareholders shall not enjoy any preferential right to the allotment of such additional shares

The Bank shall, as soon as may be, establish offices in Bombay, Calcutta, Delhi, Madras and Rangoon and a branch in London, and may establish branches or agencies in any other place in India or, with the previous sanction of the Governor General in Council, elsewhere

The general superintendence and direction of the affairs and business of the Bank shall be entrusted to a Central Board of Directors which

may exercise all powers and do all acts and things which may be exercised or done by the Bank and are not by this Act expressly directed or required to be done by the Bank in general meeting

(1) The Central Board shall consist of the following Directors, namely —

(a) a Governor and two Deputy Governors to be appointed by the Governor General in Council after consideration of the recommendations made by the Board in that behalf

(b) four Directors to be nominated by the Governor General in Council

(c) eight Directors to be elected on behalf of the shareholders on the various registers, in the manner provided in section 9 and in the following numbers, namely —

(i) for the Bombay register—two Directors

(ii) for the Calcutta register—two Directors

(iii) for the Delhi register—two Directors

(iv) for the Madras register—one Director

(v) for the Rangoon register—one Director

and

(d) one government official to be nominated by the Governor General in Council

(2) The Governor and Deputy Governors shall devote their whole time to the affairs of the Bank, and shall receive such salaries and allowances as may be determined by the Central Board, with the approval of the Governor General in Council

(3) A Deputy Governor and the Director nominated under clause (d) of sub section (1) may attend any meeting of the Central Board and take part in its deliberations but shall not be entitled to vote

Provided that when the Governor is absent a Deputy Governor authorized by him in this behalf in writing may vote for him

(4) The Governor and a Deputy Governor shall hold office for such term not exceeding five years as the Governor General in Council may fix when appointing them, and shall be eligible for re appointment

A Director nominated under clause (b) or elected under clause (c) of sub section (1) shall hold office for five years or thereafter until his successor shall have been duly nominated or elected and subject to the provisions of section 10, shall be eligible for re nomination or re election

A Director nominated under clause (d) of sub section (1) shall hold office during the pleasure of the Governor General in Council

(5) No act or proceeding of the Board shall be questioned on the ground merely of the existence of any vacancy in, or any defect in the constitution of, the Board

Local Boards—(1) Local Board shall be constituted for each of the five areas specified in the First Schedule, and shall consist of —

(a) five members elected from amongst themselves by the shareholders who are registered on the register for that area and are qualified to vote, and

(b) not more than three members nominated by the Central Board from amongst the share holders registered on the register for that area, who may be nominated at any time

Provided that the Central Board shall in exercising this power of nomination aim at securing the representation of territorial or economic interests not already represented, and in particular the representation of agricultural interests and the interests of co-operative banks

(2) At an election of members of a Local Board for any area, any shareholder who has been registered on the register for that area, for a period of not less than six months ending with the date of the election as holding five shares shall have one vote, and each shareholder so registered as having more than five shares shall have one vote for each five shares, but subject to a maximum of ten votes, and such votes may be exercised by proxy appointed on each occasion for that purpose such proxy being himself a shareholder entitled to vote at the election and not being an employee of the Bank

(3) The members of a Local Board shall hold office until they vacate it under sub section (6) and subject to the provisions of section 10 shall be eligible for re-election or re-nomination, as the case may be

(4) At any time within three months of the day on which the Directors representing the shareholders on any register are due to retire under the provisions of this Act the Central Board shall direct an election to be held of members of the Local Board concerned, and shall specify a date from which the registration of transferees and to the register shall be suspended until the election has taken place

(5) On the issue of such direction the Local Board shall give notice of the date of the election and shall publish a list of shareholders holding five or more shares with the dates on which their shares were registered and with their registered addresses, and such list shall be available for purchase not less than three weeks before the date fixed for the election

(6) The names of the persons elected shall be notified to the Central Board which shall thereupon proceed to make any nominations permitted by clause (b) of sub section (1) it may then decide to make, and shall fix the date on which the outgoing members of the Local Board shall vacate office, and the incoming members shall be deemed to have assumed office on that date

(7) The elected members of a Local Board shall as soon as may be after they have been elected, elect from amongst themselves one or two persons, as the case may be to be Directors representing to the shareholders on the register for the area for which the Board is constituted

(8) A Local Board shall advise the Central Board on such matters as may be generally or specifically referred to it and shall perform such duties as the Board may by regulations, delegate to it

(1) No person may be a Director or a member of a Local Board who—

(a) is a salaried government official or a salaried official of a State in India, or

(b) is, or at any time has been, adjudicated an insolvent, or has suspended payment or is compounded with his creditors or

(c) is found lunatic or becomes of unsound mind, or

(d) is an officer or employee of any bank or

(e) is a director of any bank, other than a bank which is a society registered or deemed to be registered under the Co-operative Societies Act, 1912 or any other law for the time being in force in British India relating to co-operative societies

(2) No two persons who are partners of the same mercantile firm, or are directors of the same private company, or one of whom is the general agent of or holds a power of procuration from the other, or from a mercantile firm of which the other is a partner may be Directors or members of the same Local Board at the same time

(3) Nothing in clause (a) clause (d) or clause (e) of sub section (1) shall apply to the Governor, or to a Deputy Governor or to the Director nominated under clause (d) of sub section (1) of section 8

(1) The Governor General in Council may remove from office the Governor or a Deputy Governor or any nominated or elected Director

Provided that in the case of a Director nominated or elected under clause (b) or clause (c) of sub section (1) of section 8 this power shall be exercised only on a resolution passed by the Central Board in that behalf by a majority consisting of not less than nine Directors

(2) A Director nominated or elected under clause (b) or clause (c) of sub section (1) of section 8, and any member of a Local Board shall cease to hold office if at any time after six months from the date of his nomination or election he is not registered as a holder of unencumbered shares of the Bank of a nominal value of not less than five thousand rupees, or if he ceases to hold unencumbered shares of that value, and any such Director shall cease to hold office if without leave from the Governor General in Council he absents himself from three consecutive meetings of the Central Board convened under sub section (1) of section 13

(3) The Governor General in Council shall remove from office any Director, and the Central Board shall remove from office any member of a Local Board, if such Director or member becomes subject to any of the disqualifications specified in sub section (1) or sub section (2) of section 10

(4) A Director or member of a Local Board removed or ceasing to hold office under the foregoing sub sections shall not be eligible for re-appointment either as Director or as member of a Local Board until the expiry of the term for which his appointment was made

(5) The appointment, nomination or election as Director or member of a Local Board of any person who is a member of the Indian Legislature or of a local Legislature shall be void,

unless, within two months of the date of his appointment, nomination or election, he ceases to such member, and, if any Director or member of a Local Board is elected or nominated as a member of any such Legislature, he shall cease to be a Director or member of the Local Board as from the date of such election or nomination, as the case may be

(6) A Director may resign his office to the Governor General in Council, and a member of a Local Board may resign his office to the Central Board, and on the acceptance of the resignation the office shall become vacant

(1) If the Governor or a Deputy Governor by infirmity or otherwise is rendered incapable of executing his duties or is absent on leave or otherwise in circumstances not involving the vacation of his appointment the Governor General in Council may, after consideration of the recommendations made by the Central Board in this behalf, appoint another person to officiate for him, and such person may, notwithstanding anything contained in clause (d) of sub section (1) of section 10, be an officer of the Bank

(2) If an elected Director is for any reason unable to attend a particular meeting of the Central Board, the elected members of the Local Board of the area which he represents may elect one of their number to take his place, and for the purposes of that meeting the substitute so elected shall have all the powers of the absent Director

(3) Where any casual vacancy in the office of any member of a Local Board occurs otherwise than by the occurrence of a vacancy in the office of a Director elected by the Local Board, the Central Board may nominate thereto any qualified person recommended by the elected members of the Local Board

(4) Where any casual vacancy occurs in the office of a Director other than the vacancies provided for in sub section (1), the vacancy shall be filled, in the case of a nominated Director by nomination, and in the case of an elected Director by election held in the manner provided in section 9 for the election of Directors

Provided that before such election is made the resulting vacancy, if any, in the Local Board and any vacancy in the office of an elected member of such Board which may have been filled by a member nominated under sub section (3) shall be filled by election held as nearly as may be in the manner provided in section 9 for the election of members of a Local Board

(5) A person nominated or elected under this section to fill a casual vacancy shall, subject to the proviso contained in sub section (4), hold office for the unexpired portion of the term of his predecessor

(1) Meetings of the Central Board shall be convened by the Governor at least six times in each year and at least once in each quarter

(2) Any three Directors may require the Governor to convene a meeting of the Central Board at any time and the Governor shall forthwith convene a meeting accordingly

(3) The Governor, or in his absence the Deputy Governor authorized by the Governor under the proviso to sub section (3) of section 8 to vote

for him, shall preside at meetings of the Central Board, and, in the event of an equality of votes, shall have a second or casting vote

General Meetings—(1) A general meeting (hereinafter in this Act referred to as the annual general meeting) shall be held annually, at a place where there is an office of the Bank within six weeks from the date on which the annual accounts of the Bank are closed, and a general meeting may be convened by the Central Board at any other time

Provided that the annual general meeting shall not be held on two consecutive occasions at any one place

(2) The shareholders present at a general meeting shall be entitled to discuss the annual accounts, the report of the Central Board on the working of the Bank throughout the year and the auditors' report on the annual balance sheet and accounts

(3) Every shareholder shall be entitled to attend at any general meeting and each shareholder who has been registered on any register, for a period of not less than six months ending with the date of the meeting, as holding five or more shares shall have one vote and on a poll being demanded each shareholder so registered shall have one vote for each five shares, but subject to a maximum of ten votes and such votes may be exercised by proxy appointed on each occasion for that purpose such proxy being himself a shareholder entitled to vote at the election and not being an officer or employee of the Bank

(1) The following provisions shall apply to the first constitution of the Central Board and notwithstanding anything contained in section 8, the Central Board as constituted in accordance therewith shall be deemed to be duly constituted in accordance with this Act

(2) The first Governor and the first Deputy Governor or Deputy Governors shall be appointed by the Governor General in Council on his own initiative, and shall receive such salaries and allowances as he may determine

(3) The first eight Directors representing the shareholders on the various registers shall be nominated by the Governor General in Council from the areas served respectively by those registers, and the Directors so nominated shall hold office until their successors shall have been duly elected as provided in sub section (4)

(4) On the expiry of each successive period of twelve months after the nomination of Directors under sub section (3) two Directors shall be elected in the manner provided in section 9 until all the Directors so nominated have been replaced by elected Directors holding office in accordance with section 8. The register in respect of which the election is to be held shall be selected by lot from among the registers still represented by nominated Directors, and for the purposes of such lot the Madras and Rangoon registers shall be treated as if they comprised one register only

As soon as may be after the commencement of this Act, the Central Board shall direct elections to be held and may make nominations, in order to constitute Local Boards in accordance with the provisions of section 9, and the mem-

bers of such Local Boards shall hold office up to the date fixed under sub section (6) of section 9 but shall not exercise any right under sub section (7) of that section

Business—The Bank shall be authorized to carry on and transact the several kinds of business hereinafter specified, namely—

(1) the accepting of money on deposit without interest from, and the collection of money for, the Secretary of State in Council, the Governor General in Council, Local Governments, States in India, local authorities, banks and any other persons

(2) (a) the purchase, sale and rediscount of bills of exchange and promissory notes, drawn on and payable in India and arising out of *bona fide* commercial or trade transactions bearing two or more good signatures one of which shall be that of a scheduled bank, and maturing within ninety days from the date of such purchase or rediscount, exclusive of days of grace,

(b) the purchase, sale and rediscount of bills of exchange and promissory notes, drawn and payable in India and bearing two or more good signatures one of which shall be that of a scheduled bank or a provincial co-operative bank, and drawn or issued for the purpose of financing seasonal agricultural operations or the marketing of crops and maturing within nine months from the date of such purchase or rediscount, exclusive of days of grace,

(c) the purchase, sale and rediscount of bills of exchange and promissory notes drawn and payable in India and bearing the signature of a scheduled bank, and issued or drawn for the purpose of holding or trading in securities of the Government of India or a Local Government, or such securities of States in India as may be specified in this behalf by the Governor General in Council on the recommendation of the Central Board, and maturing within ninety days from the date of such purchase or rediscount, exclusive of days of grace,

(3) (a) the purchase from and sale to scheduled banks of sterling in amounts of not less than the equivalent of one lakh of rupees,

(b) the purchase, sale and rediscount of bills of exchange (including treasury bills) drawn in or on any place in the United Kingdom and maturing within ninety days from the date of purchase provided that no such purchase, sale or rediscount shall be made in India except with a scheduled bank, and

(c) the keeping of balances with banks in the United Kingdom,

(4) the making to States in India, local authorities, scheduled banks and provincial co-operative banks of loans and advances, repayable on demand or on the expiry of fixed periods not exceeding ninety days, against the security of—

(a) stocks, funds and securities (other than immovable property) in which a trustee is authorized to invest trust money by any Act of Parliament or by any law for the time being in force in British India

(b) gold or silver or documents of title to the same,

(c) such bills of exchange and promissory notes as are eligible for purchase or rediscount by the Bank

(d) promissory notes of any scheduled bank or a provincial co-operative bank, supported by documents of title to goods which have been transferred, assigned, or pledged to any such bank as security for a cash credit or overdraft granted for *bona fide* commercial or trade transactions, or for the purpose of financing seasonal agricultural operations or the marketing of crops

(5) the making to the Governor General in Council and to such Local Governments as may have the custody and management of their own provincial revenues of advances repayable in each case not later than three months from the date of the making of the advance

(6) the issue of demand drafts made payable at its own offices or agencies and the making, issue and circulation of bank post bills

(7) the purchase and sale of Government securities of the United Kingdom maturing within ten years from the date of such purchase

(8) the purchase and sale of securities of the Government of India or of a Local Government of any maturity or of such securities of a local authority in British India or of such States in India as may be specified in this behalf by the Governor General in Council on the recommendation of the Central Board

Provided that securities fully guaranteed as to principal and interest by the Government of India, a Local Government, a local authority or a State in India shall be deemed for the purposes of this clause to be securities of such Government, authority or State,

Provided further that the amount of such securities held at any time in the Banking Department shall be so regulated that—

(a) the total value of such securities shall not exceed the aggregate amount of the share capital of the Bank, the Reserve Fund and three fifths of the liabilities of the Banking Department in respect of deposits,

(b) the value of such securities maturing after one year shall not exceed the aggregate amount of the share capital of the Bank, the Reserve Fund and two fifths of the liabilities of the Banking Department in respect of deposits, and

(c) the value of such securities maturing after ten years shall not exceed the aggregate amount of the share capital of the Bank and the Reserve Fund and one fifth of the liabilities of the Banking Department in respect of deposits,

(9) The custody of monies, securities and other articles of value and the collection of the proceeds, whether principal, interest or dividends, of any such securities,

(10) the sale and realisation of all property, whether movable or immovable, which may in any way come into the possession of the Bank in satisfaction, or part satisfaction, of any of its claims,

(11) the acting as agent for the Secretary of State in Council, the Governor General in Council for any Local Government or local authority of State in India in the transaction of any of the following kinds of business, namely —

(a) the purchase and sale of gold or silver,
(b) the purchase, sale, transfer and custody of bills of exchange, securities or shares in any company

(c) the collection of the proceeds, whether principal, interest or dividends, of any securities or shares,

(d) the remittance of such proceeds, at the risk of the principal by bills of exchange payable either in India or elsewhere,

(e) the management of public debt,

(12) the purchase and sale of gold coin and bullion

(13) the opening of an account with or the making of an agency agreement with, and the acting as agent or correspondent of a bank which is the principal currency authority of any country under the law for the time being in force in that country or any international bank formed by such banks, and the investing of the funds of the Bank in the shares of any such international bank

(14) the borrowing of money for a period not exceeding one month for the purposes of the business of the Bank, and the giving of security for money so borrowed

Provided that no money shall be borrowed under this clause from any person in India other than a scheduled bank or from any person outside India other than a bank which is the principal currency authority of any country under the law for the time being in force in that country

Provided further that the total amount of such borrowings from persons in India shall not at any time exceed the amount of the share capital of the Bank,

(15) the making and issue of bank notes subject to the provision of this Act, and

(16) generally, the doing of all such matters and things as may be incidental to or consequential upon the exercise of its powers or the discharge of its duties under this Act

When, in the opinion of the Central Board or, where the powers and functions of the Central Board under this section have been delegated to a committee of the Central Board or to the Governor, in the opinion of such committee or of the Governor as the case may be, a special occasion has arisen making it necessary or expedient that action should be taken under this section for the purpose of regulating credit in the interests of Indian trade, commerce, industry and agriculture, the Bank may, notwithstanding any limitation contained in sub-clauses (a) and (b) of clause (2) or sub-clause (a) or (b) of clause (3) or clause (4) of section 17 —

(1) purchase, sell or discount any of the bills of exchange or promissory notes specified in sub-clause (a) or (b) of clause (2) or sub-clause (b) of clause (3) of that section though such bill

or promissory note does not bear the signature of a scheduled bank or a provincial co-operative bank or

(2) purchase or sell sterling in amounts of not less than the equivalent of one lakh of rupees or

(3) make loans or advances repayable on demand or on the expiry of fixed periods not exceeding ninety days against the various forms of security specified in clause (4) of that section

Provided that a committee of the Board or the Governor shall not save in cases of special urgency authorized action under this section without prior consultation with the Central Board and that in all cases action so authorized shall be reported to the members of the Central Board forthwith

Forbidden Business—Save as otherwise provided in sections 17, 18 and 45, the Bank may not

(1) engage in trade or otherwise have a direct interest in any commercial, industrial or other undertaking, except such interest as it may in any way acquire in the course of the satisfaction of any of its claims provided that all such interests shall be disposed of at the earliest possible moment

(2) purchase its own shares or the shares to any other bank or of any company or grant loans upon the security of any such shares,

(3) advance money on mortgage of, or otherwise on the security of, immovable property or documents of title relating thereto, or become the owner of immovable property except so far as is necessary for its own business premises and residences for its officers and servants

(4) make loans or advances

(5) draw or accept bills payable otherwise than on demand,

(6) allow interest on deposits or current accounts

Central Banking Functions

The Bank shall undertake to accept monies for account of the Secretary of State in Council and the Governor General in Council and such Local Governments as may have the custody and management of their own provincial revenues and such States in India as may be approved of and notified by the Governor General in Council in the Gazette of India and to make payments up to the amount standing to the credit of their accounts respectively and to carry out their exchange, remittance and other banking operations, including the management of the public debt

(1) The Governor General in Council and such Local Governments as may have the custody and management of their own provincial revenues shall entrust the Bank, on such conditions as may be agreed upon, with all their money remittance exchange and banking transactions in India and in particular, shall deposit free of interest all their cash balances with the Bank

Provided that nothing in this sub-section shall prevent the Governor General in Council or any Local Government from carrying on

money transactions at places where the Bank has no branches or agencies, and the Governor General in Council and Local Governments may hold at such places such balances as they may require

(2) The Governor General in Council and each Local Government shall entrust the Bank on such conditions as may be agreed upon with the management of the public debt and with the issue of any new loans

(3) In the event of any failure to reach agreement on the conditions referred to in this section the Governor General in Council shall decide what the conditions shall be

(4) Any agreement made under this section to which the Governor General in Council or any Local Government is a party shall be void, as soon as may be after it is made, before the Central Legislature and in the case of a Local Government before its local Legislature also

Bank Notes—(1) The Bank shall have the sole right to issue bank notes in British India, and may, for a period which shall be fixed by the Governor General in Council on the recommendation of the Central Board, issue currency notes of the Government of India supplied to it by the Governor General in Council, and the provisions of this Act applicable to bank notes shall unless a contrary intention appears apply to all currency notes of the Government of India issued either by the Governor General in Council or by the Bank in like manner as if such currency notes were bank notes, and references in this Act to bank notes shall be construed accordingly

(2) On and from the date on which this Chapter comes into force the Governor General in Council shall not issue any currency notes

Issue Department—(1) The issue of bank notes shall be conducted by the Bank in an Issue Department which shall be separated and kept wholly distinct from the Banking Department, and the assets of the Issue Department shall not be subject to any liability other than the liabilities of the Issue Department as hereinafter defined in section 34

(2) The Issue Department shall not issue bank notes to the Banking Department or to any other person except in exchange for other bank notes or for such coin, bullion or securities as are permitted by this Act to form part of the Reserve

Bank notes shall be of the denominational values of five rupees, ten rupees, fifty rupees, one hundred rupees, five hundred rupees, one thousand rupees and ten thousand rupees, unless otherwise directed by the Governor General in Council on the recommendation of the Central Board

The design, form and material of bank notes shall be such as may be approved by the Governor General in Council after consideration of the recommendations made by the Central Board

(1) Subject to the provisions of sub section (2), every bank note shall be legal tender at any place in British India in payment or on account for the amount expressed therein, and shall be guaranteed by the Governor General in Council

(2) On recommendation of the Central Board the Governor General in Council may, by notification in the Gazette of India, declare that with effect from such date as may be specified in the notification any series of bank notes of any denomination shall cease to be legal tender save at an office or agency of the Bank

The Bank shall not re-issue bank notes which are torn, defaced or excessively soiled

Notwithstanding anything contained in any enactment or rule of law to the contrary, no person shall of right be entitled to recover from the Governor General in Council or the Bank the value of any lost stolen mutilated or imperfect currency note of the Government of India or bank note

Provided that the Bank may, with the previous sanction of the Governor General in Council prescribe the circumstances and the conditions and limitations subject to which the value of such currency notes or bank notes may be refunded as of grace and the rules made under this proviso shall be laid on the table of both Houses of the Central Legislature

The Bank shall not be liable to the payment of any stamp duty under the Indian Stamp Act, 1899, in respect of bank notes issued by it

(1) If in the opinion of the Governor General in Council the Bank fails to carry out any of the obligations imposed on it by or under this Act, he may, by notification in the Gazette of India, declare the Central Board to be superseded, and thereafter the general superintendence and direction of the affairs of the Bank shall be entrusted to such agency as the Governor General in Council may determine and such agency may exercise the powers and do all acts and things which may be exercised or done by the Central Board under this Act

(2) When action is taken under this section the Governor General in Council shall cause a full report of the circumstances leading to such action and of the action taken to be laid before the Central Legislature at the earliest possible opportunity and in any case within three months from the issue of the notification superseding the Board

No person in British India other than the Bank or, as expressly authorized by this Act, the Governor General in Council shall draw accept, make or issue any bill of exchange hundi, promissory note or engagement for the payment of money payable to bearer on demand or borrow, owe or take up any sum or sums of money on the bills, hundis or notes payable to bearer on demand of any such person

Provided that cheques or drafts, including hundis, payable to bearer on demand or otherwise may be drawn on a person's account with a banker, shroff or agent

(1) Any person contravening the provisions of section 31 shall be punishable with fine which may extend to the amount of the bill, hundi, note or engagement in respect whereof the offence is committed.

(2) No prosecution under this section shall be instituted except on complaint made by the Bank

Assets of the Issue Department

(1) The assets of the Issue Department shall consist of gold coin, gold bullion, sterling securities, rupee coin and rupee securities to such aggregate amount as is not less than the total of the liabilities of the Issue Department as hereinafter defined

(2) Of the total amount of the assets, not less than two fifths shall consist of gold coin, gold bullion or sterling securities

Provided that the amount of gold coin and gold bullion shall not at any time be less than forty crores of rupees in value

(3) The remainder of the assets shall be held in rupee coin, Government of India rupee securities of any maturity and such bills of exchange and promissory notes payable in British India as are eligible for purchase by the Bank under sub clause (a) or sub clause (b) of clause (2) of section 17 or under clause (1) of section 18

Provided that the amount held in Government of India rupee securities shall not at any time exceed one fourth of the total amount of the assets or fifty crores of rupees, whichever amount is greater, or, with the previous sanction of the Governor General in Council, such amount plus a sum of ten crores of rupees

(4) For the purposes of this section, gold coin and gold bullion shall be valued at 8 47512 grains of fine gold per rupee, rupee coin shall be valued at its face value and securities shall be valued at the market rate for the time being obtaining

(5) Of the gold coin and gold bullion held as assets, not less than seventeen twentieths shall be held in British India and all gold coin and gold bullion held as assets shall be held in the custody of the Bank or its agencies

Provided that gold belonging to the Bank which is in any other bank or in any mint or treasury or in transit may be reckoned as part of the assets

(6) For the purposes of this section, the sterling securities which may be held as part of the assets shall be securities of any of the following kinds payable in the currency of the United Kingdom, namely —

(a) balances at the credit of the Issue Department with the Bank of England

(b) bills of exchange bearing two or more good signatures and drawn on and payable at any place in the United Kingdom and having a maturity not exceeding ninety days,

(c) government securities of the United Kingdom maturing within five years

Provided that, for a period of two years from the date on which this Chapter comes into force, any of such last mentioned securities may be securities maturing after five years, and the Bank may, at any time before the expiry of that period, dispose of such securities notwithstanding anything contained in section 17

Liabilities of the Issue Department — (1) The liabilities of the Issue Department shall be an amount equal to the total of the

amount of the currency notes of the Government of India and bank notes for the time being in circulation

(2) For the purposes of this section any currency note of the Government of India or bank note which has not been presented for payment within forty years from the 1st day of April following the date of its issue shall be deemed not to be in circulation, and the value thereof shall, notwithstanding anything contained in sub section (2) of section 23, be paid by the Issue Department to the Governor General in Council or the Banking Department, as the case may be, but any such note, if subsequently presented for payment, shall be paid by the Banking Department, and any such payment in the case of a currency note of the Government of India shall be debited to the Governor General in Council

On the date on which this Chapter comes into force the Issue Department shall take over from the Governor General in Council the liability for all the currency notes of the Government of India for the time being in circulation and the Governor General in Council shall transfer to the Issue Department gold coin, gold bullion, sterling securities, rupee coin and rupee securities to such aggregate amount as is equal to the total of the amount of the liability so transferred. The coin bullion and securities shall be transferred in such proportion as to comply with the requirements of section 33

Provided that the total amount of the gold coin, gold bullion and sterling securities so transferred shall not be less than one half of the whole amount transferred and that the amount of rupee coin so transferred shall not exceed fifty crores of rupees

Provided further that the whole of the gold coin and gold bullion held by the Governor General in Council in the gold standard reserve and the paper currency reserve at the time of transfer shall be so transferred

(1) After the close of any financial year in which the minimum amount of rupee coin held in the assets, as shown in any of the weekly accounts of the Issue Department for that year prescribed under sub section (1) of section 53 is greater than fifty crores of rupees or one sixth of the total amount of the assets as shown in that account, whichever may be the greater, the Bank may deliver to the Governor General in Council rupee coin up to the amount of such excess but not without his consent exceeding five crores of rupees, against payment of legal tender value in the form of bank notes, gold or securities

Provided that if the Bank so desires and if the amount of gold coin, gold bullion and sterling securities in the assets does not at that time exceed one half of the total assets a proportion not exceeding two fifths of such payment shall be in gold coin, gold bullion or such sterling securities as may be held as part of the assets under sub section (6) of section 33

(2) After the close of any financial year in which the maximum amount of rupee coin held in the assets, as so shown, is less than fifty crores of rupees or one sixth of the total amount of the assets, as so shown, whichever may be

the greater the Governor General in Council shall deliver to the Bank rupee coin up to the amount of such deficiency, but not without its consent exceeding five crores of rupees, against payment of legal tender value

(1) Notwithstanding anything contained in the foregoing provisions, the Bank may, with the previous sanction of the Governor General in Council, for periods not exceeding thirty days in the first instance, which may, with the like sanction be extended from time to time by periods not exceeding fifteen days, hold as assets gold coin, gold bullion or sterling securities of less aggregate amount than that required by sub section (2) of section 33 and, whilst the holding is so reduced, the proviso to that sub section shall cease to be operative

Provided that the gold coin and gold bullion held as such assets shall not be reduced below the amount specified in the proviso to sub section (2) of section 33 so long as any sterling securities remain held as such assets

(2) In respect of any period during which the holding of gold coin, gold bullion and sterling securities is reduced under sub-section (1), the Bank shall pay to the Governor General in Council a tax upon the amount by which such holding is reduced below the minimum prescribed by sub section (2) of section 33, and such tax shall be payable at the bank rate for the time being in force, with an addition of one per cent per annum when such holding exceeds thirty two and a half per cent of the total amount of the assets and of a further one and a half per cent per annum in respect of every further decrease, of two and a half per cent or part of such decrease

Provided that the tax shall not in any event be payable at a rate less than six per cent per annum

The Governor General in Council shall undertake not to re-issue any rupee coin delivered under section 36 nor to put into circulation any rupees, except through the Bank and as provided in that section, and the Bank shall undertake not to dispose of rupee coin otherwise than for the purposes of circulation or by delivery to the Governor General in Council under that section

(1) The Bank shall issue rupee coin on demand in exchange for bank notes and currency notes of the Government of India, and shall issue currency notes or bank notes on demand in exchange for coin which is legal tender under the Indian Coinage Act, 1906

(2) The Bank shall, in exchange for currency notes or bank notes of five rupees or upwards, supply currency notes or bank notes of lower value or other coins which are legal tender under the Indian Coinage Act, 1906, in such quantities as may, in the opinion of the Bank, be required for circulation, and the Governor General in Council shall supply such coins to the Bank on demand. If the Governor General in Council at any time fails to supply such coins, the Bank shall be released from its obligations to supply them to the public

Obligation to sell sterling—The Bank shall sell, to any person who makes a demand in that behalf at its office in Bombay, Calcutta,

Delhi, Madras or Rangoon and pays the purchase price in legal tender currency, sterling for immediate delivery in London, at a rate not below one shilling and five pence and forty nine sixths of a penny for a rupee

Provided that no person shall be entitled to demand to buy an amount of sterling less than ten thousand pounds

Obligation to buy sterling—The Bank shall buy, from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon, sterling for immediate delivery in London, at a rate not higher than one shilling and six pence and three sixteenths of a penny for a rupee

Provided that no person shall be entitled to demand to sell an amount of sterling less than ten thousand pounds

Provided further that no person shall be entitled to receive payment unless the Bank is satisfied that payment of the sterling in London has been made

Cash reserves of scheduled banks—(1) Every bank included in the Second Schedule shall maintain with the Bank a balance the amount of which shall not at the close of business on any day be less than five per cent of the demand liabilities and two per cent of the time liabilities of such bank in India as shown in the return referred to in sub section (2)

Explanation—For the purposes of this section liabilities shall not include the paid up capital or the reserves, or any credit balance in the profits and loss account of the bank or the amount of any loan taken from the Reserve Bank

(2) Every scheduled bank shall send to the Governor General in Council and to the Bank a return signed by two responsible officers of such bank showing—

(a) the amounts of its demand and time liabilities respectively, in India,

(b) the total amount held in India in currency notes of the Government of India and bank notes,

(c) the amounts held in India in rupee coin and subsidiary coin, respectively

(d) the amounts of advances made and of bills discounted in India, respectively and

(e) the balance held at the Bank at the close of business on each Friday or if Friday is a public holiday under the Negotiable Instruments Act, 1881, at the close of business on the preceding working day, and such return shall be sent not later than two working days after the date to which it relates

Provided that where the Bank is satisfied that the furnishing of a weekly return under this sub section is impracticable in the case of any scheduled bank by reason of the geographical position of the bank and its branches, the Bank may require such bank to furnish in lieu of a weekly return a monthly return to be dispatched not later than fourteen days after the end of the month to which it relates giving the details specified in this sub section in respect of such bank at the close of business for the month

(3) If at the close of business on any day before the day fixed for the next return, the balance held at the Bank by any scheduled bank is below the minimum prescribed in sub-section (1), such scheduled bank shall be liable to pay to the Bank in respect of each such day penal interest at a rate three per cent above the bank rate on the amount by which the balance with the Bank falls short of the prescribed minimum, and if on the day fixed for the next return such balance is still below the prescribed minimum as disclosed by this return, the rates of penal interest shall be increased to a rate five per cent above the bank rate in respect of that day and each subsequent day on which the balance held at the Bank at the close of business on that day is below the prescribed minimum.

(4) Any scheduled bank failing to comply with the provisions of sub-section (2) shall be liable to pay to the Governor General in Council or to the Bank, as the case may be, or to each, a penalty of one hundred rupees for each day during which the failure continues.

(5) The penalties imposed by sub-sections (3) and (4) shall be payable on demand made by the Bank, and, in the event of a refusal by the defaulting bank to pay on such demand, may be levied by a direction of the principal Civil Court having jurisdiction in the area where an office of the defaulting bank is situated, such direction to be made only upon application made in this behalf to the Court by the Governor General in Council in the case of a failure to make a return under sub-section (2) to the Governor General in Council, or by the Bank with the previous sanction of the Governor General in Council in other cases.

(6) The Governor General in Council shall, by notification in the Gazette of India, direct the inclusion in the Second Schedule of any bank not already so included which carries on the business of banking in British India and which—

(a) has a paid up capital and reserves of an aggregate value of not less than five lakhs of rupees, and

(b) is a company as defined in clause (2) of section 2 of the Indian Companies Act, 1913, or a corporation or a company incorporated by or under any law in force in any place outside British India,

and shall by a like notification direct the exclusion from that Schedule of any scheduled bank the aggregate value of whose paid up capital and reserve becomes at any time less than five lakhs of rupees, or which goes into liquidation or otherwise ceases to carry on banking business.

The Bank shall compile and shall cause to be published each week a consolidated statement showing the aggregate of the amounts under each clause of sub-section (2) of section 42 exhibited in the returns received from scheduled banks under that section.

The Bank may require any provincial co-operative bank with which it has any transactions under section 17 to furnish the return

referred to in sub-section (2) of section 42 and if it does so, the provisions of sub-sections (4) and (5) of section 42 shall apply so far as may be to such co-operative bank as if it were a scheduled bank.

Agreement with the Imperial Bank—

(1) The Bank shall enter into an agreement with the Imperial Bank of India which shall be subject to the approval of the Governor General in Council, and shall be expressed to come into force on the date on which this Chapter comes into force and to remain in force for fifteen years and thereafter until terminated after five years' notice on either side, and shall further contain the provisions set forth in the Third Schedule.

Provided that the agreement shall be conditional on the maintenance of a sound financial position by the Imperial Bank and that if, in the opinion of the Central Board, the Imperial Bank has failed either to fulfill the conditions of the Agreement or to maintain a sound financial position the Central Board shall make a recommendation to the Governor General in Council and the Governor General in Council, after making such further enquiry as he thinks fit may issue instructions to the Imperial Bank with reference either to the agreement or to any matter which in his opinion involves the security of the Government monies or the assets of the Issue Department in the custody of the Imperial Bank, and in the event of the Imperial Bank disregarding such instructions may declare the agreement to be terminated.

(2) The agreement referred to in sub-section (1) shall as soon as may be after it is made, be laid before the Central Legislature.

General Provisions

The Governor General in Council shall transfer to the Bank rupee securities of the value of five crores of rupees to be allocated by the Bank to the Reserve Fund.

After making provision for bad and doubtful debts, depreciation in assets, contributions to staff and superannuation funds, and such other contingencies as are usually provided for by bankers, and after payment out of the net annual profits of a cumulative dividend at such rate not exceeding five per cent per annum on the share capital as the Governor General in Council may fix at the time of the issue of shares, a portion of the surplus shall be allocated to the payment of an additional dividend to the shareholders calculated on the scale set forth in the Fourth Schedule and the balance of the surplus shall be paid to the Governor General in Council.

Provided that if at any time the Reserve Fund is less than the share capital not less than fifty lakhs of rupees of the surplus, or the whole of the surplus if less than that amount shall be allocated to the Reserve Fund.

(1) Notwithstanding anything contained in the Indian Income tax Act 1922, or any other enactment for the time being in force relating to income tax or super tax, the Bank shall not be liable to pay income tax or super tax on any of its income profits or gains.

Provided that nothing in this section shall affect the liability of any shareholder in respect of income-tax or super tax

(2) For the purposes of section 18 of the Indian Income tax Act, 1922, and of any other relevant provision of that Act relating to the levy and refund of income tax any dividend paid under section 47 of this Act shall be deemed to be Interest on Securities

The Bank shall make public from time to time the standard rate at which it is prepared to buy or re discount bills of exchange or other commercial paper eligible for purchase under this Act

(1) Not less than two auditors shall be elected and then remuneration fixed at the annual general meeting. The auditors may be shareholders, but no Director or other officer of the Bank shall be eligible during his continuance in office. Any auditor shall be eligible for re election on quitting office

(2) The first auditors of the Bank may be appointed by the Central Board before the first annual general meeting and, if so appointed, shall hold office only until that meeting. All auditors elected under this section shall severally be, and continue to act as, auditors until the first annual general meeting after their respective elections

Provided that any casual vacancy in the office of any auditor elected under this section may be filled by the Central Board

Without prejudice to anything contained in section 50, the Governor General in Council may at any time appoint the Auditor General or such auditors as he thinks fit to examine and report upon the accounts of the Bank

Every auditor shall be supplied with a copy of the annual balance-sheet, and it shall be his duty to examine the same, together with the accounts and vouchers relating thereto, and every auditor shall have a list delivered to him of all books kept by the Bank, and shall at all reasonable times have access to the books, accounts and other documents of the Bank, and may, at the expense of the Bank if appointed by it or at the expense of the Governor General in Council if appointed by him, employ accountants or other persons to assist him in investigating such accounts, and may, in relation to such accounts, examine any Director or officer of the Bank

(2) The auditors shall make a report to the shareholders or to the Governor General in Council, as the case may be, upon the annual balance sheet and accounts, and in every such report they shall state whether, in their opinion, the balance sheet is a full and fair balance sheet containing all necessary particulars and properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, and, in case they have called for any explanation or information from the Central Board, whether it has been given and whether it is satisfactory. Any such report made to the

shareholders shall be read together with the report of the Central Board, at the annual general meeting

Returns—(1) The Bank shall prepare and transmit to the Governor General in Council a weekly account of the Issue Department and of the Banking Department in the form set out in the Fifth Schedule or in such other form as the Governor General in Council may, by notification in the Gazette of India, prescribe. The Governor General in Council shall cause these accounts to be published weekly in the Gazette of India

(2) The Bank shall also, within two months from the date on which the annual accounts of the Bank are closed, transmit to the Governor General in Council a copy of the annual accounts signed by the Governor, the Deputy Governors and the Chief Accounting Officer of the Bank, and certified by the auditors together with a report by the Central Board on the working of the Bank throughout the year, and the Governor General in Council shall cause such accounts and report to be published in the Gazette of India

(3) The Bank shall also within two months from the date on which the annual accounts of the Bank are closed, transmit to the Governor General in Council a statement showing the name, address and occupation of, and the number of shares held by, each shareholder of the Bank

Agricultural Credit Department—The Bank shall create a special Agricultural Credit Department the functions of which shall be—

(a) to maintain an expert staff to study all questions of agricultural credit and be available for consultation by the Governor General in Council, Local Governments, provincial co-operative banks, and other banking organisations

(b) to co-ordinate the operations of the Bank in connection with agricultural credit and its relations with provincial co-operative banks and any other banks or organisations engaged in the business of agricultural credit

(1) the Bank shall, at the earliest practicable date and in any case within three years from the date on which this Chapter comes into force, make to the Governor General in Council a report, with proposals, if it thinks fit, for legislation, on the following matters, namely—

(a) the extension of the provisions of this Act relating to scheduled banks to persons and firms, not being scheduled banks, engaged in British India in the business of banking, and

(b) the improvement of the machinery for dealing with agricultural finance and methods for effecting a closer connection between agricultural enterprise and the operations of the Bank

(2) When the Bank is of opinion that the international monetary position has become sufficiently clear and stable to make it possible

to determine what will be suitable as a permanent basis for the Indian monetary system and to frame permanent measures for a monetary standard it shall report its views to the Governor General in Council

(1) The Local Board of any area may at any time require any shareholder who is registered on the register for that area to furnish to the Local Board within a specified time, not being less than thirty days, a declaration, in such form as the Central Board may by regulations prescribe giving particulars of all shares on the said register of which he is the owner

(2) If it appears from such declaration that any shareholder is not the owner of any shares which are registered in his name the Local Board may amend the register accordingly

(3) If any person required to make a declaration under subsection (1) fails to make such declaration within the specified time, the Local Board may make an entry against his name in the register recording such failure and directing that he shall have no right to vote, either under section 9 or section 14, by reason of the shares registered in his name on that register

(4) Whoever makes a false statement in any declaration furnished by him under subsection (1) shall be deemed to have committed the offence of giving false evidence defined in section 191 of the Indian Penal Code, and shall be punishable under the second paragraph of section 193 of that Code

(5) Nothing contained in any declaration furnished under subsection (1) shall operate to affect the Bank with notice of any trust, and no notice of any trust expressed, implied or constructive shall be entered on the register or be receivable by the Bank

(6) Until Local Boards have been constituted under section 9 the powers of a Local Board under this section shall be exercised by the Central Board in respect of any area for which a Local Board has not been constituted

(1) Nothing in the Indian Companies Act 1913, shall apply to the Bank, and the Bank shall not be placed in liquidation save by order of the Governor General in Council and in such manner as he may direct

(2) In such event the Reserve Fund and surplus assets, if any, of the Bank shall be divided between the Governor General in Council and the shareholders in the proportion of seventy five per cent and twenty five per cent respectively

Provided that the total amount payable to any shareholder under this section shall not exceed the paid up value of the shares held by him by more than one per cent for each year after the commencement of this Act subject to a maximum of twenty five per cent

(1) The Central Board may, with the previous sanction of the Governor General in Council, make regulations consistent with this Act to provide for all matters for which provision is necessary or convenient for the purpose of giving effect to the provisions of this Act

(2) In particular and without prejudice to the generality of the foregoing provision, such regulations may provide for all or any of the following matters, namely —

(a) the holding and conduct of elections under this Act, including provisions for the holding of any elections according to the principle of proportional representation by means of the single transferable vote

(b) the final decision of doubts or disputes regarding the qualifications of candidates for election or regarding the validity of elections,

(c) the maintenance of the share register the manner in which and the conditions subject to which shares may be held and transferred and, generally, all matters relating to the rights and duties of shareholders

(d) the manner in which general meetings shall be convened, the procedure to be followed thereat and the manner in which votes may be exercised,

(e) the manner in which notices may be served on behalf of the Bank upon shareholders or other persons

(f) the manner in which the business of the Central Board shall be transacted, and the procedure to be followed at meetings thereof,

(g) the conduct of business of Local Boards and the delegation to such Boards of powers and functions

(h) the delegation of powers and functions of the Central Board to the Governor, or to Deputy Governors, Directors or officers of the Bank

(i) the formation of Committees of the Central Board, the delegation of powers and functions of the Central Board to such Committees, and the conduct of business in such Committees

(j) the constitution and management of staff and superannuation funds for the officers and servants of the Bank,

(k) the manner and form in which contracts binding on the Bank may be executed

(l) the provision of an official seal of the Bank and the manner and effect of its use,

(m) the manner and form in which the balance sheet of the Bank shall be drawn up and in which the accounts shall be maintained

(n) the remuneration of Directors of the Bank

(o) the relations of the scheduled banks with the Bank and the returns to be submitted by the scheduled banks to the Bank,

(p) the regulation of clearing houses for the scheduled banks,

(q) the circumstances in which, and the conditions and limitations subject to which the value of any lost, stolen, mutilated or imperfect currency note of the Government of India or bank note may be refunded, and

(r) generally, for the efficient conduct of the business of the Bank

(3) Copies of all regulations made under this section shall be available to the public on payment

In the Indian Coinage Act, 1906, for section 11 the following section shall be substituted, namely —

'11 Gold coins, coined at His Majesty's Royal Mint in England or at any mint established in pursuance of a proclamation of His Majesty as a branch of His Majesty's Royal Mint, shall not be legal tender in British India in payment or on account, but such coins shall be received by the Reserve Bank of India at its offices, branches and agencies in India at the bullion value of such coins calculated at the rate of 8 47512 grains troy of fine gold per rupee

The Indian Paper Currency Act 1923 the Indian Paper Currency (Amendment) Act, 1923, the Indian Paper Currency (Amendment) Act 1925, and the Currency Act, 1927, are hereby repealed

In sub section (3) of section 11 of the Indian Companies Act, 1913 after the word "Royal" the words "Reserve Bank" shall be inserted

The Reserve Bank began work with the opening of the financial year 1935-36 The Bank made a net profit of Rs. 53,42,100 for the year ended December 31, 1936

Of this amount Rs. 17,50,000 will be utilised for payment to shareholders of a dividend at the rate of 34 per cent per annum, being the cumulative rate fixed by the Governor General in Council. This leaves a surplus of Rs. 35,92,100 for payment to the Governor General in Council, in accordance with the Reserve Bank Act

Under Section 22 of the Reserve Bank of India Act, the Central Board of Directors are empowered to continue to issue the currency notes of the Government of India until their own are ready for issue. It was hoped that they would be able to make the first issues, including notes of a distinctive design for Burma, in the summer of 1937, but the abdication of His Majesty Edward VIII has delayed this programme by some months because the head of His Majesty appears not only on their notes, but also in the watermark. The consideration of revised designs is in hand with the Master Security Printing, Nasik, from whom they obtained their supplies

Provincial Autonomy

When the provinces become autonomous, they will have to maintain separate banking accounts with the Reserve Bank, and they will also become responsible for their own ways and means of finance. At present the Reserve Bank deals

solely with the Central Government, and the latter are responsible for the adjustments with provinces. This change necessarily involves not only far reaching alterations in the accounts, but also several important questions of principle, primarily with reference to the method by which the provinces will obtain their ways and means of resources in future. These problems were examined by the Government of India the Finance Members of the various provinces, and the Reserve Bank at a meeting which was held in Simla in August, and the consequential arrangements are now being worked out between the various parties concerned

Scheduled Bank's Position.

Towards the close of the year it was obvious that there was a definite increase in the credit requirements of trade and industry, though this had not, by the end of the year, developed to such an extent as to absorb the resources available or to react on money rates

The effect on the cash position of the Reserve Bank was marked. Whereas at the end of December 1935, the Bank's cash balance was Rs. 21½ crores it had fallen to Rs. 11½ crores on December 31, 1936, and the latter figure included an increase in the currency of Rs. 4 crores effected in the last week of the year

As a result of the strength of exchange, the Bank was able to put Government in a position to repay the 5½ per cent India Bonds, 1936-38, on July 15, 1936, amounting to £16,858,000 without the necessity of having recourse to a sterling loan, though, of course, part of the proceeds of the sterling loan floated in the previous year was utilised for this purpose. In addition the Bank has increased the external assets of the currency during the year by £3,750,000

Branch Banking

The year has also shown a real development in branch banking. During the year the total number of branches, pay offices, etc. of the scheduled banks increased from 723 to 828 out of which the Imperial Bank contributed 36 pay offices. This shows that the continuance of cheap money is stimulating the banks to develop the potentialities of the upcountry markets. The advance in this direction is particularly noticeable in southern India. Though this increase is welcome, it is obviously still very meagre when the vast possibilities are considered, and it is to be hoped that with the spread of banking education and the consequent increasing availability of trained Indian bankers, the process may develop on a largely increasing scale, because it is in the expansion of branches by the scheduled banks that one of the main solutions lies to the problem of building up rural credit and developing the potentialities of the country

Trade.

India is pre eminently an agricultural country, and that fact dominates the course of its trade. The great export staples are the produce of the soil—wheat, seeds, cotton and jute. If we look back on the course of Indian trade over a long period of years we shall note a striking development towards stability. In the days that are past the outturn of the soil was subjected to periodic shocks from famines arising from the failure of the rains, when the export trade in these staples dwindled to small proportions. But the spread of irrigation has produced a great change, and though no doubt in future heavy losses may be incurred from the weakness of the monsoons, they are never likely to be as catastrophic as in such year as 1896-97 and 1899-1900. Well over thirty per cent of the culturable area of the Punjab is under irrigation, and huge new works are in progress to utilise the waters of the Sutlej, and of the Indus in Sind. Whilst these great works have been carried out or are in progress to spill on the land the floods of the snowed rivers of the North, other works of a less imposing character have safeguarded the arid tracts of the South. A chain of storage lakes arrests the rains of the Western Ghats and through canals spreads them over the parched lands of the Deccan. The rivers of the South like the Cauvery are being harnessed to preserve their flood waters for Madras. All over India irrigation works large and small, are being restlessly pressed forward, and their effect is to give a far greater stability to Indian agriculture.

The destination of these surplus crops is another factor of importance. The great customer for Indian cotton is Japan and to a lesser extent the Continent of Europe. Continental Europe is also a large buyer of her oilseeds and other produce, and of her hides and skins. Whilst the United Kingdom is the great market for tea and wheat foreign coun-

tries are very important factors in the Indian export trade, therefore India had a vital interest in the economic recovery of Europe.

But whilst India is pre eminently an agricultural country, she ranks at the International Labour Office at Geneva as one of the great industrial countries of the world. Her manufacturing industries are few in number and are concentrated in a few areas, but they are of great importance. The largest is the cotton textile industry, which has its home in the town and Island of Bombay, with important subsidiary centres at Ahmedabad, Solapur and Nagpur. Next in importance is the jute industry. Raw jute is a virtual monopoly of Bengal, and the jute mills are concentrated in and near Calcutta. The metallurgical industry is of more recent growth. The principal centre is Jamshedpur, the seat of the works of the Tata Iron and Steel Company where subsidiary industries have sprung up to utilise the products of the blast furnaces and mills. A very large proportion of the jute manufactures is exported. The cotton textile industry has lost a considerable part of its export trade to Japan, the Far East and East Africa, the mills find their principal outlet in India itself, and even there they are subject to severe competition from Japan and China. The iron and steel industry is for the most part a home industry though large quantities of Indian pig iron are shipped to the Far East and in some years to the western ports of North and South America. The sugar manufacturing industry has grown by leaps and bounds in recent years. Therefore whilst India is still in the main an agricultural country three quarters of her population drawing their sustenance from the soil her manufacturing industries are of large and growing importance and their prosperity every year affects in an increasing degree the general prosperity of the people.

I—GENERAL

Agricultural Conditions in India.—A review of the conditions in India during the year under review indicates a steady, if not spectacular improvement. Despite the large industrial advance made in recent years India's prosperity depends, in the main, on good harvests and satisfactory prices for her commodities. Agricultural conditions during the year under review were on the whole, fair. During the monsoon period the rainfall was generally within 10 per cent of the normal but owing to uneven distribution it showed a deficit in some of the important provinces, such as Bengal the United Provinces and the Punjab. During the retreat period of the monsoon, conditions were unusually dry over the greater part of the country. Crop outturns with a few exceptions were, however, good. The total outturn of rice in India and Burma was 8 per cent short of the production in the preceding season owing to unfavourable conditions in Bengal and Bihar and Orissa which are the chief producing centres in India. Burma, however, realised a good crop and production was 11 per cent in

excess of that in the preceding season. Larger cultivation of sugarcane accounted for an increase of about 15 per cent in the estimated *gur* production as compared with 1934-35. The quality of the cane was also better during the year. Cotton, the most important commercial crop, recorded an increase in outturn of 23 per cent as compared with the preceding season in which climatic conditions were not very favourable to the crop. Jute on the other hand was subject to adverse weather conditions during the early stages and this combined with the scheme for restricting output brought the total outturn down to 85 per cent of the 1934 figure. The production of groundnuts, sesamum and castor seed showed considerable increases. In the case of winter oilseeds, the outturn of rapeseed and mustard during 1934-35 declined by 5 per cent but that of linseed increased by 12 per cent as compared with the preceding season. The wheat crop of 1934-35, the commercial crop of the year under review, increased by 3 per cent. Agricultural prices, on the whole, made distinct recovery.

Volume of Trade—To illustrate the variations in the volume of the trade the values of the imports and exports of merchandise have been compiled on the basis of the declared values per unit in 1927-28 and are shown below (changes in the price level of imports and exports in relation to 1927-28 are also indicated by means of index numbers obtained by comparing these figures with the actually recorded values each year. These statistics are necessarily approximate, but they are sufficiently accurate to afford a fair measure of the course of trade and prices

Year	QUANTUM OF		PRICE LEVEL OF		Indices of imports received for a given quantity of exports
	Exports	Imports	Exports	Imports	
1	2	3	4	5	6
	Crores of Rs	Crores of Rs			
1927-28	319 2(100 0)	249 8(100 0)	100 0	100 0	100 0
1928-29	338 6(106 1)	262 8(105 2)	97 5	96 4	101 1
1929-30	344 6(108 0)	258 4(103 4)	90 2	93 2	96 8
1930-31	308 4(96 6)	206 0(82 5)	71 5	80 0	89 4
1931-32	263 3(82 5)	176 3(70 6)	59 2	71 7	82 6
1932-33	239 2(74 9)	203 4(81 4)	55 5	65 2	84 8
1933-34	275 2(86 2)	181 7(72 7)	53 5	63 5	84 3
1934-35	280 4(87 8)	210 0(84 1)	54 1	63 0	87 9
1935-36	282 1(88 4)	216 4(86 6)	56 9	62 1	91 6

Prices in India—The prices of raw materials, specially jute, oilseeds and hides and skins showed considerable improvement in the year under review. Jute moved up from 46 in April to 66 in November and after a relapse in January and February touched 55 in March. In the oilseeds group the index rose from 101 in April to 113 in October but thereafter showed a declining trend. The index number for rice moved up from 72 in April 1935 to 83 in January 1936, but fell to 79 in March. Wheat rose from 74 in April to 84 in October, but declined to 79 in March. Tea made a moderate recovery. Cotton rose from 76 in April to 84 in November thereafter a temporary period of weakness ensued which was followed by a revival in March. Both cotton and jute manufactures were during the greater part of the year on a lower level than in the previous year. In the case of metals, the decline in the trend of prices noticed in the latter half of the preceding year was checked in the year under review.

Balance of Trade—The total value of the imports of private merchandise into India advanced from Rs 1,32 crores in 1934-35 to Rs 1 34 crores in the year under review while exports including re-exports advanced by Rs 9 crores from Rs 1 55 crores to Rs 1 64 crores. For purposes of comparison it may be mentioned that the total value of the imports in 1932-33 and 1933-34 was Rs 1 33 crores and Rs 1 15 crores and of exports including re-exports Rs 1 35 crores and Rs 1 51 crores respectively. The visible balance of trade in merchandise and treasure in 1935-36 was in favour of India to the extent of Rs 67 crores, as compared with Rs 76 crores in 1934-35.

Tariff Changes—The changes in the tariff made under the various Acts passed during the latter part of 1934 and the earlier part of 1935 were dealt with in the preceding year's review. Since then three Acts have been passed, introducing certain changes in the tariff.

The Salt Additional Import Duty (Extending Act 1936 extended the operation of the Salt (Additional Import Duty) Act 1931 for two years i.e. to the 30th April 1938 subject to a reduction of the rate of duty from 24 annas to 1½ annas per maund. The duty which stood originally at 4½ annas has thus been reduced by 3 annas per maund by successive stages since 1933. It was considered that this step could be taken without detriment to the indigenous producers of salt. The Indian salt industry had complained that it had been unduly handicapped by the uncertainty created by the practice hitherto followed of renewing the Act on a year to year basis. During the year under review this complaint was met by the extension of the Act for two years instead of one.

The protective duties of Rs 1 8 per cwt on wheat and wheat flour and of 12 as per Indin maund on broken rice expired on the 31st March, 1936 but the Indian Tariff (Amendment) Act, 1936 imposed an import duty of Rs 1 per cwt on wheat and wheat flour and of 12 as per maund on broken rice for a further period of one year. While in the interests of the Indian rice grower the existing rate of duty of twelve annas per maund was maintained on broken rice the rate of duty on wheat and wheat flour was reduced to Rs 1 per cwt as the world statistical position of wheat and flour had shown further improvement. The Act received the assent of the Governor General on the 26th April 1936 but the duties imposed by it were actually brought into force on the 9th April, 1936 under the Provisional Collection of Taxes Act 1931, and are to remain in force till the 31st March 1937.

As a result of the widespread complaints that the existing concessional rate of import duty on fabrics of non-British manufacture had called into existence an import trade in spurious fabrics which constituted a threat to the scheme for the protection of the cotton textile industry,

the Indian Tariff (Second Amendment) Act, 1936, reduced the permissible length of silk and artificial silk fents, the imports of which had been specially stimulated by the concessional treatment, from 4 yards to 2½ yards. The Act also imposed an alternative specific duty of 12 as per lb on cotton knitted apparel of weight not exceeding 4 lbs per dozen and of 10 as per lb on those of weight exceeding 4 lbs per dozen. This measure was adopted in order to give effect to the recommendation contained in paragraph 134 of the Report of the Tariff Board on the woollen textile industry, namely, that the pro

ective duty then applicable to cotton knitted hosiery should be extended to all cotton knitted apparel. This Act also made spun silk yarn subject to the same rate of duty as pure silk yarn because the statistics of imports over the past two years had shown that the competitive value of spun silk was underestimated when the protective duties on raw silk and silk manufactures were imposed. At that time it was thought that spun silk yarn being a product of waste silk was not in effective competition with Indian silk. The Act came into force on the 1st May, 1936.

II—IMPORTS OF MERCHANDISE

The following table shows the comparative importance of the principal articles imported into British India —

IMPORTS

(In thousands of Rupees)

	1931-32	1932-33	1933-34	1934-35	1935-36	Percentage on total imports of merchandise in 1935-36
Cotton and cotton goods	26,18.81	34,08.53	21,30.05	27 04.58	27 89.62	20 76
Machinery and millwork	10,92.34	10 54.24	12 76.93	12 63.67	13 68.16	10 18
Metals and ores	9,77.65	9 73.49	9,49.86	11,37.74	12,03.82	8 95
Oils	9 72.62	8,00.01	6,75.47	6,97.19	7 24 54	5 39
Vehicles	4 48.47	3,81.94	4,76.83	6,60.00	6,92.14	5 15

Cotton Manufactures (Rs 21,52 lakhs)

The improvement in the imports of cotton manufactures noticed in the preceding year was generally maintained in the year under review. There was a noticeable advance in the case of yarns, while in the piecegoods section the decline in white and coloured goods was more than made up by the increase in the imports of grey goods. Values were, however, on the whole on a lower level. Of equal interest with the variations in the figures of imports was the change in the relative position of the two principal competitors, the United Kingdom and Japan. In the trade in the year under review India proved a somewhat disappointing market for the British cotton industry while Japan established her position still more strongly. To a larger extent than before demand for Lancashire goods was restricted to styles that were unobtainable elsewhere. In the latter part of the year there was in addition some hesitancy on the part of dealers to enter into fresh contracts owing to the uncertainty regarding the import duties.

The total value of the imports of cotton twist and yarn during the year under review was Rs 3,71 lakhs, an increase of Rs 61 lakhs or 20 per cent as compared with the preceding year. In quantity there was an increase of 10½ million lbs. or 31 per cent which was mostly appropriated by Japan. The imports during the year viz 44½ million lbs. were only half a million lbs. less than in 1932-33 which taking the period since 1929-30 was a record year for imports of cotton manufactures. As compared with the preceding year imports of grey yarns advanced by 7·7 million lbs. and accounted for an increase of Rs 47 lakhs. Mercerised yarns increased by 3·2 million lbs. in quantity and by Rs 20 lakhs in value. There were, however, decreases under bleached and coloured yarns.

The imports of piecegoods into British India in 1935-36 totalled 947 million yards which was 3 million yards more than in the preceding year. The total value of the imports was, however, only Rs 15·78 lakhs, as compared with Rs 16·93 lakhs in 1934-35. Supplies from Japan amounted to 498 million yards and those from the United Kingdom to 440 million yards. Imports from these sources in 1934-35 were 374 million yards and 552 million yards, respectively.

The figures for 1935-36 disclose an appreciable increase in the imports of grey goods and a large decline in the import of white goods, as well as a less marked, though substantial fall in the case of coloured and printed goods. Japan's share in the grey goods trade advanced by 52 million yards, while that of the United Kingdom fell by 18 million yards, leaving a net increase of 34 million yards. Expressed in percentages, Japan's share increased by 27, while that of the United Kingdom fell by 17. There was a decline of 22 million yards under white goods, a fall of 38 million yards in the imports from the United Kingdom being partially offset by an increase of 18 million yards in the imports from Japan. The former's share in the trade declined by 16 per cent while that of Japan increased by as much as 45 per cent. Coloured and printed goods, which form the most important section

of the trade, showed a decline of 9 million yards. There was, however, a striking increase of 51 million yards or 36 per cent in the despatches from Japan, which was not sufficient to set off the decline of 68 million yards (27 per cent) in the receipts from the United Kingdom.

Of the total imports of 218 million yards of printed goods, Japan supplied 150 million yards, and the United Kingdom 68 million yards as against 102 and 97 million yards respectively, in the preceding year. In dyed goods the United Kingdom was able to maintain her position as the leading supplier but her consignments totalled only 79 million yards as compared with 102 million yards in the preceding year. Japan's share in dyed goods increased by about 2 million yards to 20 million yards. Switzerland sent about 2·2 million yards, as against nearly 3 million yards in 1934-35. There was a decline of about 24 million yards in the total imports of dyed goods. Imports of woven coloured goods also decline by 4 million yards to 30 million yards, but Japan, which leads in this line, was able to increase her share by over a million yards. The imports from the United Kingdom declined by 5 million yards to 8·8 million yards, while those from Japan increased from 19·6 to 20·8 million yards.

Silk, raw and manufactured (Rs 2,78 lakhs)—The total imports of raw silk, including cocoons, in the year under review were valued at Rs 57½ lakhs, as compared with Rs 57½ lakhs in the preceding year. Japan has largely supplanted China in this trade. Imports from China in 1935-36 were valued at only Rs 15 lakhs as against Rs 36 lakhs in the preceding year and Rs 64 lakhs in 1933-34. The share of Japan, on the other hand, increased from Rs 71 lakhs in 1933-34 and Rs 21 lakhs in 1934-35 to Rs 42 lakhs in the year under review.

Artificial silk (Rs 3,16 lakhs)—As compared with the preceding year there was a decline of 1·7 million lbs. in the imports of artificial silk yarn. In the case of piecegoods made entirely of artificial silk there was, on the other hand, an increase of about 6·9 million yards, but imports of goods of artificial silk mixed with other materials decline further by 4·7 million yards.

The total imports of artificial silk piecegoods during the year amounted to 74·5 million yards valued at Rs 1,88 lakhs as compared with 67·6 million yards valued at Rs 1,83 lakhs in the preceding year and 40·4 million yards with a total value of Rs 1·08 lakhs in 1933-34. Though the imports in 1935-36 were far short of those in 1932-33 when 113 million yards were received there has been a progressive increase in the last two years, more than sufficient to offset the decline in the imports of silk piecegoods and silk or artificial silk mixtures in the same period. Japan, as usual, dominated the market, her contribution amounting to 73·7 million yards with a total value of Rs 1,84 lakhs, as compared with 66·6 million yards valued at Rs 1·78 lakhs in the preceding year.

Wool, raw and manufactured (Rs 2,79 lakhs)—There was a very marked reduction in the imports of woollen manufactures in the year under review, but imports of raw wool improved. The total imports of raw wool and

woollen manufactures in the year under review were valued at Rs 2 79 lakhs as against Rs 3 86 lakhs in the preceding year, and Rs 2 55 lakhs in 1933-34. Imports of raw wool advanced from 6 million lbs valued at Rs 41½ lakhs to 7 5 million lbs valued at Rs 44 lakhs. Australian supplies amounted to 4 5 million lbs while consignments from the United Kingdom totalled 1 7 million lbs.

Woollen Piece-Goods (Rs 130 lakhs)—Import of woollen and worsted piece-goods totalled only 5 3 million yards (2 7 million lbs) valued at Rs 81 lakhs as against 10 5 million yards (4 8 million lbs) valued at Rs 1 40 lakhs in 1934-35. Receipts from the United Kingdom declined from 2 1 million yards valued at Rs 46½ lakhs to 1 9 million yards valued at Rs 43½ lakhs. Supplies from Japan totalled only 2 5 million yards, as against 6 9 million yards received in the preceding year, the value of the imports falling by Rs 43 lakhs to Rs 30 lakhs. Imports from Germany declined from

432 000 yards to 266,000 yards and those from France from 663 000 yards to 11 000 yards. Italy sent 68,000 yards, as against 193 000 yards in the preceding year.

Iron and Steel (Rs 7 22 lakhs)—Imports during the year showed a considerable improvement manufactured iron and steel (excluding pig iron and old iron) increasing from 987 000 tons to 446 000 tons, the value of the receipts rising by 13 per cent from Rs 6 36 lakhs to Rs 7 20 lakhs. Imports of pig iron improved from 1 500 tons to 1,700 tons, the entire quantity having been received from the United Kingdom. The total imports into India of all classes of iron and steel including pig and old iron and steel in 1935-36 were returned at 449 000 tons as compared with 370 000 tons in 1934-35, an increase of 21 per cent. The imports of ferroalloys during the year amounted to 3 000 tons as against 1,700 tons in the preceding year.

The following table shows the quantities and values of the principal descriptions of iron and steel imported into British India during the last three years —

	Quantity Ton (000)			Value Rs (lakhs)		
	1933-34	1934-35	1935-36	1933-34	1934-35	1935-36
Steel angle and tee	11 4	13 8	19 4	10 9	14 1	19 6

Sleepers and keys of steel or iron for Railways	2 9	4 3	4 5	4 2	6 5	7 0

MACHINERY AND MILLWORK (Rs 13,68 LAKHS)—The following table analyses the imports of machinery according to classes in 1929-30 and during the past five years —

	1929-30 Rs (lakhs)	1931-32 Rs (lakhs)	1932-33 Rs (lakhs)	1933-34 Rs (lakhs)	1934-35 Rs (lakhs)	1935-36 Rs (lakhs)
Prime movers	4,12	1,56	1 00	1 21	1 44	1,57
Electrical	2 41	2,16	1,56	1,27	1 69	2,05
Rollers	1,09	56	45	66	44	76
Metal working (chiefly machine tools)	36	19	15	16	14	18
Mining	61	66	38	32	52	41
Oil crushing and refining	43	35	19	27	21	22
Paper mill	7	6	5	11	9	8
Refrigerating	20	10	9	9	11	15
Rice and flour mill	24	10	9	7	10	9
Saw mill	9	3	3	3	3	5
Sewing and knitting	85	51	45	50	83	74
Sugar machinery	9	30	1 53	3 36	1,05	66
Tea machinery	28	11	21	12	22	13
Cotton machinery	2,10	1,93	2,08	2 03	2,41	2 01
Jute mill machinery	1 44	32	36	32	54	1,16
Wool machinery	6	1	3	3	2	4
Typewriters including parts and accessories	26	13	7	10	18	19
Printing and lithographing presses	23	15	9	15	15	17
Belt for machinery	90	50	53	46	50	54

Motor Vehicles (Rs 6,92 lakhs)—During the three years 1931-32 to 1933-34 imports of motor cars were on a very low scale but the last year of the triennium had witnessed a slow improvement in the position. In 1934-35 there was a substantial increase in imports receipts totalling 14,434. In the year under review imports totalled 13,590 a fall of 844 as compared with the previous year, and of 5,977 as compared with the record imports in 1928-29. The table below shows the number of motor cars imported during the last ten years, indicating the principal sources of supply —

Number of motor cars imported

	United Kingdom	United States	Canada	France	Italy	Other Countries	TOTAL
1926-27	2,546	4,030	4,476	607	1,416	122	13,197
1927-28	3,600	6,031	3,400	538	1,367	186	15,122
1928-29	3,645	10,145	4,366	277	907	167	19,567
1929-30	3,758	9,620	2,318	364	1,150	189	17,399
1930-31	2,885	5,098	3,250	261	917	190	12,601
1931-32	2,178	3,368	676	161	510	327	7,220
1932-33	3,958	1,201	206	84	226	436	6,201
1933-34	5,348	2,227	1,715	62	221	186	9,759
1934-35	6,311	5,564	2,057	26	267	209	14,434
1935-36	6,744	3,851	2,328	13	210	444	13,590

Hardware (Rs 3.27 lakhs)—Imports of hardware improved by over Rs 21 lakhs as compared with the preceding year, to Rs 3.27 lakhs in the year under review.

Mineral oils (Rs 5.92 lakhs)—The total value of the imports of mineral oils of all kinds in 1935-36 showed a decrease of Rs 15 lakhs as compared with the preceding year. Imports of kerosene, which had amounted to nearly 69 million gallons valued at Rs 2.61 lakhs in 1934-35 declined to 64 million gallons valued at Rs 2.17 lakhs. There was, however, a substantial increase in the quantity of fuel oil imported. Imports of kerosene oils declined, but those of other lubricating oils improved. There was also, some improvement in the imports of petroleum.

Chemicals (Rs 3.12 lakhs)—A further improvement was noticed in the imports of chemicals which had a total recorded value of Rs 3.12 lakhs in 1935-36, as against Rs 2.924 lakhs in 1934-35 and Rs 2.70 lakhs in 1933-34.

Sodium compounds constituted 44 per cent of the total value of chemicals imported during the year. The quantity received increased from 1,908,000 cwt. to 2,012,000 cwt. The value of the imports, however, declined from Rs 1.45 lakhs to Rs 1.38 lakhs owing to lower prices. Imports of sodium carbonate improved in quantity from 1,238,000 cwt. to 1,253,000 cwt. but the value of the imports fell from Rs 674 lakhs to Rs 62 lakhs. The chief source of supply was as usual the United Kingdom. Imports of caustic soda improved from 377,600 cwt. to 406,000 cwt., but the declared value of the imports showed a small fall from Rs 42 lakhs to Rs 414 lakhs.

Drugs and Medicines (Rs 2.11 lakhs)—The imports of drugs and medicines showed an increase of Rs 19 lakhs in value over that recorded in the preceding year due principally to larger imports of proprietary and patent medicines. Imports of proprietary and patent medicines improved from Rs 39 lakhs to Rs 64 lakhs, receipts from the United Kingdom improving by nearly Rs 64 lakhs to Rs 26 lakhs and those from Germany by Rs 9 lakhs to nearly Rs 16 lakhs.

Paper and Pasteboard (Rs 2.99 lakhs)—The total imports of paper and pasteboard in the year under review had an aggregate value of Rs 2.99 lakhs as against Rs 2.73 lakhs in the preceding year. Imports of paper of all kinds improved from Rs 2,518,000 cwt. valued at Rs 2.39 lakhs to 2,836,000 cwt. valued at Rs 2.62 lakhs. Imports of printing paper improved from 759,000 cwt. valued at Rs 754 lakhs to 1,014,000 cwt. valued at over Rs 96 lakhs. Newsprinting paper (white)

accounted for Rs 524 lakhs while other sorts of white printing paper, excluding machine glazed poster paper, accounted for over Rs 12 lakhs. Machine glazed paper accounted for Rs 44 lakhs and other sorts of printing paper for about Rs 27 lakhs. There was a very large improvement in the imports of printing paper from Germany which were valued at nearly Rs 30 lakhs in the year under review as against Rs 9 lakhs in 1934-35.

Liquors (Rs 2.48 lakhs)—The total imports were returned at 5.1 million gallons valued at Rs 2.48 lakhs as compared with 4.9 million gallons valued at Rs 2.36 lakhs in 1934-35. Of this, ale, beer and porter accounted for 76 per cent, spirit for 20 per cent and wines for 4 per cent as compared with 73 per cent, 23 per cent and 4 per cent, respectively, in the preceding year. The imports of ale, beer and porter increased from 3,593,000 gallons valued at Rs 71 lakhs in 1934-35 to 3,867,000 gallons valued at Rs 78 lakhs in 1935-36.

Salt (Rs. 57 lakhs) Imports of salt increased from 1,77,600 tons valued at Rs 52 lakhs in 1934-35 to 3,89,000 tons valued at Rs 57 lakhs in the year under review. Aden is before was the principal supplier, receipts from that source amounting to 2,96,000 tons valued at Rs 40 lakhs as against 2,95,000 tons valued at Rs 384 lakhs in 1934-35.

Other Articles—The table below shows the important items comprised in this group—

	1934-35	1935-36
	Rs (lakhs)	Rs (lakhs)
Instruments, apparatus, etc.	4.73	5.18
Dyeing and tanning substances	3.08	3.34
Spices	1.55	1.62
Glass and glassware	1.33	1.39
Tobacco	62	62
Precious stones and pearls, uncut	50	48
Cement	24	22
Coal and coke	12	13

III—EXPORTS OF MERCHANDISE

The following table shows the comparative importance of the principal articles exported from British India —

EXPORTS

(In thousands of Rupees)

—	1931-32	1932-33	1933-34	1934-35	1935-36	Percentage on total exports of merchandise in 1935-36
Cotton, raw and waste	23 78 19	20 69 95	27 91 47	35 44 87	34 47 03	21 47

Cotton (Rs 33.77 lakhs)—The exports of Indian cotton in 1935 36 totalled 3,397,000 bales which was about 94,000 bales short of the exports in the preceding year. Japan as usual the best customer took 1,759,000 bales, which was 2,95,000 bales less than the exports to that country in 1934 35. There was a further increase in the exports to the United Kingdom which totalled 4,56,000 bales in the year under review as compared with 3,47,000 bales in the preceding year and 3,42,000 bales in 1933 34. The United Kingdom is now the second best customer for Indian cotton.

Cotton Manufactures (Rs 2.93 lakhs)—The following table sets forth the quantities of piecegoods exported—

	(In thousand yards)		
	1933 34	1934-35	1935 36
Cotton piecegoods—			
Grey	4,165	6,350	8 867
White	292	534	1 323
Coloured	52 004	50 809	61,060
TOTAL	56 461	57 693	71,250

Jute and Jute Manufactures (Rs 37.20 lakhs)—The total exports of raw and manufactured jute during the year under review amounted to 1,523,000 tons as compared with 1,437,000 tons in the preceding year, an increase of 6 per cent. The total recorded value of the shipments amounted to Rs 37 crores as compared with Rs 32½ crores in 1934 35. The exports of raw jute alone amounted to 7,71,300 tons with a total declared value of about Rs 13.71 lakhs, the preceding year's exports being 7,52,500 tons valued at Rs 10.87 lakhs. The exports during

the year were the highest since 1929 30 in which year 8,07,000 tons were shipped abroad.

The total exports of gunny bags in 1935 36 numbered nearly 459 million as compared with 423 million in 1934 35. The value of the shipments increasing from Rs 10.25 lakhs to Rs 11.01 lakhs.

The total yardage of gunny cloth exported increased by 155 million yards to 1,218 million yards with a corresponding increase in value from Rs 10.99 lakhs to Rs 12.24 lakhs.

Foodgrains and flour (Rs 12.41 lakhs)—The statement below shows the exports of food grains—

	1934 35	1935 36
	Tons (000)	Tons (000)
Rice not in the husk	1 593	1,394
„ in the husk	14	16
Wheat	11	10
„ flour	12	18
Pulses	112	99
Barley	14	3
Jowar and bajra	4	9
Maize	3	2
Other sorts	2	2
TOTAL Tons (000)	1,765	1 553
VALUE Rs (lakhs)	11 84	12 41

Tea (Rs. 19.82 lakhs)—The quota for overseas shipments of tea from India for 1935-36 was fixed at 311 million lbs as compared with 330 million lbs in 1934-35 and 321 million lbs in 1933-34. In view of the reduced export allotment there was naturally a decline in the quantity of tea exported during the year. The exports during the year calculated on the statistical month basis (month ending generally on or about the 25th) amounted to 312½ million lbs valued at Rs. 19.8 crores as compared with nearly 3.25 million lbs valued at Rs. 20.1 crores in the preceding year. The exports during the year represented 79 per cent of the total production, the balance left for home consumption being 84 million lbs as compared with 75 million lbs in the preceding year. The voluntary scheme of restriction of production among estates in India continued to operate on the same lines as in the previous years and met with a fairly considerable measure of success.

Oilseeds (Rs. 10.33 lakhs)—The total exports of oilseeds of all kinds from India in 1935-36 showed a considerable decline as compared with the preceding year being only 6,73,000 tons, a decrease of 2,02,000 tons. Part of this decline is explained by the larger internal consumption of oilseeds like linseed and cotton seed, the barriers to free trade in the shape of exchange restrictions, quotas and tariffs was another factor. The total value of the exports in 1935-36 did not however decline appreciably in spite of the large reduction in the quantity shipped. As against Rs. 10.54 lakhs in 1934-35 exports in 1935-36 were valued at Rs. 10.33 lakhs.

Exports of linseed to the United Kingdom according to the Indian trade returns were 90,100 tons in 1935-36 as against 1,08,800 tons in 1934-35. Among other customers for Indian linseed, the United States of America took 31,000 tons which was less than half the quantity taken by her in the preceding year.

Exports of groundnuts during the year under review amounted to 4,13,000 tons as against 5,11,000 tons in 1934-35 but the total declared value improved from Rs. 5.93 lakhs to Rs. 6.65 lakhs owing to the high prices which prevailed for the greater part of the year.

The decline in the exports of rapeseed noticed in the preceding year continued in the year under review and the shipments totalled only 19,000 tons valued at Rs. 26 lakhs as against

37,000 tons valued at Rs. 42 lakhs in the preceding year and 73,500 tons valued at over Rs. 81 lakhs in 1933-34.

While the quantity of castor seed exported in 1935-36 amounted only to about 60,000 tons as compared with nearly 69,000 tons in 1934-35, the value of the exports improved from Rs. 81½ lakhs to Rs. 83 lakhs.

Hides and Skins (Rs. 9.33 lakhs)—The total shipments of raw hides in 1935-36 amounted to 22,700 tons as against 22,600 tons in the preceding year. Exports of cow hides improved from 19,300 tons valued at Rs. 95½ lakhs to 19,500 tons with a total value of over Rs. 98 lakhs. Exports of raw skins improved from 15,160 tons to 21,200 tons; goat skins improving from 13,870 tons to 20,100 tons.

Raw Wool (Rs. 2.10 lakhs)—Exports of raw wool from India during the year under review amounted to 49.4 million lbs valued at Rs. 2.10 lakhs as compared with 34.1 million lbs valued at Rs. 1.27 lakhs in the preceding year. Shipments to the United Kingdom rose from 25.7 million lbs to 34.7 million lbs and to the United States of America from 5.6 million lbs to 11.7 million lbs. Belgium took 1.9 million lbs as against 1.3 million lbs in the preceding year. Besides wool declared to be of Indian origin a large quantity of foreign wool imported by land into India is also shipped from India. These re-exports totalled 11.3 million lbs in 1935-36 as compared with 6.3 million lbs in the preceding year.

Metals and Ores (Rs. 7.73 lakhs)—A marked improvement took place in the exports of the articles comprised in this group. Exports of ores improved from 5,15,000 tons valued at Rs. 2.72 lakhs to 7,93,000 tons valued at Rs. 3.68 lakhs. There was a further enlargement in the demand for manganese ore and wolfram ore owing to the continued increase in activity in the iron and steel and armament industries. Exports of manganese ore, which represented about 92 per cent of the total quantity of ores exported, totalled 7,29,000 tons as compared with 4,60,000 tons in 1934-35 and 2,66,000 tons in 1933-34.

Other Exports—Other important exports from India included lac totalling 4,87,600 cwts., oilcakes 3,00,000 tons, paraffin wax 54,000 tons, corn manufactures 6,84,000 cwts., unmanufactured tobacco 28 million lbs., coffee 2,16,000 cwts. and dyeing and tanning substances 1.7 million cwts.

Index Numbers of Prices.

The Director General of Commercial Intelligence, Calcutta, publishes from time to time an addendum to the publication *Index Numbers of Indian Prices 1861-1931* which brings up to date (1) the unweighted index numbers of 28 exported articles, (2) the unweighted index numbers of 11 imported articles, (3) the general unweighted index number for 39 articles and (4) the weighted index numbers of 100 articles on base 1873-100

The following table contains these index numbers since the year 1925 —

Year	Exported articles 28 (unweighted)	Imported articles 11 (unweighted)	General Index No for all (39) Articles (unweighted)	Weighted Index No (100) Articles equated to 100 for 1873
1925	233	211	227	265
1926	225	195	216	260
1927	209	185	202	258
1928	212	171	201	261
1929	216	170	203	254
1930	177	157	171	213
1931	125	134	127	157
1932	120	139	126	149
1933	118	128	121	139
1934	117	122	119	136
1935	128	122	127	149
1936	126	122	125	Not available

Besides the above wholesale price index numbers, the Director General of Commercial Intelligence, Calcutta, publishes a wholesale price index number for Calcutta while the Bombay Labour Office compiles similar statistics for Bombay and Karachi

The following table gives these index numbers since 1925 —

Wholesale price index numbers for Calcutta, Bombay and Karachi (Base 1914)

Year	Calcutta	Bombay	Karachi
1925	591	163	151
1926	148	149	140
1927	148	147	137
1928	145	146	137
1929	141	145	133
1930	116	126	108

Wholesale price index numbers for Calcutta, Bombay and Karachi (Base 1914) —Cont

Year	Calcutta	Bombay	Karachi
1931	96	109	95
1932	91	109	99
1933	87	98	97
1934	89	95	96
1935	91	99	99
1936	92	96	102

About the end of the year 1929 there began a sharp decline in wholesale prices which continued during 1930 and 1931. During 1932, wholesale prices showed a tendency to decline and in 1933 they definitely registered a fall reaching their lowest level. This downward trend was somewhat checked in 1934, while during the next two years there was a slight rise in wholesale prices.

The various Provincial Governments publish in their respective *Gazettes* fortnightly and monthly statements of retail and wholesale prices of certain important commodities. In addition to these however some of the Provincial Governments also publish working class cost of living index numbers. Such index numbers are being published regularly every month for the following centres: for Bombay, Ahmedabad, and Sholapur by the Labour Office of the Government of Bombay, for Nagpur and Jubbulpore by the Department of Industries, Central Provinces and Berar, for seven centres in Bihar and Orissa by the Department of Industries, Bihar and Orissa, and for Rangoon by the Office of the Director of Statistics and Labour Commissioner, Burma, Rangoon.

The Bombay working class cost of living index number with base July 1914 100 stood at 103 in December 1936, the average for 1936 being 102. The Ahmedabad cost of living index number with base August 1926 to July 1927-100 stood at 72 in December 1936 while the Sholapur cost of living index number with base February 1927 to January 1928 100 stood at 70 in December 1936. The Nagpur cost of living index number on base January 1927 100 was 60 in December 1936 while the Jubbulpore Index on the same base was 59. For Rangoon, four different index numbers with

base 1931 100 are compiled for (a) Burmese (b) Famlis, Telugus and Oriyas (c) Hindus and (d) Chittagonians. The Index Number in December 1936 for these were 84, 90, 90 and 85 respectively.

The catastrophic fall in prices which commenced at the end of 1929 continued also during 1931 although with less vigour than in 1930. In 1932 prices ruled at a slightly lower level than in 1931. In 1933 and 1934 the downward tendency of prices continued.

The inadequacy as also the general unreliability of Indian price statistics has been the subject of comment by many committees and commissions of enquiry and the majority of the Indian Economic Enquiry Committee of 1925 made many suggestions for the improvement of price statistics and advocated the passing of a Census and Statistics Act. This latter suggestion was also endorsed by the Whitley Commission on Indian Labour and the Government of India have already taken up the recommendation which is under their consideration. Messrs Bowley and Robertson who were invited by the Government of India to advise them on the question of obtaining more accurate and detailed statistics have also made certain recommendations for improving Indian price statistics. As regards the General Index number of wholesale prices in India they suggest the construction of a new index number on the model of that of the Board of Trade in England. With regard to index numbers of retail prices they recommend that the data should be compiled for India as a whole, and not for separate provinces, and that they should not be initiated till certain preliminary steps of improvement of the data suggested by them have been taken.

The Indian Stores Department.

A detailed account of the organisation of the Indian Stores Department at Government of India headquarters and of the successive orders issued by Government to assure as far as possible the purchase of stores of Indian manufacture or in India is to be found in earlier issues of the "Indian Year Book". The current rules to regulate stores purchase prescribe that preference in making purchases shall be given in the following order —

First, to articles which are produced in India in the form of raw materials or are manufactured in India from raw materials produced in India, provided that the quality is sufficiently good for the purpose,

Second, to articles wholly or partially manufactured in India from imported materials provided that the quality is sufficiently good for the purpose,

Third, to articles of foreign manufacture held in stock in India provided that they are of suitable type and requisite quality,

Fourth, to articles manufactured abroad which need to be specially imported.

The new rules were calculated materially to widen the scope of operations of the Department.

The total value of orders placed by the Department during the year 1934-35, the latest period for which figures are yet available, was Rs 4,76,36,251 as compared with Rs 3,59,94,135 during 1933-34. The increase amounts to Rs 1,16,42,116 or 32.3 per cent which is most satisfactory considering that the emergence from the great depression was slow and hesitant and that expenditure on large capital works continued to be restricted.

A feature of the year's activities was an increase to Rs 11,66,997 from Rs 9,47,507 in the preceding year in the value of purchases made in behalf of quasi public bodies, a fact which amounts to a well appreciated tribute to the usefulness of the Department.

The Department continued throughout the year to assist manufacturers in India to improve the quality of their products. The means adopted included technical advice and suggestions. Every endeavour was made to substitute supplies of indigenous manufacture, wherever possible, without sacrificing economy and efficiency.

The organisation of the Department underwent considerable overhaul during the year to improve its efficiency and an important new development was the institution by the Government of India under the control of the Department of Industrial Intelligence and Research Bureau. The principal functions of this office are—

(1) The collection and dissemination of industrial intelligence.

(2) Collaboration with Provincial Directors of Industries and industrialists in all matters relating to industrial research.

(3) The publication at intervals of bulletins relating to industrial research and other matters connected with industrial development.

(4) Assistance to industrialists in India by giving advice and making suggestions as to the directions in which research should be undertaken.

(5) To collaborate with the various organisations of the Central and Provincial Governments with a view to ensuring that specifications prepared or issued by them provide as far as possible for industrial standardisation.

(6) To assist in the organisation of industrial exhibitions in India.

The Bureau has been given Rs 5 lakhs to cover its cost of working for three years and an Advisory Council constituted as follows—

(a) Members nominated by the Government of India to represent the Departments of Industries and Labour, Railways, Commerce and the Imperial Council of Agricultural Research.

(b) The Director of Industries of each Province or the Provincial Officer entrusted with industrial affairs.

(c) Corresponding officers of the States of Hyderabad, Mysore, Baroda, Gwalior, Jammu and Kashmir, Indore, Travancore and such other States as may subsequently enter the scheme.

(d) Non official members nominated by Provincial Governments.

(e) Non official members nominated by Government of India, and

(f) Such additional members as the Advisory Council may co-opt.

Bombay Stamp Duties.

[illegible]

	Rs a	Rs n
<i>Copy or Extract</i> —If the original was not chargeable with duty, or if duty with which it was chargeable does not exceed 1 Rupee	1 0

Promissory Notes—		Transfer of debentures, being marketable securities whether the debenture is liable to duty or not, except debentures provided for by section 8—12 annas for every Rs 100 or part thereof of the face amount of the debenture	
(a) When payable on demand—		Transfer of any Interest secured by a Bond, Mortgage-deed, or Policy of Insurance—If duty on such does not exceed Rs 5—The duty with which such Bond, &c., is chargeable	10 0
(i) When the amount or value does not exceed Rs 250	0 1	In any other case	
(ii) When the amount or value exceeds Rs 250 but does not exceed Rs 1,000	0 2	—of any property under the Administrator General's Act, 1874, Section 31	10 0
(iii) In any other case	0 4	—of any trust property without consideration from one trustee to another trustee or from a trustee to a beneficiary—Five rupees or such smaller amount as may be chargeable for transfer of shares	
(b) When payable otherwise than on demand—The same duty as a Bill of exchange for the same amount payable otherwise than on demand		Transfer of Lease by way of assignment and not by way of under-lease—The same duty as a conveyance for a consideration equal to the amount of the consideration for the transfer	
Protest of Bill or Note	2 0	Trust, Declaration of— Same duty as a Bond for a sum equal to the amount or value of the property concerned, but not exceeding	15 0
Protest by the Master of a Ship	2 0	Revocation of— Ditto, but not exceeding	10 0
Prozy	0 2	Warrant or Goods	0 5
Receipt for value exc Rs 20	0 1		
Reconveyance of mortgaged property—			
(a) If the consideration for which the property was mortgaged does not exceed Rs 1,000—the same duty as a bond for the amount of such consideration as set forth in the Reconveyance			
(b) In any other case	10 0		
Release— that is to say, any instrument whereby a person renounces a claim upon another person or against any specified property—			
(a) If the amount or value of the claim does not exceed Rs 1,000—The same duty as a Bond for such amount or value as set forth in the Release			
(b) In any other case	10 0		
Respondentia Bond— The same duty as a Bond for the amount of the loan secured			
Security Bond— (a) When the amount secured does not exceed Rs 1,000—The same duty as a Bond for the amount secured			
(b) In any other case	10 0		

The Indian National Congress.

For a complete history of the movement represented by the Indian National Congress the reader is referred to earlier editions of the *Indian Year Book*. The Congress was founded in 1885 by Mr. Allan Octavian Hume, a retired member of the Indian Civil Service, and it held its first session in Bombay at Christmas of that year, the fundamental principles of the Congress were laid down to be —

Firstly, the fusion into one national whole of all the different and discordant elements that constitute the population of India,

Secondly, the gradual regeneration, along all lines, mental, moral, social and political of the nation thus evolved, and

Thirdly, the consolidation of union between England and India by securing the modification of such of the conditions as may be unjust or injurious to the latter country.

With these objects in view the Congress pursued an uneventful career until 1907. It undoubtedly exercised a great influence in inducing a spirit of national unity amongst the diverse peoples of India, in focussing the chief political grievances, and in providing a training ground for Indian politicians. But in 1907 the extremists, chiefly of the Deccan and the Central Provinces, who had for some time chafed under the control of the older generation, succeeded in wrecking the Surat session of the Congress and produced a split which had long been seen to be imminent. The senior members of the Congress therefore re-crystallised its creed in definite terms. They laid down that—

‘The objects of the Indian National Congress are the attainment by the people of India of a system of Government similar to that enjoyed by the self governing members of the British Empire, and a participation by them in the rights and responsibilities of the Empire on equal terms with those members. These objects are to be achieved by constitutional means by bringing about a steady reform of the existing system of administration and by promoting national unity, fostering public spirit and developing and organising the intellectual moral economic and industrial resources of the country.’

For some years following 1907 efforts were made to heal the split and these were without avail until 1916 when a re-united Congress met at Lucknow under the presidency of Babu Ambica Charan Muzumdar of Faridpur in Bengal. But the union then effected was purely superficial, the difference between the moderates and the extremists was fundamental, the extremists captured the machinery of the Congress and from the period of the special session held at Calcutta in September 1920 the Congress passed entirely under the domination of Mr. Gandhi and his lieutenants. In 1927 the Congress actually adopted independence as the goal of India. In the following two years the Congress made what the extreme leftists described as a climb down, while the Liberals moved towards the left, with the result that for a time there appeared

to be a commonness of purpose between the Liberals and Congressmen. At its 1928 session the Congress, while adhering to Independence, agreed to accept Dominion Status if granted, before the end of 1929. Things were tending towards a satisfactory settlement when in the latter half of 1929 the Congress insisted on the immediate grant of Dominion Status or an assurance that Dominion Status would be the basis of discussion at the Round Table Conference to be convened in England between representatives of England, British India and the Indian States. Here was the parting of the ways. The Liberals went their way and the Congress its own. In fulfilment of the ultimatum issued at its previous session the Congress, at its 1929 session, declared for complete independence or “Purna Swaraj”. Throughout the year 1930 the Congress was engaged in a defiance of the law of the land which, it was hoped, would help India, to attain complete independence. Early next year the Congress actually suspended civil disobedience by virtue of an agreement arrived at with the Government, but the fulfilment of the terms of this agreement gave rise to trouble and another agreement was concluded.

As a result of this Mr. Gandhi, on behalf of the Congress, actually went to London to take part in the Round Table Conference. While he was away things took a turn for the worse in the country, and matters reached a crisis with the birth of the New Year. In 1932 the Government bent all its efforts to making it impossible for the Congress to carry on its subversive activities and succeeded fully in its object. Congress was crushed and all forms of Congress work throughout the country were successfully prevented. In fact as well as in law Congress ceased to exist. In the middle of 1934 the civil disobedience movement, which had rendered the Congress illegal, was withdrawn. At present the Congress is once again a constitutional organisation, most of whose activities are legitimate and lawful. It once again decided to contest elections to the legislatures. Mr. Gandhi retired from it and from politics, although he continued to be “the power behind the throne.”

From the latter half of 1934 he ceased to be even a fourth member of the Congress, but his advice was sought on most important decisions of the Congress. His personality and influence were fully exploited by Congress men generally and by right wing Congressmen in particular. By right wing Congressmen is meant that group of Congressmen who were inclined to make use of the institutions established by the reformed constitution although they joined the rest in condemning the reforms. These parliamentarians, as they were termed, were very much in evidence since 1934. Mr. Gandhi was never a believer in the efficacy of parliamentary institutions in bringing about India's political salvation, but he appeared to support them as against the growing tide of socialism under the leadership of Pandit Jawaharlal Nehru. In a sense, he kept the balance between the two.

The youth, personal magnetism, sacrifice and earnestness of Pandit Nehru attracted a large following to his creed of socialism, but, although for a time the movement appeared to spread like wild fire it was effectively kept under check by Mr Gandhi's secret influence. Nevertheless it has succeeded in sending out its roots far and wide among the youth of the country.

In spite of open hostility to the political reforms embodied in the Government of India Act of 1935, the Congress decided to contest elections under the much wider franchise conferred by it and scored signal success at the polls. Congressmen secured clear majorities in six of the eleven provinces. A sharp difference of opinion prevailed on how to utilise these majorities—the right wing desiring to assume executive power and thereby bringing about a replacement of the unwanted constitutions by one designed by Indians themselves and the left wing wishing to adopt obstructive tactics right from the start. Mr Gandhiji again appeared on the scene as the peace maker and evolved a clever formula whereby he sought not only to prevent a schism in the Congress but also to place the British Government in the wrong. He advised Congress majorities to form Cabinets provided the Governors of Provinces undertook in advance not to exercise their discretionary powers of interference with Ministers in respect of their constitutional activities. This the Governors refused to do as being contrary to the provisions of the Act and the Instrument of Instructions. The Congress refused to form Cabinets without the assurance demanded, and the Governors called upon leaders of minority groups to form Ministries. At the time of writing, these Ministries are functioning, but what will happen to them when they face the legislatures, as they must, not later than October 1937, is a foregone conclusion. Attempts are being made to terminate the impasse by bringing about a reconciliation between the standpoints of Mr Gandhi and the Governors.

Meanwhile Mr Gandhi has come into his own as far as the Congress is concerned although he has not, at the time of writing, actually entered the Congress. During the past year or two he has been concentrating in rural uplift work, thereby exploring the possibilities of a new field for exploitation. His foresight was amply rewarded by the success of Congressmen at the general elections of 1936. In that year for the first time in the history of the Congress, the annual session was held in a village. It proved the correctness of Mr Gandhi's plan, for it served to send the Congress into the villages—the real masses of India were touched by the Congress. It is indeed a new phase of Congress activity whose value Mr Gandhi had the vision to see. (See earlier editions of the *Indian Year Book* for a history of the non-cooperation and civil disobedience movements.)

Soon after the conclusion of the Lucknow session of the Congress there took place a change in India's Viceroyalty, Lord Linlithgow succeeding Lord Willingdon. Within a few hours of his setting foot on Indian soil, as the King's representative, Lord Linlithgow made a broadcast appeal to the people which gave rise to the hope of

conciliation of Indian sentiments. His Excellency introduced a great deal of personal touch in his speech which was distinctly conciliatory in character and he also expressed himself as being ever ready to consult leaders of Indian opinion of all shades. Indeed, the speech was so much appreciated in India that for weeks and months thereafter speculation continued on the prospect of the Governor General calling spokesmen of the Congress for consultation. This, however, did not materialise, thanks mainly to the activities of the President of the Congress, Pundit Jawaharlal Nehru.

Although the resolutions of the Lucknow session of the Congress were a compromise between the president's extremist views and the moderate outlook of the majority of Congressmen and although the resolutions in effect turned down Pundit Nehru's revolutionary programme, they had little effect on the president. Very soon after the session he undertook a tour of upper India which he utilised to conduct a raging tearing campaign for his socialistic ideals. Repudiation of debts, expropriation of property, seizure of power by the masses of peasants and workers and the establishment of proletarian dictatorship after the Moscow model were the burden of his numerous speeches in Bombay, the Central Provinces and the Punjab. Vested interests were naturally alarmed and even the bulk of the Congressmen, who were accustomed to work for Mr Gandhi's swaraj based on ideals of service and sacrifice and mutual accommodation among the various classes of the country's population, were struck against by Pundit Nehru's propaganda for a materialistic and atheistic swaraj. A number of prominent businessmen in Bombay issued a public statement, now known as the manifesto of Twenty one, wherein they drew attention to the dangerous implications of the Congress President's programme. There were other indications, too, that even Congressmen disapproved of their President's methods, so much so that Pundit Nehru was compelled to acknowledge that although he preached socialism he visualised it only as a distant possibility after the achievement of political independence, to work for which he pledged himself and his socialistic colleagues.

Apart from the merits of the propaganda, it suffered from a few other defects. In the first place, having broken a convention by speaking at Lucknow against the resolutions of the Working Committee, Pundit Nehru proceeded after the session to propagate his ideals which had been specifically turned down by the session. In almost every respect he went counter to the majority decisions of the Congress at Lucknow—general mentality, scope and nature of parliamentary work, attitude towards the Communal Award, the place of workers and peasants within the Congress, and solicitude for States subjects. Moreover, the doctrine of socialism preached by Pundit Nehru scared away the commercial community among Indians who were the mainstay of the Congress, and it was feared that the Congress election campaign might be seriously jeopardised. Right wing leaders and ex-presidents of the Congress of the status of Babu Rajendra Prasad and Mr Vallabhbhai Patel did not conceal their disapproval of Pundit Nehru's

methods. These pointed out that, apart from the unsuitability and inopportune of the socialistic programme pushed forward by Pundit Nehru it seriously diverted attention from the main objective of the Congress. Other leaders protested that the Congress stood for zamindar and peasant alike, for the trader the capitalist and the worker. Small wonder that organs of moderate opinion complained that a real subversive doctrine of hate and acrimony is going to be preached, if both the Congress and the Government conspired to connive at them they will create a position which they will find very difficult to control ere long. A well known Congress leader deplored the situation wherein the President expresses opinions against the Working Committee's resolutions, the members of the Working Committee are pitted against one another, and majority resolutions have to be carried out under the lead of a president who has no sympathy for them.

Before many months of his presidentship had elapsed Pundit Nehru realised his unenviable position and began to feel that his enthusiastic socialist followers had overestimated the strength of leftist opinion in the country and had misled him into launching upon campaigns to which he had perforce to cry a halt. Matters came to a head at the meeting of the Working Committee held in the summer at which, mainly through the influence of Mr. Gandhi, a compromise was effected. Pundit Nehru virtually agreed to suspend his socialistic drive, and that was all what the right wing wanted. The latter was willing and eager to exploit the youth, personality and vigour of Pundit Nehru, but was unwilling to allow him a free hand in respect of his socialistic doctrines. Pundit Nehru, for his part, did not seem very eager to precipitate a crisis which would result in his small party measuring swords with the vast organisation of the Congress which was mostly under right wing leadership. Neither desired an open breach, and the compromise was welcome to both.

While Pundit Nehru was tilting his socialistic lance right wing leaders were busy laying the foundations of an intensive election campaign. Within a few weeks of the Lucknow session, at which it was decided to contest the elections to the various provincial legislatures, leaders got down to brass tacks and went about organising town and country. The Congress, which had regarded the Council chamber beneath its notice, entered into the spirit of the game and paid great attention to the minutest details of the election campaign. They did not even mind waiting in deputation on the hated bureaucracy to obtain small benefits in the matter of enrolling potential Congress voters and obtaining facilities for campaigning. The Congress was the first organised political party to enter the election field, as it had fully realised the potentialities of the large number of newly enfranchised lower middle class people and the poorer classes. Congress leaders made a thorough job of it and they kept the country buzzing with political activity which might have done credit to a thoroughbred constitutional organisation.

There was a great deal of discussion about the contents of the election manifesto which the Congress should issue. For instance, the

socialists tugged hard at the Karachi programme (see Year Book of 1931-32), the left wing Hindus wanted the Congress to give up the neutral attitude towards the Communal Award, and the moderate elements desired the Congress categorically to express itself in favour of office acceptance if the electorate returned Congress nominees in sufficient majorities. After weeks and months of continuous wrangling the All India Congress Committee met in Bombay in August and approved the draft formula recommended by the Working Committee. The AICC also endorsed the establishment of a parliamentary sub-committee in place of the Congress Parliamentary Board. This Committee was invested with almost plenary powers not only to organise the election campaign but also to choose candidates, obtain pledges from them, enforce discipline and generally conduct the election campaign on behalf of the Congress.

It may be apt here to give a short summary of the contents of the election manifesto.

The Congress rejected in its entirety the constitution imposed upon India by the new Act and declared that no constitution imposed by outside authority and no constitution which curtails the sovereignty of the people of India, and does not recognise their right to shape and control fully their political and economic future, can be accepted. Such a constitution in its opinion, must be based on the independence of India as a nation and it can only be framed by a Constituent Assembly.

The Congress has always laid stress on the development of the strength of the people and the forging of sanctions to enforce the people's will. To this end it has carried on activities outside the legislatures. The Congress holds that real strength comes from thus organising and serving the masses.

Adhering to this policy and objective but in view of the present situation and in order to prevent the operation of forces calculated to strengthen alien domination and exploitation, the Congress decided to contest sats in the coming elections for the provincial legislatures. But the purpose of sending Congressmen to the legislatures under the new Act is not to co-operate in any way with the Act but to combat it and seek to end it. It is to carry out, in so far as is possible, the Congress policy of rejection of the Act, and to resist British Imperialism in its attempts to strengthen its hold on India and its exploitation of the Indian people. In the opinion of the Congress, activity in the legislatures should be such as to help in the work outside, in the strengthening of the people, and in the development of the sanctions which are essential to freedom.

The Congress representatives will seek to take all possible steps to end the various regulations, Ordinances and Acts which oppress the Indian people and smother their will to freedom. They will work for the establishment of civil liberty, for the release of political prisoners and detenus, and to repair the wrongs done to the peasantry and to public institutions in the course of the national struggle.

Pending the formulation of a fuller programme the Congress reiterates its declaration made at Karachi—that it stands for a reform of the system of land tenure and revenue and

rent, and an equitable adjustment of the burden on agricultural land, giving immediate relief to the smaller peasantry by a substantial reduction of agricultural rent and revenue now paid by them and exempting uneconomic holdings from payment of rent and revenue. The question of indebtedness requires urgent consideration and the formation of a scheme including the declaration of a moratorium, an enquiry into and scaling down of debts and the provision for cheap credit facilities by the State. Their relief should extend to the agricultural tenants, peasants, proprietors, small landholders, and petty traders. In regard to industrial workers the policy of the Congress is to secure to them a decent standard of living, hours of work and conditions of labour in conformity, as far as the economic conditions in the country permit, with international standards, suitable machinery for the settlement of disputes between employers and workmen, protection against the economic consequences of old age, sickness and unemployment, and the right of workers to form unions and to strike for the protection of their interests.

The communal decision which forms part of the new Act has led to much controversy and the Congress attitude towards it has been misunderstood by some people. The rejection in its entirety of the new Act by the Congress inevitably involve the rejection of the communal decision. Even apart from the Act as a whole, the communal decision is wholly unacceptable as being inconsistent with independence and the principles of democracy. The attitude of the Congress is therefore not one of indifference or neutrality. It disapproves strongly of the communal decision and would like to end it. But the Congress has repeatedly insisted on the fact that a satisfactory solution of the communal question can come only through the goodwill and co-operation of the principal communities concerned. An attempt by one group to get some connivance from the British Government at the expense of another group results in an increase of communal tension and the exploitation of both groups by the Government. Such a policy is hardly in keeping with the dignity of Indian nationalism; it does not fit in with the struggle for independence. It does not pay either party in the long run, it sidetracks the main issue. The Congress, therefore, holds that the right way to deal with the situation created by the communal decision is to intensify our struggle for independence and, at the same time, to seek a common basis for an agreed solution which helps to strengthen the unity of India. The Congress is of the opinion that such one-sided agitation can bear no useful result.

The question of accepting ministries or not in the new legislatures was postponed for decision by the Lucknow Congress. The A I C C is of opinion that it will be desirable for this decision to be taken after the elections. Whatever the decision on this question might be, it must be remembered that, in any event, the Congress stands for the rejection of the new Act and for non-cooperation in its working. The object remains the same, the ending of the Act. With a view to this end every endeavour will be made to prevent the introduction and to the people.

The manifesto brought about an atmosphere of peace among all ranks of Congressmen who found in it something to please them. The Socialist was glad that it contained some phraseology after his own heart, the moderate was thankful that nothing had been said to weaken the prospect of Congressmen becoming ministers, the Hindu Congressman was happy over the more acceptable attitude towards the Communal Award. All told, Congressmen of all persuasions swore by the manifesto and the election campaign was vigorously pressed forward. Pundit Nehru himself taking a leading part in it.

When a thing seemed to be going on smoothly for the Congress, Pundit Nehru threw another of his periodical bombshells. Partly because he had not had a fair chance to introduce his doctrines into the Congress organisation, partly because no other suitable candidate was available (Mr. C. Rajagopalachari having temporarily gone out of the Congress over a provincial squabble) and partly because Pundit Nehru at the helm of affairs would mean a firm hold on the socialist hot heads, Mr. Gandhi suggested that the Pundit should be re-elected President of the Congress for another period. Prior to the formal election, however, Pundit Nehru, who had all the while been resenting the restrictions placed on his zeal, sought to interpret his re-election as a vote of confidence in him and as an approval of his policy. Under the new method of presidential election Congressmen all over India had the right to elect him by a direct vote, so that Pundit Nehru tried to short-circuit the right wing, which was in a majority. He said in effect: 'A vote for me is a vote for Socialism and a vote for non-acceptance of ministries by Congressmen.' This raised a storm of protest among those who had supported him on the assumption that he would continue to be a good boy. The autumn threatened to repeat the history of summer but once again Mr. Gandhi averted a crisis by persuading Pundit Nehru to explain that, his personal views notwithstanding, he would abide by the wishes of the majority.

All the hurdles thus cleared Congressmen began to prepare for the annual session of the Congress. Mr. Gandhi was bent upon so arranging its venue and other details that the session would not only serve as a great dictationing stunt but also re-affirm the hold of the Congress on the country and facilitate the re-establishment of his own hold on the Congress. Since the failure of his satyagrahi experiments and his exit from the Congress in the autumn of 1934, Mr. Gandhi had had little to do with the Congress directly. He had been quietly working in another direction, namely, the villages. It is well known that India is in her villages. Having failed with the classes, the townsfolk and the intelligentsia, he turned to the masses, the villagers and the illiterate peasants. He was prospecting a new field. He made an experimental bore and he struck oil. He wished to sound the villager, and the latter responded. He insisted on holding the great, big annual session of the Congress in an out of the way village, amidst typical rural surroundings. The session was a phenomenal success from many points of view. It struck the imagination of the peasants, many of whom,

came closer to the Congress. Mr Gandhi was able to see for himself that the Congress was not dead and that his own personal influence on the masses was still there undiminished. He had been groping in the dark and now he began to see light. The countryside was to be his main stay for his next campaign—if and when he chose to launch it—and he was overjoyed. He said as much in a political speech at Faizpur, the first after months of slothfulness. The session itself was of great propagandist value to the Congress election workers.

By way of actual achievement, very little could be put down to the credit of the session which met at Faizpur in the bitter cold amidst uninviting surroundings. Pandit Nehru's presidential address did not contain anything out of the way. It was mostly a repetition of his Lucknow address, full of socialistic and extremist views and hopes with a background of world conditions. He spoke of democratisation of the Congress and hurried on mass organisation. Here is a gist of the main resolutions passed at Faizpur—

The Congress reiterated the rejection and the resolve to combat the constitution both inside and outside so as to end it. The Congress stands for a democratic constitution based on independence, determined by Constituent Assembly elected on adult suffrage. The demand for a Constituent Assembly is to be put forward in Councils, the election campaign is to be based on the manifesto which was reaffirmed. Office acceptance question is to be decided after elections by the A I C C after ascertaining the views of primary committees. A Convention is to be called by the Working Committee after elections of the Congress legislators and A I C C members to determine methods of ending the new constitution in provinces and preventing introduction of federation.

A Committee is to consider changes in Congress constitution for increasing association of the masses. Meanwhile primary Congress committees should be established in villages and wards of towns. Their members should meet twice a year to consider local problems. Subscriptions may be taken in kind. Provincial Committees should appoint organising secretaries for this work.

Agrarian problem will be finally solved by radical changes in land tenure and land revenue system. The following measures of immediate relief are necessary: (1) substantial reduction of rent and revenue, (2) exemption in case of uneconomic holdings, (3) agricultural income to be assessed like income tax above a fixed minimum, (4) reduction in water rates, (5) abolition of feudal dues and levies, (6) fixity of tenure with hereditary rights, (7) introduction of co-operative farming, (8) inquiry into debts, liquidation of unconscionable debts with declaration of moratorium and provision of credit facilities, (9) arrears of rent to be wiped out, (10) common lands should be provided, (11) arrears of rent to be recoverable only as civil debt and not by ejectment, (12) statutorily determined living wage to agrarian workers, (13) recognition of Peasants Unions.

Fresh from the triumph of the Faizpur session, Congress leaders toured the country and organised the election campaign in an

efficient manner. A vote for the Congress is a vote for liberty, a vote against the Congress is a vote for slavery—was their war cry. What with their appeal to sentiment, their demand in the name of an organisation, which had just come into its own and the total inactivity of any other political parties in the country, the Congress swept the polls. Apart from the sentimental appeal referred to above, the Congress leaders presented a dual picture to the electorate. On the one hand, they undertook to pursue a programme of amelioration of the grievances of the masses and, on the other, they pledged themselves to end the present constitution with a view to its replacement by a constitution evolved by a Constituent Assembly summoned by the Congress. It was one or the other—rather both—and they carried with them the bulk of the electorate, which, under the new Constitution, comprised a large body of the lower classes easily amenable to Congress influence. In six of the eleven provinces Congressmen were returned in a majority, and in most of the others their number is by no means inconsiderable. The following is a summary of the party position as the result of the general elections—

Shortly after the elections, in pursuance of the Faizpur resolution, a meeting of the A I C C was held at Delhi, followed by a convention of members of the various provincial legislatures. The main resolution passed by the A I C C on the question of office acceptance read —

The All India Congress Committee records its high appreciation of the magnificent response of the country to the call of the Congress during the recent elections and approval by the electorate of the Congress policy and programme

'The Congress entered these elections with its objective of independence and the total rejection of the new Constitution, and demand for a constituent assembly to frame India's constitution. The declared Congress policy was to combat the new Act and end it

The electorate has in an overwhelming measure set its seal of approval on this policy and programme and the new Act therefore stands as condemned and utterly rejected by the people through the self same democratic process which has been invoked by the British Government and the people have further declared that the desire to frame their own constitution is based on national independence through the medium of a constituent assembly elected by adult franchise. This Committee therefore demands on behalf of the people of India that the new Constitution should be withdrawn

In the event of the British Government still persisting with the new Constitution, in defiance of the declared will of the people, the All India Congress Committee desires to impress upon all members of the legislatures that their work inside and outside the legislatures must be based on the fundamental Congress policy of combating the new Constitution and seeking to end it a policy on the basis of which they sought the suffrage of the electorate and won their overwhelming victory in the elections. That policy must inevitably lead to deadlocks with the British Government and bring out the still further inherent antagonism between British Imperialism and Indian Nationalism and expose the autocratic and undemocratic nature of the new Constitution

The All India Congress Committee endorses and confirms the resolution of the Working Committee passed at Wardha on February 27 and 28, 1937, on the extra parliamentary activities of the Congress and Congress policy in the legislatures and calls upon all Congressmen in the legislatures and outside to work in accordance with the directions contained in them

And on the pending question of office acceptance and in pursuance of the policy summed up in the foregoing paragraphs the All India Congress Committee authorizes and permits the acceptance of Ministerial offices in Provinces where the Congress commands a majority in the legislatures, provided Minister ship shall not be accepted unless the leader of the Congress Party in the legislature is satisfied and is able to state publicly that the Governor will not use his special powers of interference or set aside the advice of Ministers in regard to their constitutional activities

This was mainly the handiwork of Mr Gandhi who served several objects thereby. Firstly he pleased the parliamentarians by giving them an opening to form cabinets, at the same time he pleased the socialists by imposing a condition which they expected the Governors to reject. Secondly, he managed to evolve a formula which would save the Congress face with the electorate. To accept offices without conditions or not to do so in any event, either course would have exposed the Congress to a charge of breach of faith with the voters. His scheme was intended to be a solution for the dilemma. Thirdly, it was the only way out of the anomalous situation which the Congress had created for itself. While, on the one hand it had been talking of complete independence, direct action, etc., on the other, it would virtually have to work the

constitution which it set out to wreck. To avoid this, Mr Gandhi sought for the Congress Ministers such powers as would enable them in the first instance to do much tangible good to the people and by virtue of it strengthen the Congress hold on them so as to prepare them for the next revolutionary campaign, if and when it was decided upon. Above all, he desired, by means of the Delhi proviso, to rid the Government of India Act of some of the safeguards and in effect to establish complete provincial autonomy in place of the restricted one contemplated.

In due course the leaders of the majority parties were summoned by the various Governors to assist them in the formation of cabinets. The leaders repeated the Delhi condition and refused to be satisfied with a general assurance by the Governors of help, sympathy and co-operation. Thereupon, they withdrew, refusing to form ministries unless the A I C C's demand was complied with. The Governors then invited leaders of minority parties to form cabinets.

The Governors' action in refusing the Congress demand and in forming minority ministries was severely criticised by Mr Gandhi and the Congress leaders. The constitutional possibility or otherwise of giving the undertaking demanded by the Congress, the prudence or necessity of making such a demand and the propriety of the Congress in sacrificing the real interests of the people on a technical assurance were the subjects of prolonged controversy in which the Secretary and Under Secretary of State for India, other British statesmen, Mr Gandhi and the Congress leaders and numerous non-Congress politicians in India, not to speak of the press, took an active part. Statements, replies, counter statements and rejoinders filled the summer of 1937. It was pointed out on behalf of the Governors that having been charged with the task of administering the Act, they could not constitutionally divest themselves of powers specifically placed in their hands by the Act. The Congress, on the other hand, contended that, as the powers sought to be suspended were discretionary powers, it was within the discretion of the Governors to exercise them or not to exercise them. At one stage the Congress leaders made it appear that it was a case of the British Government being unwilling to give up power and to reduce provincial autonomy to a sham. To this the spokesman of the India Office replied by a reaffirmation of the past declarations of British Ministers that the special powers would not ordinarily be used. So on, the controversy continued until at the time of writing the Congress has modified its demand to this: if in the pursuit of their constitutional activities, permitted by the Act, the ministers propose measures with which the Governors could not agree, the latter should not overrule the Cabinets but should take the responsibility of dismissing them.

This was embodied in a resolution of the Working Committee of the Congress passed at Allahabad in April 1937 which ran as follows:

The Working Committee approves of, and endorses, the action that the leaders of the Congress Parliamentary Parties in the Provinces took in pursuance of the resolution of the All

India Congress Committee on March 18, on being invited by the Governors in their respective Provinces to help them in the formation of Ministries.

In view of the fact that it is contended by British Ministers that it is not competent for the Governors, without an amendment of the Act, to give the assurances required by the Congress for enabling the Congress leaders to form Ministries, the Committee wishes to make it clear that the resolution of the A I C C did not contemplate any amendment of the Act for the purpose of the required assurances. The Working Committee, moreover, is advised by eminent jurists that such assurances can be given strictly within the Constitution.

The Working Committee considers that the pronouncements of the policy of the British Government made by Lord Zetland and Mr Butler are utterly inadequate to meet the requirements of the Congress, are misleading, and misinterpret the Congress attitude. Further, the manner and setting in which such pronouncements have been made are disconcerting to the Congress. The past record of the British Government as well as its present attitude, shows that, without specific assurances as required by the Congress, popular Ministries will be unable to function properly and without interturbulence.

The assurances do not contemplate any abrogation of the right of the Governor to dismiss the Ministry or dissolve the Provincial Assembly when serious differences of opinion arise between the Governor and his Ministers. But this Committee has grave objection to Ministers having to submit to interference by the Governors with the alternative of themselves having to resign the office instead of the Governors taking the responsibility of dismissing them.

Indian Princes

During the past four or five years the Indian Princes have figured largely in discussions on the future constitutional machinery of British India. They became actively interested in British Indian Reforms with the announcement made by representative Princes at the First Round Table Conference that they would join an All India federation provided there were adequate safeguards for them. This enthusiasm waned, however, in 1931 when some prominent Princes began to entertain doubts about the advisability of their joining the Federation. The Congress resolution which set its goal as the establishment of a socialist state and the subsequent pronouncements of Congress leaders, including Mr Gandhi, on their intentions if they gained power, made the Princes pause before they plunged. The Maharaja of Patiala was the first to come into the open to warn his brother Princes against the dangers to their very existence involved in the Federal Structure Committee's plan. He declared that smaller States were bound to suffer the fate of the smaller German principalities under the Confederation of 1815 and disappear from the map of India. He suggested the advisability of a Union of Indian States directly in relationship with the Crown. He was later followed by other Princes, who shared his fears, and the view gained in strength that

unless adequate guarantees were given for the continued maintenance of their rights and privileges, they should not give their consent to join the proposed Federation.

When the Maharaja of Bikaner accepted the idea, on behalf of his brother Princes, at the first Round Table Conference, to join the All India Federation no details of the scheme for the entry of the Princes were discussed. When the question was later gone into at the Federal Structure Sub-Committee of the R. F. C. it became evident that the Princes had a number of mental reservations and conditions precedent to their entry. On their return to India they had mutual consultations and the Maharaja of Patiala became the sponsor of a modified plan of federation, namely, that, instead of each Ruler entering the Federation singly on his own terms, the matter should be discussed by the Chamber of Princes and the terms for their entry should be so settled that the Princes as a body should form one group of their own and join the federation only for certain specific purposes and to the extent that they consented to do so.

This gave a new aspect to the whole question. For some time there was difference of opinion between one section of Princes led by the Maharaja of Bikaner and another led by the Maharaja of Patiala.

Later on they arrived at a settlement between themselves and a common plan was evolved whereby the Princes were to settle the terms of entry of all of them, it was also proposed that unless a proportion of over fifty per cent of the States joined no State should join singly. As regards their representation in the two federal Chambers, it was found that however widely the legislatures were enlarged seats could not be provided for each one of the 600 odd Indian States. Out of these 600 more than half are what may be called small or minor States. And the larger States like Hyderabad, Mysore and Baroda naturally objected to be placed on the same level as the smaller States which are no more than mere principalities. Then an attempt was made to give representation to the smaller States on the group system. At the meeting of the Chamber of Princes held in Delhi in March 1933 the Princes made a serious attempt to bring about a settlement of this question. Efforts were also made since then to settle this thorny problem but the general opinion seemed to be in favour of leaving it to be settled by Government.

Apart from this, the main anxiety of the States in joining the federation is that their integrity and their rights under treaties should not in any way be affected except to the extent that they voluntarily agree to accede in what are called treaties of accession. They fear that once they enter democratic chambers they will not be able to hold on against the onslaught of democracy and by a process of wearing down they will soon be reduced to the position of mere principalities. It was with this object that the late Jam Saheb of Nawanagar, as the Chancellor of the Chamber of Princes, proposed several safeguards for guaranteeing the position of the States against the danger foreshadowed above.

Almost all the Princes of India or their representatives had gathered at Delhi about the time of the publication of the White Paper

The scheme was generally supported by the Princes, subject to the incorporation in the Constitution Act of safeguards for the maintenance of internal autonomy, an equitable distribution of seats among the States in the federal legislature and a satisfactory settlement of the claims made by the Princes under the vague term paramountcy.

Interest next shifted to London where the Joint Parliamentary Committee took evidence on the Reforms proposals. Representatives of the Standing Committee of the Princes Chamber demanded statutory provisions rendering it permissible for States to enter the proposed federation collectively through a confederation, measures to secure weightage for the representation of States in the Legislature in the event of a bare minimum federating at the outset, prohibition of discussion of the domestic affairs of States in the Federal Legislature, co-ordinate powers for the Upper House in voting supplies at joint sessions, freedom for States from direct taxation and inviolability of treaties. These conditions were considered essential, but entry into federation would depend on the final completed picture of the Indian constitution.

The Joint Parliamentary Committee having accepted Sir Samuel Hoare's suggestion that the new Government of India Bill should not confine itself to provincial autonomy but should include the establishment of a federation for all India, the position of the States in the Federation naturally became an important consideration with the Princes. They appointed a committee of States Ministers to examine the report and formulate their views. This was done and a number of Princes, including the most prominent Rulers, met in Bombay in February, 1935, and expressed their disapproval of the Joint Parliamentary Committee's recommendations as they stood.

A resolution passed by the meeting of Princes emphasised that before the Bill could be considered as acceptable to the States it was necessary that it should be amended in certain essential particulars. These were set out in the report of the States Ministers Committee and referred to the form and mode of accession to the Federation, specific mention and preservation of the treaties and agreements concluded with the States, the extent of the executive authority of the Federation in regard to the States, the special responsibilities of the Governor General vis à vis the Indian States, provisions consequent upon the possible suspension of the constitution, and enforcement of Federation laws and powers vested in the Governor General.

(For details see last year's issue of this book)

The Princes' decision caused a great sensation and was promptly seized upon by the Conservative die-hards in Britain who saw in it a weapon with which they hoped to kill Federation. Sir Samuel Hoare showed a conciliatory spirit and offered to consider the Princes' representations in respect of details. On the question of principle, however, he refused to bring into discussion the question of Paramountcy, which was definitely outside the purview of the Government of India Bill.

(For details see last year's issue of this book)

The Secretary of State's assurances allayed to some extent the fears of Indian Rulers. During the report stage of the Bill amendments were introduced by the Government which, it is believed, generally meet the issues raised by the Princes.

A new development occurred with the passing of the Government of India Act. The picture was complete and it was no more open to the Princes to argue that they could not come to a decision on their entry into federation until after they had known the final constitution of the federation. Following on the parliamentary enactment of the reformed constitution, the officers of the Political Department in India sent to the various Princes draft Instruments of Accession to the federation with a request that the reply should be sent at an early date. The larger question of the entry into federation was narrowed down to the terms on which each individual State was invited to join. But even in the matter of details many of the Princes sought to withhold many of their existing powers, rights and privileges and seemed inclined to federate for the minimum purposes. The next stage of discussion was confined to the extent to which they should go. The original time allowed for coming to a decision, namely, two months, was gradually extended so that even at the time of writing no finality has been reached on the subject. The Princes have submitted alternative draft Instruments of Accession on the lines of the decisions reached at two conferences, one in Bombay at the end of 1936 and the other at Delhi early in 1937.

As soon as the Act was complete there occurred a schism between the bigger and smaller States. The former seemed inclined to join the federation straightaway, because the scheme of federation, it is argued in certain quarters, is such that the bigger states need not be afraid of any financial loss by accession to federation and also because each of the bigger states could be sure of entering into an administrative agreement with the federation ensuring the integrity of their respective internal administrations. The same could not be said of the smaller states according to this school of thought. These smaller states would be subjected to much loss in revenue as the result of accession to the federation and might also lose a part of their internal administrative powers.

It also appeared that some of the larger states, who were, generally speaking, inclined to enter the federation, utilised the critical attitude of the smaller states to secure for themselves some extra federal advantages, such as the retrocession of Bangalore and the Baroda Cantonment. Barring these negotiations, however, the bigger states generally kept out of the discussions of the past few months.

It may be explained here that most of the smaller states were critical of the federal scheme for two reasons: the first is one of revenue, and the second one of internal autonomy. Most of their revenue at present is drawn from excise or land custom. As a large number of excise levies will be proposed by the Federal Government and as federal excise is superior in claim to the state excise, it is felt that the smaller states will lose the major portion of their revenue if they

federate without reservation. Secondly, when it came to be known that administrative agreements between the federation and the states will be sparingly given, the smaller states began to suspect that their administrative sovereignty in respect of many federal subjects will suffer. It has been openly expressed that in course of time, except for the police, judiciary and land revenue, most of the state administrative departments will be absorbed by the federal machinery, and the sovereignty of the rulers of smaller states will correspondingly diminish. In the absence of an administrative agreement, it will be open to the federal authority to expect a specified standard of efficiency on the part of the state departments administering federal subjects, the enforcement of which condition will lead to increasing interference by federal officers with the internal administration of the states. So on and so forth argue the smaller states.

With this background it will be easy to follow the spate of criticism to which the federal scheme as embodied in the Act and as detailed in the British Government's draft Instruments of Accession was subjected by the smaller states. In order to ventilate these points and to evolve a minimum formula on which most states could agree, the Standing Committee of the Chamber of Princes organised a bigger conference of Princes and Ministers in the latter half of 1936. At this conference, which met in Bombay and which was presided over by the Chancellor, the Maharaja of Bhopal, some very strong speeches were made expressing the disinclination of many small states to federate on the terms proposed. Important amendments were suggested to the provisions of the draft Instruments of Accession and it was sought to withhold a number of subjects mentioned in the list of federal items appended to the Government of India Act. To consider these suggestions the conference appointed two sub-committees: the constitutional sub-committee under the chairmanship of the Maharaja of Patiala and the finance sub-committee presided over by the Nawab of Bhopal. The former had the assistance of two legal experts, namely Mr Morgan and Mr D. G. Dalvi, and the latter was assisted by Sir B. N. Mitra and Mr Manu Sukhrad. The constitutional sub-committee met for three weeks in Delhi and the latter met from time to time at Bhopal and submitted their reports to the Chamber of Princes.

The main recommendation of the constitutional sub-committee was that the sphere of paramountcy must be quite distinct from the federal sphere and the obligations of the Crown arising out of the treaties and must in no way be affected by the federation. It was also made clear that it must be understood that the states would join the federation only in respect of the subjects to which they acceded and with the limitations proposed by them. Moreover the sovereignty of the states must remain as before except to the extent agreed to be transferred to the federation by their rulers through the Instruments of Accession.

The finance sub-committee recommended that there should be no direct taxation of the states subjects except in respect of the surcharge on income tax. Even in respect of in-

direct taxation, only those mentioned in the Act should be levied, and the list should not be added to. Whatever tributes were now payable should cease after federation.

Both the reports were in the main adopted by the meeting of Princes and Ministers which met at Delhi early in 1937.

Most of the States have sent to Government alternative draft Instruments of Accession embodying the suggestion approved by the

Delhi conference but many are reported to have gone beyond the Delhi formula. These alternative drafts will now be considered by Whitehall and the final draft submitted before the end of 1937 for acceptance by the rulers of states.

An additional complication in the federal discussion has arisen as the result of the constitutional impasse in six of the British Indian Provinces, which if not solved in time may unsettle the present arrangements for the inauguration of the federation.

The National Liberal Federation.

The definite breach between the moderate and extremist elements in the Congress at its special session in Bombay in August 1918 (*vide* 1919 edition of this book) witnessed the birth of the National Liberal Federation which has, since then, been the platform of Indian moderate leaders. It held its first session in Bombay in 1918, Sir Surendranath Banerjee presiding. The Federation adopted for its creed the old Congress formula which was set aside by the Nagpur Congress. The Liberal Party in India has always been the rallying point of moderately progressive opinion. It has consistently stood of a pure type of nationalism and orderly progress through peaceful and constitutional means, as opposed to the revolutionary creed and policy of the Congress. During the first five or six years of its existence the party played a useful and valuable part in politics and exerted a wholesome influence on public life. The death of the late Hon. E. S. Montagu was a serious blow to the Indian Liberal Party whose influence on Indian affairs steadily waned since then. The Indian Round Table Conference brought it again to the fore front, but its influence again suffered as the result of the reactionary provisions of the Government of India Act of 1935. The return of the Congress to the constitutional path ousted it from Indian politics. At the time of writing the Liberal Party exists only in name there being no place for a middle group in Indian affairs of the present day.

The country was deeply interested in this move, which was widely discussed in the Indian press. The extreme left wing warned the Congress against having anything to do with the Liberals, while right wing Liberals opposed any joint action with the Congress. Eventually, however, the proposal fizzled out mainly owing to fundamental difference between the two in their goal and policy.

The position of the Liberal Party was clearly explained at the annual session of the Liberal Federation which met at Nagpur in December 1935. Mr. T. R. Venkatrama Sastri who presided said—We who claim to be progressive and nationalist should go in and work the new Government of India Act and, to the extent possible, keep out unprogressive elements from the Councils. Entering the Councils, are we to wreck the Act by indiscriminate opposition?

I do not expect any such programme to succeed. The unity required has yet to be created, he added, "and when that unity is created, wrecking may not be necessary for securing changes in the constitution. He entered upon an elaborate criticism of the Government of India Act of 1935 and said that it had erected as far as the combined ingenuity of lawyers and Parliamentary draftsmen can erect them, barricades against full Dominion Status ever being attained.

The session deplored that the Government of India Act 1935, with numerous objectionable provisions, was imposed on the Indian people, but expressed the view that, as a boycott of the constitution was futile and impossible, all nationalists of all parties and groups in the country should, in the supreme interests of India, act together in the general election, so as to extract from it whatever good it can yield and accelerate the reform of the constitution on lines demanded by, and acceptable to Indian opinion.

The weeks following the Nagpur session were full of rumours of an understanding with the Congress in order jointly to contest the elections, but these were soon proved to be unfounded. Efforts were doubtless made to bring about this consummation but it was found that was very little chance of the Congress and Liberals agreeing on any joint programme of work—their outlook was so widely divergent. Moreover, difficulties arose over the approach to the constitution. The Congress had destruction on its lips all the time. Pandit Jawaharlal Nehru would not condescend to ally himself with any party whose programme was ever so slightly less radical than that of the Congress. He was fully confident of the hold of the Congress on the masses and had no mind to share the spoils with anyone. On the other hand, he did not conceal the suspicion that others who sought to work with the Congress were only trying to rehabilitate their influence on the people of India by allying themselves with the leading political organisation. Under the Pandit's influence the Congress attitude towards the Liberals desire steadily stiffened, and in a short time the efforts at a rapprochement, even for the purposes of contesting the elections, were abandoned. From then onwards the Liberal Party was virtually out of the picture of Indian politics. The year was practically barren as far as the Liberal Party's

activity was concerned. Small wonder that the real position of the Indian Liberals in the public life of the country was truly reflected at the first provincial elections under the reformed constitution. The Party put up very few candidates, and even these were mostly rejected by the electorate.

The last session of the Indian National Liberal Federation was held at Lucknow in the end of December 1936 under the presidency of Sir Cowasji Jehangir.

Our claim to Dominion Status will become irresistible within the next ten years if only we will combine without regard for public applause and spectacular displays but with one object and one object alone, namely, to do whatever lies in our power for the immediate advantage and benefit of peoples of all classes and all creeds, declared Sir Cowasji Jehangir in his presidential address. Enunciating the Liberal creed as one of security to possessors, facility to acquirers and liberty and hope to the people, he exhorted Indians to give a fair trial to the new Constitution. The Liberal Party, he said, intended to encourage by every possible means Swadeshi enterprises. They would support land revenue reform, protect the interests of agricultural tenants and tackle the question of agricultural indebtedness. They aimed at the removal of unemployment among the educated classes and at compulsory primary education.

Sir Cowasji ridiculed the inconsistency of the Congress decision to seek to wreck the Constitution while simultaneously it enjoined on its future representatives in the new legislatures the urgent necessity of adopting measures such as for the scaling down of debts and reform of the system of land tenure and revenue. Declaring that India would never sacrifice her traditions, culture and religious mentality for a Communist form of Government of the Soviet type, Sir Cowasji outlined the Liberal Party's programme which includes the encouraging of Swadeshi enterprises, land revenue reform, protection of the interests of agricultural tenants, tackling of the question of agricultural indebtedness and removal of unemployment among the educated classes. We shall, surely, he added, attain the goal of our ambitions but let us see to it that, in the process, we do not trip and fall. Such accidents must necessarily prolong the intervening period and none will deplore it more than those who have, through good times and bad, stuck to their principles, regardless of adverse criticism.

On the main political question, the session passed the following resolutions—

(a) The National Liberal Federation reiterates its considered opinion that the constitution embodied in the Government of India Act of 1935 is extremely unsatisfactory and altogether unacceptable. It is not merely inadequate but is retrograde in many respects and includes features obnoxious to Indian nationalist opinion.

(b) Nonetheless, the Federation repeats that it has to be utilised to the best advantage of the people for the amelioration of their social and economic condition and for accelerating the pace of further constitutional advance towards

Dominion Status. Therefore it expresses the earnest hope that in the elections to the new provincial legislatures the electorates will return nationalist candidates who will neither attempt the impossible nor be subservient to authority nor prefer sectional interests to national but will do their best for the well being and advancement of the people as a whole.

(c) The Federation is strongly of opinion that in the constitution of ministries and in the actual working of government the Governors of provinces should not further whittle down such meagre concessions as the Act has made to Indian demands but if the Governors use their powers so as to impede the political or economic progress of the country, Ministers should resign their offices.

(d) The Federation urges that no concession be made to Princes in the course of negotiations now going on between them and the agents to the Viceroy with regard to the establishment of federation which is calculated to increase still more the powers of Princes at the expense of federal Government.

The session also passed the following resolution on the Indian States people. The National Liberal Federation reaffirms its complete sympathy with the natural and perfectly legitimate aspirations of the people of Indian States for civil and political liberties. The Federation deeply regrets that no provision has been made in the new Government of India Act for the election of representatives of the States in the coming Federal Legislature or for the recognition of the people's fundamental rights of citizenship. This Federation, however, hopes that the rulers of Indian States will allow their representatives in the Federal Legislature to be returned by election. The Federation strongly urges once again that the rulers of States should without further delay concede to their subjects the rights of security of person and property, liberty of speech and of the press, freedom of association, and an independent judiciary as well as representative government as a prelude to responsible government.

A comprehensive economic programme was adopted by the Federation at Lucknow. It ran—

(a) Keenly alive as the National Liberal Federation of India is to the distressing poverty of the mass of people in India and to the acute state of unemployment specially among the educated middle class, the Federation is convinced of the necessity of bold and far-reaching measures of social and economic amelioration which would recognise the legitimate rights of all classes. Such measures alone can ensure ordered progress and avert anything in the nature of a revolution disastrous to all.

(b) The Federation emphasises, as it did at earlier sessions, the imperative need of the widest diffusion of education, agricultural improvement, industrial development and commercial expansion.

(c) In particular the Federation urges—

“(1) A reform of agrarian laws which will secure the tenantry in their legitimate rights principally, fixity of tenure and fair rents,

(2) The embodiment in legislative enactments of the main principles of land revenue assessment in provinces where this has not yet been done,

(3) The relief of agricultural indebtedness by means of debt conciliation boards, land mortgage banks and the extension of the co-operative movement,

(4) The adoption of measures to check further fragmentation and facilitate the consolidation of agricultural holdings,

(5) Substantial State aid in the development of industries, big and small alike,

(6) A fiscal and a monetary policy wholly in the interests of this country,

(7) Legislation for the more adequate protection of the labouring classes, both in urban and rural areas,

(8) The early introduction of free and compulsory elementary education for both boys and girls,

(9) Such reform of the system of education as is indicated by the great and increasing

difficulty experienced by educated young men in getting employment, without prejudice to the wider diffusion of liberal education, but with special regard to the training of larger numbers for wealth producing occupations by increase of facilities for technical education,

(10) Adequate provision for medical relief and the promotion of public health, particularly in rural areas,

(11) An active policy of temperance reform which will subordinate considerations of revenue to the welfare of the people

Leaders of the Liberal Party played an important part in clarifying the political situation arising from the refusal of the Congress to take office in provinces where Congressmen had been returned in a majority except on the fulfilment of constitutionally impossible conditions. The weighty pronouncements of Liberal politicians, many of whom had a wealth of administrative experience behind them, and their appeals to the Congress Party not to stultify itself by persisting in an unwise attitude were a feature of the summer of 1937

MUSLIM ORGANISATIONS

The awakening of political consciousness among Muslims in India as a separate entity dates back to 1906 when the All India Muslim League was formed. It worked up its influence steadily, so that when it was hardly ten years old it became sufficiently important to enter into an agreement—known since as the Lucknow Pact—with the powerful Indian National Congress. The League fell on evil days in the twenties, and differences set in among its members. When enhanced powers were conferred on India by the Montford Reforms, Muslims became more and more politically minded and began to aspire for a greater share in the control of the administration of the country and in Government posts. This feeling gave rise to the formation of a new body whose promoters concentrated on aggressive presentation of Muslim demands. With the prospect of still further constitutional reforms at the end of the first ten years of the working of the Montford Scheme these leaders strove to organise Muslims into an influential body which would safeguard their interests more effectively than the League. The result was the All Parties Muslim Conference in 1928. The publication of the Communal Award and its inclusion in the White Paper Scheme of Reforms in 1933 helped this process of consolidation. An attempt was made early in 1934 to consolidate the community by healing the split within the Muslim League and, if possible, bringing the League and the Conference together to work as a united body. The latter failed, but the former object was largely successful and the League marched from strength to strength until it emerged as a powerful organisation of the Muslim community on the eve of the first elections to the provincial legislatures under the Government of India Act of 1935. For the first time in the political history of Muslims their representative institution functioned as a vigorous and active all India organisation with results which flattered Mr. Jinnah and his co-workers. Doubtless Mr. Jinnah, who was

the guiding spirit behind this new activity, was handicapped by fissiparous tendencies and reactionary forces in distant provinces beyond the sphere of his direct influence. But he has reason to be satisfied with what has been achieved and build on it hopes of a united Muslim community, fully conscious of its political status in the life of the country.

Muslim League in 1936-37—With the Bombay session of the Muslim League held early in the summer of 1936 (*see last year's issue of this book*) may be said to have begun a new era in the history of the Muslim League. Instead of being a purely deliberative body which met once a year and passed resolutions lapsing into comparative inactivity till the next annual session, the League decided to get into grips with current politics. In pursuance of the resolution passed at the Bombay session, Mr. Jinnah formed a Central Parliamentary Board, comprising influential representatives of the various provinces. Provincial boards were soon established and the whole machinery started under very good auspices. But it early became evident that local problems and influences might impair the solidarity of the League. Some prominent members of the League resigned from the League Parliamentary Board, but Mr. Jinnah persevered undeterred. He saw more clearly than either wing of Muslim leadership the task before the community.

'We are engaged, he said in April 1936, in the task of organising the electorates and training 80,000,000 Muslims to a higher level of political understanding, so that ultimately they might be soldiers for the national struggle. I have always felt that if Muslims could speak with one voice a settlement between Hindus and Muslims would come more quickly. Muslims are making a mistake if they lean on either Government or the Congress. This in essence was the programme of the Muslim League in the past year.

After elaborate consultations Mr Jinnah constituted the Central Parliamentary Board of the League and strove to make it fully representative of all provinces and of all shades of opinion in the community. Soon after the League issued its election manifesto, the first of its kind. It reaffirmed the position of the League as outlined at the Bombay session, namely—

While it accepts the Communal Award till a substitute is agreed upon between the communities concerned, it emphatically protests against the constitution embodied in the Government of India Act, 1935, being forced upon the people of India against their will and in spite of their repeated disapproval and dissent expressed by various parties and bodies in the country. The League considers that, having regard to the conditions prevailing at present in the country, the provincial scheme of constitution be utilised for what it is worth, in spite of the most objectionable features contained therein, which render the real control and responsibility of the Ministry and the Legislature over the entire field of government and administration nugatory. The League is clearly of the opinion that the all India federal scheme of Central Government embodied in the Government of India Act, 1935, is fundamentally bad, is most reactionary, retrograde, injurious and fatal to the vital interests of British India vis-à-vis the Indian States and is calculated to thwart and indefinitely delay the realisation of India's most cherished goal of complete responsible government and is totally unacceptable. The League considers that the British Parliament should still take the earliest opportunity to review the whole situation afresh regarding the central scheme before it is inaugurated, else the League feels convinced that the present scheme will not bring peace and contentment to the people, but, on the contrary, it will lead to disaster if forced upon and persisted in as it is entirely unworkable in the interests of India and her people.

Explaining the policy and programme of the Central Parliamentary Board, the manifesto stated: 'The inauguration of the Montagu-Chelmsford scheme of constitution and the working thereof has developed and brought forth various forces, and it appears that such power as was available under that scheme has been captured in various provinces by the reactionary and conservative element in combination with a coterie of men whose sole aim and object is to secure offices and places for themselves wherever and whenever available. This has suited Government and these two classes have received every encouragement and support, with the result that they have not only been a hindrance and an obstacle in the way of independent and progressive intelligentia, but the people generally have been exploited. Thus was created a double domination of reactionary forces and imperialistic power. Our aim is that this domination must cease.'

After pointing out that the League was opposed to any movement aiming at expropriation of private property, the manifesto laid down the following main principles to guide its representatives in the various legislatures—

(1) that the present provincial constitution and the proposed central constitution should be replaced immediately by full democratic self government, and (2) that in the meantime the representatives of the Muslim League in the various legislatures will utilize the legislatures in order to extract the maximum benefit out of the constitution for the uplift of the people in various spheres of national life.

The manifesto concluded: 'The Muslim League party will be formed as a corollary so long as separate electorates exist, but they would be free to co-operate with any group or groups whose aims and ideals are approximately the same as those of the League Party.'

The League appeals to Mussalmans not to permit themselves to be exploited on economic or any other grounds which will break up the solidarity of the community.'

Meanwhile, the Muslim Conference had gradually lost its influence over the community. In fact one heard very little of its activities except for a meeting of its executive board in September 1936 which condemned the movement against the Communal Award and resolved that although it does not satisfy the aspirations of Muslims, it nevertheless deserves a fair trial in order to develop a sense of responsibility among Indians and a spirit of amity and mutual regard among the different communities of India. Another resolution appealed to Muslims 'to vote for those candidates (1) who are explicitly pledged not only to support the Communal Award but also to keep it intact in each province until a change is effected therein by such agreement as is arrived at by the mutual consent of the communities concerned and ratified by the conference and (2) who undertake to safeguard religious, cultural and other Muslim rights and demands.'

Then came the elections. The task of the League was stupendous, considering that it was the first time that the League, from the centre without effective provincial or district organisations and in face of defections and local intrigues made an attempt at mass contact. In Bengal, the League secured 50 per cent of the seats and is the largest Muslim group. In the United Provinces, it put up only 35 candidates for the lower house, and secured 29 out of a total of 66 Muslim seats.

In Madras, the Muslim League Board put up 11 candidates for the Assembly and three for the Council, and succeeded except for one seat in the Assembly. Bombay achieved the greatest success. It secured two thirds out of a total number of 30 seats.

No Muslim League Board was formed in Bihar, Orissa, Sind and the North West Frontier Province. In Assam the League annexed 9 out of 34 Muslim seats. In the Central Provinces a schism set in, with the result that two League parties functioned side by side. The League's efforts failed thoroughly in the Punjab where the Muslims co-operated with right wing Hindus in the formation of the Unionist Party—a purely political organisation—which carried away the largest number of seats and which has formed a stable ministry with a definite programme.

Shortly after the elections, Mr Jinnah explained the position of the League members of provincial legislatures *vis à vis* other groups and said 'The constitution and policy of the League do not prevent us from co operation with others. On the contrary, it is part and parcel of our basic principle that we are free and ready to co operate with any group or party from the very inception, or inside the legislature, if the basic principles are determined by common consent

These words engendered a hope that the League might be induced to co operate with the Congress in its extremist programme and negotiations were started, but it soon became apparent that the two could not come together. The situation was rendered more difficult by the attitude of stiffness adopted by the Congress and its President, Pandit Jawaharlal Nehru. Mr Jinnah refused to convert the League into an under study of the Congress and firmly upheld the position of the Muslim community. The Congress, for its part, found as the result of the elections that it did not have the support of the Muslim community. Very few Congress Muslims were put up as candidates for the elections, and

even they failed. The Congress therefore set about roping in the Muslims by an appeal to their economic conscience, explaining that the Congress was out to alleviate the sufferings of the masses, Muslims as well as Hindus, and to uplift the nation as a whole. In this process the League and its leaders came in for a great deal of violent criticism at the hands of the Congress managers. On behalf of the League Mr Jinnah retorted 'The Congress have not the monopoly, nor are they the sole custodians, of Indian nationalism. As I have always maintained, the Muslim League is prepared to join hands with any progressive party in the fight for the country's freedom, but to achieve this the question of minorities must be settled satisfactorily. Here I am not talking of only Muslims but all minorities. Further we are not prepared to merge ourselves into any organisation, however great it may be, and however advanced its programme and policy may be unless it is determined by common consent.'

A wordy warfare ensued between the leaders of the Congress and the League which is being kept up as these lines go to press.

Government of India Act, 1935.

The seeds of the Government of India Act, which was placed on the Statute Book in 1935, were sown as far back as the autumn of 1930 when the Indian Round Table Conference met in London for the first time. Three sessions of the conference were held, and it concluded on December 24, 1932. Some months later the British Government published their proposals for the reform of the Indian constitution based on the largest measure of agreement reached at the three sessions of the Round Table Conference. These proposals were embodied in a White Paper (March 1933) which was referred to a Committee of the two Houses of Parliament. The Committee submitted its report in October 1934. Based on the recommendations of this Committee, the Government of India Bill was presented to Parliament in October, 1935. The Bill has since become law with a few changes in its passage through Parliament.

The Act proposes to set up a Federation with responsibility at the Centre, and to provide for provincial autonomy as a preliminary step.

The Federation which the Act provides differs from those in other parts of the world because its units are not homogeneous. The Indian States differ widely from the British India Provinces. These complications react upon the constitution. As Sir Samuel Hoare said in the House of Commons 'they react, for instance, upon the provisions as to how the federation is to be formed, for it is obvious that the Princes, being voluntary agents, can only enter of their own volition. They react again upon the

kind of executive and the kind of legislature that is proposed, each side of the federation obviously demanding adequate representation both in the government and in the federal legislature. They react again upon the relations between the two Federal Chambers, the Princes from the first attaching the greatest possible importance to the Chambers having equal powers. They react, further, upon the list of federal subjects, the Princes again rightly insisting that, apart from the functions of Government which they surrender to the Federation, there should be no interference in their internal sovereignty. These complications make a formidable list of difficulties.

The Act sets up a Federal Executive similar to the responsible executives in other federations of the Empire. The whole executive power of the Federation is conferred on the Governor-General, and his Ministers are appointed to aid and advise him and hold office during his pleasure. The Ministry shall consist of persons in whom the Legislature has confidence and the Governor-General shall dismiss them when they lose that confidence.

In contrast, however, with Dominion Constitutions, the Governor-General of India is given special powers by the Act. In the first place, the Departments of Foreign Affairs, Ecclesiastical Affairs and Defence are 'reserved' and will be administered by him through the agency of counsellors. In the second place, in all other departments he may act in certain cases and for certain purposes otherwise than on his ministers' advice.

The Act imposes upon him special responsibilities for

- (a) The prevention of any grave menace to the peace or tranquillity of India or any part thereof
- (b) The safeguarding of the financial stability and credit of the Federal Government
- (c) The safeguarding of the legitimate interests of the minorities
- (d) The securing to, and to the dependents of persons who are or have been members of the public services of any rights provided or preserved for them by or under the Act and the safeguarding of their legitimate interests
- (e) The prevention of discrimination
- (f) The prevention of action which would subject goods of United Kingdom or Burmese origin imported into India to discriminatory or penal treatment
- (g) The protection of the rights of any Indian State and the rights and dignity of the rulers thereof
- (h) The securing that the due discharge of his functions with respect to matters with respect to which he is by, or under the Act required to act in his discretion, or to exercise his individual judgment, is not prejudiced or impeded by any course of action taken with respect to any other matter

The Federal Legislature will consist of two chambers—the Council of State and the Federal Assembly. The Council of State will consist of not more than 104 representatives of the federating Indian States and of 156 representatives of British India elected by the people, of whom six will be chosen by the Governor General in his discretion. The Council of State is to be a permanent body with a provision that a third of its members should retire every third year. The representatives of British India are to be chosen on a communal basis, while those of the States will be appointed by the Rulers of the States concerned in accordance with the relative rank and importance of the State. (See table at the end of this chapter for the composition of the British Indian half of the Council of State.)

The Federal Assembly will consist of not more than 125 representatives of the federating Indian States and of 250 representatives of British India mostly elected by the Provincial Legislatures—by the lower House of the Provincial Legislatures wherever there are two Houses.

The Federal Assembly is to continue for five years from the date appointed for their first meeting after the expiration of which it will be dissolved. The distribution of seats here will also be on a communal basis. Thus the Hindu, Muslim and Sikh seats will be filled by the

representatives of those communities in the Provincial Assemblies voting separately for a prescribed number of communal seats. Depressed Classes will have representation from among the Hindu seats. Besides these three main groups, Europeans, Anglo Indians, Indian Christians, representatives of commerce and industry, landholders representatives of labour and women will have seats. (See table at the end of this chapter for the composition of the British Indian half of the Federal Assembly.)

An "annual financial statement" setting out the estimated receipts and expenditure of the Federation in respect of every financial year will be laid before both Chambers of the Federal Legislature. The estimates of expenditure will show separately the sums required to meet expenditure charged upon the revenue of the Federation and the sums required to meet other expenditure proposed to be made from the revenues of the Federation. Items falling under the former category will not be submitted to the vote of the Legislature. With a view to the observance of the well recognised principle of public finance that no proposal for the imposition of taxation or for the appropriation of public revenues should be made otherwise than on the responsibility of the Executive, it is provided in the Act that no demand for a grant is to be made unless recommended by the Governor General.

The Federal Legislature alone may make laws upon any federal subject and the Provincial Legislature alone may make laws upon any subject treated as concurrent, but in case of conflict Federal legislation shall prevail unless the provincial law has been reserved for the consideration of the Governor General and has received his assent.

The foregoing is a description of the framework of the India Federation. When half of the Indian States, on the basis of population and of representation in the Upper Federal Chamber have acceded and after both Houses of Parliament have presented an address to His Majesty praying that the Federation may be brought into existence, a Royal Proclamation will give legal effect to the Federation of India.

The creation of a number of autonomous administrative units including two new ones, namely, Sind and Orissa, some of which have in recent years found it very difficult to make both ends meet, and the need for a strong Central Government presented some very difficult financial problems for the framers of the constitution. The allocation of sources of taxation and the settlement of heads of expenditure in 1930, not only to enable the provinces progressively to develop but also to provide the Central Government with adequate funds to discharge its All India responsibilities was the main problem. To secure a satisfactory solution of this problem the expert advice of Sir Otto Niemeyer was sought. His recommendations are summarised elsewhere in this volume. (See page 725.)

The Government of India Act also establishes a Statutory Railway authority which will take over the executive authority of the Federation in respect of the regulation, construction,

maintenance and operation of railways coming under the jurisdiction of the Federal Government. The powers which the Governor General possesses of taking action in virtue of special responsibilities and in respect of the reserved subjects extend to the giving of directions to the Railway authority.

Under the Act a Federal Court is to be established which will consist of a Chief Justice of India and such number of other Judges as His Majesty may deem necessary. The Federal Court will ordinarily sit in Delhi. It will have an original jurisdiction and an appellate jurisdiction, in the latter in appeals from High Courts in British India and in Federated States. Its original jurisdiction will extend to any dispute between any two or more of the following, namely, the Federation, any of the Provinces and any of the Federated States. Provision is also made for an appeal to the Judicial Committee of the Privy Council from a decision of the Federal Court.

The Act abolishes the Council of the Secretary of State for India and makes him a Minister of the Crown individually responsible for the exercise of all authority vested in the Crown in relation to the affairs of India. He will, however, continue to be a member of the Cabinet and of Parliament, to which bodies he will be responsible for his actions.

Provincial Constitutions

It may take two or three years before the federal part of the constitution is ready to function. In the meantime Provincial Autonomy will be set up. Under the Act there will be eleven Governors' provinces, namely Madras, Bombay, Bengal, the United Provinces, the Punjab, Bihar, the Central Provinces and Berar, Assam, the N. W. F. Province, Orissa and Sind, with power to the Crown by Order in Council to create, if deemed necessary, a new Province, increase or diminish the area of any province or alter the boundaries of any Province. The Provincial Executive will be similar to that of the Federation in form.

In addition to the Governors' Provinces there will be the following Chief Commissioners' provinces: British Baluchistan, Delhi, Ajmer, Merwar, Coorg, the Andaman and Nicobar Islands, the area known as Panch Piplas and such other Chief Commissioners' Provinces as may be created under the Act which will be administered by the Governor General acting through a Chief Commissioner to be appointed by him.

The Provinces of Madras, Bombay, Bengal, the United Provinces, Bihar and Assam will have two Chambers, Upper and Lower, namely the Legislative Council and the Legislative Assembly, while the others will have only one Chamber, the Legislative Assembly. Representation in the Legislative Assembly will be by separate electorates for each community based on the provisions of the Communal Award as modified by the Poona Pact of September 25, 1932, under which a number of seats out of the seats classified as general seats will be reserved to the Depressed Classes. The life of the Provincial Legislatures will be the same as that of the Federal.

In provinces with bi-cameral legislatures the Upper House will see that the Lower House does not indulge in hasty and ill-conceived legislation due to the temporary majority of any party. But the deliberations of the Upper House will also be subject to examination by the Lower House.

While there will be no nominated members and no officials in the Assembly—all members of the Lower House will be elected—the Governor will have the right to fill some seats in the Provincial Council wherever one exists (*See table at the end of this Chapter for the composition of the Provincial Councils and Provincial Assemblies*).

The constitution sets out the qualifications of electors. There are certain provisions of a general nature applicable to all Provinces while particular Provinces are dealt with separately, as in some cases the payment of local taxation in other cases payment of local taxation in other cases payment of land revenue is the main qualification. The new constitution has extended the existing franchise so as to enfranchise about 10 per cent of the total population of British India. The Acts of 1915 and 1919 provided for an electorate of approximately 3 per cent of the total population, the franchise based mainly on a property qualification. Under the reformed constitution women have a much wider franchise, over 8,000,000 female electorates as compared with 315,000 provided by the acts of 1915 and 1919. The Act of 1935 secures representation for women for the Depressed Classes for industrial labour and for special interests and for the bulk of the small landholders, small cultivators, urban ratepayers as well as a substantial section of the poorer classes.

At present the Provinces have no original or independent powers. The local Governments are under the superintendence, direction and control of the Governor General in Council and the Secretary of State for India. The first step which the new constitution proposes to take is to create provinces with independence of their own and to assign to them a certain exclusive share of the activities of Government. There will be a transfer of all subjects to the control of the legislature. The subjects which are classified as provincial will as indicated above, be exclusively dealt with by the Provincial Government which will have power to make laws for peace and good government. There will be no more reserved subjects. All subjects will be transferred. The administration of all these subjects will pass from the bureaucracy to the control of Ministers responsible to the legislature. Such subjects will include public order, courts, police, prisons, education, health and sanitation, public works, agriculture, forests, land revenue, excise, tolls, unemployment and certain classes of taxation.

Generally the Ministers will be entrusted with the administration of their own departments. Under the existing constitution they are merely advisers of the Governor. Under the new constitution they will be effective executives. Only in those spheres where the Governor will retain a special responsibility will he have the right to act independently of the Ministers should he differ from their views. But normally such occasions should not be very frequent.

Both the Upper and Lower Houses will have power to initiate legislation except that Money Bills will be initiated in the Lower House only. Should there be a difference of opinion between the two Houses with regard to a Bill the Governor will be empowered to convene a joint session of the two Houses. Any Bill affirmed by the majority in the joint session shall be taken to have been duly passed.

Under the new Constitution the Governor will have almost the same special responsibilities as the Governor General except the one relating to financial stability and credit. The Governor has, notwithstanding the advice of his Ministers, power to take whatever action he thinks necessary

for the due discharge of his responsibility for preserving the peace or tranquillity of the Provinces. The grant of these powers will ensure a smooth working of the constitution and prevent a breakdown.

Indeed, the proposed constitution will enable India to achieve considerable political power. Everything depends on whether it is worked in a spirit of co-operation, sincerity and unity or in a spirit of irresponsibility or, communal bias. In the former event, India's advance along the path of responsible Government is assured, in the latter, the Governors or Governor General's special powers will be more than justified.

THE COUNCIL OF STATE.

Note.—In Bombay seven of the General seats are to be reserved for Marathas.

In the Punjab one of the Landholders' seats is to be filled by a Tumandar.

In Assam and Orissa the seats reserved for women are to be non-communal seats.

The Indian Legislature.

The annual Budget session of the Indian Legislature commenced with the opening sitting of the Indian Legislative Assembly on 3rd February 1936. It began its proceedings as did the Council of State, later with a formal resolution expressing deep sorrow at the death of His late Majesty King George V. Heart felt sympathy with His Majesty King Edward VIII and with his gracious Majesty Queen Mary and loyal congratulations to His Majesty upon his accession combined with which was an assurance of devotion to his Royal person.

Railway Budget

The annual Railway Budget for 1936-37 was presented by the Hon.ble Sir Muhammad Zafarullah Khan on 17th February. The revised estimates for 1935-36 were lower than the Budget estimates presented in February 1935. It was originally estimated that total traffic receipts on State-owned lines would amount to Rs. 933 crores and working expenses including depreciation to Rs. 64.43 crores, the net railway revenue being estimated at Rs. 292 crores which would leave a deficit of under Rs. 2 crores. But traffic earnings during the year were almost consistently below those of 1935 and it is now considered unlikely that our traffic receipts will exceed Rs. 90 crores. The principle commodities contributing to this fall in earnings were shown to be rice, cotton and oil seeds. Working expenses were expected to be Rs. 42 lakhs below the original estimate. The net deficit was, therefore, now expected to be just over Rs. 11 crores, which it was proposed to meet by a loan from the depreciation fund; the actual balance of which would at the end of the financial year be just under Rs. 9 crores. The total borrowings from the depreciation fund to meet deficiencies would thus reach Rs. 32 crores.

The Railway Member in presenting his estimates for 1936-37 showed that he expected total traffic receipts to be Rs. 914 crores against Rs. 90 crores in the current year. Working expenses including depreciation were put at Rs. 64½ crores. The net traffic receipts would thus stand at Rs. 262 crores and allowing Rs. 1 crore for miscellaneous receipts, the net revenue was shown at Rs. 27.67 crores, an improvement of Rs. 84 lakhs upon the current year. This figure was short of the total interest charges by Rs. 3.44 crores, to cover which a further loan from the depreciation fund would be required. This would leave the balance in the fund at the end of the year Rs. 11½ crores and make the total loans from the fund up to date Rs. 33½ crores.

The Railway Member reminded the House that his predecessor a year earlier basing his hopes on the good traffic figures of the first eight months of the year 1934-35, held there to be good justification for the belief that the railways had turned the corner and that a period of balanced budgets might be looked for. He added

This year's figures would appear to indicate that those anticipations are not likely to be

realized for some years. Though it is expected that this year's deficit will be smaller than last year's mainly owing to a reduction in the rate of interest and it is hoped that the results of next year's working would show a further small improvement, we must recognize that any real improvement in the position is likely to be slow. With expected deficits of Rs. 41 crores and Rs. 34 crores in 1935-36 and in 1936-37 respectively following upon accumulated deficits in each of the previous 5 years, totalling nearly Rs. 38 crores it is obvious that the seriousness of the position cannot be under-rated.

The Chief Commissioner for Railways, the Hon.ble Sir Guthrie Russell, simultaneously presented the Railway Budget in the Council of State. Both the Railway Member and the Chief Commissioner examined in some detail the causes producing the unfortunate railway financial position. They showed them in the main to be connected with the world depression and collapse of commodity prices, the policy of economic self-sufficiency pursued by other countries, the increase of road motor competition, labour legislation and improvement in the service conditions of the railway staff. The Chief Commissioner laid great stress on the contributory effect of current Indian fiscal policy, showing that the high protective duties, by diminishing imports, lessened the distributive loads carried by the railways from the ports over long distances in land while the substitution for this long distance traffic of short distance freights between inland factories and their markets did not correct the balance of railway business.

Summing up the position the Railway Member said that though it caused anxiety and required ceaseless watchfulness it was not desperate.

Given a reasonable improvement in world conditions, regulation of motor transport on a fair competitive basis, a check on further concessions and privileges to railway staff and legislation imposing effective check upon ticketless travel, there is a fair chance that the financial position of Railways will gradually improve and that they will within a reasonable period, achieve a sound financial position.

General Budget

The annual General Budget was simultaneously presented in both Houses of the Legislature on 28th February, by the Finance Member the Hon.ble Sir James Grigg, in the Legislative Assembly and by the Finance Secretary the Hon.ble Mr. J. C. Nixon in the Council of State. The outstanding feature of the revised estimate for the year 1935-36 was their anticipation of a surplus of Rs. 2.42 lakhs instead of Rs. 6 lakhs originally expected. This surplus being produced by an improvement of Rs. 3.53 lakhs in revenue, offset by a deterioration of Rs. 1.17 lakhs in expenditure. The most important item of increased expenditure were outlay necessitated by the great Quetta earthquake in 1935 and by the cost of the Mohmand operations in 1935.

and the estimates for 1936-37 showed the revenue excluding that from railways at Rs. 87.3 lakhs an improvement of Rs. 83.1 lakhs over the revised estimates for the current year and expenditure exclusive of railways, Rs. 85.30 lakhs, an increase of Rs. 1.20 lakhs over the current year's revised estimates.

The Finance Member proceeded to show how he proposed to deal with the surpluses which he found in his hands, there being first a balance of Rs. 1.73 lakhs remaining over in the Rural Development Fund from 1934-35, an expected surplus of Rs. 2.42 lakhs for the current year and an estimated surplus of Rs. 2.05 lakhs for 1936-37.

From the first of these three he said Government proposed to make a grant of Rs. 30 lakhs for agricultural research, this figure covering the still outstanding Rs. 10 lakhs of the block grant promised to the Imperial Council of Agricultural Research when it was first established, a grant of Rs. 10 lakhs to the Indian Research Fund and a grant of Rs. 5 lakhs for the benefit of cottage and small scale woollen industries and a grant of Rs. 20 lakhs to the fund for the development of broadcasting.

From the 1935-36 surplus of Rs. 2.42 lakhs the Finance Member proposed to allot Rs. 4 lakhs for a special fund for assisting Sind and Orissa to finance the provision of official buildings newly required by the inauguration of provincial autonomy. The remaining Rs. 1.97 lakhs he proposed to transfer to a Revenue Reserve Fund with which to help out the finances of the first year of provincial autonomy in 1937-38.

The estimated surplus of Rs. 2.05 lakhs in 1936-37 he proposed to use to abolish the tax on incomes between Rs. 1,000 and Rs. 2,000 and to reduce by half the surcharge on income tax and super-tax levying it at one-twelfth. These two reductions were estimated to cost Rs. 1.85 lakhs after which there would be left an estimated surplus of Rs. 20 lakhs. Out of this it was proposed to increase from 4 to 10 per cent the weight of a letter conveyable for one mile and to adopt scale of an additional half penny for every additional mile these two concessions being estimated to cost Rs. 13 lakhs.

The general discussion upon the Railway and General Funds followed the usual lines. So did the general discussion of the Annual Finance Bill.

Legislation

During the detailed consideration of the clauses of the Finance Bill the Legislative Assembly by a majority, under the leadership of the Congress Party and of Mr. M. A. Jinnah made such cuts in the taxation required by Government that the Finance Member declined to move the third reading of the measure. The Bill was subsequently returned to the House by His Excellency the Governor General with the recommendation that it should be passed in its original form. The Finance Member then proceeded to move the first of the amendments required to restore the Bill to that form. This amendment the House again under the leadership of the Congress Party and of Mr. Jinnah rejected by 68 votes to 51. The Finance Member thereupon requested the President to endorse on the Bill a certificate to the effect that the

Chamber has failed to pass the Bill in the form recommended. The President gave the endorsement. His Excellency the Governor General next day sent the Bill in its recommended form to the Council of State with the certificate that the Lower House had refused to pass it in that form but that His Excellency regarded its passage essential in the public interests. The Council of State thereafter with due discussion passed the measure.

The Legislature during the same session and during its annual Autumn session which commenced in Simla on 31st August dealt with a quantity of general official legislation. One of the important measures advanced a stage was the Payment of Wages Bill, a measure introduced by Government in order to secure the punctual and frequent payment of wages by employers of labour and to prevent undue deductions from them. The Legislature approved Government's conclusion not to ratify the Draft Convention adopted by the 10th Session of the International Labour Conference calling for the reduction of hours of work to 40 per week.

The Commerce Department, in accordance with a promise given when the House in 1932 approved the Ottawa Agreement submitted the working of the Agreement to the consideration of the House and proposed a Committee for its examination. The House declined to appoint a Committee and by 70 votes to 63 demanded on 30th March after prolonged debates the termination of the Agreement without delay and the investigation of the possibilities of alternative agreements with Great Britain or foreign countries.

A monumental Bill prepared by the Hon. the Law Member for the amendment of the Indian Companies Act was on 15th April on the motion of the Law Member referred to a Select Committee. Consideration of this Committee's Report was the chief business of the Autumn session. The report was the subject of prolonged debates and the Bill was eventually passed into law.

The Railway Member submitted to the Legislative Assembly in Simla a Bill to amend the Indian Railways Act in order to tighten up measures for the prevention of people travelling without tickets. There was considerable opposition to the Bill largely on the ground that it provided for the vesting of unsuitably large powers in the hands of the railway staff and on 2nd September an amendment for the circulation of the measures was carried against Government by 65 votes to 17.

The Industries and Labour Member introduced in the Simla session a Bill to amend the Indian Motor Vehicles Act. This measure was designed to control road motor traffic in various ways and particularly with the object of restricting its competition with Railways. The Government member moved for the circulation of the measure and this course was approved.

A remarkable feature of the Simla session was a noisy demonstration against the Chair by the Congress members. The President towards the end of an adjournment motion directly affecting the Commerce Department but also affecting the Finance Department ruled that the Finance

Member as well as the Commerce Member was entitled to speak. His ruling the Congress Party resented and they walked out of the House amid a chorus of noisy acclamation on their part. Next morning Mr. President severely rebuked them for their demonstration which was, he said, against the ruling of the Chair if not against the occupant of the Chair itself.

Viceroy's Farewell

His Excellency the Viceroy, the Earl of Willingdon, addressed a joint meeting of the two Houses of his Legislature on 8th April and thus being shortly before his retirement from office, briefly reviewed the considerable and satisfactory development and progress of all branches of the Administration during the past five years and bade the Legislature farewell. At the outset of his address His Excellency expressed his extreme regret at the calculated discourtesy which had been shown to him by Congress members of the Legislature when he had visited the Assembly as His Majesty the King Emperor's representative to address it or had in the same capacity sent messages to be read to the House. This action on the part of Congress Party members had His Excellency said he was sure, met with the disapproval of every loyal citizen of India.

In the course of stirring references to the Constitutional Reforms now in course of materialization His Excellency said: 'To men of my own civilization throughout the Empire who influence opinion or guide policy I venture to make an earnest appeal. That splendid political organization, the British Commonwealth of Nations in which we all take just pride can endure only if all its constituent parts have faith in one another. The measure of the permanence of their mutual association will depend on their mutual contentment. India has the pride of an ancient civilization. She is therefore quick to resent any kind of discrimination against her sons and daughters who have settled in other parts of the Empire. She is confident of a future destiny no less glorious than her past and therefore impatient of delay in the removal of

disabilities on Indians where these exist. Equality of status is their due. Its progressive realization is the aim of the Government of India and if I may say so an obligation on all statesmen throughout the Empire who desire its solid unity. I am confident that in the pursuit of their aim the Government of India will never falter. May those whose obligation it is to ensure its speedy fulfilment be given the vision and the strength to work for prompt and generous fulfilment of their duty.

Turning to the Indian viewpoint towards the Constitutional Reforms His Excellency said:

'I see just across the threshold self-reliant Provinces receiving from the Crown grant authority equipped with wide power each under the Crown master in its own house managing its own affairs promoting and stimulating its own activities to ends congenial to the tastes sentiments and conditions of its people. I see the growth of a new political spirit—indeed its stirrings are even now apparent—in whose expanding influence communities will no longer war within the bosom of a single State, but men differing it may be in political interest, will agree in desiring above all the good of their country and the general well-being of their fellows.'

His Excellency similarly referred to the projected changes in the Central Government and of the establishment of a Federal Court and concluded: 'Other figures too loom upon my gaze but I would leave you with the general picture of great problems demanding solutions wide powers of the Crown entrusted to you onerous responsibilities laid upon you and a growing spirit and capacity which will enable you to surmount all difficulties. Fortunate are those who will join with you in realizing this inspiring future and my every good wish attends the distinguished statesman who will so soon assume the burdens of the great office which I with many grateful memories, shall regretfully lay down.

The address ended amid loud cheers.

The Indian Tariff Board.

The Indian Tariff Board continued in suspense throughout 1936, owing to the absence of inquiries to be made by it. By the time these inquiries in print it will be reconstituted in order to undertake the first of a series of new inquiries which are statutorily required before the expiration of the different periods for which protection has been given to various industries. Under the direction of the Government of India the following Board will take up at the beginning of April 1937 the statutory inquiry into the

extent of protection required by the Indian Sugar Industry during the period from 31st March 1935 to 31st March 1946—

President—Sir Geoffrey Bracken, K C I E
C S I I C S

Members—Mr. Fazl Ibrahim Rahimtoola
and Mr. L. C. Jain, M A., LL B., Ph D.,
D Sc., F R S (London)

Secretary—Mr. K. B. Bhattacharya

Indians Overseas.

NUMBERS—The total Indian population resident in the countries to which Indians mainly emigrate for purposes of settlement, according to the latest available returns is as follows —

* Including Straits Settlements, Federated and Unfederated Malay States

† Indian Estate Labourers only.

Origin of Indian Emigration—Emigration is prohibited by the Hindu Shastras, and there is little evidence of any settlement of Indians overseas in early times except in Sumatra, Java and Ceylon. Emigration for purposes of labour dates from the beginning of the 19th century. From 1800 A. D. onwards Indians crossed the Bay to the Straits Settlements to work on the sugar, spice, tobacco, and cocoanut plantations of Penang, and this intercourse was allowed to continue for long without regulation. The first officially recorded instance of genuine recruitment for labour emigration occurred in 1830, when a French merchant, named Joseph Argand, carried some 150 citizens to Bourbon. The abolition of slavery in British colonies in 1834 gave the first great impetus to the movement. The sugar planters of Mauritius at once turned to India as their best recruiting ground, and between 1834 and 1837 obtained at least 7,000 recruits from Calcutta. The Government of India at a very early stage realised the necessity of bringing such emigration under regulation. The Law Commission was asked to investigate the case and to make recommendations for securing the well being of emigrants. They advised that no legislation was required except in order to prevent undue advantage being taken of the simplicity and ignorance of emigrants by providing that a magistrate should satisfy himself that all contracts were entered into freely and understood by them and in order to secure that sufficient provision was made for their accommodation and sustenance during the voyage. A copy of every engagement was also to be transmitted to the Government under which the emigrants were to live. These recommendations were embodied in the first Emigration Act (V of 1837), which also provided that contracts should be determinable after 5 years.

History of Emigration—Under the above Act emigration during 1837 was permitted to Mauritius, British Guiana and Australia (89 men, the first and last direct emigrants to Australia). In 1838 emigration was suspended owing to agitation in England regarding the abuses to which the system was liable, and a committee of enquiry reported in 1840 that emigrants were being entrapped by force or fraud, robbed of their wages and treated with brutality. In consequence, emigration was prohibited (Act XV of 1842) except to Mauritius and thence control was tightened. In Act XXI of 1844 emigration under still stricter regulation was allowed to Jamaica, British Guiana and Trinidad. Act XIII of 1847 removed the restrictions on emigration to Ceylon. The emancipation of slaves in the French colonies in 1841 gave rise to a system of emigration from French Indian ports to Reunion and Bourbon which was largely based on crimping in British territory. This practice was checked by Act XXIV of 1842. In 1858 emigration was opened to St. Lucia, and in 1860 to St. Vincent, Natal and St. Kitts. In the latter year a more elaborate Act, based on a convention with the French Government, was passed legalising and regulating emigration to Reunion, Martinique, Guadeloupe, and French Guiana. Act XIII of 1864 marks an important stage in the history of emigration, since it elaborated

and consolidated the whole system of control. It was itself amended in 1869 and 1870 in important respects with the object of preventing epidemics on emigrant vessels and improving sanitary conditions in settlements. In 1869 emigration was permitted to Grenada, and in 1872 to Surinam. Owing to the removal of the Straits Settlements from the control of the Government of India in 1867, emigration to that colony came under all the restrictions imposed by the Emigration Act and was only permitted from the port of Negapatam. Owing to the injury caused to the agricultural industries of the colony, these restrictions were removed in 1872, subject only to magisterial control of recruitment in India. In 1870 complaints reached the Government of India of gross abuses in the treatment of emigrants in British Guiana. A commission of enquiry was appointed, and their report led to important legislation in the colony for the protection of Indian immigrants, which was subsequently extended to Trinidad. Owing to similar complaints from Natal and Mauritius, commissions of enquiry were also instituted in both these colonies, and their reports in 1872 brought to light a number of points requiring amendment.

Recent Legislation—In 1871 a fresh consolidating Act was passed (Act VII of 1871) by which the Acts regulating emigration to the French Colonies and two amending Acts to Act XIII of 1864 were incorporated in the general law. The question of revision of the law again came up for consideration in 1882, when several cases of kidnapping and other objectionable practices were reported to the Government of India. The opportunity was taken to depute two officials (Major Pitcher and Mr. Girderson) to ascertain, in the N. W. P. and in Bengal respectively, the way in which the system of recruitment actually worked, the respects in which it was open to improvement, and the attitude of the people towards emigration. Their reports were reviewed by the Government of India, and finally in 1883 the law was again recast and consolidated by Act XXI of that year. This Act specifies the countries to which emigration is lawful, but empowers the Governor-General in Council to add to the list by notification, and also to prohibit emigration to any of the countries in the list on the ground of epidemic disease and/or excessive mortality among emigrants in such country, or on the ground that proper measures have not been taken for the protection of emigrants or that the agreements made with them in India are not duly enforced. This Act with certain amendments of no importance to the system of indentured emigration remained in force until 1908, when a fresh revision of the law was undertaken.

Under the Act of 1908 (XVII of 1908) the countries to which emigration was lawful were the British Colonies of Mauritius, Jamaica, British Guiana, Trinidad, St. Lucia, Grenada, St. Vincent, Natal, St. Kitts, Nevis, Fiji, the Seychelles, the Netherlands Colony of Dutch Guiana and the Danish Colony of St. Croix. Emigration to St. Lucia, Grenada, St. Vincent, St. Kitts, Nevis, the Seychelles and St. Croix ceased soon after the passing of the Act, the demand for fresh labour having died out.

Emigration to Natal was discontinued from the 1st July 1911 as the Government of India were satisfied that it was undesirable to continue to send Indian labour to that country. Emigration to the French Colonies of Reunion, Martinique and Guadeloupe had been suspended prior to the passing of the Act of 1908 on account of repeated complaints of the inadequate precautions taken for the proper treatment and repatriation of the immigrants.

The labour laws of the several Colonies provide for the protection and welfare of resident Indian labourers. The Government of India also occasionally depute to the colonies their officers to report on the condition of Indian labourers. Deputations from India visited Fiji and British Guiana in 1921. In spite of all precautions certain social and moral evils had grown up in connection with the indentured system of emigration and Indian public opinion has during the last decade been strongly opposed to it. The whole system was exhaustively examined by the Government of India in 1915 in the light of the report received from Messrs McNeill and Chimanlal and they arrived at the conclusion that the time has come when contract labour should be abolished. The Secretary of State for India accepted this policy and authorised the Government of India to announce the abolition of the indentured system and the announcement to this effect was made in 1916.

In 1922 a further step forward was taken in Act VII of 1922 which prohibited indentured emigration and all unskilled emigration, except to countries specially approved by the Legislature. Emigration to Ceylon and Malaya was brought under control, and the definition of "Emigrant" was extended to cover all persons assisted to depart from India.

Present Position—Indian emigration questions have recently taken on a wider aspect. The status of Indians in the Empire generally is one in which the Indian public now takes keen interest. It is no longer possible to deal with the treatment of Indian labour apart from other classes of Indian emigrants and travellers. In several colonies and dominions considerable Indian communities have sprung up, which although composed largely of the descendants of indentured labourers, are themselves free and lawfully domiciled citizens of the countries in which they are settled but have not yet been placed on a footing of legal, social, political and economic equality with the rest of the population. The issues round which public interest at present centres are three—

(a) Control of emigration

(b) Rights of Indians to admission to other parts of the Empire

(c) Rights and disabilities of Indians domiciled overseas

These questions may be considered separately.

Control of Emigration—So far as unskilled labour is concerned, the Government of India have assumed absolute powers of

control. The terms of section 10 of the Emigration Act of 1922 are as follows—

* 10 (1) Emigration, for the purpose of unskilled work, shall not be lawful except to such countries and on such terms and conditions as the Governor-General in Council, by notification in the *Gazette of India*, may specify in this behalf.

"(2) No Notification shall be made under sub section (1) unless it has been laid in draft before both Chambers of the Indian Legislature and has been approved by a resolution of each Chamber, either without modification or addition, or with modifications and additions to which both Chambers agree, but, upon such approval being given, the notification may be issued in the form in which it has been so approved."

Under this law emigration has been legalised to Ceylon on the following conditions

(1) The emigrant shall—

(a) have been recruited by a person licensed for that purpose by and responsible to an officer (hereinafter called the Emigration Commissioner) appointed by the Government of Ceylon, or

(b) have applied direct to the Emigration Commissioner for an assisted passage and have been accepted by him.

(2) The emigrant shall not, before leaving British India, have entered into a contract of service for a period exceeding one month.

(3) Within six months from the issue of this Notification, or within such further period as the Governor General in Council may by notification appoint, the Legislature of Ceylon shall have enacted that any contract of service for a period exceeding one month entered into by an emigrant shall be void.

(4) No part of the cost of his recruitment, subsistence during transport, or transport shall be recoverable from any emigrant and all expenses in this connection shall be defrayed from a common fund to be raised in such manner and managed by such agency as may appear suitable to the Colonial Government.

(5) The Government of Ceylon shall at any time when so desired by the Governor General in Council admit and give all facilities to an Agent appointed under section 7 of the Act.

(6) Within one year of his arrival in Ceylon any emigrant who has been assisted to emigrate at the cost of the common fund referred to in clause (4) shall on satisfying the Agent appointed under section 7 of the Act that his return to his home is desirable, either on the ground of the state of his health or on the ground that the work which he is required to do is unsuitable to his capacity, or that he has been unjustly treated by his employer, or for any other sufficient reason, be repatriated free of cost to the place of recruitment, and the costs of such repatriation shall be defrayed by the Government of Ceylon or the Ceylon Planters Association.

(7) If at any time there is no Agent appointed under section 7 of the Act, the Government of Ceylon shall appoint a person to perform the duties of the Agent as set forth in clause (6)

(8) Within six months from the issue of this Notification, or within such further period as the Governor-General in Council may by notification appoint, the Legislature of Ceylon shall have enacted that no payment made in India by a recruit to an emigrant to enable him to pay off debts before emigrating shall be recoverable

(9) The Government of Ceylon shall furnish such periodical reports and returns as may be required from time to time by the Government of India in respect of the welfare of persons emigrating to Ceylon in accordance with this Notification

Similar conditions have been imposed in the case of Malaya. Emigration was also permitted to Mauritius for a period of 1 year only with effect from May 1st, 1923, and limited to a number not exceeding 1,500 labourers. The terms were more onerous than in the case of nearer Colonies and the arrangement has now lapsed

Emigration to British Guiana for the purpose of unskilled work has also been declared lawful on the terms and conditions given below but the date from which emigration is to commence has not yet been fixed —

Emigration to British Guiana — Emigration to British Guiana for the purpose of unskilled work shall be lawful with effect from such date as the Governor General in Council may with the concurrence of the Governor of British Guiana notify in the *Gazette of India* on the following terms and conditions which shall thereupon become operative —

(1) The family shall be the unit for the purposes of emigration. Not more than 500 families shall be permitted to emigrate and the number of persons included in the said 500 families shall not exceed 1,500

(2) The emigrants shall either have been recruited by a person licensed for that purpose by and responsible to an officer (hereinafter called the Emigration Commissioner) appointed by the Government of British Guiana, or have applied direct to the Emigration Commissioner for an assisted passage and have been accepted by him

(3) No part of the cost of his recruitment of subsistence during transport shall be recoverable from any emigrant and all expenses in this connection shall be borne by the Government of British Guiana or met from funds at their disposal

(4) The Government of British Guiana shall at any time when so desired by the Governor General in Council admit and give all facilities to an Agent appointed under section 7 of the Act

(5) If at any time there is no Agent appointed under section 7 of the Act, or if the Agent is absent or unable to perform his duties, the Government of British Guiana shall at the

request of the Governor General in Council appoint a person to perform temporarily the duties of the Agent

(6) Prior to the arrival of the emigrants a Settlement Commission shall be appointed in British Guiana to select and prepare suitable agricultural land for the emigrants and generally to supervise their employment. The Agent referred to in clause (4) shall, on appointment, be a member of such Commission

(7) The Government of British Guiana shall offer to each family for its separate enjoyment a holding comprising not less than five acres of suitable agricultural land prepared for cultivation on the terms hereinafter set out in a locality which shall be healthy and shall have an adequate supply of good drinking water. All expenses in connection with the preparation of the holdings shall be borne by the Government of British Guiana and shall in no case be recoverable from an emigrant

The annual rent of the holding shall be fixed by the Settlement Commission at a rate not exceeding the lowest rate paid in the locality

After an emigrant has been in occupation of a holding for three years he shall provided that he has cultivated a portion of the holding either by himself or through some member of his family be entitled to a grant of the holding on payment at any time during the ensuing four years of such fees not exceeding 24 dollars as may be fixed by the Settlement Commission

On the expiry of seven years from the date of the commencement of his occupation of a holding an emigrant shall acquire absolute ownership in the holding provided that he has paid the rent and fees referred to in the foregoing paragraphs of this clause and has brought under cultivation either by himself or by some member of his family half the area of his holding

(8) An emigrant on arrival in British Guiana shall be housed and maintained without charge by the Government of British Guiana for at least one month

(9) If any emigrant so requires loans shall be made to him for maintenance house accommodation, payment of rent and for agricultural purposes generally. Free medical assistance and free skilled supervision shall be provided

(10) Any emigrant shall be entitled to repatriation at the expense of the Government of British Guiana to the place of his former residence in India on the expiry of 7 years from the date of his arrival in British Guiana

Any emigrant shall be entitled to repatriation at the expense of the Government of British Guiana to the place of his former residence in India on the expiry of more than 3 and not more than 5 years from the date of his arrival in British Guiana on payment to the Government of British Guiana of half of the cost of his passage from his residence in India to British Guiana

Any emigrant shall be entitled to repatriation at the expense of the Government of British Guiana to the place of his former residence in India on the expiry of more than 5 and not more than 7 years from the date of his arrival in British

Guiana on payment to the Government of British Guiana of quarter of the cost of his passage from his residence in India to British Guiana

(11) Notwithstanding anything contained in the last preceding clause the Government of British Guiana on the request of an Agent appointed under section 7 of the Act shall repatriate at its own expense and without any payment by or on behalf of the emigrant to the place of his former residence in India any emigrant at any time after his arrival in British Guiana

(12) An emigrant shall be at liberty at any time after his arrival in British Guiana to take up work or employment other than or in addition to the cultivation of a holding on lease from the Settlement Commission

(13) The ordinance enjoining compulsory education in British Guiana shall be enforced to the same extent in the case of Indian children as in the case of children belonging to other communities

(14) Boards of arbitration in regard to wages shall be established before the arrival of the emigrants and Indians shall be adequately represented on such boards

(15) Any Indian who has emigrated to British Guiana before the date of this notification and under any agreement in force at the date of this notification is entitled to an assisted return passage to India shall not be required to pay more than 25 per cent of the excess in the cost of his return passage and clothing over the cost of such passage and clothing at the time of his first arrival in the colony

(16) Any Indian who has emigrated to British Guiana before the date of this notification and has at the date of this notification become or thereafter becomes destitute shall be entitled to be repatriated to India at the expense of the Government of British Guiana without being further required to prove that he has become incapable of labour

(17) The Government of British Guiana shall furnish such periodical reports and returns as may be required from time to time by the Government of India in respect of the welfare of the persons emigrating to the Colony in accordance with this notification

Admission of Indians to Other Parts of the Empire—On the motion of the Government of India this question was discussed at the Imperial War Conferences, 1917 and 1918, and the policy accepted by the self governing dominions and the British Government was embodied in the following resolutions—

"(1) It is an inherent function of the Governments of the several communities of the British Commonwealth including India, that each should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities

"(2) British citizens domiciled in any British country, including India, should be admitted into any other British country for visits, for the purpose of pleasure or commerce, including temporary residence for the purpose

of education, such right shall not extend to a visit or temporary residence for labour purposes or to permanent settlement

"(3) Indians already permanently domiciled in the other British countries should be allowed to bring in their wives and minor children on condition (a) That not more than one wife and her children shall be admitted for each such Indian, and (b) that each individual so admitted shall be certified by the Government of India as being the lawful wife or child of such Indian"

The first paragraph of this resolution has regularized the various restrictions on immigration which the self governing dominions have, from time to time, adopted and which, without expressly differentiating against Indians are in practice used in order to check Indian immigration, the objections to which are stated to be not racial or political but economic. Australia prohibits the entry of any person who fails to pass a dictation test of not less than 50 words in any prescribed language. New Zealand prohibits the entry of any person who has not received in advance a permit from the Dominion Government which is refused to any person regarded as unsuitable to settle in the country. South Africa prohibits the entry of any person deemed by the Minister of the Interior on economic grounds or on account of his standard or habits of life to be unsuitable to the requirements of the Union. Canada prohibits the landing of any person who has come to the Dominion other wise than by continuous journey from the country of which he is a native and unless he possesses in his own right 250 dollars. New foundland and the Irish Free State impose no restrictions. All the self governing Dominions have adopted special exemptions in favour of students, tourists and merchants visiting the countries for the temporary purposes of commerce, pleasure, or education. India on its side has assumed power to regulate the admission of immigrants from any other part of the Empire or foreign countries, by means of passports. A bill has also been passed by the Indian Legislature empowering the Government of India to make rules "for the purpose of securing that persons not being of Indian origin, domiciled in any British possession, shall have no greater rights and privileges as regards entry into and residence in British India, than are accorded by the law and administration of such possession to persons of Indian domicile." With regard to the Crown colonies and protectorates the attitude of the Indian Government is that there is no justification for placing any restrictions on the immigration of British Indians, which are not placed on other classes of British subjects, and this principle has in practice been observed by the Colonial Office except in the case of Kenya colony where as stated hereafter the British Government has reserved to itself the right to impose restrictions on the immigration of classes of people whose entry into the colony may have an adverse effect on the economic evolution of the indigenous population

Rights and Disabilities of Indians Lawfully Domiciled Overseas—The policy of the Empire is summed up in the resolu

tion of the Imperial Conference, 1921 which was recorded in the following terms —

'This Conference reaffirms that each Community of the British Commonwealth should enjoy complete control over the composition of its own population by restricting immigration from any of the other communities, but recognises that there is incongruity between the position of India, as an equal member of the Empire, and the existence of disabilities upon British Indians lawfully domiciled in some parts of the Empire and this Conference, therefore, is of opinion that in the interests of the solidarity of the Commonwealth it is desirable that the rights of such Indians to citizenship should be recognised "

'The representatives of South Africa regret their inability to accept this resolution in view of the exceptional circumstances of the greater part of the Union. The representatives of India while appreciating the acceptance of this resolution nevertheless feel bound to record their profound concern at the position of Indians in South Africa and hope that by negotiations between India and South Africa a way can be found as soon as may be to reach a more satisfactory position '

Summary of present Position—Outside Australia, New Zealand and Canada the position stands as follows —

(1) **South Africa**—The main grievances of Indians, which led to a passive resistance movement headed by Mr Gandhi, were settled by the compromise embodied in the Indians Relief Act, 1914 and by the guarantee known as the Smuts Gandhi agreement. The substance of this agreement is embodied in the following extracts from letters —

(i) Mr Gorges, Secretary for the Interior, to Mr Gandhi, June 30th, 1914. With regard to the administration of existing laws, the Minister desires me to say that it always has been, and will continue to be, the desire of the Government to see that they are administered in a just manner and with due regard to vested rights "

(ii) Mr Gandhi to Mr Gorges, July 7th, 1914

By vested rights I understand the right of an Indian and his successors to live and trade in the township in which he was living and trading, no matter how often he shifts his residence or business from place to place in the same township '

This has been officially interpreted to mean 'that the vested rights of those Indians who were then living and trading in townships, whether in contravention of the law or not should be respected

In 1920 an Asiatic Enquiry Commission was appointed to investigate the grievances of Indians regarding their rights to trade and hold land in the Union. Their main recommendations were as follows —

(1) Law 3 of 1885 (Transvaal), the Gold Law of the Transvaal (Act No 85 of 1908) and Act No 37 of 1919 should not be repealed

(2) There should be no compulsory repatriation of Asiatics but

(3) Voluntary repatriation should be encouraged

(4) There should be no compulsory segregation of Asiatics but

(5) A system of voluntary separation should be introduced under which municipalities should have right, subject to certain conditions —

(a) to lay out residential areas for Asiatics

(b) to set aside certain streets or portions of the town for Asiatic traders to which existing license holders should gradually be attracted

(6) These areas should be selected and allocated by a board of independent persons in consultation with the Municipal Council and Asiatic community

(7) In Natal the right of Asiatics to acquire and own land for farming or agricultural purposes outside townships, should be confined to the coast belt, say, 20 to 30 miles inland

(8) A uniform License law applicable to all the Provinces of the Union should be possible be enacted. If that is impracticable, the law relating to the issue of Trade Licenses in the Cape Province, the Transvaal and Natal should be assimilated in a comprehensive consolidating Act of Parliament providing, *inter alia* —

(a) That the granting of all licenses to trade (not being liquor licenses) shall be entrusted to municipal bodies within the area of their jurisdiction, outside those areas, to divisional Councils in the Cape Province, and in the other Provinces to special Licensing Officers appointed by the Administrator

(b) The grounds upon which an application for the grant of a new license may be refused

(c) That the reasons for the refusal to grant any license shall be recorded, together with any evidence tendered for or against the application

(d) That, in the case of the refusal of a license on the ground that the applicant is not a fit and proper person to hold the same or to carry on the proposed business, there shall be a final appeal to a Special Appeal Board, appointed by the Administrator

(e) That municipal bodies shall have the right to prohibit the license holder, or any other person, from residing in any shop, store or other place of business

(9) There should be no relaxation in the enforcement of the Immigration Laws, and more active steps should be taken to deal with prohibited immigrants who have evaded the provisions of those laws

(10) The administration of the Asiatic policy of the Government should be placed in the hands of one official, under whose charge would come all administrative functions, together with the official records relating to Asiatics. This officer should also be entrusted with the duty of securing full statistics regarding

Asiatics in the Union and of the arrivals in and departures from South Africa. Details of all applications for trade licenses, and transactions in connection with the purchase of land and property made by Asiatics throughout the Union, should be sent to him in order to ensure the enforcement of the provisions of Section 8 of Act 22 of 1913.

On the other hand, he should keep in close touch with the various sections of the Indian community, see that the laws are applied in a just manner, give a ready ear to any complaints or grievances and generally safeguard their interests.

From the above it will be observed that the Commission recommended the retention of a law prohibiting the ownership of land by Asiatics in the Transvaal, and another of its recommendations, threatened the right which Indians had previously enjoyed of acquiring and owning land in the Uplands of Natal. Against this latter proposal the Government of India earnestly protested, but it was not accepted by the Union Government.

Present Position—Indians enjoy both the political and municipal franchise only in the Cape Province and the municipal franchise only in Natal. In the remaining two provinces they are not enfranchised. They are subjected to differential treatment in the matter of trading licenses, specially in the Transvaal. Their immigration into the Union is barred and severe restrictions exist on inter provincial migration. In the Transvaal they are not allowed to acquire immovable property outside locations and on the Witwatersrand they are subject to the restrictions of the Gold Law. Efforts have lately been made and are still on the tapis to prevent the marriage of Indian men to white women and to prevent the employment of white girls and women by Indians.

The anti Asiatic party have made several efforts, especially in Natal, further to curtail the rights of Indians. Some of these are merely irritating social disabilities, such as railway regulations debarring Indians from travelling in any other carriages except those reserved for them, and similar rules restricting their use of tramways at Durban, and excluding them from race courses and betting club rooms. Examples of recent anti-Asiatic legislation of major importance are

(a) The Natal Rural Dealers Licensing Ordinance, transferring the power of granting trading licenses from the Licensing Officer to an elected Licensing Board, on which Indians may not sit.

(b) The Durban Land Alienation Ordinance. This Ordinance, which enables Municipalities in selling land to assign it for particular communities, and to that extent to secure segregation, has been allowed on condition that Asiatics are given reasonable opportunity for acquiring adequate residential sites.

(2) **Kenya Colony**—The grievances of Indians domiciled in this Colony are fully set forth in the published despatch of the Govern-

ment of India, dated October 21st, 1920. The controversy centred round the following points—

(a) **FRANCHISE**—Indians have not the elective franchise. The Government of India proposed that there should be a common electoral roll and a common franchise on a reasonable property basis *plus* an educational test without racial discrimination for all British subjects.

(b) **SEGREGATION**—Professor Simpson who was sent to East Africa to report on Sanitary matters, recommended segregation on sanitary grounds. The Government of India objected, firstly, that it was impracticable and secondly, that it was commercially inconvenient and thirdly, that Indians are in practice unfairly treated in the allocation of sites.

(c) **THE HIGHLANDS**—Lord Elgin decides in 1908 that as a matter of administrative convenience grants of land in the upland area should not be made to Indians. The whole area has now been given out, and the Government of India claim that there is no land left to which Lord Elgin's decision applies. This decision has now, however, been extended so as to prohibit the transfer of land in the uplands to non-Europeans.

(d) **IMMIGRATION**—Suggestions have been put forward for restricting Asiatic immigration into Kenya. The Government of India claim that there is no case for restricting Indian immigration and that such restrictions would be in principle indefensible.

The Settlement—The decisions of the British Government were contained in a White Paper presented to Parliament in July 1923. It was held that the guiding principle should be that "the interests of the African native must be paramount," and in light of this it was decided—

(a) **FRANCHISE**—A communal franchise was adopted with 11 seats for elected Europeans, 5 elected Indians, one nominated Arab, one missionary representing the Africans, and a nominated official majority. One Indian is also appointed on the Governor's Executive Council.

(b) **SEGREGATION**—The policy of segregation as between Europeans and Asiatics is abandoned.

(c) **THE HIGHLANDS**—The existing practice is maintained both as regards initial grants and transfers. A similar reservation in the lowlands is offered to Indians.

(d) **IMMIGRATION**—Racial discrimination in immigration regulations is rejected. But in the economic interests of the Africans, further control over immigration is necessary. Some arrangement is required for securing a strictly impartial examination of applications for entry into Kenya. The Governors of Kenya and Uganda have been instructed to submit joint proposals for legislation.

The Government of India reviewed their decision in a resolution published on August 18th, 1923, and recorded "their deep regret that His Majesty's Government did not feel justified in giving greater effect to the recom-

recommendations made by them" and reserved liberty to reopen the case on a suitable opportunity. They stated their intention of making representations regarding the action to be taken to implement these decisions, particularly in the matter of the Immigration regulations.

Following upon the Kenya award statutory action was taken by the local administration on the franchise question. Adult suffrage on communal lines was conferred upon Indians. As regards immigration, the Government of India took the opportunity to urge the postponement of the bill giving effect to the decision of His Majesty's Government until such time as the Committee proposed by their representatives at the Imperial conference in 1923 had an opportunity of examining the question of the restrictions therein embodied. Accordingly the introduction of the bill was postponed at the instance of the Colonial Secretary. The Government of Kenya was also asked by His Majesty's Government for an explanatory statement regarding the method proposed for the administration of immigration measures. The Government of India received an assurance from the Colonial Secretary that ample opportunities would be afforded for the expression of their views and that earnest attention would be given to any representation which their Committee desired to make. As has already been stated such a Committee was appointed in March 1924. The following statement made by the Secretary of State for the Colonies in the House of Commons on 7th August 1924 shows the result of the representation made by the Colonies Committee—

"(1) IMMIGRATION—My position is that if danger ever arises of such an influx of immigrants, of whatever class, race, nationality or character as may likely be prejudicial to the economic interest of the natives, I hold myself entirely free to take any action which may be necessary. Conflicting statistics which have been laid before me have not enabled me to reach a definite conclusion as regards the extent of net Indian immigration. Accordingly steps will be taken to create a statistical department to obtain accurate information with regard to persons of all races arriving in or departing from Kenya. Meanwhile the Kenya Immigration Ordinance will not be enacted.

(2) FRANCHISE—I have given careful consideration to representations in favour of a common poll, but I am not prepared to resist the conclusion already arrived at that in the special circumstances of Kenya, with four diverse communities, each of which will ultimately require electoral representation, the communal system is the best way to secure the fair representation of each and all of these communities.

(3) HIGHLANDS—I consider that the Secretary of State for the Colonies has no alternative but to continue pledges, expressed or implied, which had been given in the past, and I can hold out no hope of the policy in regard to agricultural land in the Highlands being reconsidered.

(4) LOWLANDS—It was proposed to reserve an area in the lowlands for agricultural immi-

grants from India. The Committee made it plain that it is averse from any reservation of land for any immigrant race, subject to the suggestion that before applications for land in lowland areas are invited in opportunity should be taken of sending an officer experienced in Indian settlement and agricultural methods to report on the area. At present any consideration of the matter is in suspense pending receipt from the colony of reports from the native and agricultural points of view on the areas in question.

With regard to the announcement in connection with "Lowlands" the question of deputing an officer to examine these areas was considered by the Government of India who thought it inadvisable to proceed any further with the idea.

The work of the Colonies Committee did much to abate the bitterness which existed in the relations between the different classes of settlers in Kenya and the situation was further improved by the decision of the Indian community to relinquish their attitude of non-cooperation and to select five members for nomination by the Governor to the Legislative Council.

In June 1924, His Majesty's Government announced the appointment of an East African Committee under the Chairmanship of Lord Southborough to consider and report on certain questions regarding the administration and economic development of British East African dependencies. Since this enquiry was likely to affect Indian interests, the Government of India urged that the Indian point of view should be heard before the Committee came to any conclusions. This request was granted, but further action in the matter was suspended pending the publication of the report of the Commission presided over by Major Ormsby Gore, which visited East Africa to enquire into certain aspects of the questions referred to the Southborough Committee. The report of the Ormsby Gore Commission was published in the United Kingdom on May 7th 1925. On June 9th, Major Ormsby Gore announced in the House of Commons that, in view of the completeness of the report presented by the Commission which under his chairmanship, had visited East Africa, His Majesty's Government had decided that the Southborough Committee should not resume its sittings.

In November 1926, information reached the Government of India, that the Government of Kenya contemplated undertaking legislation at an early date in order to make the European and Indian communities responsible for the net cost of their education. It was originally intended to give effect to this decision by levying from Europeans a tax on domestic servants in their employ and from Indians a poll tax. The Indian community resented this differentiation and, ultimately the Colonial Government decided that both communities should pay the same form of tax, viz, an adult poll tax. For Europeans this has been fixed at 30 shillings and for Indians at 20 shillings. An Ordinance giving effect to this decision was passed by the Kenya Legislative Council and came into force from 1st January 1927.

In view of the issue of another White Paper in July 1927 in which it was announced that His Majesty's Government had authorised the Secretary of State for the Colonies to send to Africa a special Commission to investigate the possibility of securing more effective co-operation between the Governments of Eastern and Central African Dependencies and make recommendations on this and cognate matters, the question regarding the position of Indians in Kenya again came to the forefront.

In March 1929, the Secretary of State for the Colonies sent out Sir Samuel Wilson, Under Secretary of State for the Colonies, to East Africa to discuss the recommendations of the Hilton Young Commission for the closer union of Kenya, Tanganyika and Uganda (and such possible modification of these proposals for effecting the object in view as may appear desirable) with the Governments concerned and also with any bodies or individuals representing the various interests and communities affected, with a view to seeing how far it may be possible to find a basis of general agreement. Sir Samuel was also directed to ascertain on what lines a scheme for closer union would be administratively workable and otherwise acceptable and to report the outcome of his consultations. At the invitation of the Secretary of State for the Colonies, the Government of India deputed the Rt. Hon. V. S. Srinivasa Sastri, P.C., to East Africa to help the local Indian communities to state their views to Sir Samuel Wilson on matters arising out of the Hilton Young Commission's Report and to be at Sir Samuel Wilson's disposal if he wished to make use of him in dealing with the Indian deputations.

Mr Sastri left India in April and returned in June 1929. In the Report presented by him on his return he recommended that the Government of India should—

- (a) press for inquiries as to the basis of a civilisation franchise which shall be common to all races alike,
- (b) invoke the good offices of the Colonial Office and of the Government of Kenya in securing the consent of the European Community to the establishment of a common roll,
- (c) oppose the grant of responsible government to Kenya or of any institutions leading up to it,
- (d) oppose the establishment of a Central Council on the lines proposed by Sir Samuel Wilson
- (e) demand, in case of the establishment of some such body that the unofficial representatives from each province should include an adequate number of Indians,
- (f) advocate the continuance of the official majority in the Legislative Council of Kenya

- (g) demand that the representation of natives in the Kenya Legislative Council should be by natives or by Europeans and Indians in equal proportions

Thereafter meetings of the Standing Emigration Committee were held and the decision arrived at by the Government of India was communicated to His Majesty's Government.

The report of Sir Samuel Wilson was published on the 5th October 1929. Another meeting of the Standing Emigration Committee was held soon thereafter to consider the report and a further communication was addressed to His Majesty's Government on the subject.

The conclusions of His Majesty's Government as regards closer union in East Africa were published in June, 1930, in the form of a White Paper and it was announced that they would be submitted to a Joint Committee of the two Houses of Parliament. In accordance with this decision a Select Committee was set up in November, 1930. The Government of India communicated their views in a despatch to the Secretary of State for India on the scheme set out in the White Paper in so far as it affected the Indian population in East Africa. With the permission of the Joint Select Committee of Parliament they also deputed the Right Honourable V. S. Srinivasa Sastri, P.C., C.H., as their representative to present their case and elucidate in the course of oral examination such questions as the Committee might consider necessary to refer to him. The Select Committee examined Mr Sastri in July, 1931.

The report of the Committee was published simultaneously in England, East Africa and India on the 2nd November, 1931, and the decisions of His Majesty's Government on the recommendations of the Committee together with certain correspondence arising from the report of the Committee were also similarly published on the 24th August, 1932.

As regards the question of *Closer Union*, His Majesty's Government have accepted the view of the Joint Committee that apart from considerations arising out of the Mandatory position of the Tanganyika Territory, the time has not arrived for taking any far reaching step in the direction of the formal Union of the several East African Dependencies.

(3) **Fiji and British Guiana**—Emigration to Fiji was stopped in 1917, under Rule 16 (B) of the Defence of India (Consolidated) Rules in pursuance of the general policy of stopping recruitment under the indentured system of emigration. With a view to secure, if possible, a renewal of emigration to the Colony, an unofficial mission composed of the Bishop of Polynesia and Mr Rankine, Receiver General to the Fiji Government arrived in India in December 1919 and submitted a scheme of colonisation, which was referred to a committee of the Imperial Legislative Council on 4th February, 1920. To secure a favourable reception for the mission the Fiji Government cancelled all outstanding indentures of East Indian labourers from 2nd January, 1920 and also announced their intention to take early measures to provide

for the representation of the Indian community on the Legislative Council on an elective basis by two members. In accordance with the recommendations made by the Committee the Government of India informed the mission in March, 1920 that they would be willing to send a Committee to Fiji provided that the Government of Fiji and the Secretary of State for the Colonies would guarantee that the position of the emigrants in their new home will in all respects be equal to that of any other class of His Majesty's subjects resident in Fiji. In July, 1920, the Government of Fiji informed the Secretary of State for the Colonies of their willingness to give the pledge, subject to his approval. Arrangements with regard to the contemplated deputation however were postponed until January 1921, owing to the announcement of Lord Milner's policy in regard to Indians in Kenya, and the desirability of consulting the new Legislature in India. After consultation with the Fiji Government as to the terms of reference and personnel of the deputation an announcement was made on the 27th June 1921. But owing to the inability of the two Indian members Messrs Srinivasa Sastri and Hirdaynath Kunzru who had been nominated to join the Committee which as finally constituted consisted of Messrs Venkatapati Raju G. L. Corbett, Govind Sahai Sharma, and Lieutenant S. Hissam ud din Khan did not reach Fiji until the end of January 1922.

The labour troubles in Fiji in the years 1920-21 had produced an unexpected result in India. The Government of India cancelled the indentures of Indian labourers, as from January 1920, while arrangements were made for the early repatriation of such of them as desired to return to their own country. In consequence, large numbers left Fiji. Many arrived in India comparatively destitute, while others, who were colonial born or whose long residence in the colonies had rendered them unfit for the old social conditions found themselves utterly out of place—indeed foreigners—in their own country. Returned emigrants from other colonies also being in difficulties owing to the unfavourable economic situation in India, strongly desired to return to the territories from which they had come. During the early part of 1921, from all parts of India there was a steady drift of destitute and distressed labourers in the direction of Calcutta where they hoped to find ships to take them back to the colonies in which they were certain of work and livelihood. At the earnest representation of the Fiji Government, and after full consultation with representative public men, arrangements were made to relax the emigration restriction in favour of those Indians who were born and had property in any colony, as well as of such near relations as they desired to take with them. Admirable work was done among these distressed persons by the Emigrants' Friendly Service Committee which had been formed primarily to deal with the applications of repatriated Indians desirous of returning to Fiji. The Government of India gave discretion to this Committee to permit persons who could prove that they had been in Fiji to return there if they so desired. The local labour conditions stimulated the return of these unfortunate people by giving them assisted passages. The Legislative Assembly had made a grant of £1,000

for the maintenance of these labourers, until such time as they were able to find work and settle down in India. The deputation from India left Fiji on the 3rd April, 1922, and submitted its report to the Government of India. It has not been published.

In February 1920, Letters Patent under which the constitution of the Fiji Legislative Council was revised were issued. Provision was made, *inter alia*, for the election of three Indian members on a communal basis. On the 4th November, 1920, one of the Indian members moved a resolution recommending the adoption of a common electoral roll in place of the existing communal one. The resolution was supported by the three Indian members and opposed by the rest of the Council including the elected European and nominated Fijian members. As a protest against this vote, all three Indian members resigned their seats and, no Indian having subsequently offered himself for election, the seats remained unfilled throughout the life of the Council. A fresh election was held during 1932 and as a result two Indian constituencies returned their representatives to the Council, but no candidate offered himself for election from the third constituency. Two subsequently elected members also withdrew from the Council owing to the decision of the Secretary of State for the Colonies that the introduction of a common electoral roll in Fiji is impracticable at present. The issue became whether the system of election should be replaced by nomination and on that the Government of India have made representations. The Colonial Office decided upon a compromise which appears to have satisfied a great majority of people if not all.

British Guiana—The Indian population in this colony belong almost entirely to the labouring classes and their grievances are mainly economic. Towards the end of 1919, a deputation consisting of the Hon ble Dr J. J. Nunan, Attorney General, and Mr J. A. Luckhoo, a prominent Indian who was a member of the combined court, visited India to put forward a scheme for the colonisation of British Guiana by means of emigration from India. This was examined by a Committee of the Indian Legislature, which advised that a deputation be sent from India to investigate conditions on the spot. Owing to certain unforeseen circumstances it was not found possible to proceed with the proposal until 1922, when a deputation consisting of Messrs Pillai, Keatinge and Tiwary visited British Guiana. Mr Keatinge was a former member of the Indian Civil Service who had retired from the post of Director of Agriculture, Bombay, Diwan Bahadur P. Kesava Pillai was an elected member of the Madras Legislative Council of which he was also Vice President, and Mr Tiwary was a member of the Servants of India Society who had done considerable amount of Social Welfare Work among the Depressed Classes in the United Provinces. The two reports of the deputation were published on the 21st of January, 1924. Towards the end of the month a deputation from the Colony of British Guiana, consisting of Sir Joseph Nunan, Kt, and the Hon Mr J. C. Luckhoo, K.C., arrived in India for further discussions. The Standing Emigration Committee of the Indian Legislature

eventually reported that while they would be inclined to view with favour the colonization scheme put forward by the deputation, they would, before making any definite recommendation, like the Government of India to depute an officer to British Guiana to report on certain matter. Kunwar Maharaj Singh M.A., C.I.E., Bar at Law, was deputed for this purpose. He proceeded to that Colony in September 1925. His report was received on February 1st, 1926 and published. He made certain criticisms and suggestions and the whole matter was thus satisfactorily settled. The colonisation scheme has not yet come into operation as the Colonial Government are not in a position at present to afford the cost which it involves.

In March 1928 following special inquiries by the Colonial Office reports appeared in the press that a bill had been introduced in the House of Commons empowering His Majesty's Government to alter the constitution of British Guiana by Order in Council. The changes eventually introduced by the British Guiana (Constitution), Order in Council 1928, did not involve any differentiation against Indians and did not in any way infringe the provisions of the special declaratory Ordinance which was passed by the Colonial Government in 1923 and which confers equality of status on all persons of East Indian race resident in the Colony.

(1) **Other Parts of the Empire**—In Ceylon, Mauritius, and Malaya, the position of Indians has on the whole been satisfactory, and the matters have gone smoothly. The Government of India maintain their own Agents in Ceylon and Malaya. The question of the fixation of a standard minimum wage for Indian Estate labourers in Ceylon and Malaya has been the subject of negotiations between the Government of India and the Colonial Governments ever since the emigration of Indian labour to the Colonies for the purpose of unskilled work was declared lawful in 1923 under the provisions of the Indian Emigration Act, 1922. So far as Ceylon is concerned a settlement satisfactory to the Government of India and that of Ceylon has been arrived at, i.e., the standard wage and other outstanding questions affecting the interests of the labourers and the draft legislation to give effect to it was passed by the Ceylon Legislative Council in December 1927 as Indian Labour Ordinance No. 27 of 1927. The Standard Rates of Wages agreed upon were introduced with effect from the 1st January 1929. In 1931, however it was decided with the concurrence of the Government of India to reduce these wages by 5 cents for men, 4 cents for women and 3 cents for children by way of readjustment owing to the price of rice issued from estates being fixed at Rs. 4.80 instead of Rs. 6.40 per bushel. In regard to Malaya Standard Wage Rates which are considered suitable by both the Indian and Malayan Governments have been introduced in certain areas. The rates so fixed were, however, reduced by 20 per cent with effect from the 5th October 1930 owing to acute depression in the rubber trade. The questions affected by these details have recently received much attention by the

Indian and Malay Authorities. The world wide economic depression has also had repercussions on Indian labourers employed on tea and rubber estates in Ceylon. Wages had to be reduced, but the Government of India, with the co-operation of the Colonial Government, successfully prevented such reduction from materially affecting the labourers standard of living. For those who are unwilling to work on reduced wages facilities for repatriation to their homes in India were secured. The position in both the countries is being watched by the Government of India through their Agents. The general passing of the world depression resulted in a return of prosperity to Malaya. The Government of India in 1936 deputed the Rt. Hon. Mr. Srinivasa Sastri to visit the country to review conditions there and his report was satisfactory.

Zanzibar—The Zanzibar Government recently passed decrees for the economic assistance of their people which caused great difficulty to their Indian population and this was the subject of negotiation. His Majesty's Government sent out Mr. Jander to inquire into the new legislation and to recommend what modifications, if any, in it are desirable. He sailed from England in the fourth week of April 1926 and having been chosen for the work purely as a business man and highly qualified and experienced chartered accountant, presented later in the year a report in which he reviewed the situation with a single eye to its economic aspects and generally endorsed the sound proposals drafted by the Zanzibar authorities. The report was received with satisfaction in Zanzibar except by the Indian trading community there and was the butt of vehement criticism in Indian political circles in India.

Indians have for generations participated in the business life of Zanzibar and in particular in its clove growing and exporting industry. The country is dependent on this industry which represents 75 per cent of its trade and revenue so that its prosperity is vital to the welfare of Zanzibar. The clove growers have fallen inextricably into debt and their creditors are Indians. The clove export trade long since passed into Indian hands and became greatly disturbed by speculation. The middlemen between the growers and exporters also in the course of years became almost all Indian. The Zanzibar Government early in 1937 published the drafts of four Bills by which they proposed to extricate the clove growers from their difficulties and to place the industry on a sound footing. They were respectively—

A Bill to provide for the settlement of mortgage debts secured on lands owned by Arabs and Africans either by purchase of the mortgages or interests in such lands or by the appointment of receivers thereof and for matters ancillary thereto,

A Bill to restrict the voluntary permanent alienation and mortgaging of lands owned by Arabs and Africans and to prevent the involuntary alienation of such lands and to provide for the appointment of receivers and for matters ancillary thereto.

A Bill to provide for the settlement and registration of rights to land, and

A Bill to regulate and control the purchase, sale and exportation of cloves and to amend certain enactments for purposes of a minor and consequential nature.

The titles of these measures indicate both the special problems which they are intended to deal with and the way in which the proposed remedies are embodied in them. Their objectives are purely economic, for the benefit of the clove growing industry and of the clove growers. They are not racially anti Indian and Indians are not mentioned in them, though in effect they in various ways affect the Indian position in Zanzibar and its trade. One of the main objections of the Indians to the Bills is that they would establish permanently in Zanzibar a Clove Growers Association and restrict trading operations to licenses under it, thus making the clove trade largely in effect a State monopoly. The Government of India have energetically taken up the defence of Indian traders and the position at the time of writing is that the negotiation of the new Bills has temporarily been suspended to permit of discussion.

Mauritius—In April 1924, the Government of Mauritius requested that emigration to the Colony might be continued for a further period of one year, but the Government of India in consultation with the Standing Committee on Emigration decided that consideration of the request should await the results of a local investigation. The Government of Mauritius agreed to receive an Officer for the purpose and to give him all facilities, and in December, 1924, an Indian Officer of Government, Kunwar Maharaj Singh, left India to conduct the necessary inquiry.

Kunwar (now Sir) Maharaj Singh's report was published by the Government of India in August 1925. The various recommendations made in the report were commended to the consideration of the Colonial Government.

In February, 1926, the Government of India received a reply from the Colonial Government stating that they accepted the main conclusion formulated by Kunwar Maharaj Singh in regard to the renewal of emigration to Mauritius, viz., that no more unskilled Indian labour should be sent to Mauritius either in the immediate or near future. With regard to Kunwar Maharaj Singh's

suggestions relating to other matters of interest to the Indian population now resident in the Island, the Colonial Government expressed their willingness to give effect to several of them.

Canada and Australia—The present position of Indians in the Dominions is that under the Canadian Dominion Election Act, Indians domiciled in Canada enjoy the federal franchise in eight out of the nine provinces. In New Zealand, Indians enjoy the franchise on the same footing as all other British subjects. In Australia, sub section (5) of section 39 of the Commonwealth Electoral Act, 1918-24, was amended in 1925, by adding after the word "Asia" the words, "except British India." This measure gives the Commonwealth franchise to subjects of British India at present domiciled in Australia and is the fruition of the hopes held out by the Commonwealth Government to Mr Sastri on the occasion of his visit to Australia in 1922. As a result of the representations made in London in 1930 informally by the late Sir Muhammad Shafi at the instance of the Government of India to the Prime Minister of Australia the electoral law of Queensland has also been revised to enfranchise the British Indians resident in that State. It is, therefore, in Western Australia alone that Indians do not enjoy the suffrage in respect of election for the Lower House. By Acts which have recently been passed by the Commonwealth Parliament British Indians in Australia have been admitted to the benefits of Invalid and Old Age Pensions and Maternity allowances from which they were hitherto excluded as Asiatics. Old Age Pension is payable to men above 65 years of age, or above 60 years, provided such persons are of good character and have resided continuously for at least 20 years. An Invalid Pension is obtainable by persons, who, being above 16 years of age and not in receipt of an Old Age Pension, have whilst in Australia become permanently incapacitated for work by reason of an accident or by reason of being an invalid or blind, provided they have resided continuously in Australia for at least five years.

Maternity allowance to the amount of £5 is given to a woman of every child to which she gives birth in Australia, provided the child is born alive and the woman is an inhabitant on the Commonwealth or intends to settle there. This Legislation removes the last grievance of the Indian community in Australia which was remediable by the Federal Government.

Indians in Great Britain.

Some seventy years have gone by since the Parsee community, in the persons of the late Dadabhai Naoroji and other members of the firm of Cama & Co., led the way in the sojourn of Indians in England for business purposes. This lead it has since maintained, though there are both Hindu and Mahomedan business men firmly established there. Nor are the professions unrepresented, for there are in London and elsewhere practising barristers, solicitors and medical men of Indian birth. The number of the latter, especially Parsees, is considerable. Three Indians (all belonging to the Parsee community) have sat in the House of Commons. Since 1910 four Indians—the late Mr. Ameer Ali, the first Lord Sinha, the late Sir Binode Mitter and Sir Dinsha Mulla—have served on the Judicial Committee of the Privy Council. Three Indians are on the Secretary of State's Council. In 1919, the late Lord Sinha was the first Indian to be raised to the peerage and to be appointed a member of the Home Government.

High Commissioner for India—This post was first established in 1920 and its various permanent incumbents have been—

Sir Wm Meyer, 1898 (Retd.) 1920-22. Sir Dadilal Mirwanjee Durrani, 1923-24. Sir Atul Chandra Chatterjee, 1925-31. Sir Bhupendra Nath Mitra, 1931-36. Sir Horokhan Noon, 1936.

India House

In March, 1930, the office of the High Commissioner for India was transferred from the inadequate premises in Grosvenor Gardens to the new India House in Aldwych, erected and furnished at a cost of £324,000. The design of this noble building, which has a frontage of about 130 ft. opposite the Waldorf Hotel, was the work of Sir Herbert Baker, A.R.A., with Dr. Oscar Faber as consulting engineer. Although expression of the Indian character of the building is mainly found in the interior, the architect has given to the details of the external elevation, by means of carving, heraldry, and symbolism an individuality that proclaims it the London house of India. Including basement and mezzanine floors, there are twelve floors in all, the available space for clerical work alone being between 50,000 and 60,000 ft. The total height from the lower level in the courtyard on the Strand side to the roof is about 100 ft.

On the ground floor there is a great hall for exhibits of the products and art wares of India. This hall is carried up two floors, the upper floor being represented by a wide gallery, and on either side of the exhibition hall there are recesses after the style of an Indian bazaar for special exhibits. From the octagonal entrance hall a great public staircase leads to a

gallery round the octagonal hall on the first floor. This gallery in its turn leads to a high vaulted library and reception rooms, and the central portion of the library provides accommodation for large receptions on special occasions.

The staircase, exhibition hall, octagonal hall and library markedly express the Indian character of the building. The walls of the staircase and the halls are of red stone similar in appearance to the Agra and Delhi sandstone, carved and pierced in the geometrical patterns of the *jali* in Indian architecture. Such of the carving as could be completely separated from the structure was actually worked at New Delhi by Indian workmen from Makara mabli. The use throughout of Indian hardwoods, chiefly gurgan, for flooring obviates the need for any floor covering. From basement to roof scarcely any wood of non-Indian origin was employed. For panelling and decorative purposes in all parts of the great building silver gray, koko, laurel and the beautiful dark red padouk have been used. The domes and vaults of the building have been embellished by mural paintings, the work of specially selected Indian artists. The water supply is entirely independent of municipal service, being obtained from two artesian wells sunk some 460 ft. below the basement, where the central heating apparatus is installed.

The Indian Trade Commissioner and his staff are at India House, with all other departments of the Office of the High Commissioner excepting the Stores Department which is at the depot off the Thames at Belvedere Road, Lambeth.

The Students

Under normal conditions it is the student community which constitutes the greatly preponderating Indian element and creates a constant problem. Its numbers multiplied ten or twelve fold in the quarter of a century before the war. After a very considerable temporary check caused by the Great War the number rapidly expanded from 1919 in spite of pressure on college accommodation. In addition to the ordinary graduate or under graduate student, there are some youths of good family, including heirs of Indian States, admitted into our public schools, such as Eton and Harrow. There are some 500 Indians at the Inns of Court. Since the war there has been a welcome increase in the number of technical and industrial students. Altogether including technical and medical students, there are fully 2,000 young Indians (some five per cent of them women) in London, Edinburgh, Cambridge, Oxford, Glasgow, Manchester, Birmingham, Leeds, Sheffield, Liverpool and a few other centres. London absorbs about half the total.

SOCIETIES AND INSTITUTIONS IN LONDON CONNECTED WITH INDIA

ANGLO INDIAN ASSOCIATION, LONDON—Established in 1900 to promote the interests and welfare of the Anglo Indian and Domiciled European communities wherever resident by such means as may be deemed by the Council to be desirable. Anglo Indians and Europeans whether domiciled in India or not are eligible. *Hon. Sec.* L. C. Palmer, 6, Coolhurst Road, London, N. 8

BRITISH INDIAN UNION—Promotes friendship and understanding between the two races. *Hon. Secretary* R. S. Nohra, 43 Chalkhill Road, Wembley, Middlesex

CENTRAL HINDU SOCIETY OF GREAT BRITAIN—Founded to give exposition to Hindu philosophy and culture, to provide for better mutual understanding between Hindus and the British public and to further the social, economic and political interests of the Hindus in general. *President* Dr R. U. Hingorani, *Hon. Secretary* Dr M. L. Kulkarni, 36, Barrington Road, S.W. 9

CENTRAL INDIAN COLONIAL ASSOCIATION, LONDON—Established to represent the Colonial Indians (cause) to the Colonial Office, India Office, and other proper authorities to protect, strengthen and enhance the interests, political, social, commercial and religious, of Colonial Indians in all parts of the World, to provide a central platform and meeting place for Colonial Indians in London to promote, encourage and strengthen friendship and amity between Colonial Indians and other races, to assist in the achievement of fair and equal treatment to Indians in the Colonies by all constitutional means. *President* R. S. Nohra, *Hon. Sec.*, N. D. Tanguir

CHIEF PUNJAB ASSOCIATION—Founded 1925 to achieve for India a position of honour in the British Commonwealth of Nations to promote better understanding between India and Great Britain, to bring about unity between the sister Communities of India and to raise the standard of living of the people of India. *President* Sirdar Hardit Singh, *Secretary* M. H. Rashid, 445, Strand, W. C. 2

EAST INDIA ASSOCIATION—Its object is to promote, by all legitimate means, the welfare of the inhabitants of India generally. The objects and policy of the Association are promoted—(1) by providing opportunities for the free public discussion in a loyal and temperate spirit, of important questions affecting India, (2) by promoting friendly social contact between Indians and Englishmen interested in India, through the medium of social gatherings and of private meetings of members to exchange views on current Indian questions, (3) by lectures and the publication of papers or leaflets correcting

erroneous or misleading statements about India and its administration, and (4) generally by the promulgation of sound and trustworthy information regarding the many weighty problems which confront the Administrations in India, so that the public may be able to obtain in a cheap and popular form a correct knowledge of Indian affairs. Subscription, entitling a member to the free supply of the quarterly *Indian Review* £1.50 per annum. *President* Lord Lamington, G.C.M.C. *G.O.I.E. Chairman* Sir Malcolm Stoen K.C.B. *Hon. Secretary* F. H. Brown, C.I.E., 3, Victoria Street, S.W. 1

INDIAN EMPIRE SOCIETY—Reorganised since the passing of the India Act to collect and disseminate information as to events in India. *Hon. Secretary* Sir Louis Stuart, C.I.E., 48, Broadway S.W. 1

THE INDIA SOCIETY (ART AND LETTERS)—Founded in 1910 to promote the study and appreciation of Indian art and literature in India and also in those countries which have been influenced by it have influenced India especially Java, Siam, Indo China, Afghanistan, Iran and the Middle East. Lectures at which papers are read by leading British Indian and Continental specialists have become a regular feature of the Society's activities. In order that the members resident abroad may be able to share in the benefit of these lecture papers and proceedings are published biannually in *Indian Art and Letters* which is issued free to members. In addition members receive free in return for their annual subscription (£1.11.6) volumes as issued on some subject connected with Indian art or literature published by the Society. Visits to private collections of Oriental Art are arranged from time to time. An exhibition of modern Indian art was held in December 1934. *President* The Marquis of Zetland, G.C.S.I., G.C.I.F. *Chairman of Council* Sir Francis Younghusband K.C.S.I., K.C.I.E. *Vice Chairman* John de la Vigne, *Hon. Treasurer* F. H. Brown, C.I.E. *Hon. Secretary* F. J. P. Richter, M.A., 3, Victoria Street, London, S.W. 1

INDIAN STUDENTS UNION AND HOSTEL—112, Gower Street, W.C. 1. *Chairman* Sir Ewart Greaves, *Warden* T. D. Santwan, B.Sc.

INDIA LEAGUE FTH—(Formerly the Commonwealth of India League) to support the claim of India for Swaraj (Self Rule). Publishes *India to day* (monthly) 105, Strand, W.C. 2. *Chairman* Bertrand Russell, *Secretaries* James Marley and V. K. Krishna Menon

INDIAN CONCILIATION GROUP—(Meeting at Friends House, Euston Road, N.W. 1). *Chairman* Carl Heath, *Secretary* Agatha Harrison, 2 Cranbourne Court, Albert Bridge Road, S.W. 11

INDIAN VILLAGE WELFARE ASSOCIATION—Its objects are—(1) the collection and dissemination of information on rural activities in India, (2) the furtherance of schemes and experiments to promote rural welfare which are approved at a meeting of the Executive Committee, (3) the holding of Schools and other educational activities to arouse interest in the needs of rural India. *Chairman* Sir Francis Younghusband, KCSI. *Hon Secretary* Miss A R Caton, 4, Great Smith St., London, S W 1.

INDIAN GYMKHANA CLUB—Journbury Avenue, Osterley, Middlesex. Object: To provide facilities for sports, games and social intercourse for Indians, particularly students, in Great Britain. The Club owns 16 acres of well-situated freehold sports ground with a recently erected fine Pavilion at Osterley. *Annual Subscription* £110. *Indics* 10/6d. *Hon Secretary* Mr David S Brulker, Africa House, 44/46, Leadenhall Street, London, E C 3.

MUSLIM SOCIETY IN GREAT BRITAIN—Formed to safeguard and to maintain the interests of Islam and Islamic institutions. *President* T W Salim Babonau. *Secretary* Ahmed Bennett. Headquarters 451, Great Russell Street, London, W C 1.

NATIONAL INDIAN ASSOCIATION in aid of social progress and education in India—Founded by Miss Mary Carpenter in 1870. Objects of the Association—to extend a knowledge of India, in England, and an interest in the people of that country, to co-operate with all efforts made for advancing education and social reform in India, to promote friendly intercourse between British people and the people of India. *President* Lord Lamington. *Chairman of the Committee* Sir Selwyn H Fremantle, Chiche House, Chalfont St Peter, Bucks.

NORTHBROOK SOCIETY—Makes grants to deservng Indian students. *Hon Secretary* P Chichgir, Imperial Institute, S Kensington.

PARSEE ASSOCIATION OF EUROPE INCORPORATED—Zoroastrian House, 11, Russell Road, Kensington, London, W 14.

ROYAL ASIATIC SOCIETY—Established 1823, obtained Royal Charter 1824 for the investigation of subjects connected with and for the encouragement of Science, Literature, and

the Arts in relation to Asia. *Secretary* Col D M F Hoysted, CBE, DSO, 74, Grosvenor Street, London W 1.

ROYAL CENTRAL ASIAN SOCIETY—*President* The Rt Hon Lord Lloyd, PC, GCSI. *GOIF DSO Chairman* The Rt Hon Sir Horace Rumbold, BT GCB, GCMG. *Hon Secretaries* Brig General Sir Percy Sykes, KCI, CBE, CMG and F M Gull, Esq, 77, Grosvenor Street, London, W 1.

ROYAL EMPIRE SOCIETY—Formerly Royal Colonial Institute. Northumberland Avenue, W C 2. *Secretary* R E H Baily, CBE.

ROYAL SOCIETY OF ARTS has an Indian section before which lectures are delivered on industrial historical and commercial questions. 18, John Street, Adelphi, W C 2. *Secretary* W Perry, MA. *Secretary, Indian Section* K W Luckhurst, MA.

ROYAL INSTITUTE OF INTERNATIONAL AFFAIRS Chatham House, 10 St James's Square, S W 1. *Secretary* Ivison S Macadam, CBE.

SOCIETY FOR PROMOTING THE STUDY OF RELIGIONS—*President* The Most Hon the Marquess of Zetland, PC, GCSI, GCL. *Chairman of Council* Sir E Denison Ross, CBE. *Phil Chairman of Executive Committee* Sir Francis Younghusband, KCSI, KCI. Information from the *Hon Secretary*, 17, Bedford Square, London, W C 1.

STUDENT CHRISTIAN MOVEMENT OF GREAT BRITAIN AND IRELAND—*Secretary* R C Mackie, Annadale, North End Road, Golders Green, N W 11.

VICTORIA LEAGUE—81, Cromwell Road, S W 7. *Secretary* Miss Gertrude Drayton, CBE.

WOMEN'S INDIAN ASSOCIATION London Committee—*Hon Secretary* Miss Avabai Mehta, L.B. (London), Barrister at Law, 171, Adelaide Road, N W 3.

WORLD CONGRESS OF FAITHS (Continuation Movement)—Organised to promote a spirit of fellowship among mankind through religion. *International President* H H the Maharaja Gackwar of Baroda. *Chairman* Sir Francis Younghusband, KCI. *Secretary* Arthur Jackman, 17 Bedford Square, London, W C 1.

Sport.

Sport in India is rapidly becoming more organized and it is chiefly on the administrative side that the year 1936-37 records most progress. For over a year what amounted to almost a war continued between the two chief football organizations of the country. The All India Football Association the younger body of the two, claimed the right to control the game throughout the country. This right was disputed by the Indian Football Association a body with a fine record behind it. The All India Football Association however was one in name only it being a purely provincial association governing the game in Bengal. It had it is true done this very well though its critics were not slow in pointing out that professionalism was showing signs of creeping into its amateur ranks and practically no steps had been taken to eradicate this evil.

The All India Football Association applied for recognition by the Football Association of England but this was withheld in view of the differences which existed between the two bodies although the younger association carried the allegiance of all the provinces with the exception of Bengal. The Army Sports Control Board were appointed by the English authorities to act as mediators in the dispute and at the time when this was written there was every sign that the two organizations will settle their differences and India will then have a governing body controlling football throughout the length and breadth of this country. During this dispute both parties mutually agreed to recognize each others tournaments, thus avoiding what would have been a catastrophe in the Indian football world.

Racing

The race track continued to attract its hundreds of thousands of supporters and the race courses of Bombay Calcutta and Madras as well as other parts of the country were witness that the Indian is as keen on racing as any man in any other part of the world. The Turf Clubs generally increased their stakes and interest was added by the visit to India of the famous jockeys, Steve Donoghue and Charlie Smirk both of whom had won the Derby. Both of these riders were seen on Indian tracks.

For quite a while an agitation for the provision of more races for Indian bred horses was vociferous but during this year the Turf Clubs met and the stakes for this class of racing with the result that Indian breeders began to take more interest and more Indian horses were registered with the various turf clubs.

The champion horse of the year was the Nivabada Lakshmi Mulik of Bhopal's Masud Antibes which brought off a fine double by winning the King Emperor's and the Victoria cups.

Cricket

Interest in cricket mainly confined itself to the cricket championship of India and the University championship for the Rohinton Bahria Gold Cup. The cricket championship was marred by a dispute between the various associations with regard to the venues for some of the matches and at one time there was a danger that the final would not be played at all. This was fixed by the board to be played in Bombay after the Bombay season had closed. Bengal felt that the match would be a financial loss and therefore suggested that the final should be played in Calcutta. To this Nawanager the other finalists did not agree insisting that the game should be played in Bombay and even offering to bear the whole expenses incurred by Bengal which they eventually did. The game was played in Bombay before a very small crowd Nawanager winning.

The Cricket Club of India made good progress. Work was commenced on the new stadium at Bombay. The playing field was laid out and the work on the club house and pavilion was well under way by March 37. There is no doubt that the house of Indian cricket is not yet in order.

Tennis

Once again a team of foreign tennis players toured the country. This time the players were Gentien, the Frenchman C. E. Milroy and A. C. Stedman the New Zealand Davis Cup players. Though these players were generally too good for India's best their visit here afforded another opportunity for India's premier players to obtain experience by playing against first class exponents of the game.

Hockey

In the hockey world chief interest centred upon India's team for the eleventh Olympic Games at Berlin. Once again the Indian XI won the world's olympic hockey championship and on their return embarked on a very successful hockey tour of the country generally winning their matches fairly comfortably. The team was given a rousing reception on their arrival in Bombay. Hockey again continued to attract big crowds in all the chief tournaments.

Athletics

The revival which athletics showed last year continued. Provinces are gradually placing their organisations on a sounder basis and although the country still lacks a proper track the interest is being continued. Bombay held its annual Olympic Games and improved timings were registered in many events.

The Indian cup this year was honoured by the presence of the Victoria and Lady Imithgow while another interesting visitor was Lord Baden Powell, who won this competition as far back as 1883.

Racing.

Bangalore.

1 The entries in the above table which are in alphabetical order in each article apply exclusively to the persons entered therein, and while regulating their relative precedence with each other do not give them any precedence over members of the non official community resident in India, who shall take their place according to usage

2 Officers in the above table will take precedence in order of the numbers of the entries. Those included in one number will take precedence *inter se* according to the date of entry into that number with the exception of officers of the Defence Services, who rank *inter se* in accordance with their seniority, and of the Chief Justice of Bengal, who will rank before all other persons included in Article 14 irrespective of the date of their entry into that Article.

3 When an officer holds more than one position in the table, he will be entitled to the highest position accorded to him

4 Officers who are temporarily officiating in any number in the table, will rank in that number below permanent incumbents

5 All officers not mentioned in the above table, whose rank is regulated by comparison with rank in the army, to have the same rank with reference to civil servants as is enjoyed by military officers of equal grades

6 All other persons who may not be mentioned in this table to take rank according to general usage which is to be explained and determined by the Governor General in his discretion in case any question shall arise * When the position of any such person is so determined and notified it shall be entered in the table in *italics* provided he holds an appointment in India

7 The following will take courtesy rank as shown —

Consuls General —Immediately after Article 35, which includes Brigadiers

Consuls —Immediately after Article 38, which includes Colonels

Vice Consuls —Immediately after Article 59, which includes Majors

Consular officers *de carriere* will in their respective grades take precedence of consular officers who are not *de carriere*

Among themselves Consular Officers will take precedence in their respective grades according to the dates of the Government of India notifications announcing the recognition of their

appointments An officiating incumbent of a grade will rank as an officer of that grade immediately below its permanent incumbents except that when an officer below the substantive grade of Consul officiates as a Consul General he will be ranked with Consuls and assigned a place immediately after permanent Consuls

8 The following may be given, by courtesy precedence as shown below, provided that they do not hold appointments in India —

Peers according to their precedence in England Knights of the Garter, the Thistle and St Patrick Privy Councillors Advisers to the Secretary of State for India Immediately after Members of the Governor General's Executive Council, Article 9

Baronets of England Scotland Ireland and the United Kingdom according to date of Patents Knights Grand Cross of the Bath Knights Grand Commander of the Star of India Knights Grand Cross of St Michael and St George Knights Grand Commander of the Indian Empire Knights Grand Cross of the Royal Victorian Order Knights Grand Cross of the Order of the British Empire Immediately after Puisne Judges of High Courts, Article 23

Knights Commander of the Bath Knights Commander of the Star of India Knights Commander of St Michael and St George Knights Commander of the Indian Empire Knights Commander of the Royal Victorian Order Knights Commander of the Order of the British Empire Knights Bachelor Immediately after the Residents of the Second Class, Article 31

* In virtue of the provisions of section 9 (ii) of the Indian Church Act, 1927, a Bishop or Archdeacon who held a bishopric or archdeaconry on the 1st March 1930 takes rank as follows —

Bishop of Calcutta, Metropolitan of India, immediately after Article 8

Bishops of Madras and Bombay, immediately after Article 14

Bishops of Lucknow and Nagpur, immediately after Article 25

Bishops (not territorial) under licence from the Crown immediately after Article 39

Archdeacon of Lucknow, in Article 42

Indian Orders.

The Star of India

The Order of the Star of India was instituted by Queen Victoria in 1861, and enlarged in 1866, 1875, 1876, 1897, 1902, 1911, 1915, 1920 and 1935 and the dignity of Knight Grand Commander may be conferred on Princes or Chiefs of India, or upon British subjects for important and loyal service rendered to the Indian Empire, the second and third classes for services in the Indian Empire thirty years in the department of the Secretary of State for India. It consists of the Sovereign, a Grand Master (the Viceroy of India), the first class of forty six Knights Grand Commanders (24 British and 22 Indian), the second class of one hundred and six Knights Commanders, and the third class of two hundred and thirty seven Companions, exclusive of Extra and Honorary Members, as well as certain additional Knights and Companions.

The Insignia are (i) the Collar of gold, composed of the lotus of India, of palm branches tied together in satire, of the united red and white rose, and in the centre an Imperial Crown, all enamelled in their proper colours and linked together by gold chains. (ii) The Star of a Knight Grand Commander is composed of rays of gold issuing from a centre, having thereon a star of five points in diamonds resting upon a light blue enamelled circular riband, tied at the ends and inscribed with the motto of the Order, *Heaven's Light our Guide*, also in diamonds. That of a Knight Commander is somewhat different, and is described below. (iii) The Badge, an onyx cameo having Her Majesty Queen Victoria's Royal Effigy thereon, set in a perforated and ornamental oval, containing the motto of the Order surmounted by a star of five points, all in diamonds. (iv) The Mantle of light blue satin lined with white, and fastened with a cordon of white silk with blue and silver tassels. On the left side a representation of the Star of the Order.

The ribbon of the Order (four inches wide for Knights Grand Commanders) is sky-blue, having a narrow white stripe towards either edge, and is worn from the right shoulder to the left side. A Knight Commander wears (a) around his neck a ribbon two inches in width of the same colours and pattern as a Knight Grand Commander, and pendant therefrom a badge of a smaller size, (b) on his left breast a Star composed of rays of silver issuing from a gold centre, having thereon a silver star of five points resting upon a light blue enamelled circular ribbon, tied at the ends, inscribed with the motto of the Order in diamonds. A Companion wears around his neck a badge of the same form as appointed for a Knight Commander, but of a smaller size pendant to a like ribbon of the breadth of one and a half inches. All Insignia are returnable at death to the Central Chancery, or if the recipient was resident in India, to the Secretary of the Order at New Delhi or Simla.

Sovereign of the Order—His Most Gracious Majesty The King Emperor of India

Grand Master of the Order—His Excellency the Viceroy and Governor General of India, the Marquess of Linlithgow, G M S I, G M I E

Officers of the Order—*Registrar* Major Henry Hudson Fraser Stockley C V O, O B E, R M, Secretary of the Central Chancery of the Orders of Knighthood, St James' Palace, London, S W 1

The Most Eminent Order of the Indian Empire

This Order, instituted by H. M. Queen Victoria, Empress of India, December 1877, and extended and enlarged in 1886, 1887, 1892, 1897, 1902, 1911, 1915, 1920 and 1935, is conferred for services rendered to the Indian Empire, and consists of the Sovereign, a Grand Master, forty-two Knights Grand Commanders (of whom the Grand Master is first and principal), one hundred and fifty Knights Commanders, and an indefinite number of Companions (not exceeding, without special statute, 54 nominations in any one year), also Extra and Honorary Members over and above the vacancies caused by promotion to a higher class of the Order, as well as certain Additional Knights and Companions appointed by special statute Jan. 1st, 1909, commemorative of the 50th Anniversary of the assumption of Crown Government of India.

The Insignia are (i) The COLLAR of gold formed of elephants, lotus flowers, peacocks in their pride and Indian roses, in the centre the Imperial Crown, the whole linked together with chains, (ii) The STAR of the Knight Grand Commander, comprised of five rays of silver, having a small ray of gold between each of them, the whole alternately plain and scaled, issuing from a gold centre, having thereon Her Majesty Queen Victoria's Royal Effigy, within a purple circle, edged and lettered gold, inscribed *Imperatrix Auspiciis*, and surmounted by an Imperial Crown gold, (iii) The BADGE consisting of a rose, enamelled gules, barbed vert, and having in the centre Her Majesty Queen Victoria's Royal Effigy, within a purple circle, edged and lettered gold, inscribed *Imperatrix Auspiciis*, surmounted by an Imperial Crown, also gold, (iv) The MANTLE is of Imperial purple satin, lined with and fastened by a cordon of white silk, with purple silk and gold tassels attached. On the left side a representation of the Star of the Order.

A Knight Commander wears (a) around his neck a ribbon two inches in width, of the same colour (purple) and pattern as a Knight Grand Commander, pendent therefrom a badge of smaller size (b) on his left breast a star, similar to that of the first class, but the rays of which are all of silver.

The above mentioned Insignia are returned at death to the Central Chancery, or if the Knight was resident in India to the Secretary of the Order.

A Companion wears around his neck a badge (not returnable at death) of the same form as appointed for a Knight Commander, but of smaller size, pendent to a like ribbon of the breadth of one and a half inches.

Sovereign of the Order—His Most Gracious Majesty The King Emperor of India.

Grand Master of the Order—H. E. the Viceroy (Marquess of Linlithgow from April 18th, 1935).

Officers of the Order—The same as for the Order of the Star of India.
